I have frequently heard of people living in New York and New England who thought that the Indians roamed wild practically every place west of Buffalo, which they considered on the frontier. When I was a lad back in Ohio we considered ourselves western to quite an extent. In fact, one of Ohio's leading institutions of learning is called the Western Reserve College, having been established ninety years ago. But when I was nineteen years old I decided I was not a real, genuine westerner after all, so I took Horace Greeley's advice and "went west," as far as Missouri. Back in 1867 that was the West, indeed, and I have done most of the things which we usually associate with pioneer life in the far West. For instance, I have, with my own hands, held the plow and broken out the first furrows around 160 acres of raw prairie. I have cut down the forked saplings from which the corner posts were made for the original "pole" or "prairie" barns. I have cut the brush and mowed the slough grass with which the roofs were thatched. I have been up all hours of the night to fight the oncoming prairie fires, so common and so much dreaded by the pioneer settlers of fifty years ago. I have helped to market hogs and cattle by driving them over the broad prairies and through timber adjacent to creeks and rivers, a distance of fifty miles, to reach the nearest railroad shipping station. To a boy of nineteen or twenty all this seemed like real pioneering, and I fondly imagined I had come to the West, indeed. But who of northern Missouri today would be considered a westerner once they got out into Washington or Oregon or Nevada or California? We are all of us from "back East" in the eyes of the people across the Rockies.

So, it seems to me, it is next to impossible to draw any imaginary line east of the Pacific ocean where we can rightly say the East ends and the West begins. It may not be highly important to do so, for so long as our fields yield abundantly and we are prosperous, peaceful and happy, it may not matter whether we of the grain belt are classified as easterners or as westerners. Yet there is some importance to it, after all, for man is a sociable sort of animal and likes to clique with congenial companions. Nothing gives us more pleasure when we are away from home than to run across some person who comes from the same state or town or neighborhood as we do. So, whether we are easterners or westerners, we want to know it so we can "gang together."

Perhaps the best answer to the question is the one which a Denver newspaper man made when he wrote the poem entitled, "Out Where the West Begins." It is one of my favorites and I am going to print it here, for your entertainment and pleasure:

Out where the handclasp's a little stronger,
Out where the smile dwells a little longer,
That's where the West begins.
Out where the sun is a little brighter,
Where the snows that fall are a trifle whiter,
Where the bonds of home are a wee bit tighter,
That's where the West begins.

Out where the skies are a trifle bluer,
Out where friendship's a little truer,
That's where the West begins.
Out where a fresher breeze is blowing,
Where there's laughter in every streamlet flowing,
Where there's more of reaping and less of sowing,
That's where the West begins.

Out where the world is in the making,
Where fewer hearts in despair are aching,
That's where the West begins.
Where there's more of singing and less of sighing,
Where there's more of giving and less of buying,
And a man makes friends without half trying,
That's where the West begins.

Why not make the dividing line a mental, rather than a geographical one; a spiritual, rather than a political one? Measured by this standard we are westerners, not easterners; for where in all this broad, fertile land do you find heartier handclasps, more true and abiding friendships, fresher breezes and brighter suns than right here in the grain belt? Take any line of this poem and see if we who live here in the garden spot and granary of the nation cannot look about us and find our community measuring up to the test. If it does we are living "out where the West begins," no matter what river forms the eastern boundary of the territory in which we live or what township, county or state lies just above or below ours. The West—as they used to say, in levity, of Boston—is not a place, it is a state of mind, and we of Wisconsin, Iowa, Illinois, Missouri, Kansas and our neighboring states are of the West, where "a man makes friends without half trying."

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Milk Situation at Milwaukee.

WISCONSIN dairymen who ship their whole milk to the Milwaukee market, have placed themselves in position, through the organization of the Milwaukee Milk and Cream Shippers' Association, to demand and receive a fair and equitable price for their product. Organization appears to be the salvation of the farmers who must depend upon the large cities to take care of their product and this association, incorporated only a few weeks ago, is already displaying its power with a demand on the Milwaukee distributors and retailers for an increase, beginning July 1st, of substantially 1 cent a quart. Indications at the time this editorial was written were that this increase would be granted and would be in effect before this issue of The Wisconsin Farmer reaches its readers. This increase, of course, will be passed on to the consumer.

For many years the dairymen supplying Milwaukee with its milk have been playing the part of philanthropists to the poor. Milk, bottled and delivered to the door, has been selling in Milwaukee for 6 cents a quart, a price enjoyed by no city of its size in this country, and from 2 to 3 cents below the prevailing prices in most cities of equal size. During June the Milwaukee shippers netted 85 cents for an eight-gallon can of milk or little more than 10 cents a gallon, and The Wisconsin Farmer does not believe that milk can be produced on any farm at a profit at that price, not taking into consideration the stringent health department regulations these shippers must obey. This price was for milk averaging 3.7 per cent in butter fat, according to the health department figures, and the prevailing sentiment among dealers that Milwaukee is buying its milk too cheaply and that the farmers are not being paid sufficiently for their labor leads to the belief that the increase the shippers ask will be granted and that milk will be boosted to 7 cents a quart in Milwaukee. At 7 cents Milwaukee will still be getting milk at a price far below other cities of its class.

The Milwaukee shippers have appreciated the situation for many years but have been without effective organization to back up any demands which they might make. The present association, which was fathered by the old Milk Producers' Association, which passed out of existence with the new organization, now controls about 2,200 cans of the 5,000 cans of milk used daily by Milwaukee. It controls also about one-third of the shippers, which number include the larger shippers, and with a rapidly-growing membership it felt that it was in position to ask of the Milwaukee retailer and the public a fair price for the milk of its members.

The result was that the dealers were asked to pay 1.30 cents during July for an eight-gallon can which will net the farmer about $1.15 as the freight into the city amounts to an average of 15 cents a can. As an eight-gallon can weighs 68.8 pounds, this is substantially the price granted the Chicago shippers after their fight this spring, and the price is based on the value of the fat content, the health department's figures of 3.7 per cent being taken as the average fat content of the milk shipped into the Milwaukee market. During May and June the dealers paid $1 for an eight-gallon can or about 85 cents net, so that the increase asked is 30 cents a can or about 2 cent a quart.

Since last January the Milwaukee shippers have been receiving from 15 to 25 cents a hundred less for their milk than they could have received from the cheese factories; condenseries or creameries in this district. The price of milk to the retail trade in Milwaukee has been so low that the farmers could not expect much higher prices as, until recently, they were without organization; were without other avenues for disposing of the milk and were at the mercy of Milwaukee, in which city it can be said that the distributors have the overhead expense at so low a mark that they are doing business on a closer margin than similar concerns in other cities. For many years it has been a wonder to outsiders how these distributors, although paying a low price to the farmer, could sell milk so cheaply, considering for example that where the difference in farmers' prices in Milwaukee and Chicago were only a fraction of a cent per quart the difference in the price to the city trade until the Chicago strike was 2 cents a quart.

The situation has now changed and the association believes it can divert, if necessary, sufficient milk from the Milwaukee market to force an increase if such ever becomes necessary. Dealers are agreed that Milwaukee is getting milk too cheaply; that the farmers are underpaid for their product, and it is not thought there will be any great protest from Milwaukee if the price is advanced a cent per quart. At least there should not be any protest, as The Wisconsin Farmer knows of no city of Milwaukee's size which is buying 3.7 per cent milk, bottled and delivered to the door for 7 cents, let alone 6 cents.

The new association which is incorporated for $10,000 has opened offices in the First National Bank building, Milwaukee, with Mr. G. R. Rice as secretary, treasurer and general manager. Mr. Rice is a dairyman, thoroughly conversant with the milk situation. About $7,000 worth of stock has been paid in, and the remainder is being subscribed for by shippers, the plan being to have 1,000 members at $10 each. As there are 3,000 shippers to Milwaukee this will give the association a third of the shippers as members, which will include the larger shippers, thus enabling it to control almost half of Milwaukee's milk supply. A half cent a can is charged each member as running expenses for the organization.

Interest in Land Clearing in Wisconsin.

THE interest that exists in the problem of opening up to cultivation the thousands of acres of fertile land in Upper Wisconsin, now covered with stumps, was never better shown than by the success which attended the land clearing demonstrations which have just ended. Our readers are familiar with the work of these demonstrations which were planned entirely to show the owners of stump land the ways and means by which they could be made ready for the plow.

During the seven weeks the special train carrying the equipment used in the demonstrations was on the road more than 8,200 persons attended, according to an accurate count kept by Mr. Carl Livingston, of the engineering department, college of agriculture, who was in charge of the work. The demonstrations proved successful far beyond the hopes of the originators, and the Soo line has now asked that it be permitted to co-operate in sending a similar demonstration train over its lines in Upper Wisconsin. The other train was conducted over the Northwestern and the Omaha lines, and it is possible that a number of demonstrations will be held along the Soo line this fall, although nothing definite has been decided upon at this writing.

Mr. Livingston is greatly pleased with the results of the trip, and he is entitled to much credit for carrying it to its successful conclusion. At some of the stops it was discovered that farmers had driven as far as fifteen and twenty miles to attend, and it was not uncommon to find those who had come as far as seventy-five to 100 miles by auto, and some who had even walked eight or ten miles. This denotes the interest that is being shown in the machinery and explosives used in clearing land as well as a desire to open up the great stretches of fertile lands covered with stumps in this state that are now lying idle. The co-operators who supplied the machinery and explosives found the interest keener than they had anticipated and it is probable they will be glad to assist in future demonstrations. Nothing will do so much to increase Wisconsin's prosperity as turning the great stretches of stump land to cultivation, and it is just such demonstrations as the land clearing special gave that will lead to the utilization of these now waste lands. In other words, it is only the stumps that are keeping hundreds of thousands of acres from producing bumper crops, and with men willing to take hold, once they realize the clearing operations are as simple as they are, Wisconsin can be expected to take further strides in an agricultural way.

Fly Time Warning to Wisconsin Farmers.

MR. H. F. WILSON, of the Wisconsin College of Agriculture, is author of the July bulletin of the Wisconsin Bankers' Association. This is the thirty-sixth bulletin issued by the association. Mr. Wilson gives us some interesting facts about the common fly. He says that, innocent as they may seem, flies annually bring us untold suffering, unbelievable loss and a heavy toll of human life, and cites these facts about the fly:

The fly is the filthiest creature on the face of the earth.

Flies breed in filth, live on filth, and distribute filth.

Flies distribute typhoid fever, summer complaint, and possibly other common diseases, including tuberculosis.

The flies you remove from the cream and sirup may have just come from the vault of your neighbor who is sick with typhoid fever or tuberculosis.

The fly on the baby's bread and butter may have just come from the spittoon or garbage can.

Flies caused the death of more American soldiers during the war with Spain than did Spanish bullets.

You can prevent the fly with a little extra cost and effort.

Although we seldom see flies during the winter months, Mr. Wilson tells us that they never entirely disappear. They are hidden in cracks and crevices waiting for warm weather. While only the female survives the winter she has been fertilized by the male the previous fall. Each female may lay several hundred eggs, laying them in batches of 120 or more. The time required for hatching these eggs varies from eight hours to three or four days—depending upon the temperature. From the beginning of summer until the middle of September usually about ten generations of flies are raised.

All good methods should be employed to get rid of flies. Swatting is not enough. Trapping and poisoning should be employed as well, and, more important still, complete doing away with their breeding places. Mr. Wilson says that one ounce (two tablespoonfuls) of formalin (40 per cent formaldehyde) in sixteen ounces (one pint) of a mixture of equal parts of milk and water in shallow dishes, with a piece of bread in the center for the flies to light upon, proves very attractive and destructive to flies. The front and back porches are good places for this solution. Of course, this must be kept away from the children. Other strong points brought out by Mr. Wilson in his bulletin are as follows:

Keep garbage in fly-tight receptacles.

Have garbage removed at least twice a week.

Remove all manure and waste promptly.

In removing manure if possible put it directly in the wagon to haul to the fields. In case this is impractical treat manure with borax or insect powder. Either of these substances injure the fertilizing value of the manure.

To keep flies out of the stable, put removable screens in the windows and hang burlap in the doors so that it will strike the backs of stock when entering.

To prevent flies in the house use screens, fly traps, fly poison, fly paper and swatters.

A good fly trap may be made from two nail keg hoops and two pieces of wire screening. Small hooks hold the two cones together. The opening at the top of the inside cone is about the size of a lead pencil. Four nails are partly driven into the bottom to serve as legs to raise the trap from the floor. A saucer of some sweet substance such as sugar serves as bait.

Mr. Irwin's Visit to Wisconsin.

WISCONSIN dairy interests were fortunate in having so distinguished a visitor to the state as Mr. John B. Irwin, of Minnesota, who during the third week of June made a circle of the southwestern part of the state to talk better dairying and bigger profits from the dairy farm. Mr. Irwin is the owner and developer of the champion cow, Duchess Skylark Ormsby, and his remarks were consequently received with great regard at the various places which he spoke. During the week he spoke to Holstein gatherings in Walworth, Kenosha, Waukesha, Ozaukee and Columbia counties and the 2,000 dairymen or more who heard him during that week certainly have new inspirations and new ideals to work towards now, as Mr. Irwin endeavored to instill into his listeners that spirit which has dominated him in the building up of his herd and the developing of the champion Holstein cow.

Co-operation he considers the great asset on the farm, and he never missed an opportunity to touch upon the need of this one thing which he said was essential if the farmer is to succeed. Not only co-operation as we sometimes think of it in relation to the business interests and the breeders of the community but co-operation of the entire family, the husband, the wife, the children, and the hired men. There was never a time when so much interest has been shown by business men, the bankers, railroads and other commercial interests in the farmers as is shown today. This is due largely to the realization that farming is the basis of the nation's wealth and that when crops are poor business is poor; when cream checks are low the dairy farmer begins to retrench, and when the farmer's profits dwindle the other interests suffer. These matters Mr. Irwin called particular attention to and as the developer of a great herd of Holsteins he says he has found that co-operation is essential to success and by co-operation he means co-operation in every sense of the word. The writer, who was with Mr. Irwin most of his week in Wisconsin, is calling particular attention to this phase of his addresses to emphasize the contention that the most successful men and the most noted communities are those who work shoulder to shoulder for the common good as well as for the welfare of the individual.

Of course, there was much interest in Mr. Irwin's story of the development of Duchess Skylark Ormsby, how she was fed, etc., for every dairyman has the ambition some day to produce a world-record cow. She was among the herd he bought from John B. Young, of Iowa, and at that time he had little idea she could produce 1,205 pounds of fat in a year. But feeding with Mr. Irwin is not everything, and without the aid of Mrs. Irwin he says that the Irwin herd could never have been brought up to the high standard it is today. He believes that the co-operation of the wife and the family must be secured to develop a fine herd, and he regards the children as the greatest help of all. He believes in taking every child into the partnership by giving him something to develop; something to interest him in the work that is going on so that the years of constructive breeding a parent puts in will not be lost by the herd being distributed widely at his death but will be conserved and carried forward by the children. The breeder, Mr. Irwin be-

lieves, must have the inspiration and love of his work to carry it out successfully, and nothing promotes this so much as taking the family and even the cows into the partnership. He speaks of making the cows his partners because he believes every dairyman should study every cow just as he would study a partner. He would know her disposition; her likes and her dislikes; her blood lines; her family connections; her breeding qualities and, in fact, everything about her. Mr. Irwin has followed this in his own work, for he doubtless could not have built up so strong a herd without such knowledge. Care of the cows he regards as very important, and if she is a partner, as he speaks of it, he feels she will get the proper care. Mr. Irwin brought to Wisconsin some splendid messages to dairymen, and it is unfortunate that he could not remain longer or talk to more while he was in the state.

Interest in Sheep in Wisconsin.

INTEREST in sheep raising in Wisconsin, because of the present conditions of the wool and mutton market, were never greater than now, according to Frank Kleinheinz, shepherd of the college of agriculture flock at Madison and an authority on sheep in Wisconsin. Mr. Kleinheinz, in talking with the writer recently, said that he had not encountered so many inquirers about sheep in many months as he has encountered this year and says that it is because of the growing knowledge that sheep raising is very profitable in Wisconsin, especially with prevailing prices for mutton and wool and prospects of higher prices.

Mr. Kleinheinz draws these conclusions after being out in the field for several weeks attending sheep institutes which have been directed by the Wisconsin Live Stock Breeders' Association. The second week of these institutes, which will continue all summer in various parts of the state, was concluded last Saturday at Readstown, following institutes earlier in the week at Gay's Mills, Viola, La Farge and Soldiers' Grove, all in the Kickapoo valley. The meetings were all well attended and showed a growing desire of farmers in the valley to take hold of this branch of live stock farming.

Mr. Kleinheinz is much pleased with the manner in which the farmers have turned out to the institutes. In past years sheep have been given attention on the live stock special which was run by the Wisconsin Live Stock Breeders' Association. Along with the sheep breeders came the dairymen; the swine breeders, the horse men and the beef producers, and it was difficult to give the time required to the sheep division of the train. So this year it was decided to hold separate sheep institutes in different parts of the state which would appeal only to the breeder of sheep or the farmer who is considering adding a flock to his farm. This plan, Mr. Kleinheinz says, works out to splendid advantage and he expects big results to come from the institutes already held and those to be held during the next few weeks.

Deceiving Consumers of Meat Products.

ANY system of distribution that has for its purpose the enabling of producers to find a good market for their products must take into account the welfare of the consumer. In the past the latter has, in too many instances, been called upon to pay exorbitant prices for food products, whereas these same products were sold at a ridiculously low price by the producer. Those who are favoring co-operative methods of buying and selling are more and more consulting both parties of the transaction and in time it may be expected that the middleman will not be allowed so large a margin as his part in the transaction.

A typical instance of unfairness to producer and consumer alike has recently been furnished by the great state of New York. In that state a commission firm was found guilty of loading the "crops" of poultry. The firm has made a record of selling as many as 100,000 fowls per week, and it seems that it has been the practice to keep the fowls hungry after receiving them from the producer and after feeding a liberal supply of red pepper upon their arrival at the central market, these fowls then had access to heavy mixtures composed of such products as gravel, cement, sand, quartz, water and shorts.

A meal of these products sometimes adds as much as one pound to the weight of the fowl. Prompt killing was made necessary by this system of gorging, and no matter how the slaughter was expedited many of the fowls were sick when killed. It is estimated that this thieving policy cost the people of New York City $7,000,000 annually, all paid out because of this vile practice of feeding heavy products to hungry birds. A four-pound hen that would ordinarily sell for $1.00 on the basis of her weight would bring $1.25 after passing through the hands of these rogues. This has meant a very serious discrimination against those who are honest in their practice because rightly speaking the hen was only worth $1 to the consumer. It is not contended that the producer should get any part of the additional 25 cents, but rather that the effect of this high price is to cut down consumption and in that way the legitimate producer is injured.

A case of this kind would almost shatter one's faith in humanity, but our feelings are relieved by the promise that these scalawags are likely to have suitable punishment meted out to them. The westerner whose large apples worked to the top of the barrel is merely an infant in arms in dishonesty compared with the rascals who compound these heavy mixtures and handle poultry in such a way that much is consumed before the poultry is weighed out to the individual who buys it for consumption.

Improved Method of Producing Serum.

HERETOFORE it has been impossible to produce a sterile serum and in one instance at least, according to government reports, foot-and-mouth disease has been spread through the agency of the anti-hog-cholera serum. Besides, it is not uncommon for serum to produce boils on hogs after vaccination, due to its having become contaminated.

The United States Department of Agriculture has recently perfected a new method for treating serum to eliminate from it the red blood corpuscles and thus make it practicable to sterilize it. This, according to Drs. M. Dorset and R. R. Henley, of the Bureau of Animal Industry, is done by adding a small amount of bean extract to the serum after it has been produced in the ordinary way. After the addition of this extract, the serum is centrifugalized and the red corpuscles separated, leaving a clear, nearly transparent liquid that can be heated to 150 degrees F. without injuring the anti-bodies it contains and which make it valuable as a cholera preventive. After having been heated to the temperature mentioned for a period of thirty minutes, it is perfectly sterile, and even if the serum had been drawn from a hog harboring germs of foot-and-mouth disease, it would be incapable of conveying that disease to any animal inoculated with it.

This new method of production is considered by the department of agriculture as a distinct step in advance in serum production and will undoubtedly be adopted by the commercial serum producers as rapidly as possible. Many attempts have heretofore been made to sterilize anti-hog-cholera serum but without satisfactory results.

Farming With Live Stock.

WE HEAR much nowadays about the increase of farm tenancy. Some claim that this is due to the small profits that farming yields, while others consider it to be the result of the phenomenal increase in the value of land, which has made it possible for a large percentage of the farmers to retire and live on the rent from their land. We do not intend to analyze either of these theories, but simply accept the facts as they are: That tenancy is rapidly increasing; that rents are gradually becoming higher just like land values are advancing; and that it is becoming increasingly difficult for young men without means to become landowners.

These young men, if they wish to make farming their life work, must necessarily rent for a term of years until they accumulate enough money to enable them to make a substantial payment on a piece of land and equip the farm with the necessary machinery and live stock to begin business on their own hook.

We believe that in the majority of instances young men as renters or owners are still too much imbued with the idea of extensive rather than intensive farming, and that they do not, as a rule, realize how much more profitable live stock really is than grain farming. Neither do they realize that by feeding a relatively large amount of the crops produced and returning the manure to the land that they can readily raise at least 50 per cent more on a given acreage than when the products of the land are sold in the raw form.

Suppose we compare wheat-and-corn farming and the selling of these products on the market with dairy-and-hog farming and selling the bulk of the farm-produced grains to cows and swine instead of at the elevator. Under the grain-farming system, for example, if average yields of eighteen bushels of wheat and forty bushels of corn are obtained and wheat is sold at an average of 85 cents a bushel and corn at 55 cents, the gross income would be $2,984 for eighty acres of corn and eighty of wheat. The cost of growing these crops, according to reliable statistics, is about $12 per acre for wheat and $14.50 per acre for corn. If we deduct these cost figures, which would amount to a total of $2,120, from the gross income per acre mentioned above, there would be a net balance of $864 or $5.40 per acre.

Suppose instead of farming 160 acres to grain and selling the products at the elevator eighty acres were devoted to live stock farming, making dairying and hog raising the principal lines of work. Such a farm could easily support a herd of twenty cows capable, say, of producing 250 pounds of butter fat per head per year. By purchasing some concentrates, thirty-five acres would support twenty cows and a year's crop of calves, provided a silo were employed and the cows were fed the year round instead of running on pasture during the summer season. That this can easily be done may be seen from the following: The cows would require about 120 tons of silage; sixty tons of alfalfa, 650 bushels of corn, six tons of bran and three tons of oil meal. The silage could be produced on ten acres, the alfalfa on ten acres, and the corn on fifteen acres—a total of thirty-five acres.

The income from the cow, valuing butter fat at 30 cents a pound and skim milk at 20 cents per hundredweight would be $90 per head, or a total of $1,800 Assuming a man's time to care for these twenty cows to be worth $480, and the cost of needed concentrates $240, we have a net income from the thirty-five acres devoted to feeding the cows of $1,080, or an average of $30.89 per acre, as compared with $5.85 in the case of small grain crops.

There would still be forty-five acres left on which to raise hog and horse feed. By keeping ten good brood sows and breeding them twice a year, 100 shoats could be marketed each year weighing 225 pounds per head, or a total of 22,500 pounds worth, at $7 per hundredweight, $1,575. Two men could easily do the work on a farm of that size. Suppose the rent to be $6 per acre or $480, and that $175 were spent for hog concentrates, there would be a net labor income from cows and hogs of $2,000 for the owner or tenant.

Thus we see that a much greater net profit can be obtained from eighty acres devoted to intensive dairying and pork production than from 160 acres devoted to grain production. The lesson is that the young man with limited means stands a much better show in case he buys a farm, by carrying on live stock farming on a small scale than by attempting the growing of grain on a farm three or four times larger.

Discovery Important to Agriculture

FOR many years Dr. Cyril G. Hopkins, of the Illinois Experiment Station, has been advocating the use of finely-ground raw rock phosphate in connection with organic matter as the more economical source of phosphorus for crop production as compared with the use of acid phosphate. Raw rock phosphate is technically known as tri-calcium phosphate or commonly as insoluble phosphate. Acid phosphate is technically known as mono-calcium phosphate and di-calcium phosphate or in common terms as soluble phosphate. The manufacture of acid phosphate consists in treating raw rock phosphate with sulphuric acid. The action of the sulphuric acid upon the insoluble rock phosphate changes it into the soluble forms referred to above. All acids act upon insoluble rock phosphate changing it to one or both soluble forms, hence the theory of Dr. Hopkins that the acids formed when organic matter decays would also act upon the insoluble rock phosphate and gradually make it soluble or put it in condition to serve as food for plants. While no one has disputed that such a change may take place, most investigators have held that the change is so slow that the use of raw rock phosphate is not a practical proposition when immediate results are desired.

Dr. Hopkins, however, has shown in a great many field tests that whenever ground phosphate rock is applied to soil and is turned under with a large amount of organic matter that most gratifying returns are obtained, and at a much lower cost than when so-called acid phosphate is employed.

Recently Dr. Hopkins and Prof. A. D. Whiting, the latter also of the Illinois Experiment Station, set to work to ascertain in what manner decaying organic matter acts upon insoluble phosphate in the soil to render it soluble, the results of which investigation have just been published in Bulletin No. 90, under the title of "Soil Bacteria and Phosphates." This bulletin is necessarily very technical and does not lend itself well for a detailed review, yet the discoveries made are extremely important and exceedingly valuable from the standpoint of the practical farmer.

Briefly, when organic matter, such as clover, rye, millet or other green crops are plowed under it begins at once to decay, provided there is enough moisture present in the soil and the temperature is favorable, which every farmer knows from experience. This decay is brought about by bacteria —a great many different kinds. A certain class, known as hay and potato bacteria, act upon the nitrogenous organic compounds, such as the proteins, and change them to ammonia, which, when dissolved in the soil water, becomes identical with the ordinary ammonia used for household purposes. When this change has been completed or while it is still in progress, another class, known as nitrate bacteria, act upon the ammonia changing it into nitrous acid. This nitrous acid, in turn, as these investigations have conclusively demonstrated, acts upon insoluble phosphate and changes it to soluble forms. Not only have these men shown that this change actually takes place in soils, but they have demonstrated that each pound of nitrogen in organic combination, upon decay, may change about one pound of phosphorus from the insoluble to the soluble form and at the same time also make two pounds of calcium soluble.

Translated into common terms this means: If your soil is in need of a phosphate fertilizer, begin by plowing under organic matter, and just before turning it under add ground rock phosphate, make the physical condition of the soil as favorable for bacterial life as possible, and then, through the action of certain species of soil bacteria, the fertilizer will be converted into soluble plant food. Employ this system in preference to applying acid phosphate without turning under organic matter.

When this principle of rendering insoluble phosphates soluble through the action of nitrate bacteria is thoroughly understood and appreciated, the farmer will be in a position to save millions of dollars on present fertilizer bills.

In and Around Wisconsin

Eben A. Jones, of La Crosse county (Wisconsin), has made nominations in the Clydesdale division of the Draft Horse Futurities which will be a feature of this year's Iowa State Fair.

H. C. Taylor and C. V. McCollum, of Wisconsin, have been chosen as members of the staff of the seventh session of the graduate school of agriculture, which is being held at Amherst, Massachusetts, July 3d to 28th, under the auspices of the Association of American Agricultural Colleges and Experiment Stations.

Wisconsin's plan of co-operative grain breeding, particularly the co-operative system followed by the State Agricultural Experiment Association, will be described to farmers of the Panhandle next month by R. A. Moore, College of Agriculture, in an address at Austin, Texas, on July 17th. At this meeting of the Texas Farmers' Congress Mr. Moore will also tell what experience Wisconsin farmers have had with alfalfa and other legumes in restoring soil fertility.

About $100,000 is being spent on improvements at the state fair grounds, getting ready for the exposition September 11th-16th. An addition of 123 feet to the concrete grand stand is being made, at a cost of about $50,000. This will give the stand a seating capacity of 6,000. There will be temporary stands seating 5,000 more, and bleacher seats for 2,500. Swine and sheep pavilions, accommodating 2,600 animals, are being erected at a cost of $50,000. All buildings will be completed by September 1st.

Small, green bugs about one-eighth of an inch in length, known scientifically as the pea aphis, have for some time been suspected of doing much harm to Wisconsin's annual crop of peas, which is one of the many things to which Badger boosters point with pride. Wintering on clover land, these pests migrate in the spring to the nearest planting of pea vines, and there complete their existence at the expense of the farmer and the packer. To find ways of controlling this annual pest, L. G. Gentner, of the Agricultural Experimental Station staff, has been assigned to studying ways of fighting the aphis. He will also seek for control methods against another harmful insect—the pea weevil, which together with the aphis and the disease known as blight, are standing in the way of progress in Wisconsin pea culture.

On July 1, 1915, Wisconsin had thirty-seven active cow-testing associations. Since then a campaign has been waged jointly by the United States Department of Agriculture, the Wisconsin Dairymen's Association and the University of Wisconsin, with the result that there have been organized and put into operation exactly twenty-three new associations. The total added membership of these new clubs amounts to about 620, with more than 10,000 cows on test. The membership of all these associations now totals 1,500 with nearly 25,000 cows. Cow-testing associations are working in thirty-three different counties of the state with a number of others about to organize. Wisconsin still leads all other states in the number of these modern dairy business organizations. New York is a close second, with about forty-seven at the latest report. The work in Wisconsin is in charge of N. A. Negley, of the dairy division, United States Department of Agriculture, Madison; and H. C. Searles, Wisconsin Dairymen's Association, Fond du Lac. New associations formed within the past nine months include the following: Baraboo Association (Sauk county), Door Association, Eau Claire No. 3 Association, Kenosha County Association, Lynn Association (Walworth county), Ozaukee County Association, Lone Rock Association (Richland county), Shawano County Association, Wood County No. 3 Association, Empire Association, Alto Association, Rosendale & Eldorado Association, and East Fond du Lac Association (Fond du Lac county), Brillion & Wrightstown Association (Brown and Calumet counties), Winchester Association (Calumet county), Happy Valley Association (St. Croix county), Mishicot Association (Manitowoc county), Chilton Association (Calumet county), Alban & New Hope Association (Portage county).

Many maple trees in the state are affected this year with gall mites. These appear as reddish-colored galls or blisters on the leaves, and are about the size of a pin head. Each gall contains scores of the tiny mites, which winter at the base of the buds and then crawl to the leaves when they unfold in the spring. These galls are nests for the mites, where eggs are laid for another brood. H. F. Wilson, of the College of Agriculture, declares nothing can be done at present to control the gall mites, but that a lime sulphur and nicotine sulphate spray in the spring will destroy them, if applied properly. Owners of maple groves may get complete directions for spraying by applying to the experiment station, Madison.

The city of Ripon, Fond du Lac county, has become famous throughout the country in a rather unusual way. Through the influence of Senator Husting and Representative Reilly, an appropriation of $75,000 was secured to build a postoffice in Ripon. It was expected that ground would be broken soon for the new building. When the news was received that the president had ordered a mobilization of the national guards, and when it appeared that war with Mexico was almost certain, the patriotic people of Ripon conceived the idea that they could get along without the new $75,000 postoffice building. They have been getting their mail in a perfectly good place for some time. A meeting of the citizens of the town was called by the commercial club and it was unanimously voted to telegraph the representative in congress, and the United States senator to call off the new postoffice building at Ripon. The patriotic citizens of Ripon suggested that the $75,000 be used for equipping our troops. At last report the representative in congress and the United States senator had advised the citizens of Ripon that their wishes will be complied with. So far as anyone knows, this is the first case on record where any city or town has voluntarily relinquished a government appropriation. The city of Ripon has given a splendid lesson, which provides food for thought for our people in many other parts of the country.

Alfalfa on Columbia County Farm.

At the Columbia county asylum farm, Wyocena, tests with alfalfa have been conducted for several years, and Supt. S. C. Cushman has obtained data regarding this valuable legume which is of state-wide interest and usefulness, especially in relation to raising alfalfa on light soils.

Mr. Cushman began the alfalfa work in one of the series of county farm demonstrations, which were arranged under the direction of Commissioner of Agriculture C. P. Norgord, who at that time was field representative of the agricultural experiment station.

There are now more than twenty acres of alfalfa growing on the Columbia county farm, and Mr. Cushman has seeded eight acres more this year. An average of three cuttings a year have been obtained—making in all, an average of four tons an acre.

Summarize the actual facts derived from the experiments, it is evident that a number of essentials to successful alfalfa culture on sandy soils have been determined beyond speculation. These, as taken from the notebook of Mr. Cushman's alfalfa plot tests carried on for the past two years, are indicated in the following paragraphs. Whether these experiments are to be practical help to other Columbia county farmers depends upon circumstances and their individual application.

At least some of the soil on the Columbia county farm was found to be acid in character. In order to overcome this condition and put the soil in shape for alfalfa, different kinds of lime were applied in varying amounts. The conclusions reached were to the effect that applications of from two to four tons of ground limestone, preferably three tons to the acre, gave best results. Further, it was learned that the coarser the limestone the larger the amount necessary, but that the finer limestone seemed more beneficial in its direct results.

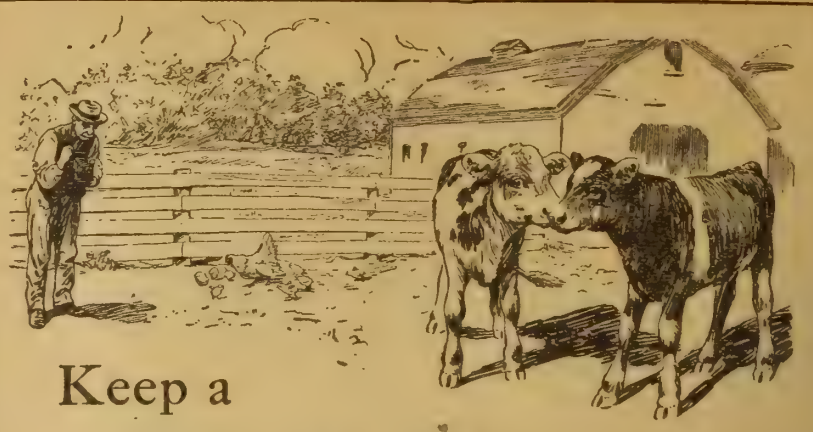
After preliminary trials, which proved conclusively that land had been inoculated or "treated" with the right bacteria was much more productive, the question arose as to which method of inoculation was most advisable. Artificial cultures, soil from an old alfalfa field, and soil from a field upon which sweet clover was growing in abundance were all tried with good results. Of late, however, Mr. Cushman has been using sweet clover or alfalfa soil rather than artificial cultures in treating the new land. He has also practiced seeding five or six pounds of alfalfa with each acre of clover, which is highly recommended as a means of gradually putting the entire farm in shape for alfalfa culture.

A nurse crop with alfalfa has no place on sandy soils, according to careful tests made at the Columbia county farm. The nurse crop takes far more than its share of the scant supply of moisture and fertility available, leaving small amounts for the alfalfa. Rye, oats and barley were tried as nurse crops, and the latter gave best results. However, where nurse crops are not used, thorough cultivation of the seed bed with disk and spring tooth harrow to clean out the weeds is absolutely essential.

Where land is fairly free from weeds the experiments at Wyocena have shown that seeding prior to May 1st is usually conducive to the best results. Twenty pounds of alfalfa seed to the acre gave highest yields. In the tests seedlings were made from early in April to the last week in July over a period of several years. In these tests the late seedings did not make a good showing, while the early seedings gave as good and in many instances far better results than the intermediate.

Sturdy growth and vitality to withstand freezing make the Grimm alfalfa decidedly acceptable for use here, but its higher price makes it somewhat prohibitive as a variety with which to begin alfalfa culture. All the larger fields on the Columbia county farm are seeded with the common varieties of alfalfa, there being practically no difference noted in these tests between seed grown in the north and that derived from southern states. Montana common, Southern common, Turkestan and Grimm have all been given careful trials at Wyocena, with the above conclusions.

Farmers of this vicinity who wish to look over the alfalfa fields at Wyocena will be given a chance to meet for this purpose some time in August or early September at the county farm picnic and field demonstration meeting, in charge of the county board and the college of agriculture, acting jointly. A. H. Wright, successor to Mr. Norgord in the county farm demonstrations, will work with Mr. Cushman in preparing the test plots for inspection. Further notices of the exact date and program for the conference will be given soon.



Keep a

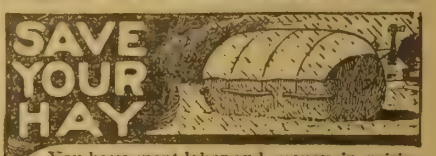
KODAK RECORD

Photographs showing the growth of your stock and crops, the conditions of your buildings and drains will prove more than interesting—they will prove valuable.

And when it comes to selling live stock a photograph is almost as good as showing the animal itself. And picture taking is both simple and inexpensive by the Kodak system.

Ask your dealer, or write us for a copy of "Kodak on the Farm." A beautifully illustrated little book that will interest the whole family. It's free.

EASTMAN KODAK CO., 469 State Street, ROCHESTER, N. Y.



You have spent labor and money in raising your hay crop—it is worth too much to expose to destruction by rain, wind and heavy dews. A stack cover is good cheap insurance, and saves its cost many times over during rainy weather. Send today for

Warmer Weather Making Crops.

Fine Prospect For Hay and Forage Crops--Live Stock Making Good and Profits Big in Dairying and Beef Production.

WISCONSIN.

Chippewa County.—Crops here are a little behind time on account of the wet spring. Heavy rains have been a little hard on corn and potatoes and although small grain is good, it is a little behind time on account of the cool weather. The weeds have gotten quite a start in some of our fields, but the farmers are very persistent in their efforts to get ahead of them. While hay will be a little later than usual, the crop is good. We will need plenty of warm weather, if the corn matures. Live stock is all in a thrifty condition on account of having access to splendid pastures.—Gustave E. Rheingans.

Clark County.—We have had one week of excellent weather here although this was followed by a heavy rain last Sunday night. All grain is looking well excepting corn, which is very small and thin. A few farmers have plowed up their corn and have seeded millet. Meadows are rather light. The apple crop will not be as large as expected as the setting of the fruit was interfered with by cold rains.—Fred W. Ackerman.

Dodge County.—Small grain is looking well excepting in low places where it has been drowned. Corn is a little backward, but the stand is good and with satisfactory weather from this time on we will raise a normal crop. Early potatoes are looking well and meadows and pastures are fair. We have had too much rain for the best interest of all our crops.—Fred Houston.

Grant County.—Oats and barley are looking well here and the same may be said of meadows and pastures. We only raise vegetables for home use and these are looking quite well. The corn crop is far behind the average and conditions will have to be very favorable, if we raise a crop at all. The weather is too wet and cold.—P. R. Stoffel.

Iowa County.—Crops are looking fairly well here, particularly the hay, clover being now ready to cut. Small grain is showing up exceedingly well and although corn is a little backward on account of the cool weather, it promises reasonably well. A few fields of corn have been plowed up and sown to millet. In most instances the plowing up was due to the use of poor seed. All gardens look well and the berry crop is abundant. Strawberries are yielding well, but have been slightly hurt by the heavy rains.—Will Dowling.

Kewaunee County.—Small grain is looking well here, excepting on the low ground where it has been wholly or partially drowned out. Pastures are a little short for this time of year on account of too much rain and the weather being too cool. Clover is rather poor and timothy is short and easily two weeks behind time. Rye will make an average crop.—W. C. Katel.

La Crosse County.—Small grain is coming on in fine shape and early planted corn is looking as well as could be expected. We have not had quite enough steady, warm weather and most of the replanted corn is just receiving the first cultivation. Strawberries are almost a failure here and prospects are just fair for the apple crop. As pastues are good, live stock are doing well. We are now in the midst of haying and the crop is light, due to the clover and alfalfa being winterkilled. Quite a good many farms changing hands.—R. R. French.

La Fayette County.—Weather is somewhat warmer now and we are having plenty of rain so that all crops are growing well. Corn is looking fine excepting few fields. Oats and barley are thrifty. At the present time, we are in the midst of haying operations and the crop is quite satisfactory, although the old meadows are a little light because clover was partly killed during the winter. Quite a good many horses have been sold out of this locality at good prices. Strawberries are ripening and the crop is up to normal in both yield and quality. Apples will be scarce. Early potatoes promise well.—Floyd Scott.

Marinette County.—Excepting on low land clover and timothy is showing up exceedingly well. Corn is not quite a full stand and is really not very promising, but if we have the right kind of weather from now on and should have a late frost, a good outcome may be expected. Nearly all the fields have been cultivated once and most of it has been gone through the second time. The season is possibly two weeks late. Pastures were never better and potatoes seldom looked as well as they do at the present time. The oat crop is very fine and there is every indication of a heavy fruit crop. Many Holstein cattle are being shipped into this locality and this is getting to be a fine dairying county.—W. B. Sanderson.

Oconto County.—Crops are not looking quite normal this year and this applies particularly to the hay crop, as it is quite light. Small grain is a little below the average. Considerable corn has been planted the second time and a considerable number of potato fields. Cattle are in fine shape because pastures have made a good growth. We have a fine crop of apples and considerable small fruit. Roads are in splendid shape here and a large mileage of "State Highway" will be completed this summer.—Mrs. H. J. Hricker.

Oneida County.—Meadows and pastures are in fine shape and clover is just now beginning to blossom. Small grain crops are doing well and alfalfa is ready to cut. Corn is a little backward on account of cool weather, but the cultivators are started and we are anticipating a normal crop. Early potatoes are exceptionally good and even late potatoes are large enough now to cultivate. We had frost here on the 19th of June and that did a little damage to some corn and potato fields.—Art Blumenstein.

Outagamie County.—Excessive rains and cool weather has delayed all farm work and crops are about three weeks behind time. Even pastures have been injured by too much rain. Crops on bottom lands have in a few instances been drowned out and some farmers have been obliged to sell their stock. There is even a little corn to plant yet. The best part of the early planting is none too good, although it is showing up fairly well on drained land. Dairying is our sure source of revenue and the milk supply is holding up well. All live stock is in a healthy condition. There has been an unusually heavy loss of young colts here and some abortion among cows. Fruit crop looks well and strawberries are just coming in bearing.—Peter Tubbs.

Ozaukee County.—Cold rains have done a great deal of damage in this county since June 1st. Planting has been retarded by the wet weather and even yet some of our corn land will be replanted. Oats and barley are fairly good excepting on very low land. We will raise quite a satisfactory hay crop and alfalfa is showing up well, but haying is slow on account of damp weather. Early corn and potatoes are doing well excepting on clay and low bottom lands. Every prospect pleases in the apple crop.—C. F. Dineen.

Racine County.—Hay and small grain are in an excellent condition here and the barley crop is now heading and promises to be very heavy. The cool weather has retarded corn and the heavy rains have given the weeds a good start, but a few more days will bring everything in a normal condition. Cabbage transplanting is in progress, but the crop will be considerable shorter this year than last. The cabbage maggot has done considerable damage and possibly we will not raise more than one-half a crop on this account. Small fruits will be light, but pastures are in fine condition.—Chas. Jeffrey.

Sauk County.—Although the weather has been cool here, conditions have been very favorable for the small grain crop and oats particularly are looking well. Corn is making good progress, although planted late and the potato crop is thrifty. Considerable buckwheat is being sown in this locality. Small fruit is doing well.—A. H. Buehler.

Taylor County.—The condition of crops has greatly improved during the last two weeks, as the weather has cleared up nicely. Old and even newly seeded meadows look rather thin and the hay crop will, therefore, be light. Small grain is doing fairly well and garden crops are in a thrifty condition. Stock never looked better and some sales are being made at high prices. Horses are plentiful here and they are selling at reasonable prices. The roads are good, but the price of gasoline affects joy-riding in this locality.—E. H. Dehue.

Walworth County.—Weather here during the last month has been cold and wet, but in spite of this fact, small grain, meadows and pastures are looking well. Corn is a little small for the time of year and somewhat weedy, but the stand is fairly good and we are optimistic over the outcome.—Arthur Ewing.

Washburn County.—Corn is a poor stand here and it is not quite as good as it was last year at this time. Considerable buckwheat and millet is being seeded on corn ground that was plowed up. We have had too much cold, wet, cloudy weather, but in spite of that, meadows and pastures are good and live stock are looking well.—James W. McCulloch.

MINNESOTA.

Mower County.—We will have a fair crop of small grain on high ground here, but oats and barley are not doing well on the low ground. Much poor seed corn was used in this locality and, therefore, we do not average more than a half stand. Worms have been working in the apple trees and some of them have been completely defoliated. Strawberries are producing abundantly and potatoes are looking well. Much clover was winterkilled and because of this, meadows are a little thin.—W. H. Martin.

To Enlarge Barron Creamery.

The Barron Creamery, which is recognized as right at the top of the list of Wisconsin creameries on total production, received 445,304 pounds of cream in May. The butter fat yielded from this cream amounted to 120,689.5 pounds, and the average price paid for this butter fat was thirty-two cents per pound. This creamery had a total of 152 patrons during the month. Mr. Charles Becker received checks amounting to $213.38 and was first in the amount of cash received for the month. William Halverson was second, with $186.24. There were forty-two patrons who received more than $100 cash during the month.

It has been decided to enlarge the Barron Creamery by an addition, 10x40 feet. This will provide office room and a cold storage room sufficiently large to hold two carloads of butter. During the second week of June this creamery made 750 tubs of butter. In May the creamery paid a total of over $40,000 to farmers for cream. The Barron Creamery is right at the top among co-operative creameries of the world.

Hauling Cream in Automobiles.

Mr. C. E. Lee, of the state dairy and food department, spoke recently at a Wisconsin cow-testing association meeting. Prior to his speech he had looked over samples of butter. Some of these he said were not fit for table use. Mr. Lee called attention to the fact that some of the butter which comes into this country, and which arrives in good condition, has been shipped 7,000 to 15,000 miles.

Every dairy farm should have a sanitary milk house, says Mr. Lee. This should not be in connection with the cow barn. We want to keep every foreign odor away from the milk house. This milk house should be heated in the winter time so as to make it a comfortable place in which to work. Every milker should have his sleeves rolled up to his elbows and should milk with clean and dry hands. "Cleanliness is next to godliness" in the dairy business. An old farmer told his boy that he kept pigs to eat up the swill, but that isn't what Wisconsin farmers keep their cows for. The purpose of keeping cows is to swell the bank account. Some creameries in Upper Wisconsin are receiving a better grade of cream than Chicago receives for coffee cream. Farmers should not complain if the creamery man is particular.

As indicating the prosperity of the dairy farmer in Wisconsin and the progress which the industry is making, Mr. Lee called attention to the fact that 42 per cent of the cream delivered to one station in Polk county was hauled around in automobiles. An even higher per cent than this has been found in some southern Wisconsin counties.

ROWELL SILO FILLERS "AUTOMATIC"

Designed for perfect efficiency and built for service by a pioneer organization of over fifty years' experience. Satisfied users all over America who claim the Rowell the perfect silo filler and urge its exclusive use. The Rowell is the most complete line in point of sizes and equipments in the United States. Complete stocks of machines and repair parts are carried at distributing points to insure quick delivery to all buyers. Send for our Free Catalog and see the features that have made "The Rowell Automatic" supreme.

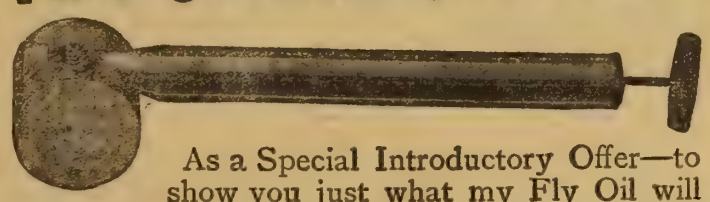
THIS SPECIAL SPRAYER—FREE



As a Special Introductory Offer—to show you just what my Fly Oil will do for your cows this summer, **I will give you this Big Special Sprayer—Free**—with a trial can of **WILBUR'S FLY OIL.** What is more, I will send you the Fly Oil on **thirty days trial** with the **distinct understanding** that it is to be used for a whole month at my risk and if at the end of the trial the results have **not** been entirely satisfactory to you—**no charge whatever is to be made.**

I Will Send You This At My Own Risk

I simply want to prove to you that **Wilbur's Fly Oil will positively keep all flies away from your cows**—that it will make them more contented—that they will **give more milk** and be far easier for you to milk them. You know yourself that there is nothing meaner to milk than a cow fighting flies. I'll guarantee you that with my Fly Oil **there'll be no kicking, stamping or tail slashing**—that the cow will stand quiet and easy and not hold back any milk. I will show you that **you can absolutely keep all flies away and get more milk** by simply spraying them with my Fly Oil before milking. I will prove this to you at my own risk and **as a special inducement I will send you—extra and free—one of the Special Sprayers shown above.**

SEND NO MONEY

Just mail me the coupon. I'll send you the can of Fly Oil and the Sprayer at once with full directions for their use. **If it doesn't do all I claim just say so and I will cancel the charge. You can't possibly lose anything by this trial.** Isn't it worth a postage stamp? **Do it now—at my risk. Fill out the coupon and mail it to me today.**

HOW AUTO TIRES ARE MADE.

Pure Rubber Gum From Native Forests and From Plantations Supplies Foundation Stock For One of World's Greatest Industries.

FARMERS in the grain belt are carried millions of miles every year on pneumatic tires. If we should undertake to give the figures as to the number of tire miles made in the grain-belt states each year they would be so large as to be unbelievable. One of the grain-belt states has about 125,000 automobiles owned by farmers. Each automobile has four tires. It has been estimated that the automobile mileage in this stage is close to 500,000,000 miles a year. Most of these miles are made on country roads. They are made in comfort because of good rubber tires. Without good tires, speed and comfort would be incompatible. Imagine making forty to fifty miles an hour over a country road with a wide-tired wagon and you will get some conception of the convenience and luxury of pneumatic tires. The farmer is such a tremendous consumer of tires that we feel sure he must have great interest in how they are made. If we should undertake to acquaint our readers with the bigness of the tire industry, with the immense capital invested, the large force of men employed, the wonderful buildings used, they would be almost as much astonished as at the figures on tire mileage. Manufacturing tires is one of the greatest industrial occupations of the age.

Rubber is the foundation stock for tires and tubes. Tires are not all rubber. If they were we would not be able to pay for them. Neither would they give the splendid wearing value that they do under the present system of manufacture. Rubber is imported from Brazil, and the highest quality comes from the native trees and is usually spoken of as Para rubber. Para is a seaport of Brazil. The rubber country is many miles distant from Para, up the Amazon valley. Rubber is a sap, or juice, from a forest tree, and is taken out in much the same manner as sugar sap. There is a supply of natural rubber in parts of Africa and Mexico, but these do not come up to the upper Amazon valley standard. The lower Amazon valley rubber is also a cheaper grade. The more difficult it is to get the rubber trees the better the supply seems to be. Even before the world began to take note of the fact that tires would eventually create a scarcity of rubber an effort to supply the market was started and rubber tree plantations were set out. This makes two classes of rubber, commonly spoken of as the native rubber and plantation rubber. There are large rubber plantations in Ceylon and the Malay states. The quality of plantation rubber depends largely upon the source from which the trees were imported. Rubber comes to America in varied grades. It comes usually in what is called a biscuit. This biscuit is formed by rolling up the rubber on a stick, so that a native can grab both ends of the stick and carry the rubber out of the forest. When the stick is removed the chunk or lump of raw rubber is left. The rubber coming from plantations is not in the biscuit form. It usually comes in square chunks, such as may be conveniently packed in barrels or boxes. Any large tire factory has thousands upon thousands of pounds of this raw rubber on hand. Fig. 1 of the accompanying illustra-

FIG. 1—GATHERING RUBBER IN NATIVE FORESTS ON UPPER AMAZON RIVER IN SOUTH AMERICA.

FIG. 2—RUBBER BISCUITS AS THEY COME TO THE TIRE FACTORY.

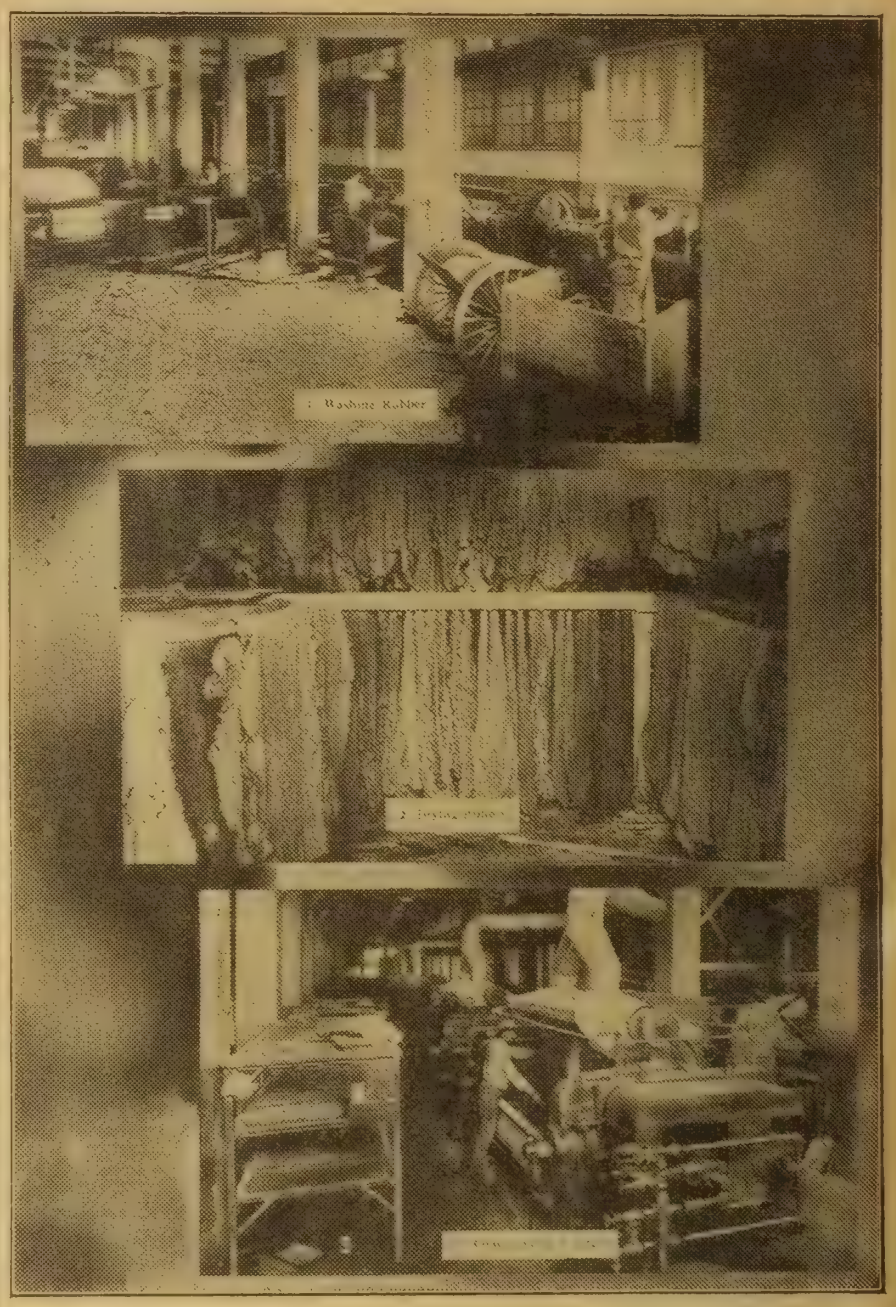

FIG. 3—WASHING, DRYING AND ROLLING OF PURE RUBBER.

FIG. 5—HEATERS WHERE THE COMPLETED TIRE IS VULCANIZED.

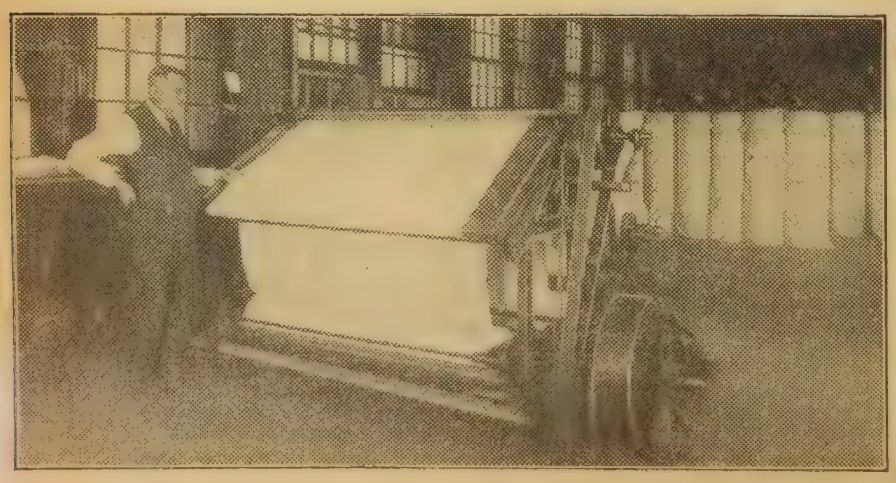

FIG. 4—INSPECTING THE FABRIC WHICH GOES IN CASINGS.

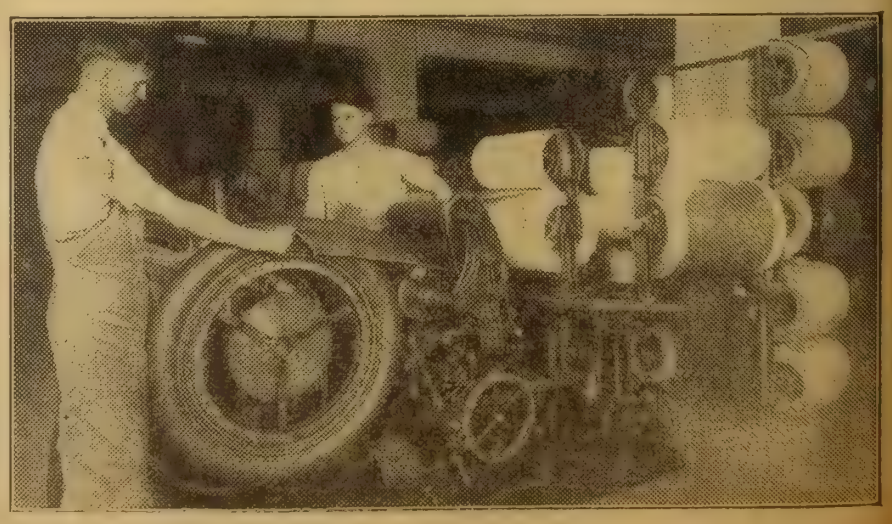

FIG. 6—BUILDING UP THE TIRE ON STEEL MOLD. MANY WRAPPINGS OF THE STOUT FIBER INCREASE THE STRENGTH OF THE CASINGS.

tions gives an idea of the gathering of the rubber. Fig. 2 shows the biscuits in the stock room of a tire factory.

Until the writer visited a tire factory he had a hazy sort of notion that the crude rubber was dumped into a large melting pot and boiled. But he was entirely wrong. Crude rubber, as it is received at the tire factory, contains more or less dirt, usually in the shape of sand, dried leaves and twigs. These foreign substances are removed by washing the gum, which is soaked in warm water and taken into a machine called a cracker. In this machine the crude rubber is masticated and subjected to a continual flow of water, washing away most of the foreign substances. The work of completing the removal of foreign matter is carried on in a washer. The pure gum is finally run through a rolling machine and spread out in sheets on linen. These sheets must be dried three or four weeks. The next step is mixing the crude rubber with compounding ingredients. Herein lie some of the secrets of the tire factory. The chemist in the mixing room weighs out the ingredients to the fractional part of an ounce. In the work rooms the entire mass is worked up upon rollers until it becomes a plastic whole.

Rubberizing the cloth which goes into tires is done by means of a frictioning machine, which grinds the plastic rubber into the fabric at high pressure and impregnates it thoroughly with the gum. The fabric for the breaker strips and canvas plies is first held at great heat, in order to be thoroughly dry. Then it is ready to be wound into the calenders, which "friction" the rubber into the fabric.

There are three huge rolls on this frictioning machine, the middle revolving at high speed and the lower at low speed. By the difference in the speed of the rolls the rubber is thoroughly worked into the cloth, which winds on one roll as the rubber revolves on the drum opposite. Casings for automomile tires are built up around molds formed like a wheel. Strips of the heavily rubberized canvas of varying lengths, according to the circumference of the tire to be built, form the first layer in the building up of a shoe. These layers have been sewed so that they form a continuous piece and then are worked around the mold. Around this inner layer go the various plies of canvas, until the breaker strip is inserted. Plies of rubber are added for the tread until the whole is built up in the form that it is designed to take.

This tire, mold and all, is carried away to be weighed, because it must come up to a certain standard. This process so briefly described is one of the most important of all in tire building. In the curing room, to which the tire and mold go for the final step in the process, there is a part of the work in the factory which is its own special device. It applies to the way in which the casing is held in the shell before it goes into the vulcanizer. Those tires which are designed to have a wrapped tread go under a spiral machine, which winds a narrow strip of canvas all around the tread. Then the casings are placed in the shells and put into the curing ovens, where they remain until the process is completed. In the mold the raised letters of the trade-mark and the figures of the sizes are embossed on them.

The upper picture in Fig. 4, shown herewith, shows where the big rubber biscuits are crushed, washed and rolled into sheets. The center picture of this group gives a view of the drying room where the air is constantly changed by huge electric fans. While the space shown herewith does not appear to be large, the pure gum hung up to dry represents a small fortune. In the lower picture of this group expert workmen are compounding various kinds of rubber in big calender machines.

The most careful system of inspection must be used in a tire factory. This is especially true of the fabric, and Fig. 3 shows an inspector looking for broken threads, grease spots, cotton hulls and other defects. The best tires contain the finest grade of Sea Island cotton. Fabric as shown in Fig. 3 has not yet been treated with gum. It is important that this fabric be carefully dried and this drying is so carefully timed that no moisture remains to interfere with the perfect union of fabric and rubber, while the fabrics retain their natural oil for long life and tensile strength. In the calender rollers the pure gum is forced into every thread of the fabric and here again the watchful inspector is ever on the job.

While the casing of a tire is a combination of pure rubber chemically treated and fabric, the inner tube is pure rubber alone. Tubes are made up of sheet rubber of the very finest quality, rolled very thin and built up in layers. It would be much easier and cheaper to roll out one sheet the required thickness, but this would not have the strength of five or six thin plies. The greatest care is taken by expert workmen in the inserting of the valve and in the uniting of the ends of the tubes.

The trade now demands the safety tread, at least for the back tires, and many careful drivers use safety treads for all four. The safety tread gives an added wearing surface which adds to the life of the tire. If one wants to go to the expense of buying the cord tires they will get added value in additional miles. Tire making is a definite system and workmen in the manufactories are expert and competent. The tire may be slighted by a poor quality of rubber or fabric, by incompetent inspection in any department, by cutting down the number of layers of fabric, by improper treatment of the rubber compound, etc. It is true in tire buying, as in almost every other line, that the purchaser must look to the good name which a manufacturer has established. Tires cannot be bought on looks or feel or weight. It is on account of these facts that manufacturers offer a guarantee to protect the purchaser against imperfections in manufacture. Tire makers admit their responsibility does not end with the sale of a tire and they are united in trying to make good their product even after it leaves their hands. To get the best possible mileage out of a tire the user must cooperate by the observance of simple, though important, regulations. The writer is indebted to the Motor Age for the following excellent advice to car drivers who wish to lengthen the life of their tires:

Careful Driving. First—Avoid ruts as much as possible. They affect the side walls of the tire, since the rubber at this place is considerably thinner and less wear-resisting than on the tread, it will soon be worn through to the fabric. After this happens, the fabric is exposed and is likely to deteriorate very rapidly.

Second—When brakes are applied too suddenly and the wheels locked, the car will often continue in motion with the result that either one or both of the rear wheels slide. Since rubber is considerably softer and more yielding than the road surface, the result of this sliding will be noticed on the tread of the tire, because the sliding along the ground will generally scrape off part of the tread rubber.

Third—Car-track riding shortens the life of the tires because of the constant chafing that takes place between the upper part of the rail and the tire. It should be avoided at all times.

Fourth—If you notice one of the front tires beginning to wear down exceedingly fast, it is well to have the wheels measured up for alignment immediately.

If the two front wheels do not run exactly parallel, one of them is always subject to a drag or a diagonal grind which soon wears down the tread excessively.

The Care of Tubes—The principal thing to watch about tubes is the application. Whenever you insert a tube in a casing be sure that there are no wrinkles in it. The best way to do this is to inflate the tube slightly so that all the wrinkles will be taken up before it is applied into the casing.

There is always a certain amount of heat generated between the casing and the tube. To take care of this heat it is customary to apply a light coat of talc to the tube before it is inserted into the tire. This coating of talc, however, should be light. Whenever it becomes too thick, it has a detrimental effect on the tube.

The Care of Rims.—It is a good idea to keep the rims of the tires as free as possible from all rust because rust will affect the tube. To do this, it is only necessary once in about every six months to remove the tires and tubes and to clean the rims with a wire brush. After that has been done, it is a good plan to coat the rims with graphite. Of course, this means considerable work. However, it is bound to help prolong the life of the tire.

Careful selection of tires and careful treatment of tires means lower cost of mileage.

Why Gamble with Your Hog Profits?

Only a **Sterile** (Germ-free) Hog Cholera Serum is **Absolutely Safe.** Why Risk Infecting Your Herd? Mulford Refined Hog Cholera Serum **is Sterile.**

YOUR own keen business instinct and your veterinarian, who values his reputation, will both prompt you to use nothing but a sterile serum on your hogs. Veterinarians and hog-raisers have always recognized the necessity for a refined, sterile (germ-free), filtered serum, free from all bacteria and solid particles. Mulford Refined Hog Cholera Serum is the only one which meets all these requirements.

The quality of Mulford Refined Hog Cholera Serum is assured by the same scientific care used in preparing Mulford serums and antitoxins for human use, and its **potency is proved** by the prescribed Government test. Mulford Refined Serum **is freed from every germ** and every particle of solid matter by the new Mulford process.

Mulford Refined Hog Cholera Serum

Potent—Sterile—Filtered—Unlike Other Serums

Properly administered, Mulford Refined Serum **cannot** infect your hogs, is promptly and completely absorbed by the animal and **cannot** cause cysts or abscesses.

There is now no need to risk using a Serum containing useless, solid material and germs, which may cause disease. Mulford Refined Serum is absolutely safe and costs 2 cents per c.c., no more than the better makes of unrefined serum. Send for Free Booklet No. 9 **—CONSULT YOUR VETERINARIAN.**

DAIRY

Waupaca Cow-Testing Meeting.

The annual picnic of the Waupaca and Butternnut Ridge Cow-Testing Association was held at the H. C. Frihart farm, June 14th. There was a fine program of local talent, and music by the Baldwin Mills Band. Prof. C. E. Lee, of the Dairy and Food Commission, delivered an address on "What makes Wisconsin the best dairy state in the Union?" The question was answered in part by Mr. Lee as follows:

Because every man, woman and child has pulled together for the past forty years. How are we going to keep Wisconsin at the top in dairying? By putting a product of high standard on the market. How are we going to get the milk, butter and cheese of a high standard? By every farmer and every member of the family co-operating with the creamery man. The farmer must deliver a better grade of cream and milk and the creamery man must run his creamery in a more sanitary way. It will benefit the farmers and the creamery men to clean up, for the consumers will learn where they can get good butter and they will demand it and will pay a higher price for it. I have received letters asking where to get good butter and I can recommend a creamery that is making good butter. They can demand the top prices. The fellow who will not clean up has got to take a back seat and take what he can get. It is up to the farmers to put on the market a clean product and see that your creamery is clean. Don't sell your cream for the same price as the fellow who is putting a dirty product on the market. If the women and children could do all the milking we would get a better grade of milk, butter, and cheese than we have now and in ten years we would have a better grade of cows and calves. There is only one-twenty-fifth of a pound of cheese and one-twelfth of butter and about one-half glass of milk consumed per day per capita in this country. If we could guarantee cleanliness and double this amount it would mean thousands of dollars to the farmers of Wisconsin. Why the annual per capita consumption of beer in the United States is estimated at more than double that of milk, butter and cheese combined. If you can change this around what will it mean to the people of this country? The New York market bought a ship load of butter from Denmark and paid 24 cents per pound more than they could buy Wisconsin butter for. I asked them why they paid more for Danish butter when Wisconsin butter was better. They told me they knew more about Wisconsin butter than I did and when Wisconsin could put on the market a grade of butter as good as can be bought from Denmark they would buy all of Wisconsin's butter. It is time we woke up and cleaned up and not only have the name of the largest dairy state, but the most sanitary dairy state in the world. We have it in our own hands if we will just co-operate and condemn the cream of the fellow who could clean up, but won't.

Manitowoc County Association.

To the Editor:—I herewith submit the first monthly report of the Manitowoc County Cow-Testing Association No. 1. The best cow in the association for the month was a registered cow owned by Julius Linstedt, of the Lakeside Farm, Manitowoc. We have forty-eight cows which made forty pounds of butter fat or over. I anticipate that this number will be greatly increased next month. We have some fine cows, both pure bred and grades. I am sending The Wisconsin Farmer a picture of Idyl Korndyke Ormsby 260962, owned by Adolph Otto, a member of our association. Mr. Otto resides at Valders. He is president of our association and did his first A. R. O. work this spring with the result that his young cow above named, aged two years and one month, produced 428.5 pounds of milk testing 3.6 per cent, or 19.27 pounds of butter fat in seven days. Mr. Otto also has one cow, Lady Oak Homestead Mutual De Kol, 112,140, an aged cow, which produced twenty-one pounds of butter fat in seven days. The following is the record of cows in the new association which produced forty-five pounds of butter fot or over the first month ending May 17, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Julius Linstedt

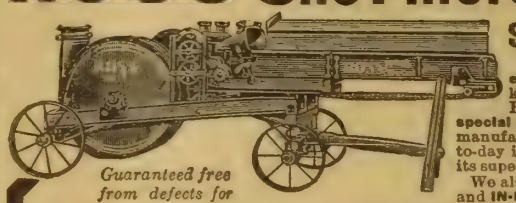
SHARPLES
SUCTION-FEED
CREAM SEPARATOR

Saves cream now lost by all other separators (see Purdue Bulletin No. 116) because it skims clean at widely varying speeds. Delivers *even* cream at all speeds. Simple Tubular bowl — no discs. Write for book *"Velvet" for Dairymen.*

The Sharples Separator Co. - West Chester, Pa.
Chicago San Francisco Portland Toronto 55

ROSS Ensilage Cutters and Silo Fillers with Blower



Guaranteed free from defects for life of machine.

STEEL Cutting Apparatus and Blower (instead of cast iron).

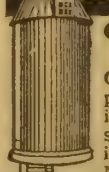
Especially designed for steam power and extraordinarily heavy work. Steel is known to be stronger than cast iron. The Ross is not an ordinary fodder cutter but a **special made machine for filling silos.** We have manufactured the Ross for **65 years,** and to-day it will by its own actions prove its superiority. Write for catalog.

We also manufacture the **Ross Wood** and **IN-DE-STR-UCT-O Metal Silo.**

THE E. W. ROSS CO., Box 154 Springfield, O.

ROSS

Use A Wood Tire Hollow Wall Silo



Cannot Sag, Blow Down or Rot.

Cures and preserves silage perfectly. Prevents freezing of silage. Easy to construct. A real farm building, permanent and rigid.

No hoops to get loose. No guy wires. No staves to shrink or swell, but a smooth, double wall from base to roof, the inner wall being of *California Redwood.*

Guaranteed for 20 Years

"But Lasts a Lifetime"

The patented wood "tire" is built up of inch boards, and shipped in sections. The boards overlap in step formation at both ends. When nailed together, these sections form a ring of unusual strength. The silo frame forms its own scaffolding.

WOOD TIRE
AIR SPACE
INNER WALL
OUTER WALL

Send for our folder which shows how the Wood Tire Silo is built, and also what owners think of them. A postal brings it. Write today.

Silverize Your Silage

Give It a Mold-Proof Cut

If you are feeding dairy cows or fat stock, by all means get our booklet on Silverized Silage. Know the money-making reasons why corn cut in Silver's "Ohio" makes better silage—packs air-tight in the silo—properly ferments—contains greater food value for stock. Write us—today—for book telling all about it and the unbeatable construction of

Silver's "Ohio"
The Logical Silo Filler

Backed by 62 years' manufacturing experience. The big leader—used by most of the Experiment Stations and Colleges. Famous features. Automatic beater feed—spring-proof knives, direct drive—friction reverse, single lever control—low speed explosion-proof blower fan, enormous capacity on fine cut. 7 sizes—40 to 300 tons a day. 4 h. p. gas to big tractor power. Book FREE. Write today.

THE SILVER MFG. CO.
312 Broadway Salem, Ohio
"Modern Silage Methods" 264 pages, 10c.

TABER LINED SILO

Non-Shrinkable—Practically Everlasting, Rot-Proof, Worm-Proof, Storm-Proof, Acid-Proof.

The latest improved Silo. A wood stave Silo; choice of lumber. Entire Silo creosoted. Special paint for outside. Acid-Proof Lining for coating inside after erection. The finest door and door frame on the market.

Special Galvanized Steel Octagon Roof—best manufactured.

Write Dept. D for Catalogue

Manufactured by

TABER LUMBER CO., KEOKUK, IA.
ESTABLISHED 1855
AGENTS WANTED IMMEDIATELY.

The Beaver Storm-Proof Silo

STANDS like an oak. Our eight cross rod anchor system and double angle iron inner hoops, top and bottom, together with self-adjusting hoops, make our silo non-collapsible when not in use.

For the past ten years thousands of satisfied farmers have been using the Beaver Silo. Now why aren't **you?** Write for circular "F."

BEAVER SILO & BOX MFG. CO. INC.
BEAVER DAM, WISCONSIN

Make Your Silo Earn $50 To $100 More Every Year.

Winner Opening Silo Roof

Increases silo profits, eliminates waste space, adds 21 tons to the capacity of a 14x32 ft. silo. Insures you a **full** silo when you start to feed. Made of heavy galvanized steel. Can't blow off. Fits any silo. Order through any silo mfr., dealer or agent or direct from us. Write for free Winner catalog today.

QUESTIONS AND ANSWERS.

Power for an Electric Fan.

What size fan can I use that will take about as much current as a forty-watt electric lamp?

Answer.—An eight-inch fan requires about twenty watts; a ten-inch fan about forty watts; and a twelve-inch fan about sixty watts.

Running Wires Under Ground.

Is it all right to put electric wires underground in galvanized or black iron pipe? Why is lead the best?

Answer.—It is all right to use iron pipe, either black or galvanized. Black pipe should be painted with asphaltum paint to prevent rusting. Lead pipe is better, because it does not rust.

A Wiring Question.

Please show how to wire a Type H Atwater-Kent system to a Ford flywheel magneto, if this can be done.

Answer. — Install a three-point switch on the dash. Wire from the magneto to the switch, and from the battery to the switch; then from the switch to the battery terminal of the Atwater-Kent coil; then from the coil to the center post of the sparker. Put the switch on battery when starting or running slowly. The Atwater-Kent Company do not recommend the use of the magneto.

Poor Compression.

I have a 1912 Ford car that has very poor compression. The cylinders are not scored. Would it be advisable to put in pistons .025 inch oversize without reboring the cylinders? The car runs well, but takes too much oil and gasoline.

Answer.—We doubt that you would be able to get pistons .025 inch oversize into your cylinders without reboring the cylinders. A new set of rings would probably remedy your trouble, if correctly fitted to the cylinders and pistons. New rings seldom give good results when first put in; they must be run several days to wear themselves in. Pistons about .002 inch or .004 inch oversize might be used in your motor; and these pistons might stop the oil from working up.

Strength of Electrolyte.

I have an Alamo light plant, sixteen cells, thirty volts. The electrolyte in some of the cells does not register 1.250 on the hydrometer. When the battery is used about a week, the strongest ones drop from 1.260 to 1.240. The weak ones will drop down to 1.160 or lower. The weak ones will not rise higher than 1.200 to 1.220. Would it be all right to take out some of the electrolyte, and replace it with acid in the weak cells and rain water in the strong cells?

Answer.—The strength of the electrolyte increases as the battery becomes changed, and decreases as the battery discharges. It is not necessary that it be exactly the same in all the cells. When the battery is fully charged the specific gravity should be 1.200 to 1.240. When the battery is discharged the electrolyte should test not less than 1.150. If it tests less than 1.150 remove it and add enough sulphuric acid to make it test about 1.190. Pour it back at once into the cell. Remove some of the electrolyte from the cells testing over 1.240 when fully charged, and add rain water.

Setting Valves With Wolf Reverse.

How do you set the valves on an engine having a Wolf reverse gear? How much lead should be given the valve? Could one get more lead by setting the reverse lever forward one or two notches on the quadrant?

Answer.—Adjust the length of the reach rod between the reverse lever and the block guide so that the valve travels equally at each end of the stroke as the engine is turned over. Then turn the flywheel in the direction the engine runs until the piston is exactly on head end dead center. Move the reverse lever from one end of the quadrant to the other, and measure the "slip" of the valve on its seat. Do likewise with the piston on crank end dead center. The slip of the valve should be the same in both cases. If not shift the eccentric to make it so. The "slip" or movement of the valve on its seat should be in the same direction as the direction in which the reverse lever is moved. The slip should be about one-sixteenth of an inch. If there is no slip or if the slip is in the wrong direction, the pedestal is too low.

Various leads are used. About one-thirty-second of an inch on the head end should give good results. The lead may be changed by adjusting the length of the valve rod.

Running Lights from a Motor.

Can a set of lights be run from a small motor operated by dry cells?

Answer.—No. A generator is used to furnish current for lights. A motor receives current and delivers power at the belt pulley; a generator receives power at the belt pulley and delivers current. Direct current machines usually may be used as either motor or generator. Your motor is probably too small to use as a generator. It would not do for lighting.

Connecting a "Trouble Light."

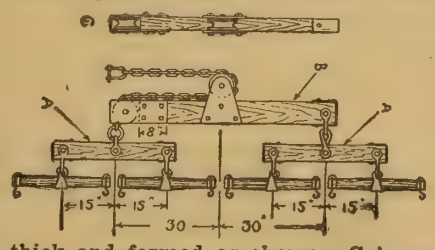
I have a Metz car with Gray and Davis lighting and starting system. I want to connect a light in the dash, and have it so that I can take it out and use it as a trouble light. How can I connect it? What size light shall I use?

Answer.—The following instructions apply to any car: If one terminal of your battery is grounded connect a light wire to the wire running from the dash switch to the headlights, and run the light wire to the socket on the dash for the trouble lamp. From the other terminal of the lamp socket, run a wire to the frame of the auto, and ground it on the frame. If there is no ground wire on the battery run the wire from the lamp socket to the return battery wire. If the socket is fixed on the dash you can have an extension made of flexible drop cord with a plug at one end and a socket at the other. About ten feet long is a convenient length. Use a two-candle power, six-volt lamp.

A Four-Horse Evener.

Please show me how to make a four-horse hitch for a sixteen-inch sulky plow. I wish to work my horses abreast, but bo not want to put one of them on the plowed ground.

Answer.—The figure shows how such an evener may be made. It consists of four single trees, two double trees, AA, and a heavy double tree, B, connected as shown. The chain pulleys—about four inches diameter—are supported by pieces of strap iron or boiler plate about one-fourth inch



thick and formed as shown. C is an edge view of B with the chain removed. Hickory is the best material for the wooden parts. The single-trees should be about two and three-eighths inches diameter at the middle, and taper to about one and three-fourths inches at the ends. Make the doubletrees AA about three and three-fourths inches wide and one and three-fourths inches thick. Make doubletree B nearly six inches wide, one and three-fourths inches thick; its over all length being about sixty inches.

Motor Heats.

I would like your advice on my Ford car. It heats and the water boils after every trip. The engine runs and pulls all right. I have h .d the valves ground and the radiator flushed out. Have drained the oil from the crank case, and washed it out with kerosene. The spark plugs and the fan are all right, but it keeps on heating just the same.

Answer.—The first thing to look for is a loose fan belt. If the belt is loose it will not drive the fan at the proper speed to keep the motor cool. Test the timing of the spark. It should occur just after the compression dead center—about one-half inch past center on the flywheel, measured on the rim—when the spark lever is in fully retarded position. If the spark occurs too late the motor will heat. This is probably not your trouble, as you have plenty of power, and a motor usually lacks power when the spark is too late. Your trouble may be due to an accumulation of carbon in the top part of the cylinder. Remove the cylinder head and scrape all the carbon out of the combustion chamber. This is one of the most common causes of heating of Ford motors. The carbon is caused by too much oil working up above the pistons, or too much gasoline being used. Running with too much gasoline will also cause overheating. To stop the oil from working up do not carry too high an oil level in the crank case. If the motor is old, new pistons or new rings may be required.

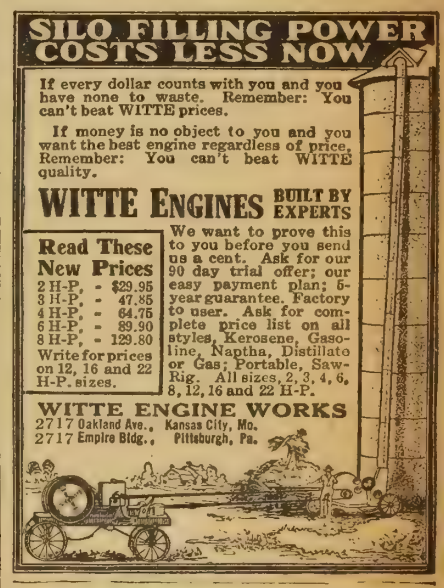
Wireless Telegraph.

I would like to have the following questions answered about making a wireless telegraph. How high should the aerial be, and what size wire should be used to make it? Instead of telephone receivers, could I use a buzzer? Should I use a jump spark coil, or a make-and-break coil? How many batteries should I use to send messages about 150 miles? Where can I get the wireless code?

Answer.—The higher the aerial the better it works. The aerials on ships are usually 100 feet high, while land stations usually have aerials 150 feet high. Aerials forty feet high will work, but not as efficiently.

The size of wire does not make much difference. Number 6 B. S. G. copper wire, either insulated or bare, is generally used, though for a small system Number 10 might be used. Use telephone receivers. The buzzer might not be sensitive enough. Use a jump spark coil that will give a spark several inches long. You could not send messages 150 miles by battery current. It would take a fifteen-horse-power generator to supply the current necessary to send a message that distance. Two to four cells should operate a receiving set, however. "Wireless Telegraph," written by A. E. Kennelly and published by Moffatt, Yard and Company, of New York City, is a good book for amateurs and contains the code. You can probably obtain it from your book dealer, or direct from the publishers.

In fifteen principal producing states watermelon acreage is 100,965, compared with 96,508 acres last year, and cantaloupe acreage is 41,273, compared with 41,981 acres last year, the agricultural department reports. Georgia, with 27,663 acres, leads the states in watermelon growing and California, with 14,935 acres, leads in cantaloupe culture. Other states with big watermelon areas are: Florida, 20,626 acres; Texas, 17,406, and Oklahoma, 6,195. Largest acreages in cantaloupes were: Georgia, 5,987; Colorado, 3,687; Arkansas, 2,675; Arizona, 2,000, and Texas, 1,107.



Group Picture Taken at the Annual Meeting of the M

LIVE STOCK SUMMER MEETINGS

Wisconsin Farmer Representatives Report Most Enthusiastic Summer Meetings of Breeders in Many Wisconsin Counties Within the Past Few Weeks.

Breeders of Three Counties Meet.

To the Editor:—The 14th of June, 1916, was certainly a beautiful day, and we Holstein breeders of Green Lake, Winnebago and Waushara counties celebrated it with our annual picnic at the farm of I. Noveau, seven miles southeast of Berlin. There were about 100 present, and many more would have been there had their cornfields not demanded their immediate attention. After spending a pleasant hour at the dinner table, which was spread upon the lawn, the president's wife, Mrs. Betry, gave the address of welcome, followed by a paper from Professor Humphrey on dairying, read by the secretary. Many have heard Mr. Humphrey several times and were glad to listen to a paper prepared by him. Doctor Kutchin, of Green Lake, then entertained the crowd with an excellent talk on things of much interest to the live dairyman, and laid particular stress on the important part the Holstein cow played in dairying in Wisconsin. It was voted to have Doctor Kutchin address the meeting again next year.

B. F. Brewer, W. Michaels, J. Root & Son, H. Betry & Son, and I. Noveau, members of the Tri-County Holstein Breeders' Association, recently sold to California buyers a carload of good registered Holstein cattle, and there are buyers in two or three times a week shipping out grades, and the Holstein business seems very active in this part of Wisconsin.

I will be pleased to answer any inquiries about Holsteins in this locality.

W. Michaels, Secretary.

BOYS' JUDGING CONTEST COMMON AT WISCONSIN SUMMER PICNICS.

Waupaca and Portage Guernsey Breeders' Meeting.

The annual picnic of the Waupaca and Portage Guernsey Breeders' Association was held recently at the L. E. Gordon farm near Nelsonville. It was reported that about 1,000 people were present. More than 150 automobiles were counted.

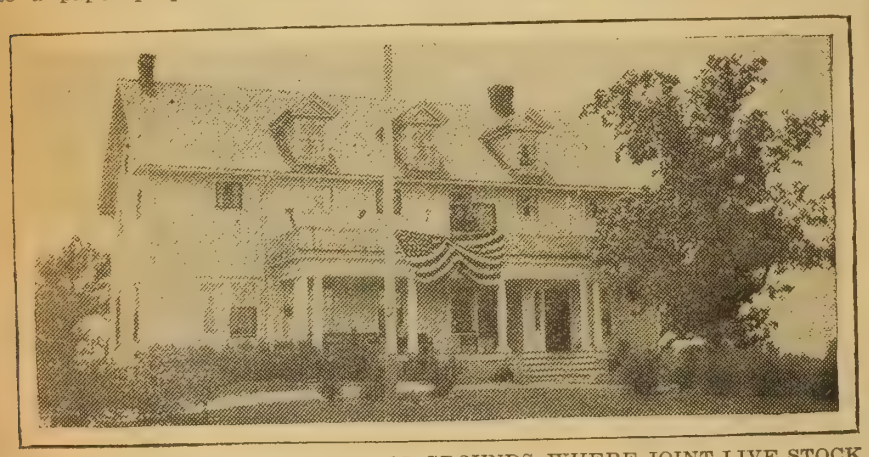
A cattle-judging contest was held in the forenoon, under the direction of J. M. Coyner, agricultural agent of Portage county, assisted by Arthur Peterson, of Nelsonville. The condition of the cattle and the rapidity and orderliness with which the contest was run off under Mr. Coyner's supervision compared favorably with similar contests often seen at state fairs.

The winners of the senior contest, men eighteen to thirty years of age, and the prizes were as follows: First prize, veterinarian's douche syringe, donated by Dr. Swan, St. Point, Donald R. Burnham, Waupaca; second prize, sprayer and one gallon fly dip, Guy Gilman, Plover; third prize, barn cleaner, Wm. Tesh, Plover. The junior prizes were awarded as follows: First, milk scale, Walter Waller; second, saw, Irving Peterson; third, hammer, Royal Gordon.

After a picnic dinner the afternoon program was opened with several selections by the Nelsonville band. Mr. Gordon, president of the association, then introduced Prof. J. L. Tormey, of the University of Wisconsin. Prof. Tormey spoke of the advantages of stock and dairy farming over grain farming. He referred to the great work done by Prof. Babcock, in perfecting a simple and accurate test for determining the per cent of butter fat in milk. He said: "The Babcock test made dairying a business instead of an occupation." The speaker also mentioned the co-operative testing associations and the farmers' institute corps as being important factors in increasing the dairy industry in this state, until at the present time the dairy products produced annually are worth over $100,000,000. After his address, Prof. Tormey took the afternoon train for Madison, in order to attend commencement Wednesday.

Dr. Eliasen, state veterinarian, then spoke upon the diseases cattle are subject to. He gave special emphasis

GATHERING TO TALK OVER THE FINE POINTS IN PURE-BRED STOCK.



ON THE WISCONSIN FARM SCHOOL GROUNDS, WHERE JOINT LIVE STOCK MEETING WAS HELD.

WAUKESHA COUNTY BOYS WHO ARE LEARNING EARLY TO DISCRIMINATE BETWEEN DAIRY COWS.

c County Holstein-Friesian Breeders' Association.

to the fact that Wisconsin dairy cattle are, as a rule, free from tuberculosis. The number of animals responding positively to the test in this state is so low that Wisconsin ranks as one of the cleanest and freest from disease. Dr. Eliasen called attention to the fact that the hoof-and-mouth disease was much less serious in this state than in the states to the east and south.

A Nelsonville sextet of young people, assisted by the audience, sang "America."

Mr. H. D. Griswold, of West Salem, one of the best known Guernsey breeders of the state, and a prominent Farmers' Institute conductor, then spoke. His talk was largely a comparison between the early days of Wisconsin dairying and the newer, better conditions of today. Mr. Griswold is a man who, through thirty-five years of dairying, has kept the enthusiasm and optimism of youth.

THE FLAG WAS VERY MUCH IN EVIDENCE AT A NUMBER OF THE SUMMER MEETINGS THIS YEAR.

Ozaukee County Holstein Meeting.

Another interesting, but not so largely attended, meeting was the gathering of the Ozaukee county Holstein breeders at Port Washington on Saturday, June 24th. Mr. Irwin spoke here on cooperation, and was preceded by Mr. A. J. Glover, of Hoard's Dairyman, who pointed out that all the great advances made in dairying in Wisconsin may be traced back to the organization of the Wisconsin Dairymen's Association in 1872.

The Ozaukee county meeting fell on a warm, sunshiny day, which kept the members away, instead of inducing them to attend, as it was a splendid day to be at work in the fields and one which could hardly be well spent otherwise. Spring has been late; corn was weedy; some had to be replanted, and as Mr. Glover said: It was a healthy sign to see the farmers at work in the field. The Ozaukee County Association is increasing its membership rapidly and Mr. C. F. Dineen, secretary, reports great interest in the Cow-Testing Association, which was started a few months ago in the Cedarburg neighborhood.

Portage-Prairie Holstein Meeting.

The Portage-Prairie Holstein-Friesian Association, held on Friday, June 23d, was the most successful breeders' picnic ever held in the eastern part of Columbia county. It was held at the Bonnie Mead Stock Farm of Mr. J. W. Hutchinson, president of the association, a few miles from Randolph, and the success which attended the meeting speaks volumes for the activity of breeders in this community and the increased interest in better dairying. Between 300 and 400 persons were in attendance and listened to addresses by Mr. Hutchinson, Mr. John B. Irwin, of Minnesota, and Mr. E. L. Aderhold, of the state dairy and food commission.

The Portage-Prairie Association only recently sprung into the limelight, but by the success of this meeting, it has taken a place alongside the best community associations in the state. Mr. Hutchinson is a very active, enthusiastic president, and is leaving nothing undone to make this association a representative of all the Holstein breeders in that territory, and also to put this district on the map through advertising and publicity. Mr. Hutchinson is regarded as a pioneer in the community, having brought in the highest-priced bull in that section.

THE FATHERS LOOK ON WITH INTEREST WHILE BOYS JUDGE LIVE STOCK.

As one breeder expressed it, when farmers are found paying $25 service fees, as they are doing in that community to use a good bull, it is a sure sign they are working towards the best in dairying, and will be heard from in the future.

Plans for the picnic were all carried out very nicely. Every breeder brought his own lunch, which was augmented with hot coffee served on the farm, and following the afternoon meeting there was a baseball game. The Holland band from Friesland supplied the music, and Mr. Irwin talked along the lines of constructive breeding and co-operation while Mr. Aderhold, in his interesting way, pointed out the benefits to Wisconsin's dairy interests from the licensing of cheese and butter factories.

AUTOMOBILES FILLED THE BARN YARDS AT THE SUMMER MEETING PLACES.

Langlade Jersey Meeting.

The Langlade county Jersey breeders' picnic, held at Chas. Schotte's farm, brought out a good crowd of farmers and their families. Better than two hundred people were present in spite of the heavy rain, which set in right after dinner and continued throughout the afternoon.

Addresses were given by J. E. Showers, of Delavan, on the Jersey, and C. H. Everett on agricultural possibilities. The East Ackley mixed quartet, Messrs. Walsh and Duenk, and Mrs. Walsh and Miss Helmbrecht sang. Mary and Donald O'Conner gave recitations. Because of the rain, the program was adjourned from the attractive grove on the Eau Claire river bank, which Mr. Schotte had gone to a great deal of trouble to fix up, to his large barn.

Farmers came from a considerable distance to attend the picnic, Peck, Ackley, Polar, Rolling, Antigo, Aniwa, Embarrass, and Harrison being represented. The fact that Rolling Grange co-operated helped materially to swell the attendance. It was the first picnic of the kind to be held in the community, and farmers showed their interest by turning out most generously. To those who did not bring their dinner the ladies provided lunch at a normal charge. The day's program was concluded by a barn dance in the evening. A large crowd of young folks turned out for this.

ON C. C. BOYCE FARM, WAUPACA COUNTY—THIS FARM SUPPLIES MILK FOR WISCONSIN VETERANS' HOME.

Ann Arbor Baler
"THE BALER FOR BUSINESS"

Low Cost of Upkeep

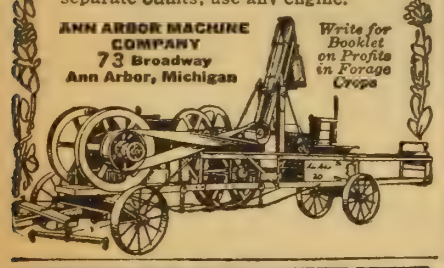
Ann Arbor Balers built 30 years ago are *still in good service today*. The average upkeep expense of all Ann Arbor Balers in use last year was *only* $2.95.

Why have anything less than the leader for your baling? It costs *less* to run an Ann Arbor, and you get *better work*. You bale more hay with the same power and crew—get neater bales. Ann Arbor Balers are adapted for baling any kind of hay.

Power presses in combination or separate outfits; use any engine.

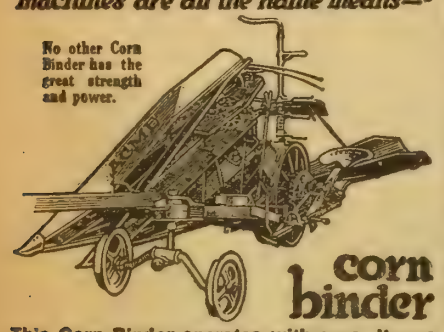
ANN ARBOR MACHINE COMPANY
73 Broadway
Ann Arbor, Michigan

Write for Booklet on Profits in Forage Crops



"ACME—
machines are all the name means—"

No other Corn Binder has the great strength and power.



corn binder

This Corn Binder operates with ease—it runs quietly and does its work in a certain dependable fashion. The Acme cuts, elevates and binds the corn in its natural vertical position—it gives the results you want.

The Acme machine has so many new and novel features that you should get our catalog—study over what we have to say—you'll come to the conclusion that there's only ONE real Corn Binder and that is the ACME. Write for the CATALOG TODAY.

Mnfrs. of Harvesting Machines and Hay Tools

90 DAY HOT WEATHER OFFER
Combination Pumping Outfit $44.95

Save time—save money—save strength! Don't toil and sweat this hot weather pumping by hand. Don't depend on a windmill! Let this Galloway outfit keep your stock always supplied with fresh water. It's simple and easy to set up, and anyone can operate it. Outfit consists of 2 1-4 H. P. engine, heavy double geared pump-jack with tight and loose pulley and 16 ft. of belt.

WATER COOLED—WONT HEAT—WONT FREEZE

Will run all day in any weather. Economical on fuel. Can be used for running churn, washer, separators, saws, feed grinders and other job work.
Special 90-day price of complete outfit only $44.95. Regular price $47.19. Buy now and save $2.24 over our regular price and $10 to $45 over prices of other outfits. Installment price $52.50. Installment orders shipped on receipt of $5.25; balance $5.25 monthly.

SPECIFICATIONS
ENGINE SPEED 450 rev. per min. BORE 4 1-8 in. STROKE 5 in. DRIVE PULLEY 6 in. diameter, 4 in. face. Floor space 26x28 in. Wt. 525 lbs. Add $6 for engine mounted on trucks; $7 for Webster Oscillating magneto.

This Low Cash Price For 90 Days Only—Order Today—We Take All Risk
Order this outfit today and try it 30 days. We return your money and pay freight both ways if not satisfied. Quick shipments. Don't bother to write. Just clip this ad. and pin it to your check or money order and mail to us.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

SYNOPSIS OF PRECEDING CHAPTERS

The prologue, or Part First, is laid in New Orleans and concerns two brothers, one of whom has proved faithless to the girl who trusted him, the other one marrying the girl and giving her the name and home which the faithless brother had well-nigh robbed her of. The scene then shifts to the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold and "bunking" with an old Scotchman, named MacDougall, his only companion, save his beloved horse, Mowitza. A neighbor, named Hardy, comes to their camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. He becomes well acquainted with his employer's sister, Rachel Hardy, who takes a great interest in him and is much in his company, although she is warned by her friends that his name is probably an assumed one and that he may, indeed, be a squaw man, with an Indian wife living somewhere, as nothing is known of him.

CHAPTER IV.

Banked Fires.

SHE did not look masculine, however, as she stood there, slender and brown from the tan of the winds; the unruly, fluffy hair clustering around a face and caressing a neck that was essentially womanly in every curve; only, slight as the form seemed, one could find strong points in the depth of chest and solid look of the shoulders; a veteran of the roads would say those same points in a bit of horse flesh would denote capacity for endurance, and, added to the strong-looking hand and the mockery latent in the level eyes, they completed a personality that she had all her life heard called queer. And with a smile that reflected that term she watched those two married lovers stroll arm in arm to where the freshly killed deer lay. Glancing at the group, she missed the face of their guide, a face she had seen much of since that sunrise in the Kootenai. Across the sward a little way the horses were picketed, and Mowitza's graceful head was bent in search for the most luscious clusters of the bunch grass; but Mowitza's master was not to be seen. She had heard him speak, the night before, of signs of grizzlies around the shank of the mountain, and wondered if he had started on a lone hunt for them. She was conscious of a half-resentful feeling that he had not given her a chance of going along, when he knew she wanted to see everything possible in this out-of-door life in the hills.

So, in some ill humor, she walked aimlessly across the grass where Clara's lecture on the conventionalities had been delivered; and pushing ahead under the close-knit boughs, she was walking away from the rest, led by that spirit of exploration that comes naturally to one in a wilderness, and parting a wide-spreading clump of laurel, was about to wedge her way through it, when directly on the other side of that green wall she saw Genesee, whom she had supposed was alone after a grizzly. Was he asleep? He was lying face downward under the woven green roof that makes twilight in the cedars. The girl stopped, about to retrace her steps quietly, when a sudden thought made her look at him more closely, with a devout prayer in her heart that he was asleep, and asleep soundly; for her quick eyes had measured the short distance between that resting place and the scene of the conversation of a few minutes ago. She tried wildly to remember what Clara had said about him, and, most of all, what answers Clara had received. She had no doubt said things altogether idiotic, just from a spirit of controversy, and here the man had been within a few feet of them all the time! She felt like saying something desperately, expressively masculine; but instead of easing her feelings in that manner she was forced to complete silence and a stealthy retreat.

Was he asleep or only resting? The uncertainty was aggravating. And a veritable Psyche, she could not resist the temptation of taking a last, sharp look. She leaned forward ever so little to ascertain, and thus lost her chance of retreating unseen; for among the low-hanging branches was one on which there were no needles of green—a bare, straggling limb with twigs like the fingers of black skeletons. In bending forward she felt one of them fasten itself in her hair; tugging blindly and wildly, at last she loosened their impish clutches, and left as trophy to the tree some erratic, light-brown hair and—she gave up in despair as she saw it—her cap, that swung backward and forward, just out of reach.

If it only staid there for the present she would not care so much; but it was so tantalizingly insecure, hanging by a mere thread, and almost directly above the man. Fascinated by the uncertainty she stood still. Would it stay where it was? Would it fall?

The silent query was soon answered—it fell, dropped lightly down on the man's shoulders, and he, raising his head from the folded arms, showed a face from which the girl took a step back in astonishment. He had not been asleep; but to the girl's eyes he looked like a man who had been either fighting or weeping. She had never seen a face so changed, telling so surely of some war of the emotions. He lay in the shadow, one hand involuntarily lifting itself as a shade for his eyes while he looked up at her.

"Well!" The tone was gruff, almost hoarse; it was as unlike him as his face at that moment, and Rachel Hardy wondered, blankly, if he was drunk—it was about the only reasonable explanation she could give herself. But even with that she could not be satisfied; there was too much quick anger at the thought—not anger alone, but a decided feeling of disappointment in the man. To be sure, she had been influenced by no one to have faith in him; still—someway—

"Are you—are you ill, Mr. Genesee?" she asked at last.

"Not that I know of."

What a bear the man was! she thought; what need was there to answer a civil question in that tone. It made her just antagonistic enough not to care so much if his feelings had been hurt by Clara's remarks, and she asked bluntly:

"Have you been here long?"

"Some time."

"Awake?"

"Well, yes," and he made a queer sound in his throat, half grunt, half laugh; "I reckon I—was—awake."

The slow, half bitter words impelled her to continue:

"Then you—you heard the—the conversation over there?"

He looked at her, and she thought his eyes were pretty steady for a drunken man's.

"Well, yes," he repeated, "I reckon—I—heard it."

All her temper blazed up at the deliberate confession. If he had seemed embarrassed or wounded she would have felt sorry; but this stoicism angered her, as the idea of drunkenness had done—perhaps because each set herself and her feelings aside—I do not know, but that may have been the reason; she was a woman.

"And you deliberately lay there and listened," she burst out wrathfully, "and let us say all sorts of things, no doubt, when it was your place as a gentleman to let us know you were here? I—I would not have taken you for an eavesdropper, Mr. Jack Genesee!" And with this tirade she turned to make her way back through the laurel.

"Here!"

She obeyed the command in his voice, thinking as she did so, how quick the man was to get on his feet. In a stride he was beside her, his hand outstretched to stop her; but it was not necessary, his tone had done that, and he thrust both hands into the pockets of his hunting coat.

"Stop just where you are for a minute, Miss," he said, looking down at her; "and don't be so infernally quick about making a judge and jury of yourself—and you look just now as if you'd like to be sheriff, too. I make no pretense of being a gentleman of culture, so you can save yourself the trouble of telling me the duty of one. What little polish I ever had has been knocked off in ten years of hill life out here. I'm not used to talking to ladies and my ways may seem mighty rough to you; but I want you to know I wasn't listening—I would have got away if I could, but I—was paralyzed."

"What?" Her tone was coldly unbelieving.

His manner was collected enough now. He was talking soberly, if rather brusquely; but—that strange look in his face at first? and the eyes that burned as if for the lack of tears?—those were things not yet understood.

"Yes," he continued, "that's what I was, I reckon. I heard what she said; she is right, too, when she says I'm no fit company for a lady. I hadn't thought of it before, and it started me to thinking—thinking fast—and I just lay still there and forgot everything only those words; and then I heard the things you said—mighty kind they were, too, but I wasn't thinking of them much—only trying to see myself as people of your sort would see me if they knew me as I do, and I concluded I would pan out pretty small; then I heard something else that was good for me, but bitter to take. And then—" His voice grew uncertain; he was not looking at the girl, but straight ahead of him, his features softened, his eyes half closed at some memory.

"And then what, Genesee?" She felt a little sorry for him as he was speaking—a little kinder since he had owned his own unworthiness. A touch of remorse even led her to lay a couple of fingers on the sleeve of his coat, to remind him of her presence as she repeated: "And then?"

He glanced down at the fingers—the glance made the hand drop to her side very quickly—and then he coolly brushed his sleeve carefully with the other hand.

"Then for a little bit I was let get a glimpse of what heaven on earth might mean to a man, if he hadn't locked the door against himself and dropped into hell instead. This is a blind trail I'm leading on, is it, Miss?—all tso-lo. Well, it doesn't matter; you would have to drop into a pretty deep gulch yourself before you could understand, and you'll never do that—the Almighty forbid!" he added, energetically. "You belong to the mountains and the high places, and you're too sure-footed not to stay there. You can go now. I only stopped you to say that my listening mightn't have been in as mean a spirit as you judged. Judging things you don't understand is bad business anyway—let it alone."

With that admonition he turned away, striding through the laurel growth and spruce and on down the mountain, leaving Miss Hardy feeling more lectured and astonished than she had often been in her life.

"Well, upon my word!"

It is not an original exclamation—she was not equal to any original thought just then; but for some time after his disappearance that was all she could find to say, and she said it standing still there, bareheaded and puzzled; then, gathering up her faculties and her skirts, she made her way back through the low growth and sat down where Clara and herself had sat only a little while before.

"And Clara says he doesn't talk!" she soliloquized, with a faint smile about her lips. "Not talk!"—he did not give me a chance to say a word, even if I had wanted to. I feel decidedly 'sat upon,' as Hen would say, and I suppose I deserved it."

Then she missed her cap and went to look for it; but it was gone. She remembered seeing it in his hand; he

must have forgotten and taken it with him. Then she sat down again, and all the time his words, and the way he had said them, kept ringing in her head—"Judging things you don't understand is bad business."

Of course, he was right; but it seemed strange for her to be taken to task by a man like that on such a subject—an uncouth miner and hunter in the Indian hills. But was he quite uncouth? While he made her stop and listen, his earnestness had overleaped that slurred manner of speech that belongs to the ignorant of culture. His words had been clearer cut. There had been the ring of finished steel in his voice, not the thud of iron in the ore, and it had cut clear a path of revelations. The man, then, could do more than ride magnificently, and look a Launcelot in buckskin—he could think—how deeply and wildly had been shown by the haggard face she had seen. But the cause of it? Even his disjointed explanation had given her no clue.

"Tso-lo," she thought, repeating the Chinook word he had used; "that means to lose one's way—to wander in the dark. Well, he was right. That is what I am doing;" and then she laughed half mockingly at herself as she added: "And Mr. Jack Genesee has started me on the path—and started me bareheaded. Oh, dear, what a muddle! I wonder where my cap is, and I wonder where the man went to, and I wonder—I wonder what he meant by a glimpse of heaven. I haven't seen any signs of it."

But she had seen it—seen it and laughed mockingly, unbelievingly, while the man had by sight been touched into a great heartache of desolation. And yet it was a commonplace thing they had seen; only two lives bound together by the wish of their hearts and a wedding ring—an affection so honest that its fondness could be frankly shown to the world.

* * * * * *

That evening Genesee came back to camp looking tired and told Ivans there was a grizzly waiting to be skinned in a gully not far off. He had a hard tussle after it and was too tired to see to the pelt; and then he turned to Miss Hardy and drew her cap from his pocket.

"I picked it up back there in the brush and forgot to give it to you before going out," he said.

That was all—no look or manner that showed any remembrance of their conversation. And for the next two days the girl saw very little of their guide; no more long gallops ahead of the party. Mr. Genesee had taken a sedate turn and remained close to the rest and if any of the ladies received more of his attention than another it was Mrs. Hardy.

He had for her something approaching veneration. In her tender, half-shy love of her husband she seemed to him as the Madonna to those of the Roman church—a symbol of something holy—of a purity of affection unknown to the rough man of the hills. Unpretentious little Tillie would have been amazed if she had suspected the pedestal she occupied in the imagination of this dark-faced fellow, whose only affection seemed to be lavished on Mowitza. Clara always looked at him somewhat askance; and in passing a party of Indians who were berry hunting in the mountains she noted suspiciously his ready speech in their own language, and the decided deference paid him by them; the stare of the squaws filled her with forebodings of covetousness for her raiment—of which several of them rather stood in need, though the weather was warm—and that night was passed by her waking dreams of an Indian massacre, with their guide as a leader of the enemy.

"Do you know them very well?" asked Miss Hardy, riding up to Genesee. "Is it entirely Chinook they are talking? Let me try my knowledge of it. I should like to speak to them in their jargon. Can I?"

"You can try. Here's a Siwash, a friend of mine, who is as near a Boston (American) man as any of them—try him."

And, under Genesee's tuition, she asked several questions about the berry yield in the hills and the distance to markets where belts could be sold; and the Indian answered briefly, expressing distance as much by the sweep of his hand toward the West as by the adjective "siah-si-ah;" and Miss Hardy, well satisfied with her knowledge, would have liked to add to her possessions the necklace of bear's claws that adorned the bronze throat of the gentleman who answered her questions.

The squaws slouched around the camp, curious and dirty, here and there a half-breed showing the paler blood through olive skin. The younger women or girls were a shade less repulsive than their mothers, but none showed material for a romance of Indian life. They were as spiritless as ill-kept cattle.

Back of some tethered ponies Miss Hardy noticed a dark form dodging as if to avoid being seen. A squaw possessed of shyness was such a direct contradiction of those she had seen that the white girl found herself watching the Indian one with a sort of curiosity—in fact, she rode her horse over in the direction of the ponies, thinking the form she had a glimpse of was only a child; but it was not, for back of the ponies it lay flat to the ground as a snake, only the head raised the eyes meeting those of Miss Hardy with a half scowl, and the bright-headed dress outlining the form of a girl perhaps twenty years old, and dressed much neater than any she had seen in the camp. By the light tinge of color she was evidently a half-breed, and the white girl was about to turn her horse's head, when, with a low exclamation, the other seized a blanket that had slipped from a pony, and quick as a flash had rolled her plump form in it, head and heels, and dropped like one asleep, face downward, in the trampled grass.

Wondering at the sudden hiding and its cause Miss Hardy turned away and met Genesee, who was riding toward her.

"Shaky-looking stock," he commented, supposing she was looking at the ponies. "The rest are going on, Miss; we have to do some traveling to reach our last camp by nightfall."

As they rode away Miss Hardy turned for a last look at that mummy-looking form by the ponies. It apparently had not moved. She wondered if it was Genesee the girl was hiding from, and if so, why? Was their guide one of those heroes of the border whose face is a thing of terror to Indian foe? And was the half-breed girl one of the few timid ones? She could not answer her own questions and something kept her from speaking to Genesee of it; in fact, she did not speak to him of anything with the same freedom since that conversation by the laurel bushes.

Sometimes she would laugh a little to herself as she thought of how he had brushed off that coat sleeve; it had angered her, amused her and puzzled her. That entire scene seemed a perplexing, unreal sort of an affair to her sometimes, especially when looking at their guide as he went about the commonplace duties in the camp or on the trail. An undemonstrative, prosaic individual she knew he appeared to the rest; laconic and decided when he did speak, but not a cheery companion. To her always, after that day, he was a suggestion of a crater in which the fires were banked.

(To be continued.)

LAW QUESTIONS.

Keeping Bees.

A Subscriber, Milwaukee, Wis.—I keep bees on my place and I wish to know if the law requires me to keep my hives a certain distance from the line between my land and the lands of others, and whether owners of adjoining land can prevent me by law from keeping bees on my place?

Answer.—The law does not require you to keep your bees at any specified distance from the lands of other people. Owners of adjoining lands cannot prevent you from keeping bees on your place.

Private Road in Wisconsin.

A Subcriber, Pound, Wis.—A bought seventy acres of land in onto county, Wis. This land is just inside of the line between Oconto county and Marinette county. The nearest public road to the land is a quarter of a mile distant in Oconto county. A public road in Marinette county is half a mile distant. A wants an outlet to the Marinette county road. He is at present traveling across B's land to the public road and B wants to collect damages from him for doing so. Can A compel Marinette county or Oconto county to open a road from his land to the public road, and if so how must he proceed?

Answer.—A cannot compel either county to open a road for him at public expense. To get a road from his place to the public road, he must present to the supervisors of the town in which his land is located, a sworn statement setting forth its description and stating that it is entirely surrounded by the lands of others, and hearing and notify the parties, and assess the damages to be paid by A for such road, and when A pays the amount so assessed, the road may be opened.

As an antidote for fungous diseases as well as scalicide, lime mixed with a little sulphur and stirred into the soil about plants is excellent. This should be used frequently, and when the soil is rather dry.

How do You Fill Your Silo?

CORN—always a wonderful crop—is more of a king each year. That is not to be wondered at since ensilage is proving so cheap and economical a feed. More and more we realize the extra profits in the all-year-'round use of green fodder.

In the same proportion **International** ensilage cutters have grown popular. Here are some **International** big points.

There's the famous special concave knife, with inward shear cut, cutting at outer edge first, hence the greatest volume is cut near the shaft with least power. The handy knife grinder that is always on the machine grinds one of the two sets of knives while the other is working. It's a water stone, leaving the temper in the knives. Perfect adjustment of knife blades to cutter bar can always be maintained, saving power and doing good work. Heavy channel steel frame, trussed, hot riveted, so that working parts can't get out of line. Self-feed keeps cutting always even; silage may be cut in various lengths. Blower pipe is adjustable to any angle; silage may be delivered to a silo of any height. Full equipment of safety devices.

These features make the **International** the best to buy. See the dealer who sells them. Write to us for the interesting booklet, "A Silo for Every Farm."

If none of the above combinations suit you, you can make your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World, and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wisconsin.

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Proper Food For Young Children.

Simple bills of fare, helpful recipes and practical directions for the preparations of foods for children between three and six years of age are contained in Farmers' Bulletin 717, "Food for Young Children," issued by the United States Department of Agriculture, Washington, D. C. The bulletin, which was written by Caroline L. Hunt, under the direction of Dr. C. F. Langworthy, chief of the office of home economics, is easy to understand and should be helpful to mothers who are trying so to care for their children that they will grow up into stalwart and efficient men and women.

The author has carefully avoided the use of all technical dietary terms or systems of grouping and has so classified foods that any mother can meet the following definition of a satisfactory diet for a little child:

"A little child three to six years of age who is carefully fed in accordance with his bodily needs (as these are now understood) receives every day at least one food from each of the following groups:

1. Milk and dishes made chiefly of milk (most important of the group as regards children's diet), meat, fish, poultry, eggs and meat substitutes.
2. Bread and other cereal foods.
3. Butter and other wholesome fats.
4. Vegetables and fruits.
5. Simple sweets."

The relation of food to the condition of the bowels is also an important matter. Grains, particularly those containing the outer or branny layers or coats, are laxative; so, too, are such mildly acid fruits as apples, oranges and grape fruit. So far, therefore, as the important matter of preventing constipation is concerned, coarse grains and mildly acid fruits serve the same purpose. When fruits are to be obtained in abundance the kind of cereal served is not of great importance. When they are not the coarser cereals should be used.

The basis of a child's diet should be clean, whole milk—at least a quart a day. Such milk, in addition to water, contains about half a cupful of the very best food substances—butter fat, milk, sugar, lime and other materials needed by the child to make muscle, bones and teeth. In addition, milk contains a substance thought to promote growth by helping the body make good use of other foods. Where good, whole milk is not obtainable, clean, fresh skim milk supplies these substances with the exception of the butter fat, and is, of course, preferable to dirty or questionable whole milk. Milk, however, contains very little iron and therefore spinach and other green vegetables and egg yolks, which are rich in iron, combine well with milk.

The child should drink the milk with the chill taken off, or should consume his full quart a day with cereals and in milk toast, cocoa, milk soups and stews, in cereal puddings, egg-and-milk puddings, custards, junkets, or simple ice creams. Milk stews may be made with vegetables or fish, or to vary the diet these things can be combined with cream sauce and served on milk toast. The bulletin therefore gives a large number of recipes for the preparation of various milk dishes which will help children consume the requisite amount of milk without growing tired of this valuable food. Those for milk soups will be found particularly useful, as they give the mother an easy means of preparing many vegetables which are essential in the child's diet.

Well-baked bread and thoroughly-cooked breakfast cereals are both good for children, and with milk should make up a large part of the diet. Bread and cereal mushes are to a certain extent interchangeable, but neither can take the place of milk, meat, eggs, fruits and vegetables. An ordinary slice of bread is equal in food value to about half a cupful of boiled or steamed cereals and about a cupful of flaked or puffed cereal. Different kinds of bread may be used for variety.

The yeast-raised bread given to young children should be at least a day old and should be toasted or twice baked. Hot breads are likely to be swallowed in large pieces and are therefore not desirable. Hot breads which are almost all crust, like thin tea biscuits or crisp rolls, are best of the hot varieties.

Under the heading, "Meat, Fish, Poultry, Eggs and Meat Substitutes" the author of this bulletin states that in some families children do not get enough meat and eggs; in others they get too much. A good general rule commonly followed is to give a child two years old or over an egg every other day and about the same amount (two ounces) of meat, fish or poultry on the intervening days. Where meat is omitted, care must be taken to see that other suitable foods take its place—preferably an extra amount of milk and eggs.

Fried meats should not be given to a child, because they are likely to be overcooked and tough and also because the fat may be scorched and thus changed in composition. Scorched fat is almost certain to be hurtful to children.

Meat is best given as broiled chop meat or in simple meat stews combined with vegetables. Poultry may be boiled and served with rice. When roasted only the tender portions should be fed. Highly seasoned stuffing or rich gravy should not be given to a young child.

Dried and other fish and oysters may be used in milk stews. Well-boiled fish is good for variety. Eggs must not be overcooked or they are likely to cause indigestion. The best way to cook eggs is to poach or coddle them. Scrambled eggs may be served occasionally, provided care is taken not to scorch the fat or to overcook the eggs.

Fat is an important part of the food of children. There is more than an ounce of fat (at least two and one-half level tablespoonfuls) in a quart of whole milk. If the healthy child is given a quart of milk, has butter on his bread, and meat or an egg once a day, he gets enough fat, and that which he received is in wholesome form. It is well, therefore, not to give such fatty foods as pastry, fried meats and vegetables, and doughnuts or rich cakes. If the child is constipated, the occasional use of cream or salad oil is desirable, for fat in abundance is laxative.

Bacon or salt pork, cut very thin and carefully cooked, may be given occasionally. It is very important not to burn the fat.

Vegetables and fruits are grouped together because they are similar in that both supply iron, lime and other mineral matters, and also mild acids. Vegetables are an important but often a neglected part of the child's diet. They should be served at least once a day, as they help to keep the bowels in good condition. Fruits are important for their flavoring, for their laxative effects and doubtless for other reasons, and should be served in some form at least once a day. Fruit juices and the pulp of cooked fruit, baked apples and pears, and stewed prunes are the safest. The child should not be allowed to eat the skins unless they have been made very tender by cooking.

Sugar is a desirable part of the diet provided it is given in simple sweets and not allowed to take the place of other foods and spoil the child's appetite. Simple sweets are such things as lump sugar, maple sugar, sirups, honey and plain candy, and those foods in which sugar is combined in simple forms with fruit juices (in lemonade, water ice, jelly, etc.), with flour or starch, as in plain cakes (cup cake, sponge cake, cookies), and with fruit, as in jams, marmalades, and similar things.

Questions Every Mother Should Ask Herself.

AT THE END of the bulletin, as a review, the author suggests that at the close of the day every mother might ask herself the following questions, to be sure that she has considered the important things in feeding her children:

Did each child take about a quart of milk in one form or another?

Have I taken pains to see that the milk that comes to my house has been handled in a clean way?

If I was obliged to serve skim milk for the sake of cleanness or economy, did I supply a little extra fat in some other way?

Were the fats which I gave the child of the wholesome kind found in milk, cream, butter, and salad oils, or of the unwholesome kind found in doughnuts and other fried foods?

Did I make good use of all skim milk by using it in the preparation of cereal mushes, puddings, or otherwise?

Were all cereal foods thoroughly cooked?

Was the bread soggy? If so, was it because the loaves were too large, or because they were not cooked long enough?

Did I take pains to get a variety of foods from the cereal group by serving a cereal mush once during the day?

Did I keep in mind that while cereals are good foods in themselves, they do not take the place of meat, milk, eggs, fruit, and vegetables?

Did I keep in mind that children who do not have plenty of fruit and vegetables need wholesome bread and whole grains served in other ways?

Did each child have an egg or an equivalent amount of meat, fish, or poultry?

Did any child have more than this of flesh foods or eggs? If so, might the money not have been better spent for fruits or vegetables?

If I was unable to get milk, meat, fish, poultry, or eggs, did I serve dried beans, or other legumes thoroughly cooked and carefully seasoned?

Were vegetables and fruits both on the child's bill of fare once during the day? If not, was it because we have not taken pains to raise them in our home garden?

Did either the fruit or the vegetable disagree with the child? If so, ought I to have cooked it more thoroughly, chopped it more finely, or have removed the skins or seeds?

Was the child given sweets between meals, or anything that tempted him to eat when he was not hungry?

Was he allowed to eat sweets when he should have been drinking milk or eating cereals, meat, eggs, fruit, or vegetables?

Were the sweets given to the child simple, i. e., unmixed with much fat or with hard substances difficult to chew, and not highly flavored?

Was the food served in a neat and orderly way and did the child take time to chew his food properly?

Wants Quilt and Cross-Stitch Designs.

To the Editor:—Will some of the readers of the sewing department send in some quilt and cross-stitch designs? I am a reader of your paper and enjoy it very much.

Miss G. L.

Asks For Rug Patterns.

To the Editor:—Will some reader kindly send in a pattern or two of rugs where one may use up men's coats and trousers? I would like a pattern of an oval rug, although another will be appreciated.

Miss E. E. A.

Ink Stains.

To the Editor:—I have been reading your department for a long time and have found many interesting and helpful things in it. I would like to ask if any of the readers can tell me how to get ink and indelible pencil stains out of white clothes. I am asking you because I want to be sure I am doing the right thing before I begin.

Miss M. J. D.

Clearing Out the Corners.

The corners and out-of-the-way places in the house always will be a constant source of annoyance to even the best housekeeper. For as the years pass a greater accumulation of those things "too good to throw away" is stored in these places until the housewife finds some day that every cranny is filled to the utmost with a lot of worthless "junk." Then she begins to consider a means of distribution which usually ends in wholesale burning and hauling to the dump heap.

Look into your closet. Just peep back into that dark corner. How many old gowns and antiquated pairs of trousers hang there? Some of the clothing may be useless and some just out of style. At any rate it no longer furnishes any part of your family's attire. The useless garments may as well be consigned to the ash heap, but those having perfectly good material in them should be given a chance to help out some needy person. There are any number of people in every community actually suffering for clothing. Why not pass some of your comforts along to those who have less? And do it before the clothing has hung around so long that it is a musty, moth-eaten piece of ancient history which has caused you no small amount of annoyance by being continually in the way. At the end of a season one should know perfectly well whether a garment is to be worn the next year.

But the closet is only one place where the housewife is confronted with the accumulation of years. Look, good housewife, on the top shelf of your kitchen cupboard. How many antiquated and even chipped pieces of pottery have you there, preserved for no special purpose, but simply because they still have their original shape of dish? How many times in one year have you had them down for any utilitarian purpose? Not once. Have you enjoyed moving them and washing their checked surfaces every time the cupboards are cleaned? You have pondered many times over their uselessness, but that frugal spirit handed down from your New England ancestors has stayed the wasteful hand which said "discard them." But when you take into consideration the energy you expend upon them, moving them and washing them, you are outraging the word saving. Shut your eyes if necessary, but after the first innova-

tion you will find enjoyment in the discarding process.

Again, look in your bags of pieces, your stocking bags, your dresser drawers and your desks. You will find rolls of cloth which belong to the dresses you had when you were first married. There will be stockings which it would take more time to mend than to earn a new pair. Your desk may contain old letters which have no possible value.

The magazines and papers have furnished no small problem. Here again is an opportunity for sharing luxuries with those less favored ones. Save your magazines, but every year or even semiannually give them to someone who has none. Many families are hungry for good stories and good solid reading. You may think when you placed that stack of Ladies' Home Journals, Literary Digests, Harper's, Century, Review of Reviews or what not in the attic that you are going to enjoy them on the rainy afternoons of the future. But you will not.

So, good housewife, have a clearing. Bring some of your eighteenth century gowns or suits of your husband to light from the dark recesses of your closet. Don't mind if hubby discovers some day and inquires where his wedding suit has disappeared to. There are some things a man doesn't need to know. Relieve your cupboard shelves of the burden which shames them. Dig a deep hole in the ground and bury their burdens along with the tin cans that clutter your yard or are hauled away to make some roadside an eyesore to the passer-by. Do not have an attic full of old magazines that someone would love to read. Relieve your house, your mind, your conscience. Make your home brighter and cheerier and at the same time add to the comfort of your less fortunate neighbor.—[Louise Overbaugh in Iowa Agriculturist.

Recipes.

Creamed Fish in Rice Cases.—Line a buttered mold about a quarter of an inch thick with boiled rice. Fill with chopped or boned salmon or other fish to which thick white sauce has been added. Brown slightly in the oven, turn from the mold, and serve.

Potato Salad.—Slice cold potatoes, a small onion and one cold, hard-boiled egg into a dish and sprinkle a little pepper and salt over this. Take three tablespoonfuls of vinegar, one of butter, one-quarter teaspoonful of mustard and heat it over boiling water. Let it get cold and pour over potatoes. Prepare in the morning and serve at night.

Turnips With Brown Sauce.—Peel the turnips and cut them in pieces like orange quarters. Boil in salted water till done and drain well. Have ready your pork steak or chops for dinner and when done lift out and pour off most of the fat, being careful to save the brown crumbs. Into this hot fat put one pint of milk into which has been stirred one tablespoon of flour smooth and creamy. Shake and stir until the brown sauce is rich and savory and then pour over the turnips. Serve at once.

Baked Turnips.—Peel and boil the turnips in salted water till tender. Put them into a bowl and hack with a knife until they are fine. Place in a baking dish with one cup of sweet milk to each quart of turnip and two tablespoons of butter. Mix well and add pepper. Smooth over the top and bake in a moderate oven until the top looks brown.

Spice Cookies.—Cream together two and one-half cups of sugar, one-half cup of butter; add to this two eggs, one cup seeded raisins chopped fine, one-half teaspoon soda, one teaspoon ginger, one teaspoon allspice, one teaspoon cinnamon, two cups flour. Bake in moderate oven.

Chile.—Slice and fry out one-half pound of fresh suet in a large skillet and add one sliced onion and one pound of round steak that has been ground in the food chopper. After cooking a few minutes in the suet add one small can of tomatoes and let cook together a few minutes before adding three cups of kidney beans, which have been well cooked. Salt to taste, then put in a tablespoon of chile powder and cook slowly all together twenty minutes.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Friends With Baby Robins.

Dear Young Folks:—I have been reading almost all of the nice letters you have written, and I think it is my turn to write to you.

I am twelve years old and am in the eighth grade at school. I live on a 120-acre farm, but my papa does not farm all of the land; he rents some of it to our neighbor. We have four head of horses and thirteen head of cattle, but we only milk two cows. Sometimes I help milk. We have forty-seven little pigs. We also raise Buff Orpington chickens. I have one cat, which is twelve years old. I have fourteen little chickens which I am going to raise this summer and sell in the fall.

This spring a pair of robins built their nest in a tree close to our house; there were four blue eggs, but only three eggs hatched. In about two more weeks I looked in the nest and there was only one little robin in it, and when he heard me coming, he jumped out of the nest. I put him in it two times, but he jumped out every time, so I put him in the nest the third time, and he stayed. The next morning I saw him sitting on the edge of the nest. I guess he will be ready to fly after a little bit if he doesn't jump down again, for the old cat might get him.

I can crochet and play on the piano.

I will ask you a riddle: What would make more noise than a pig under a gate? Can you guess it? Perhaps I will write again some other time.

—Mae.

A Good Speller.

Dear Young Folks:—I enjoy your letters very much. I am ten years old and in the sixth grade at school.

I live on a farm of eighty acres. We have twenty-one or twenty-two sheep, one cow, seven head of horses, and lots of hogs.

I go to Sunday school almost every Sunday.

Last year I went to school eight months, and did not miss a single word in my spelling class. I can crochet, embroider, play on the organ and piano, and cook.

I have two cats and one dog. My dog is named Ring. She was named that because she has a white ring around her neck. She is yellow.

I will ask you a riddle: What has four fingers and a thumb, but is neither flesh, fish, nor bone?

—Marguerite.

This Boy Likes to Read.

Dear Young Folks:—I like to read the letters in the Young Folks' department every week, and would like to join your circle.

I am fourteen years old and in the eighth grade. I go a quarter of a mile to school in an independent district. My school was out the 5th of May.

I live on a 220-acre farm, seven miles from town. We have five work horses and my pony (Cricket), and I have a calf.

I read thirty-six books last year, and have read ten this year. I have fifteen books of my own, and I have an album, too.

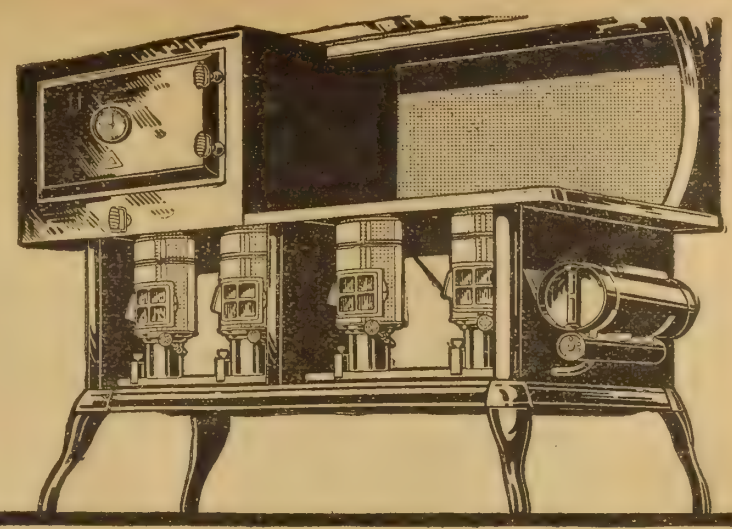
I go fishing lots of times. There are two rivers, two or three ponds that have fish in, and three creeks.

—Raymond.

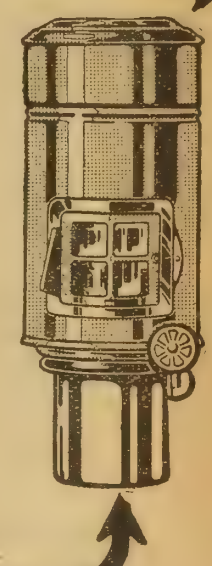
Likes to Help Mother.

Dear Young Folks:—I certainly enjoy reading the Young Folks' page, and I want to join your circle. I live on a farm of 400 acres. I have one sister and three brothers. I am nine years old, and in the third grade at school. I live a mile from school and walk it every morning and night. I enjoy going very much.

We have one dog named Rover, a cat named Tom, and a Shetland pony that I can ride. His name is Dandy. Mamma has 200 incubator chickens. I like to help feed them, and I help do other little things for her. I love to live on a farm. Perhaps I will write again sometime. —Earl.



The Long, Blue Chimney
of the
NEW
PERFECTION
OIL COOK STOVES



is the key to perfect combustion. This most desired of cook stoves is easily filled and is always ready.

Think of the comfort of touching a match to a wick and in a minute having any kind of a fire you want.

Think of doing away with excessive heat of a coal or wood-burning range, and at about one-third the cost.

Think of no blackened cooking utensils to scour.

You can't afford to be without one this summer. Write for booklet giving full description and prices of the various types.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

The Thessalonian Christians.

LESSON TEXT—I Thess. 2:17-20; 4:13-18; 5:14-24.

GOLDEN TEXT—If we believe that Jesus died and rose again, even so them also that are fallen asleep in Jesus will God bring with him.—I Thess. 4:14 R. V.

This epistle is probably one of the earliest of Paul's letters (A. D. 50-53?). It links itself closely with the seventeenth chapter of the Book of Acts. Driven from Berea, Paul goes to Athens and later to Corinth, while Timothy returns to Thessalonica and carries a report to Paul at Corinth. Whereupon, perhaps within six months, Paul writes his epistle. A study of the two letters addressed to this church teaches us how Paul advised and instructed his Gentile converts. The first is a particularly cheerful, positive and helpful exhortation.

I. Thanksgiving and Testimony (1: 1-90; 2:17-20). (1) **Salutation** (1:1) The phrase, "the church of the Thessalonians, which is in God" is nowhere else used. Some think it to be unique because Paul had so little to condemn or to criticize. The deity of Jesus Christ and that grace and peace proceed from God is clearly set forth. (2) **Thanksgiving** (vv. 2 and 3) (a) For works of faith; (b) for their "labor of love," and (c) their "patience" (endurance). That these works were "in the sight of God" is evidence of their genuineness, and such spiritual fruitage awakened (3) **Knowledge** in Paul's mind (v. 4). They were "elected" to salvation, holiness and likeness to Jesus (vv. 5-9; I Pet 1:2; Eph. 1:4, 5; Rom. 8:29). (4) **Testimony** (vv. 6-10). Paul could appeal to the known conduct of himself and his friends to substantiate, to prove, the standing of those candidates for holiness who had been "elected." His words had not come to them in mere exhortation and eloquence but "also in power," which governed their conduct. This was not to win applause, but in his own case he labored for their sakes (v. 5) and in their case they had received the word "with joy" in the midst of affliction to the end that they became examples (patterns or types; literally, like the far-echoing notes of a trumpet) (v. 7) to all that dwelt in the regions thereabout. Their obedience, consistency and missionary spirit (vv. 8-10) sounded forth everywhere, and all that

FILET CROCHET
100 DESIGNS
In Book Form

This book contains over one hundred of the most beautiful, practical, prettiest, newest and oldest designs of Filet Crochet and Cross Stitch ever published.

This Splendid, Handsomely Illustrated Book includes everything from the simplest to the most intricate and exquisite designs.

Yokes and Towels

With the beautiful illustrations and simple instructions all designs can easily be worked by novice or expert.

Complete Book, Including Postage and Packing Only 12c.

needed to be done was to say, "Behold, the Church of Thessalonica!" (5) **Paul's glory and joy** (2:17-20). Paul sets forth his character as a Christian worker (2:1-16). (a) His physical boldness (vv. 1-2); (b) his faithful, impartial teaching (vv. 3-6), affectionately kind (7-8), unselfish, working for his own support (v. 9), holy and consistent (13-16). No one "had anything on him," and such a life dares to be bold, though it is not free from persecution (v. 15). (6) **Paul's desire** (2:17-20). He here sets forth why this letter was written. Separated from them by persecution, he desires to return and supply the things they were yet lacking, and to see face to face those whom he loved. Satan prevented (v. 18) doubtless using the bitter persecution stirred up against him. He had, therefore, sent Timothy from Berea to comfort them (3:15), who had made such a good report (3:1-10) that it urged Paul to greater prayer (vv. 11-13) on their behalf.

II. **Ignorance Illumined** (4:13-18). Paul rebukes certain sins (4:1-12), exhorting them to godliness and to love one another. He then touches upon a doctrine which was one of his strongest reasons for writing to these Thessalonians. The imminent return of Christ had been strongly emphasized, but in the months of Paul's absence some of their number had died; died without seeing Christ's promised glory. Would those who remained have any advantage over the dead saints when Christ should come? It is to set their thinking aright that Paul writes. This he does by outlining the great and blessed hope of the church in its "rapture" at Christ's coming. This is more clearly set forth here than anywhere else in the New Testament. Those who mourned over departed loved ones are not to "sorrow as those who had no hope." Jesus, the risen, everlasting Saviour and king, is certainly coming again in his kingdom of glory, "with a shout, with the voice of the archangel." Their sorrow is not that of the world, for those departed are but "sleeping" and will come back with Jesus when he comes. Together, they who sleep and we who are alive shall be caught up "to meet the Lord in the air," all to dwell together forevermore with the Lord.

Paul's description of the events of this second coming, this rapture of the church, has not yet been fulfilled, but he and the disciples were not mistaken as to its nearness, its imminence.

III. **The Hope of Church and State** (5:14-24). The letter closes with moral exhortations with reference to spiritual leaders, care of one another, the spirit of prayer; and he exhorts them not to "quench the Spirit" by despising prophesying, that preaching and testifying, which can be exercised by the weakest, feeblest member of the church if he be Spirit-endued.

Persons with a meat hunger who have been expecting that the grass-fed cattle would be in off the range this month or the next and would reduce the price of beef will be disappointed, says J. C. Lonergan, a Portland stockman. Mr. Lonergan has just made a circuit through the range country of Nevada, Idaho, Montana and Colorado, finding that everywhere the season is delayed. "Stockmen tell me they experienced the hardest winter in twenty years," he said. "The cattle on the range are in poor condition and it will be September before they will come in to the markets in any quantity. Beef will remain high in price until September, at the earliest."

While attempting to drive away a bumblebee which had settled on his knee, Sydney Brewster, of the fashionable colony at Glen Cove, L. I., wrecked his motor car against a tree. One of the six occupants, Miss Katherine Hall, of New York, was thrown to the ground and sustained a fractured leg. Brewster was taking his week-end guests for a short spin. When he took his hand from the wheel to brush the bee away he lost control of the car, which jumped the gutter, plowed through a picket fence and lodged in an apple orchard.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1780—A popular and comfortable breakfast sack and cap. The pattern is cut in 3 sizes: Small, medium and large and requires 3⅜ yards of 36-inch material for the sack and ⅞ yard for the cap for a medium size.

1267—A dainty infants' set, comprising, bonnet, coat, dress and wrapper. The pattern is cut in one size and requires: For the dress, 2¾ yards of 36-inch material. For the coat, 4¼ yards of 27-inch material. For the wrapper, 2⅝ yards of 27-inch material. For the cap, ½ yard of 24-inch material.

1768—Girls' dress with strapped plaits and with sleeve in either of two styles. The pattern is cut in 3 sizes: 2, 4 and 6 years. It requires 2⅝ yards of 44-inch material for a 4-year size.

1405—A new trim apron model. The pattern is cut in 3 sizes: Small, medium and large. It requires 5 yards of 36-inch material for a medium size.

1609—A pretty dress for the little miss, with or without bolero, with sleeve in either of two lengths, and with high or square neck edge. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3⅜ yards of 44-inch material for a 6-year size.

1781—A stylish summer gown. The pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 5 yards of 36-inch material for a 16-year size.

1767—A stylish dress for the little miss. Plaid gingham, striped seersucker or figured percale are nice for this style. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 4⅛ yards of 36-inch material for an 8-year size.

1760—An attactive negligee. This smart style is lovely for any of the pretty inexpensive crepes, lawns, organdies or voiles. The pattern is cut in 3 sizes: Small, medium and large. It requires 6¼ yards of 44-inch material for a medium size.

9716—Girls' underwaist and drawers. The pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires ¾ yard of 36-inch material for the waist and 1 yard for the drawers for a 6-year size.

Waist 1763-Skirt 1757—A chic summer frock. The waist pattern 1763 is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. The skirt pattern 1757 is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 7⅞ yards of 36-inch material for a 36-inch size. Two separate patterns, 10 cents for each pattern.

1772—A simple, attractive dress for home and porch. The pattern is cut in 6 sizes: 34, 36, 38, 40 42 and 44 inches bust measure. It requires 5½ yards of 44-inch material for a 36-inch size.

1779—A dainty dress for "party" or other occasions. The pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 3¼ yards of 44-inch material for the dress without fichu and flounces and 5¾ yards with fichu and flounces, for a 14-year size.

Live Stock Summer Meetings.

(Continued from page 13.)

In his address on the Jersey, Mr. Showers urged strongly the value of pure-bred sires in building up a herd. He gave a demonstration talk on the points of a good sire with Mr. Schotte's prize cow in the ring. "Such cows as this," he declared, "cannot be bred, save by the use of a pure-bred sire." The value of the Jersey, not only as a producer of a product rich in butter fat, but also as an economical producer were strongly emphasized. Despite severe weather conditions the Jersey will produce profitably if given a chance. Good feed and good care are necessary, of course.

Wisconsin Jersey Meeting.

The annual summer meeting and picnic of the Wisconsin Jersey Breeders' Association was held last week, this meeting proving to be one of the best ever held by the Jersey breeders of Wisconsin, and one which marks new enthusiasm for the Jersey cow in this state.

The meeting was held in two divisions this year, in order that breeders for all parts of the state might attend at the least expense and loss of time. The initial gathering was on Thursday, June 29th, at the Red Oak farm of Mr. F. R. Constance at Waupaca, and the second-day gathering was at the Fewacres farm of Mr. Frederic Underwood, at Wauwautosa, Milwaukee county. Both meetings were very successful, were well attended, and the greatest interest and enthusiasm prevailed.

Elaborate preparation had been made by both Mr. Constance and Mr. Underwood, but the weather was threatening at Waupaca, which, no doubt, cut down the attendance. A hard rain early that morning put the roads in bad condition, despite which many breeders drove in their cars from points seventy-five to 100 miles away. This is the spirit that prevailed at the meetings, and with new life in the American Jersey Cattle Club and an increased interest in the state association, the breeders feel that the Jersey is coming into her own again.

The writer has seldom attended a gathering where every visitor was made to feel more at home. The Commercial Club co-operated with the Waupaca County Jersey Breeders' Association and no stone was left unturned to make it an enjoyable and long-to-be-remembered occasion. The women who prepared the bounteous picnic lunch, which was spread at noon under the spreading elms of the Constance lawn, are entitled to credit for the large part they played in the success of the gathering, and the general verdict was that the Waupaca county breeders had more than covered themselves with honor.

Mr. F. F. Showers, of Delavan, state president, presided and ran off the interesting afternoon program with good speed. Music was supplied by an orchestra from the city and soloists from the neighboring farms, and the splendid speaking program was augmented by readings, etc., from Waupaca county girls and boys. Following the meeting the guests were taken by the Commercial Club for an auto trip over the city, and a ride on the "Chain of Lakes," Waupaca's summer resort. As this issue of The Wisconsin Farmer goes to press early, because of the July Fourth holiday, a more detailed report of both meetings will appear in next week's issue.

Dr. M. D. Munn, president of the American Jersey Cattle Club, was unable to attend because of pressure of other business in connection with boosting the Jersey cow, and in his place came Wallace MacMonnies, extension manager of the club, who gave a very enthusiastic talk on the Jersey cow as the most economical producer of butter fat, and the aims and purposes of the cattle club for the next year.

Mr. F. H. Scribner, of Rosendale, the well-known Jersey breeder, spoke on the virtues of the Jersey and discussed what he terms the three essentials in successful dairying—feeding, breeding and care. Mr. C. P. Norgord, commissioner of agriculture, discussed the plans for an accredited tuberculin test, a test with which our readers are more or less familiar. Mr. Harry Jenkins, of the Jersey Bulletin, talked on the value and need of publicity if the Jersey breed is to hold its supremacy. Prof. A. C. Oosterhuis, of the college of agriculture, gave a very interesting demonstration of the desirable and undesirable qualities in the dairy cow.

Mr. Constance gave the address of welcome, to which Mr. E. E. Wyatt, of Tomah, secretary of the state association, responded. Mr. H. C. Frihart, president of the Waupaca county association, spoke of the work in that county, and Mr. A. J. Peterson, of Eland, secretary of the Marathon & Shawano County Jersey Association, brought a word of enthusiasm from the breeders of those counties.

On the second day at Fewacres Farm, where the visitors were the guests of Mr. Underwood, Mr. Norgord, Mr. Oosterhuis, Mr. MacMonnies and Mr. Jenkins repeated their addresses of the first day. The program was made even more interesting by an added address from Mr. J. O. Emery, former dairy and food commissioner. Mr. Julius Ries, secretary of the Waukesha County Jersey Breeders' Association, gave the address of welcome, and the response was by Mr. W. H. Clark, of Rice Lake.

Washington County Holstein Meeting.

About 500 people attended the annual summer meeting of the Washington County Holstein Breeders' Association at Cedar Lawn Farm, near West Bend. Most of the visitors came in automobiles and about 150 machines were on the ground. At noon a basket picnic dinner was held. The Schroeders served coffee and cream to complete the meal.

After dinner Prof. G. C. Humphrey, of the University of Wisconsin, conducted a demonstration of the true type of dairy cow, and also gave a very interesting address. Superintendent George T. Carlin arranged a cow-judging contest, at which score cards were distributed among those breeders that desired to join in applying their judgment to the animals presented. Short talks were given by prominent breeders present, among them being Lawrence Murphy, of the Badger Stock Farm of Hartford, who gave valuable information on the marketing of stock, J. E. Riordan, of the Harvest Farms at Mayville, and W. C. Schroeder.

It was a fair day; this circumstance in the first place accounts for the tremendous success of the gathering. Everybody appeared to enjoy it thoroughly to associate with genial people of common interests, to listen to helpful advice, and to take in the hospitality of the Schroeders. The success of the picnic as an annual affair is assured, and the association surely can feel elated over the first of its kind ever held in this county.

Rock County Holstein Breeders.

To the Editor:—A meeting of the Holstein breeders of Rock county was held in the city of Janesville on June 24th, and a temporary organization effected.

At this meeting it was decided to hold a regular meeting sometime during the month of August, to perfect a permanent organization; notice of the time and place will be published in the papers and also mailed to the different breeders.

Mr. K. J. Bemis, who had recently attended the National Association meeting at Detroit, gave an interesting talk on the subjects brought up at the meeting, and Mr. C. J. Schroeder, of Racine, secretary of the State Holstein Breeders' Association, was present and also gave the breeders an interesting talk on the value of organization and co-operation. The meeting was a very enthusiastic one, and all the breeders present promised their loyal assistance in organizing a big association in Rock county.

Mr. K. J. Bemis, of Hanover, was elected chairman of the temporary organization, Wallace Noey, of Milton Jct., treasurer, John W. Jones, of Milton Jct., vice chairman, and John L. Fisher of Janesville, secretary. The following breeders were present at the meeting: J. J. Sheehan, Hanover; J. L. Fisher, Janesville; Wallace Noey, Milton Jct.; Geo. Williams, Orfordville; J. W. Richardson, Edgerton; B. Hollenbeck, Clinton; D. D. Purnell, Janesville; C. J. Schroeder, Racine; Jacob Wiggins, Hanover; O. P. Gaarder, Orfordville; W. C. Huginnin, Janesville; J. H. Green & Son, Clinton; J. W. Jones, Milton Jct.; K. J. Bemis, Hanover.

John L. Fisher.

Grant County Meeting.

Bad weather kept down the attendance at the third annual meeting of the Grant county Holstein breeders at Lancaster, June 15th. Mr. F. B. Fries, of Richland Center, gave an address on "Building up the Holstein herd." Another meeting will be held sometime in the fall.

The following officers were elected for the coming year: Jay F. Morse, Mt. Hope, president; Lee Brookens, Bloomington, vice president; Frank Horton, Fennimore, secretary; L. B. Roesch, Lancaster, treasurer; Wm. Weinbrenner, Stitzer, and Clyde Farris, Fennimore, members of the executive committee, together with the officers.

Jersey Breeders' Meeting.

Jersey breeders of Eau Claire county met at the C. C. Smith farm, June 21st, there being about 250 present. The following officers for the ensuing year were elected: C. L. Craker, Augusta, president; Eugene Herrell, Augusta, vice president; Rex McCauley, Osseo, secretary; A. W. Balliet, A. C. Bradford and C. C. Smith, directors.

Rusk County Holstein Breeders.

The Rusk County Holstein Breeders' Association was recently organized with twenty-five members, and a campaign is being carried on to increase the number to fifty, J. A. Schmidt, Ladysmith, is secretary.

Department of agriculture experts have demonstrated the practicability of making good print paper from zacation, a grass which grows extensively in the Southwest and as far south as Argentina.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

John L. Fisher Sells Hershey Farm's Foundation Stock.

JOHN L. FISHER, the well-known breeder of Duroc Jerseys, of Janesville, Wis., reports the sale of ten sows and a boar to the famous Hershey Industrial School, which is a part of the Hershey Farms, Hershey, Pa. The superintendent has advised Mr. Fisher that the consignment arrived in good shape and that he was well pleased with them. He also stated that he had corresponded with several of the leading breeders, but selected the Fisher stock because they wanted animals with plenty of size, bone and lots of stretch, also animals that were well bred. The Hershey Farms consist of 8,000 acres, on which 1,000 cows are kept to produce the milk for the famous Hershey chocolates. It is some honor for a breeder to sell foundation stock to such a corporation and we are indeed glad to know that they were selected from a Wisconsin breeder. The sows that made up the consignment were daughters of King the Col., Chief's Col., Fisher, Illustrator Jr., and Defender 3d, their dams were daughters of Joe Orion 2d, Critic B., Marion's Wonder and other noted boars—they certainly cannot find fault with this line of breeding. At this time Mr. Fisher is offering four fall boars sired by the great King the Col., and three by Chief's Col. Fisher, besides fifty spring boars. We cannot talk about this herd without saying something about Gold Bond, the good boar that heads this herd. We class this boar as one of the very best in the state. He is a two year old and a boar of great scale. Has a wonderful back, heavy bone, deep, smooth sides and a good head, eye and ear. No boar of the breed has a better pedigree, he being sired by Disturber he by Defender out of Lucy Wonder 112th by Chief's Col. Dam, Tattletale 2d by Defender out of old Tattletale by Educator by Ohio Chief. The greatest boars, as well as sows the breed has produced are found in the pedigree of Gold Bond. As mentioned above, there are few boars any better than Gold Bond. Mr. Fisher has recently decided to show this boar, but at this late date he may not be able to get him in condition to show to the best advantage. Here is a great boar, keep him in mind. When writing Mr. Fisher about his herd please mention The Wisconsin Farmer. See page 22.—Adv.

Small Angus Herd For Sale.

THERE are several Aberdeen Angus bulls for sale over the state, but few cows and heifers, for there has been such a brisk demand for breeding stock, the various breeders are sold low. Here is a chance for someone to get a few cows and heifers at a very reasonable figure. F. C. Lewis, Bridgeport, Wisconsin, expects to go into the dairy business and for that reason he is offering to close out the Aberdeen Angus cattle that he has. His herd isn't large but there are some good animals among the offering. Of the lot there are five cows and four of these have calves at foot—two bull and two cow calves—and are bred back. Three of the cows are sired by Abby's Duke 112094 and two of them by Pine Lawn Hero 93055. These cows are in the prime of life, are sure and regular breeders, as the calves at foot show and are good individuals. There are two very typey coming two-year-old heifers. There is one yearling bull that is quality from end to end, sired by Tom June 170794 and out of a Miss Copeland dam. He was dropped May 30, 1915, and is old enough for light service. The herd bull, Doddie Kin, was dropped May 21, 1913, making him a short three year old. He is sired by Black Gaylawn 91941, and his dam is Liberty Grange Orah 2d 121097. You will have an opportunity to see his get in the herd which will show that he is a sire of merit. Mr. Lewis prefers to sell the entire bunch to one man if possible and if someone can use the lot he will make a price on them that certainly should be attractive to you if you are interested in this breed. Here is a chance for the breeder or a scalper can make money on them and need not keep them long either. Of course, he will sell them individually if you want to buy them that way. If you visit the herd you will be pleased with the cattle. His advertisement appears in this issue and we would suggest that you write for particulars at once, for there is a strong demand for Angus cattle and no doubt these will be sold within a short time. Kindly mention The Wisconsin Farmer when writing. Bridgeport is the first station east of Prairie du Chien on the Milwaukee. See page 23.—Adv.

The Short-horn Works Improvement.

WHERE Short-horn blood is applied, regardless of the foundation on which it is applied, there is improvement. The beef producer may safely use a Short-horn bull, because increased scale, bone and economic gains are assured. The dairy man need not hesitate to use a Short-horn bull, because he avoids the risk of reducing the milk supply and at the same time will produce calves that will sell much more readily and at advanced prices. The average farmer has long since found the Short-horn adapted to his varied needs, and, as a result, the Short-horn bull finds favor among this class. The extent to which Short-horn blood has improved the cattle stock in America can never be estimated. The Short-horn seems equally well adapted to all prevailing conditions. The American Short-horn Breeders' Association, 13 Dexter Park Ave., Chicago, Ill., will be glad to furnish information to all inquiries in reference to Short-horn breeding stock. Note the association's announcement on page 23.—Adv.

Kartman's Poland Chinas.

CHRIS KARTMAN, Cassville, Wis., has a bunch of Polands that are bred in the purple. First the herd boar, Monster Big Bone, is sired by Black Big Bone and anyone posted on Poland China pedigrees knows the record of the famous Black Big Bone. Others in the herd are sired by King Joseph, a son of Big Joe, the boar that Mr. Fesenmeyer considers the best hog he ever owned. The get of Big Crusader 2d by Philip's Big Crusader, is quite prominent in this herd. The sows in this herd are by such boars as Mammoth Wonder, a son of A Wonder 107353, Black Big Bone, Monroe's Jumbo by Big Jumbo (Mouw), Big King Equal by Lawson's Long King Equal, Big Miller 2d by Big Miller and Columbus, one of the greatest boars ever owned in Nebraska. We doubt if there is another herd in the state that has a line of breeding that is more popular than that found in the Kartman herd. The spring pigs on this place are a little late, but some of them weighed, two weeks ago, between ninety and 100 pounds and that is better than many that we have seen. At a later date we will have more to say about this herd of Polands. Mr. Kartman has claimed February 16th for his bred sow sale and we will say now that there will be some attractions offered in this sale.—Adv.

Pigs Have Done Fine.

IN sending in change of copy for his Poland China advertisement, L. P. Martiny, Chippewa Falls, Wis., writes as follows: "I would like to have you see my pigs now, they have certainly done well since you were here. There are some real herd boars in those litters that you liked, they are good enough to go any place in the United States on approval. It looks like we were going to have a good year for the hog business." Mr. Martiny has some good Polands and he is a good caretaker. The pigs mentioned above are out of some of his best sows and come from championship breeding. This is another one of the Poland herds that we are glad to stand back of, for we are confident that you will be pleased with what you buy. If you are going to need a Poland China boar write Mr. Martiny for particulars and in so doing kindly mention The Wisconsin Farmer. See page 22.—Adv.

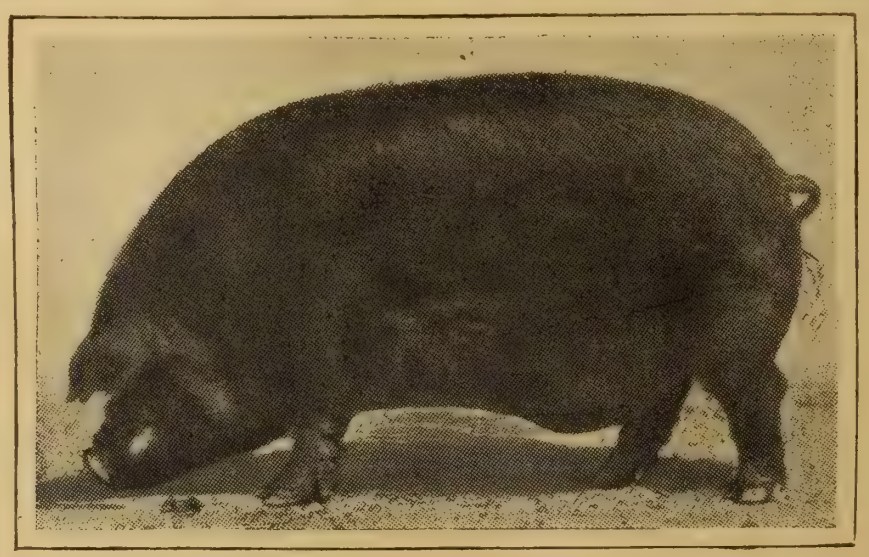
Parker & Son, the Latest Short-horn Converts.

MOST all of the Duroc Jersey breeders know the congenial Ed Parker, of Janesville, Wis., and it is with pleasure that we announce the fact that he has purchased a foundation herd of Short-horns. Ed is strong for the Durocs while his son, Phillip, leans toward the cattle game, so in all probability the care of the stock will be divided in that manner, but that is immaterial, we are glad to see them get into the pure-bred cattle game. The eight head of females that go to make up the foundation are of straight Scotch and Scotch topped breeding, but the bull purchased is of the very best Scotch breeding. He is sired by the imported bull, Rapheal, and his dam is by imported Bandsman, two herd bulls of note. This bull was purchased of J. E. Kennedy, Janesville, Wis. The Parker Short-horns will be heard from later.—Adv.

CHIEF INVINCIBLE, the biggest and smoothest Duroc boar in the Northwest. Owned by F. W. Washburn, Lake Crystal, Minn.

Cloverdale Ayrshires.

WE recently spent the day with James Van Etta, the congenial owner of beautiful Cloverdale Farm, Lima Center, Wis. When it comes to Ayrshire cattle and Clydesdale horses, Jimmie has the goods. No small amount of capital was required to establish this herd of Ayrshires and while he has only been in this game for a short time he has the satisfaction of knowing that he has some of the best that the breed affords. In Holehouse Wanderer, Mr. Van Etta has one of the greatest Ayrshire bulls that ever headed a herd. His breeding is the very best and he has been junior champion at the Chicago and Waterloo Dairy Shows. A full herd of Ayrshires will represent Cloverdale Farm at the various fairs this fall and at that time some of the older breeders will know that Mr. Van Etta is "on the job." Besides the Ayrshires, he will also have out his usual string of Clydes, and in some of the classes he will have very strong entries. If you are interested in Ayrshires write for general particulars, he has some choice young bulls for sale out of A. R. cows and he will also sell a few females, they will suit you. Please mention The Wisconsin Farmer. See page 23.—Adv.



E. J.'s CRIMSON WONDER, owned by Jno. Swenson, Willmar, Minn., and the kind to pattern after. A 1,000-pound boar, but the illustration doesn't show his size.

W. F. Ackerman's A.'s Big Orange.

WE had been told that W. F. Ackerman, Glen Haven, Wis., was the owner of a good Poland China boar and it was our pleasure to visit this herd a short time ago and the fellow that gave us the tip on this boar knew what he was talking about. However, the herd boar is not the whole show on the farm. A.'s Big Orange is a spring two year old, sired by Long Orange through Ott's Big Orange to the noted Big Orange. His dam is by Klever's Giant he by Giant Leader. Now this boar is right. In the first place he has size, has a wonderful back that will never go down, has deep, smooth sides, without a wrinkle, stands on the best of feet and bone and has a good head and ear. Perhaps the best senior yearling boar we have se n we found on this farm and he is by A.'s Big Orange and his dam goes back to Blue Valley Quality, the boar that put Thos. Walker, of Nebraska, on the map. This fall yearling will be sold in the Grant county boar scale, October 10th, and we doubt if there will be a larger or better boar in the sale. We also saw three other fall boars, that are not common by any means, sired by the same boar and out of a Longfellow bred dam. Anyone wanting fall boars that have the size and smoothness will be pleased with these. The price is right. Sixty pigs make up the spring crop and most of them are by A.'s Big Orange, or a son of his and they are out of good, big, well-bred sows. The pigs will be ready to ship July 1st and if you want to get in right a boar or gilt sired by A.'s Big Orange. There are several good boars of the Poland China breed in this state and A.'s Big Orange is one of the head-liners. Keep him in mind. Mr. Ackerman's advertisement will appear regularly in The Wisconsin Farmer from now on and we are glad to recommend this Poland herd. Write him for particulars, but please mention this publication when so doing. See page 22.—Adv.

A Great Chester White Prospect.

WE have called attention to several outstanding Duroc and Poland China boars that we have seen in this state, but we havn't said much about Chester White boars simply because there are only a few real good herds of this breed in the state and most of them could improve their herds by using a better boar, but then what herd is there that couldn't be improved upon in various manners. We have recently seen a junior yearling Chester White boar that appeals to us more than any boar of his age, of the breed, that we have had the pleasure of seeing. He is owned by Wm. Butts, Evansville, Wis., and is sired by the noted Henshaw and his dam is by Callaway's Choice. Now this boar has size and that is what most of you Chester White men need, more size. The little kind with the fancy head and ear, light bone and about as wide as they are long look nice and have been winning in some of the shows, but only because the small-type man has been judging. The ultimate end of the hog is the pork barrel and when you ship or sell a load of hogs you get paid for the weight, and not by the looks. The Poland men had to come to it and the Duroc men are trying as fast as possible to get them big and the Chester men must eventually "follow suit" and those that get in on the ground floor will reap the harvest. Getting back to our subject, the Butts boar is good, we never saw a boar stand up better on his feet, he has the best of bone, a wonderful back and a real boar in every respect. As we say, he has the most size for his age of any Chester we have seen, but he can still be bigger. Mr. Butts is a good caretaker and we feel sure this hog will "look like the money" when he goes to the fairs this fall.—Adv.

Interesting Short-horn Notes.

IN view of the fact that many of our readers are dairymen it is not likely that they pay much attention to what is going on in the beef cattle circles. However, there has been some Short-horn history made during the past month and this should be of interest to all breeders of pure-bred stock and with that point in view we list below some of the record-breaking sales of Short-horn cattle that have taken place since June 1st. C. A. Saunders, Manilla, Iowa, sold forty-nine head at an average of $1,068. Carpenter & Ross, Mansfield, Ohio, sold ten bulls at an average of $1,370, selling a son of Avondale to an Oklahoma buyer for $7,000. Forty-five females in the same sale averaged $933. Thomas Stanton, Wheaton, Ill., sold twenty-five head for $1,160 average. Frank R. Edwards, Tiffin, Ohio, made an average on forty-one head of $638. C. J. McMaster, at Altona, Ill., averaged $584. Bellows Brothers, Maryville, Mo., leads the list by selling forty head at an average of $1,100. The Rees-Kane combination sale at South Omaha, resulted in an average of $535 on forty-six head. Never before in the history of the Short-horn breed has there been so many high-class sales commanding these high prices. It only

goes to show that there is a growing demand for well-bred cattle and the man that will raise this kind will get his reward. Col. Carey M. Jones had the honor of officiating at these record-breaking sales.—Adv.

Marquart Brothers Have Excellent Milking Short-horns.

THOSE interested in milking Short-horns should not overlook the herd owned by Marquart Bros., of Milton Junction, Wis., for they have a herd that ranks among the best. Now this is not an ordinary herd of milking Short-horns. We have known men to advertise "milking Short-horns" just because they have a few cows that give a little milk, but such is not the case with the Marquart herd. Their herd has been bred for milk and beef, sires have been used that are out of record cows and from ancestors that have been great producers. One of the things that impressed us was the size of the individuals in the herd. Great, big, broad-hipped cows with great digestive capacity with neat head and necks and the breeding cows all have calves or were heavy with calf. They are offering seven young bulls for sale at this time and they are "dandies." They are in nice condition, very smooth, good colors and of the best of breeding. Most of them are sired by Queenston Duke, a white bull that weighed 2,300 pounds as a four year old. He is sired by Duke of Edgewood whose five closest dams averaged over 10792 pounds of milk. The dam of Queenston Duke is Queenston Ruby, an Ohio bred cow that produced 8,685 pounds milk in 261 days. So much for the sire of the young bulls being offered. Perhaps the best of the bulls is a dark roan whose grandam has a record of 8,000 pounds and a 4 per cent test. His dam is by Kinsella 6th, the former herd bull whose dam holds the world's three-year-old record for the breed, producing 11,062 pounds milk. There is another good roan bull whose dam is in yearly test now and is coming fine. We won't mention all of the bulls, most any one of them will make a creditable herd header. The cows in this herd give from 6,000 to 10,000 pounds milk in a year. The owners keep records of their cows and belong to the testing association, so you get records when you buy from this herd. These gentlemen sold some twenty bulls in about six weeks last fall through The Wisconsin Farmer. Their breeding is in demand and if you need something in the bull line, don't hesitate. See page 22.—Adv.

Smiley & Son Claim February 22d.

THOSE that contemplate making bred sow sales the coming winter should claim their dates as soon as possible, for in that manner you will not conflict with other sale dates. The best dates are being taken and if you expect to make a sale you should pick your date at once and if you will advise this office your date will be claimed in the "Sale Dates" column of The Wisconsin Farmer. We have just had a letter from Wm. Smiley & Son, the popular Poland China breeders of Albany, Wis., advising that they have claimed Thursday, February 22d, for their annual bred sow sale. In sending in change of copy for their advertisement they say, "We do not care to sell any of our early gilts, as we wish to hold them for our sale which will be February 22d. We have some of the best pigs we ever raised and we want to keep the best ones for this sale. The pigs are coming fine and they sure have size. We will sell some of the later gilts. Have only two fall boars left and have many inquiries since our advertisement appeared two weeks ago. We look for a good business this year." The Messrs. Smiley have the right idea about their gilts. If you expect to make a sow sale, do not sell off the best ones privately and save the "tail ends" for your sale. We have seen this done often, then after the sale is over the owners wonder why they didn't have a better sale. There is always a demand for the good ones and the more of them you can put in the sale, the sooner you will get your reputation as a breeder. The Smileys have one of the good herds of big-type Polands in the state and they have succeeded in raising about 200 pigs, so if you need a boar you will have a large number to pick from. They have the very best breeding. Get busy, and please mention The Wisconsin Farmer when writing for particulars. See page 22.—Adv.

Harvey Little's Bull Offering.

WE recently visited the Harvey Little herd of milking Short-horns, Evansville, Wis., and every time we see this herd we like it better. Mr. Little has a wonderful herd of Short-horns that combine the milking qualities with the beef qualities. The young bulls that he is offering are of outstanding quality and come from the best breeding. He can suit you in color, as well, for he has them red, white and roans. Get his prices on these bulls and better yet if you can visit his herd, you will be better off by having made the trip and seen his breeding herd. Kindly mention this publication when writing for particulars. See page 22.—Adv.

A New Wisconsin Farmer Hampshire Breeder.

THE attention of our readers is called to the advertisement of the Dane Stock Farm, Oshkosh, Wis., which appears on page 22. This farm specializes in the breeding of Hampshire swine and sheep. We did not get to see the sheep this trip, as they were on another farm about a mile away, but we did see the Hampshire pigs, and were impressed with the type. W. J. Dane, who has charge of the farm is a believer in a farmers' hog and breeds the type that farmers in Wisconsin can most profitably raise. He aims to breed a wider, deeper type with a slightly shorter head than many of the southern breeders who aim at the bacon type, and in our judgment is an improvement on the narrower type, for Wisconsin conditions. However, he is a stickler for good "belts" and all breed characteristics. He has a fine lot of spring boars and a limited number of fall boars ready for service.—Adv.

Don't Overlook These Bulls.

THERE are two Holstein bulls advertised for sale on page 23 by Grove Bros., Columbus, Wis., that you do not want to overlook if you are going to need a bull for the coming season. They are both sired by the 29.50-pound bull, Maplecrest Hengerveld De Kol and are out of dams with A. R. O. records of 22.29 and 15.55 pounds respectively. The sire is one which needs little comment if you were to see his pedigree, as he combines in the closest possible degree the blood of Friend Hengerveld De Kol and Pontiac aggie Korndyke. These two bulls have a total of eighty-two A. R. O. daughters, eight of which have made yearly records of from 1018 to 1322 pounds of butter, and seventeen that have made records from thirty to thirty-five pounds of butter in seven days. No two other bulls of the breed can equal these two for 1,000-pound daughters. One of the bulls offered for sale is out of the 22.29-pound cow, Vinnie De Kol Pauline. She is not only a heavy producer herself, but has transmitted this ability to her daughters. Her daughters, Vinnie Change, as a four year old made 24.11 pounds butter and Vinnie Changeling, as a three year old made 23.87 pounds butter in seven days. She is a granddaughter of the great bull, Paul De Kol, and her dam and both grandams have creditable A. R. O. records. There is surely a good pedigree back of this young bull and our readers cannot afford to overlook him. The other bull offered for sale is out of the cow, Johontas Hengerveld Paul De Kol, which made 15.55 pounds butter in seven days as a three year old. She is a granddaughter of Gem Pietertje Hengerveld Paul De Kol, sire of thirteen A. R. O. daughters and May Overton Mechthilde the sire of Madrigal of Belmont, one of the finest show cows of the breed. These bulls are well marked, being more white than black, are well grown and of good, straight, level type. Up-to-date extended pedigrees are ready and will be mailed on application.—Adv.

JOHN L. FISHER, Janesville, Wis., and the foundation herd of pure-bred Duroc Jersey swine which had been sold to the famous Hershey (Chocolate) Farm, of Hershey, Pa. The famous Hershey farm consists of 8,000 acres, and the foundation herd of Durocs as shown in this illustration consists of ten sows and gilts and a herd boar, Volunteer Defender. They were purchased after corresponding with leading breeders throughout the country, and the Hershey people bought this herd from Mr. Fisher for the reason that they wanted the big, rugged Durocs with heavy bone, good backs, and lots of stretch, and Mr. Fisher had this kind.

Safety in Using Hog Cholera Serum.

THE use of hog cholera serum has meant millions of dollars to the hog raisers of this country. But vaccinating hogs is a very particular practice and if impure serum is used the results may prove disastrous. The safe way is to use refined hog cholera serum, which is absolutely free from all germs or foreign matter. Mulford Refined hog cholera serum meets the most rigid requirements in this respect; it is a potent, sterile, filtered serum that will protect from cholera, but will not infect the hogs or cause cysts or abscesses on them. This absolutely safe serum costs but 2 cents per c. c., and may be obtained from the H. K. Mulford Co., Philadelphia, Pa. See advertisement on page 9.—Adv.

Protects Cows From Flies.

WILBUR'S fly oil will positively keep all flies away from your cows. This statement is made by E. B. Marshall, president of Wilbur Stock Food Co., and in proof of this he offers to send a can of the oil for a thirty days' trial, together with a special sprayer in which to use the oil. The offer is given on page 7 and those who wish to get rid of the nuisance of flies, which is one of the hindrances of profitable dairying or cattle raising, should fill out the coupon attached to the advertisement and send to E. B. Marshall, president, Wilbur Stock Food Co., Milwaukee, Wis.—Adv.

Guernsey Yearling Heifers.

EIGHT high-grade yearling Guernsey heifers are advertised for sale on page 23 by Findlay Bros., Whitewater, Wis. These are all sired by an exceptionally good registered Guernsey bull and they are standard marked and good individuals. They are bred to a registered bull to freshen this fall and winter. Write for description and prices.—Adv.

Stub-Cutter Attachment for Corn Harvesters.

COMFORT in the Cornfield" is the title of a booklet sent out by the Corn Harvester Attachment Co., as per advertisement on page 6. We rest assured that after reading its contents, the corn-belt farmer will agree with us when we say that the advent of the stub-cutter attachment for corn harvesters is, in reality, a producer of more comfort for both man and beast. The real value of the stub-cutter attachment lies in its time and labor-saving qualities subsequent to the cutting of the corn, and in the fact that it does its work at the same time the corn is being cut. Planking down these stubs does not separate them from the root-mass and besides they "come back" so that does little good and is very slow work. There is very little increase in draft. This stub cutter has been tested in, and perfected from actual work in the cornfield and is guaranteed to do and be all that is claimed for it. In dealing with the corn Harvester Attachment Co., you are doing business with a reliable, well-established concern, with the highest reputation for fair dealing.—Adv.

Low Cost of Upkeep on Hay Balers.

THE Ann Arbor Machine Co., Ann Arbor, Mich., have a new booklet, "Profits in Forage Crops," which contains much practical information of interest to farmers. The booklet will be sent to anyone who will write to the company for it. The Ann Arbor baler is made by this company and is famous for its low cost of upkeep and long service. The average upkeep expense for all Ann Arbor balers last year was only $2.95 and there are many of these machines that were built thirty years ago and are still giving good service. They are adapted for baling any kind of hay into neat, even bales and will work efficiently with a small crew of men. Either power presses in combination or separate outfits, using any engine, are obtainable. See advertisement on page 14.—Adv.

Special Low Prices on Split Hickory Vehicles.

A GENUINE, split-hickory buggy, guaranteed for two years, may be purchased for $39.25. The price is remarkably low for this kind of a vehicle and deserves the attention of every prospective buggy buyer. Split Hickory vehicles are in wide use throughout this country and have proven highly satisfactory. The new fall buggy book of the Ohio Carriage Co., describes and illustrates more than 150 styles of these vehicles, and contains many money-saving offers. It will be sent to anyone writing for it to H. C. Phelps, Pres., the Ohio Carriage Mfg. Co., Station 185, Columbus, Ohio. See page 6 and mention The Wisconsin Farmer when writing.—Adv.

HAMPSHIRE sow and litter bred by Dane Stock Farm, Oshkosh, Wis., whose advertisement appears on page 22.

Self Feeders as Money Makers.

THE labor problem of hog feeding is solved by the Star self-feeder, which is advertised on page 7 by the Star Self-Feeder Company, LaFayette, Ind. Not only labor is saved, but also feed and money. Pige are made to mature earlier and cheaper by using this feeder. Three compartments are made for keeping the corn, mineral and tankage separate, and the feed control is adjustable so that the right amount is fed for most rapid growth of the hogs. Those who write soon can get a special introductory offer on the Star feeder and a free booklet, "Self-Feeders as Money-Makers." Kindly mention this paper when writing.—Adv.

SALE DATES.

Holstein-Friesian Cattle.

Oct. 24-25, Watertown Holstein Breeders' Consignment Sale, Watertown, Wis. S. E. Jones, Mgr.

SHORT-HORN CATTLE.

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. **Are you a dairyman?** A Short-horn bull will not reduce your milk supply and he will get you calves that will be quickly salable at a much higher price than you can get from a dairy bred bull. **Are you a farmer?** The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperment, takes on flesh readily, and yields a liberal flow of milk. The Short-horn alway works improvement.
AMERICAN SHORT-HORN BREEDERS' ASS'N, 13 Dexter Park Ave., CHICAGO, ILLINOIS

MARQUART'S Milking Short-horns

SEVEN bulls ready to go, sired by Qeenston Duke (2,300 lbs.) by Duke of Edgewood out of Queenston Ruby, 8685 pounds milk in 261 days. Reds and roans out of record dams. Good ones. Write early if you want the best. Address
Marquart Bros. **Milton Junction, Wis.**

OAK LAWN FARM Short-horns of Quality

FOR sale at a very reasonable price, 22 head of registered Short-horn females, ranging in age from 16 months to 6 years. Address
J. E. KENNEDY **JANESVILLE, WIS.**

Several bulls are from Alcartra bred cows. **BONNIE MEAD STOCK FARMS, Randolph, Wis.**

Purebred Registered
HOLSTEIN CATTLE

If your present dairy herd is not quite up to standard get a good purebred registered Holstein bull, and he will transform the poorest herd into a profitable one within four or five years. The purebred sire will always demonstrate his right to be called "The foundation of the dairy industry." There's a vast difference between keeping Holsteins, and just keeping cows. One purebred Registered Holstein will do the work of two and possibly three ordinary cows. You realize a saving in feed, housing, risk and labor. And moreover, Holstein cows milk longer, more per year, and more per life than any other breed. Investigate the big "Black-and-Whites."

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

Chas. F. Lau **Thiensville, Wis.**

Electricity—The Universal Light

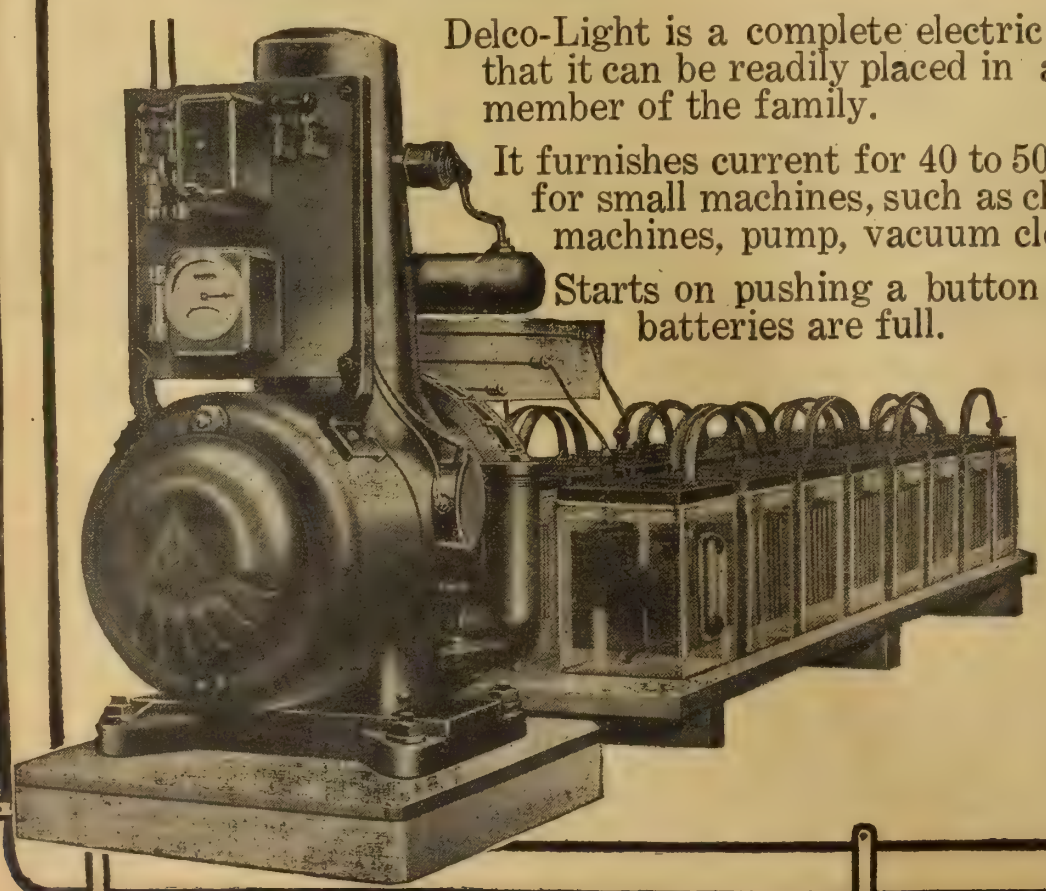
A little over 30 years ago electricity came into use in the lighting of city streets and stores.

Then it was introduced into city homes where it quickly became firmly established.

Then steamships and railway trains adopted it as the most efficient and economical light.

Five years ago it came into use in the lighting of automobiles. Almost at once it superseded all other forms of lighting and became standard equipment.

And now Delco-Light brings electricity with its efficiency and economy to the suburban and farm home---thus extending to the rural districts this greatest convenience of city life.



Delco-Light is a complete electric plant---so compact and simple that it can be readily placed in any home and operated by any member of the family.

It furnishes current for 40 to 50 lights and also provides power for small machines, such as churn, cream separator, washing machines, pump, vacuum cleaner, etc.

Starts on pushing a button and stops automatically when batteries are full.

Developed by the same engineering and manufacturing ability that has made Delco Cranking, Lighting and Ignition for Automobiles the standard of the world.

Price complete with batteries $250

Write today for illustrated folder describing Delco-Light and its uses.

It's mighty poor economy to buy a good car and keep it knocking around the place without a home of its own

Build a Garage

Your car is an investment worth protecting, and a garage of "Old Faithful" HEMLOCK is the way to protect it.

Keep the car by itself where it won't get damaged; where greasy rags, gasoline and other inflammable things are out of harm's way, and where you have a place with everything handy when you have a job of engine-tinkering or cleaning to do. *A garage built of*

"Old Faithful" HEMLOCK Lumber

will cost mighty little, and we shall be glad to supply the plans free so you may learn by experience the good points of the farmer's stand-by lumber. HEMLOCK is economical, lasting, light and pitchless.

PLANS FREE: Send for the "Old Faithful" HEMLOCK Booklet (just out) which shows pictures of garages as well as farm houses, town houses, barns, and other farm buildings for which we furnish free plans drawn by well-known architects, and include complete specifications and all practical details. If you are handy with tools you can build from them yourself. The book contains a COUPON GOOD FOR ANY TWO SETS OF PLANS FREE when presented to YOUR LOCAL LUMBER DEALER. He has the plans or can get them from us for you. We'll be glad to give you any advice or information we can. Just write.

THE HEMLOCK MANUFACTURERS
(of Wisconsin and Northern Michigan)
300 F. R. A. BUILDING **Oshkosh, Wisconsin**

If your lumber dealer cannot supply plans, we will send them direct for 50c for garage or outbuilding, $1.00 for house or barn.

CONCRETE, OF COURSE—BUT MAKE IT WATERTIGHT

Otherwise you run the risk that your silo wall will suck up moisture, freeze and crack. Besides, the watertight silo is far more sanitary—the fodder keeps better.

Medusa Waterproofing

properly mixed, makes any concrete watertight, even one which is comparatively "poor" in cement, and saves money on most jobs.

One to 2% of Medusa Waterproofing mixed well with the usual proportions of cement, sand and gravel, will do the job. Or if you prefer, we supply

Medusa Waterproofed Portland Cement
(*Gray or Pure White*)

in which waterproofing and cement are ground up together at the mill in just the right proportions for perfect work.

Medusa Waterproofed White silos keep their handsome, stainless white appearance forever. Medusa White has the same strength, hardening and setting qualities as any other high-testing Portland cement.

Ask your dealer about the Medusa products before you begin the construction of a new silo, barn or feed floor, hen house, cistern, etc.

SANDUSKY PORTLAND CEMENT COMPANY

Write today for free booklets, "Waterproofing on the Farm," "Uses of Cement," "The Medusa White House."

Room G-7
Engineers' Building
Cleveland, Ohio

CURRENT EVENTS

DANGER of war with Mexico seems well-nigh dispelled, as a direct result of the friendly note which the Carranza government has sent to Washington, after two impudent notes had made matters most serious. This latest note offers to mediate difficulties and in the meantime to use every effort to avoid any new clashes or to make the situation more serious. About the time this note was received President Wilson moved General Pershing's expeditionary force back to within 100 or 150 miles of the border so as to minimize trouble. The state troops which have been mobilizing for the past fortnight are most of them in their state camps, although some regiments have been rushed to the south to assist in patrolling the border. President Wilson is doing everything in his power to prevent war and will probably accept the latest Carranza note as an evidence of good faith and continue his policy of watchful waiting. In a speech delivered in New York a few days ago the president made it plain that he will not countenance a war with Mexico unless there is no other alternative for settling the border troubles. Again he declared that he was ready to sacrifice his own political fortunes to carry out his convictions as to what would be the just course to pursue in the situation. The president's audience, composed of newspaper men, state and municipal political leaders and others prominent in public life, signified their indorsement of his position by repeated outbursts of applause. When he asked if the glory of America would be enhanced by a war or conquest in Mexico shouts of "no" came from all parts of the banquet hall. A similar response was made to his query whether it is America's duty to carry self-defense to the point of dictation into the affairs of another people. The president is known to be strong for peace, and there is good reason to believe that the present crisis may adjust itself so that the force of arms may not be necessary.

THE great, long-promised drive of the English and the French against the Germans is now in progress and is regaining ground for the allies, according to the press dispatches. It is estimated that the German losses thus far are approximately 60,000. The capture of guns has been comparatively small, because the Germans, in anticipation, withdrew their big artillery. According to aerial observations by the French in the direction of Peronne there are now only three trench systems between the French and open country, and, if a break can be made in the German lines here, it would be extremely serious for the Germans, who are doubtless hurrying up reinforcements to the threatened point. The Germans are sending reinforcements from as far as Verdun and Lens. The continued heavy German attacks on the Meuse may be intended to conceal important transfers of troops behind the lines. The Italians also are said to be making headway. For the first time since the war broke out the allies are on the offensive all along the line and appear to be winning victories, forcing the Germans back, step by step, from the captured territory which they have long occupied.

A SUMMER campaign that will take him through the grain belt and probably on to the Pacific coast is on the program now tentatively shaping itself in the mind of Charles E. Hughes, republican candidate for president. It is Mr. Hughes' idea that this tour should be not at all of the "whirlwind campaign swing" variety, involving special trains, with frequent halts and speeches from the rear platform. He believes the whirlwind tours may have their place later, but that they may be employed to better advantage at a time when developments have made it clear in just which of the debatable states and close districts such expenditure of concentrated ammunition may be employed most effectively. In the tour beginning before mid-August his inclination would be to use only regular trains and to speak only in such centers of population as, for illustration, Chicago, Kansas City, St. Paul and Minneapolis, St. Louis, Portland, Seattle, San Francisco, and, perhaps, Los Angeles. At each point his purpose would be to deliver, probably from written manuscripts, and certainly after mature and careful deliberation and preparation, a dignified, educational speech, dealing comprehensively with campaign issues and the paramount national problems of the time. Mr. Hughes rightly believes that the people of the grain belt and West are anxious to see and to hear him, hence the proposed trip.

HETTY GREEN, the richest woman in the world, died last week at her home in New York. She left a fortune estimated at $125,000,000, her only son, Col. E. H. Green, of Texas, and her daughter, Mrs. Matthew Astor Wilkes, sharing the bulk of the large estate. She did not make any provision for charity. Because of her wealth and eccentricities Mrs. Green was one of the notable women of the country, living in almost penury at times, notwithstanding her great wealth. Hetty Green's investments were largely in mortgages, and whenever she invested in anything it was only after she had made the most minute personal examination of the properties. She never disclosed in detail the secrets of her success, but she admitted it was mainly in buying when things were cheap and never selling until they were high. If asked for advice as to what would be good to invest in her epigrammatic answer was usually, "The other world." While never intensely religious, she was a frequent attendant at Quaker meetings, and only a few years ago she, like her daughter, was baptized in the Episcopal church. She emphatically denied that her disposition was miserly. During the panic of 1907-08 she made loans which tided over many wealthy New Yorkers. Two years before the panic, it was said, she had gathered in a large portion of her money and was prepared when the storm broke to lend a helping hand, at a good rate of interest.

WITH war orders from European countries beginning to fall off Japan is stepping to the front as the biggest foreign buyer in the United States steel markets. Orders approximating $28,000,000 have been placed already by J. Inouyie, T. Yamada, J. Kamimura and others. Westinghouse, Cambria and allied concerns have secured the majority of the contracts. Mills and factories at Pittsburgh and at Wheeling, Youngstown and Dayton will be rushed for months. Most of the steel will be used in construction of the Imperial Iron Works at Yawata, Japan. The government has appropriated $20,000,000 for construction of the plant.

LAW QUESTIONS.

License for Nurses.

A Subscriber, Franksville, Wis.—(1) Is a nurse required to be a graduate or have a license in order to practice in Wisconsin or Illinois? (2) If a doctor should employ a nurse who has no license, to attend a patient what would be the penalty?

Answer.—(1) In Wisconsin a nurse is required by law to have a license in order to practice. In Illinois a nurse may lawfully practice without a license, but must not assume to be a registered nurse. (2) In Wisconsin the penalty for a nurse practicing is a fine not less than $100 nor more than $500. In Illinois there is no penalty unless the nurse assumes to be a registered nurse.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE AUTO TRUCK ON THE FARM.

I FIND a most interesting story told in one of our grain-belt newspapers of the manner in which a stockman had the value of the automobile truck impressed upon him. Here is the story:

Frank Skipton, garage man, went to the home of a farmer three miles out of the city recently with a motor truck for the purpose of transporting to market a load of fat hogs. The rear wheels of the truck were lowered in hog-loading fashion and a little alfalfa scattered from the pen up into the truck bottom. The porkers walked into the trap and laid down. Forty minutes later they were weighed and pushed out into the stock pens in South Omaha, ten miles distant from their former place of abode.

The auto truck as an accessory to the farm is just beginning to make its worth appreciated. This trip was the harbinger of as big a change in the method of marketing farm produce as the auto has worked in other fields. A ten-mile trip with a load of hogs in a wagon is slavish business. It is a heavy task for a man as well as for his team and for the hogs. With the roads in their present condition today in Iowa a ten-mile trip with a truck is little more than a before-breakfast chore. A farmer might, if he were so disposed, leave his home at five o'clock in the morning after feeding his teams and be back from such a journey and ready to go to work in the field by seven o'clock.

The day is not far distant, in my opinion, when the truck and the tractor will be as popular and as prevalent in the country as the automobile is today. I can easily recall—and so, doubtless, can most of my readers—when the automobile was considered either a "devil wagon" or a rich man's plaything, the practical usefulness of which was seriously questioned by the hard-headed farmer. It was not more than ten or twelve years ago at most, when, as I was strolling through one of our state fair grounds, I saw a good farm wife standing literally open-mouthed at the unwonted sight of a two-cylinder automobile chugging along, hauling sightseers about the grounds for 25 cents each. Finally she rallied her wits enough to exclaim: "I'd as lieve sit on a gasoline stove as ride one of those things." I have no way of telling, but I'm almost willing to bet that that good farm wife goes riding with her liege lord nowadays in their own four-cylinder, six-cylinder or eight-cylinder car and is as enthusiastic as most farmers over the use of the automobile.

The automobile fills a long-felt want in farm life, relieving the work horses of much of their drudgery, giving the entire family more pleasure and enabling the farm product to be marketed to the best advantage. The day is almost here when the auto truck and the tractor will be as generally used and as highly appreciated. Successful farming, as I have frequently pointed out, depends upon taking advantage of the market fluctuations so as to get the best possible price. When live stock—or any other produce, for that matter—can be marketed by truck in one-fourth of the time that it can be marketed by team, and in such manner as to get the market's highest price, the truck will become indispensable to the farmer. In my opinion that day is rapidly approaching; if, in fact, it has not already actually dawned.

AN INSURANCE POSTSCRIPT.

ALTHOUGH I fully intended my "last word on insurance" to be the last word, indeed, I find myself obliged to add a postscript to what I have already written on this important subject. The heavy mail which my articles have brought convinces me that farmers generally are greatly interested in this matter of protecting their loved ones after they are gone. The surprise to me is that such a large number of my correspondents should be so strenuously opposed to life insurance. Let me quote from a letter received from Mr. Delano Sanford, of Hopkinton, Iowa, as follows:

You mention the case of the young man insuring his life for twenty years at $26 annual premium on $1,000 and receiving $500 in final settlement. This annual premium placed in the bank at 4 per cent compound interest in twenty years would amount to $892.48, so you see his protection cost the difference between $500 and $892.48, or $19.62 a year, instead of the $1 you gave as the figure. Please do not connect as important and vital a matter as thrift with anything like life insurance.

Mr. Sanford goes on to tell of how he turned down an insurance agent, but how a neighbor was less firm and was induced to take out a policy, which he allowed to lapse in a few years, losing the money he had already invested. He argues from this that the whole insurance matter is a fraud and fake, when the whole trouble lies in the kind of a policy which is taken, and in allowing the policy to lapse once it is taken. A policy maturing in a certain number of years has loan and "cash-surrender" values, which are guaranteed under the various state laws. These amounts are not as large as the premiums which have been paid in, but they become proportionately larger each year, so that the longer a man stays in the company, the greater percentage of his money he ultimately receives in return. If he pulls out in a few years he gets little; if he stays in a number of years he gets back practically all that he paid in, and is, therefore, not out a cent.

My friend and correspondent is absolutely correct when he says that the annual premium on a life insurance policy, deposited in a bank at 4 per cent compound interest, will return more than a life insurance policy, but he overlooks or ignores three important factors: First, the stability of the bank in which the money is deposited, as compared with the soundness of our big insurance companies; second, the fact that many men—most men, I fear—will not keep up their deposits year after year, for twenty or thirty years, as they will their insurance premiums, because they realize that once they let their bank deposits lapse, they will get back their other deposits just the same, while once they let their insurance premiums lapse, they will get back a smaller percentage of what they have already paid in than if they were to keep up the payments the full, allotted time; third, the fact that the insurance company is bound to pay the full value of the policy—$1,000 or $10,000, or whatever it may be—whenever death comes, which might be in the first year after the policy was written, thus giving the estate of the insured $1,000 for $26 invested. In my opinion the money which the insurance companies make is not much too large in view of the risk they assume of the early death of the insured.

Another correspondent, Mr. Charles A. Babbitt, of Willis, Kansas, feels still more strongly on the subject, and writes me as follows:

Life insurance costs the average man a half more than his family gets back, thus they are being robbed of about one-third of the premiums he pays. I have seen so many men skimp their families to keep up insurance that I have sometimes wondered if the family did not feel relieved when the man or policy lapsed. A thrifty man should not encourage such extravagance. Thrift is desirable when it is used to educate the children and provide a home and business for old age, but if it will not help deserving neighbors or the community it is nearly as bad as robbing the family to pay some corporation to promise to care for us or our loved ones when we are gone. We had better be thrifty enough to manage our own business so our families may enjoy life with us instead of after us.

These letters interest me, even if they do not convince me, and I am glad to receive them. What Mr. Babbitt overlooks is that my young friend, while he paid in $26 a year, was protected up to $1,000 every year of the twenty. Had he died the first year—after only one premium of $26 had been paid—his estate would have received $1,000, or $974 more than he had paid; the second year it would have received $948 more, and so on and on. I do not see how he figures that a family receives only about half what a man pays, for in my young friend's case, even in the last year of the policy, his estate would have received $1,000 on an investment of $520 (twenty times $26) or almost double the amount paid. What my young friend did was to pay off the debt on his home and take out a new policy for $1,000, which, at his present age, costs him around $35 a year. I still think it was a wise thing to do. He could have borrowed almost the full "cash-surrender" value of the policy from the company at 6 per cent interest, or by using the paid-up policy as collateral he could have borrowed even more from a bank or an individual. But he does not like to borrow unduly, and the interest would be almost as much as the premium on his new policy, so, in my opinion, he did the wise thing. I continue to be a firm believer in life insurance, despite the protests of some of my readers, whose letters are enjoyed, even though they do not convince me of the error of my views.

THE TRACTOR IN WAR.

I FIND an interesting little item in a daily newspaper, proving that the tractor is the machine of the hour in both peace and war. Here is the item:

Stockton, Cal., July 4.—Three caterpillar tractors manufactured here for the American army were being rushed by express today to an unannounced destination on the border. The expressage on the three machines will be $3,600. They were sent in a special car attached to a passenger train.

The European war is a war of machinery even more than of men, notwithstanding the fact that never before in the world's history were so many men under arms at one time. If war with Mexico eventuates, machinery will be fully as important as men. And the tractor will be found heading the list of machines absolutely essential in the arts of war, just as it is heading them in the arts of peace.

AN HOUR MORE OF SUNLIGHT

THE FARMER is not as vitally affected by the movement to advance the clock an hour as is the city man, for the farmer works by the sun rather than by the clock, whereas the city man reverses the process. Still, should the movement ever gain ground nationally, the farmer would quickly become interested, for it would affect his intercourse and business dealings in town and city. Therefore, we might well consider this subject together for a few minutes.

So far as I am able to ascertain, the movement started in Europe, and is undoubtedly an outgrowth of the great war. As though there were not enough time in the day in which to engage in the brutal art of killing one another, the belligerent nations have almost all turned the clock ahead an hour so as to get the workmen into the factories that much sooner and begin the day's task of turning out shells with which to slay human beings. Because there must be some sort of system in the world's work, this has affected those who follow the arts of peace fully as much as those who follow the arts of war; the stream of men and women starts officeward, storeward and factoryward an hour earlier than it formerly did, and, accordingly, bedtime comes an hour sooner. An hour of daylight is gained and no one is the worse off, so far as I can see.

After all, no matter what occasioned the movement or how much ground it may or may not gain, there is no excuse for so many people lying abed so late in the morning, when the sun is high in the sky, the birds are calling merrily, and there is much work to be done. We would far better go to bed an hour earlier at night, get our full six or eight hours' sleep (as our system demands) and then get up and out to work an hour earlier in the morning than to sit up late at night, sleep too late in the morning, and feel stupid all day long. I am indebted to a London newspaper for some interesting facts bearing out my contention in this manner:

Doctors and physiologists say that both for men and for animals the light of the sun means life. In the darkness plants remain a sickly white and do not develop their green color, and in the darkness the human complexion tends to lose its natural red. In the sunlight, too, there is health and greater freedom from disease.

Even more important is the matter of sleep. For reasons which are a part of popular wisdom—always worth attention—it is believed that "one hour of sleep before midnight is worth three hours after it." Even the scientific works on medicine uphold that doctrine, and most people know from experience that it deserves to be upheld. The early sleep, the "beauty sleep," is the best sleep.

And here is a measure which at a stroke gives to the world's workers six whole days more of this boon, and to the women of the world six whole days more "beauty sleep" each year. Also to the children is given what certainly amounts to a new charter of health. For if early night sleep is vital to man's work and woman's looks, it is a matter almost of supreme importance to the child. Children in these days are permitted to sit up much too late in a great many cases. But no matter what hour may happen to be "bedtime," that same hour is now separated from midnight—in the old Greenwich sense—by an additional sixty minutes.

The farmer is not dependent upon an alarm clock, there are many noises of the early morn to waken him, even if his conscience and the knowledge that haste is necessary if the crops are to be gotten in and harvested betimes were not likewise at work. He is at his tasks a couple of hours before the average city man gets through his breakfast and begins to think of work. So there will be little gnashing of teeth in the country if the United States follows the lead of Europe and gives us an hour more of daylight, though many a city man, I imagine, will hate to think of being routed out that much earlier in the morning. When there is so much important and necessary work to do, let us get at it the earliest possible moment; that is my opinion on a subject which is occupying the minds of many men and many nations nowadays.

Advance Granted Milk Shippers to Milwaukee Market.

AN INCREASE in the price to be paid during July for milk shipped into the Milwaukee market by the farmer-dairymen in that territory has been granted by the Milwaukee dealers and distributors as predicted in these columns last week. This increase, which became effective on July 1st, amounts to fifteen cents per eight-gallon can over the July price a year ago in addition to an agreement by the dealers to take and care for all the milk which the shippers produce. This, everything considered, is a very satisfactory outcome and means an added revenue of about $25,000 during July, as compared with July last year, to the farmers in Ozaukee, Milwaukee, Waukesha and Washington counties who ship to the city of Milwaukee. Most of the shippers are residents of these four counties.

The farmers, through their organization, the Milwaukee Milk and Cream Shippers' Association, asked a July price of $1.30 for an eight-gallon can, the average fat content of which is 3.7 per cent, according to the statistics of the Milwaukee health department. The price finally agreed upon was $1.25 per eight-gallon can, which is not all, in dollars and cents, the farmers asked, but the additional five cents lost in the compromise is more than made up by the agreement of the dealers to take and care for all the milk produced by the shippers. This is quite an advance, it is seen, as previously the dealers reserved the right to "shut-off" the shipper at any time, compelling him to withhold his milk from the market one or two or three days, as the case might be. This often proved a serious loss to the farmer who did not have some other avenue into which to divert this milk. Now the dealer must stand the loss, if there be any because of an over-abundance of milk on the market.

The price of $1.25 per eight-gallon can, compared with $1.10 last July, is an increase of a half cent per quart and an increase of twenty-five cents per can over the May and June price. This price stands for July only and a new rate schedule will be arranged, beginning August 1st, when the farmer-shippers expect to be in better shape as regards oversupply. The $1.25 price is on the cars at Milwaukee and as the average cost for transportation per can is about fifteen cents, this means $1.10 net for the farmer, compared with ninety-five cents net a year ago. Based on a daily consumption of 5,000 cans daily by Milwaukee, this means an added revenue of $1,250 per day over May and June and $750 per day over July last year. As a can weighs about sixty-eight pounds, the July price to Milwaukee shippers in the terms of 100 pounds is approximately $1.65 per 100 pounds net.

The milk flow has been unusually heavy in the Milwaukee territory this season, and the agreement with the dealers to take care of all milk produced is regarded as a nice victory. In speaking of the advance, Mr. G. R. Rice, secretary and manager of the Milwaukee Milk and Cream Producers' Association, writes The Wisconsin Farmer as follows:

> We have gained half a cent a quart or fifteen cents a can over last year's July price. In view of the fact that the oversupply this year is something very unusual, we think we have done well. The milk flow, due to abundance of grass and cool weather, is much heavier this year than any year we remember of at this date.
>
> We expect, however, by the first of August to be in far better shape as regards oversupply and we also expect to have our wholesale distributing plant in operation and in that way better control the situation.

The association will soon have 1,000 of the 3,000 shippers to Milwaukee as members. It now controls 2,200 cans of the 5,000 shipped into Milwaukee, as the larger shippers are members. With its own distributing plant to take care of the surplus and an increasing control of the city's supply, which it might divert to other channels in case of necessity, the association should be able to ask and receive other advances in the near future.

The increase granted the shippers will no doubt be passed on to the consumer in Milwaukee, who, at six cents, has been buying milk, delivered at his door, cheaper than any other city of similar size in the country. We understand the larger dairies in the city have already raised the price to seven cents, and that the smaller companies are expected to fall in line shortly. The Gridley Dairy Company, which handles most of the supply, has also increased the pay of drivers $5 a month, and it is beginning to look as if the farmers in the Milwaukee district will not have to remain philanthropists much longer as they had been in past years.

Keeping Skin and Hair of Hogs Healthy.

IT IS remarkable how successful some swine breeders are, even though they follow a hit-and-miss program in their swine-breeding operations. Invariably, however, those who succeed, in spite of the fact that they do not give any special care to their hogs, are able to attain their kind of success largely because they allow their hogs plenty of range. Generally speaking, you will find the hogs roving in the yards and pastures 365 days in the year, and as a result they are hardy and show a remarkable degree of immunity against disease. Usually in such cases hog raising is merely a side issue to beef production, and the profits realized on hogs are regarded as just so much to the good.

It is a little different when swine raising is the main issue on smaller farms. Many an individual stakes his all on a bunch of 100 hogs. He may plan to feed practically all the grain that he raises to his hogs, so that his year's work depends upon his ability to take through a bunch and get them ready for the market with the least possible loss. In such instances every detail must be given attention, and during the summer months some care must be given to the matter of keeping the skin and hair of the hogs in good condition. Abundance of shade is a great aid in this respect, but it is not always available and the situation must be met squarely whether there is shade or not.

An exceeding good practice is to use coal-tar dip or crude oil in all wallowing places. Let it be remembered that a hog wallows not because he is filthy in his habits, but because it is absolutely necessary to his welfare. He is a non-sweating creature and this is the only means at his disposal for cooling off. A quart or two of dip or oil thrown into these pools of filth at intervals will accomplish two purposes. In the first place, it will tend to destroy lice, if there should be any at hand, and in the second place, the skin is kept pliable and the hair soft. Those who adopt the plan of using the rubbing posts with oil are meeting the situation ideally. No louse can live amid oily surroundings, but it is a wise precaution to give some attention to the wallows as well. A good disinfectant will destroy disease germs in these culture centers, and it is entirely within the bounds of reason to expect that an outbreak of disease may be prevented by the use of a few gallons of coal-tar dip during the summer season.

Bear in mind that we are not advocating the hog wallow, but we are well aware of the fact that these wallows will continue to exist whether we want them or not. In some cases a concrete wallow is constructed and kept well supplied with water and this, in turn, is disinfected with coal-tar dip. This beats the mud wallow and it is the only means available of preventing hogs from creating these unsightly centers of filth.

Value of Advertising By the Farmer.

ATTENTION to the value of advertising is called by E. L. Luther, supervisor of Wisconsin agricultural representatives. Mr. Luther says:

> Farmers must take more of a hand in marketing their crops. They have the same rights as other producers and, having the same rights, must assume the same responsibilities. They should not think that other people should assume the responsibility of marketing their products.
>
> Most men who market their own wares, no matter what line of production, advertise.
>
> How few farmers advertise!
>
> Is it any wonder that their markets are poor? What if an automobile concern or patent medicine concern advertised as little as the average farmer? But what if the average Wisconsin farmer did take a notion to advertise? What would he say of his products that would cause people to travel long distances to secure them?
>
> This brings us to the point of production. We find that some Wisconsin farmers do advertise and that when they do advertise we find them advertising standard stuff, pure-bred cattle, Wisconsin pedigreed grains, Wisconsin varieties of pure-bred, disease-free, certified potatoes, etc.
>
> The Wisconsin farmer who advertises is up to date, he is producing something besides scrub and common stuff and is awake to the value of advertising. He knows the name of his stuff. How many, many farmers when asked the kind of oats they are growing have to confess that they do not know, or if they do know give you some uncommon name not known to the best Wisconsin pedigree grain growers.
>
> So the problem of marketing farm crops begins back on the farm with growing something which the world wants, with producing standard stuff.
>
> Wisconsin's agricultural products can go around the world. Wisconsin pedigree grains are conquering the seed grain markets of the world, Wisconsin potatoes are conquering the seed potato markets of the United States. Wisconsin live stock is conquering the live stock market. But these things must be standardized and kept standardized.

The farmer is just beginning to learn the value of advertising. In this respect he is somewhat behind other people who have things to sell. The farmer who has nothing of any value to sell cannot afford to advertise. The better his product the more money he is justified in expending to make it known. If something exceptionally good is raised on the farm its value is enhanced by wide publicity. This is simply extending the market. The right kind of advertising should cause more people to want the farmer's products. It is only when there are a large number of buyers in sight that he may expect values to increase.

Weeds Cut Down Corn Yield.

THERE are two reasons why it is worth while for corn growers to put up a stiff fight in opposition to weed growth. In the first place, weeds use an enormous amount of water, and, secondly, they are greedy in the consumption of plant food. Only when a soil is abundantly supplied with moisture and lavishly impregnated with fertility can it be said that weeds will do little harm or not materially cut down the yield of the corn crop.

An interesting experiment was conducted at one of the experiment stations a few years ago for the purpose of showing the effect of weed growth on crop yields. Two fields of corn were treated alike and given good cultivation up to a certain date. After that the weeds were kept in check on one field by hand hoeing, and the yield of fodder per acre on this field was 11,843 pounds. The same field produced 81.6 bushels per acre. On the other hand, the corn which received no treatment whatever and was, therefore, allowed to meet the opposition of weeds and grasses, the yield of fodder was 9,188 pounds and it produced 61.4 bushels per acre.

While it is not here intimated that hand work is practicable, this experiment, nevertheless, illustrates the principle involved when weeds are kept down. There was an increase in this instance of twenty bushels of shelled corn per acre; this being the direct result of keeping weeds in check. It is fair to state that a cultivator, if rightly used, will be just as effective for weed destruction as the hand hoe, and the same good results from sensible surface tillage may be expected.

From this time on the chief concern should be to keep the weeds in check without destroying the feeding rootlets of the corn. It is a shortsighted and dangerous practice to run the cultivator shovels close to the corn row and at the same time deeply into the soil. Many men can be found who claim that they like the music furnished by the cracking of the corn rootlets, but we have no hesitation in saying that this is costly music, as no man can tell in advance what the character of the weather will be, and as we are particularly helpless to predict when there will be a shortage in the moisture supply it goes without saying that most of the work done after the second cultivation should be done without penetrating the soil deeper than three inches. Indeed, if the last plowing can be done so that only a two-inch mulch is created this will answer all practical purposes. If the work has been done carefully, weeds may be checked just as effectively in this way as they can by going down four or five inches deep.

Facts on Farm Management.

A GREAT deal of valuable information is being gathered in the counties of the state in which a number of farmers are interested in the recent farm-management contests. In Winnebago county there were eighty-two farms studied, and the average managerial income of all these farms in 1915 was $405. The average for the past four years was $531.84. The average managerial income of the five highest of all studied was $1,316.39. An interesting sidelight on the farm management study in Winnebago county is shown in the records on farms with silos. Out of the eighty-two farms studied nineteen had no silos and the average income of these was $322 per year. There were sixty-three farms which had silos and which showed an average income of $522. Out of the eighty-two farms studied only twenty-three raised five acres of alfalfa, or more. Those who raised alfalfa had an average managerial income of $706 and on the balance of the farms where less than five acres, or no alfalfa, was raised the average income was $387. In Barron county there were 104 farms studied during the past four years. Fifteen of these farms had no silos and these fifteen had an average income of $355, while the eighty-five farms which had silos had an average income of $746. Only three farmers in Barron county raised five acres or more of alfalfa during the past four years. These farmers averaged a manager's income of $1,480. The income statement in connection with all these farms means the amount of money which the farmer has left for his year's work after paying running expenses and 5 per cent on his investment. In addition to the manager's income the farmer has a house in which to live and farm products for home consumption. Dairy receipts per cow on the five best farms in Barron county averaged $52 each. In Waukesha county on the five best farms, where the cattle are all pure bred the dairy receipts per cow averaged $160. These Waukesha county farms had an average number of 57 each, while on the Barron county farms there

was an average of only 17. In crops, Waukesha county's five best farms earned $5,446 each, while in Barron county the five best farms earned $1,074 each on crops. Of course the investment in Waukesha county is about two and a half times as much as in Barron county farms. But the figures are a strong indication of the value of pure-bred live stock and of farming in all its departments.

Temperature in a Silo.

MR. F. M. WHITE, of the Wisconsin College of Agriculture, has made an exhaustive study of the factors which determine the temperature on the inside of a silo. He says that this temperature is determined to a certain extent by materials used in the wall construction. In Wisconsin it is practically impossible in any type of construction, according to Mr. White, to prevent some freezing around the edge of a silo. However, he calls attention to the fact that freezing does not hurt ensilage, although, of course, freezing makes it difficult to handle. We quote from a recent statement by Mr. White:

Some statements have been made that freezing causes losses of 40 to 60 per cent of the value of the silage. If freezing resulted in the loss of nutriment it would be serious indeed, but practically the only result of freezing is that it makes the ensilage difficult to handle and cattle naturally prefer warmer food. A statement commonly made against silage produced in masonry silos is that it has no life and this is charged up to the influence of the cold walls. So far as I am able to learn no one can state specificially just what is meant by "no life," and there is no foundation for such a statement. Some statistics, however, have been cited which seem to prove that cold walls influence the quality of ensilage produced. This claim is made against masonry construction of all kinds, the statement being that these walls are cold and prevent the proper fermentation processes occurring in the making of the silage. However, as practically all silage is made during warm weather, or at least sometime before there is any freezing, the wall of a silo is not cold enough to have any effect on fermentation. As a matter of fact there are many instances where masonry silo walls are found to be as warm as any type of construction.

Mr. White cites the results of an experiment at the Iowa station where the following conclusions have been offered:

Results of investigations on three silos during the period of experimentation indicate that no importance can be attached to the superiority of any one type of silo over another in regard to the conductivity of heat through the walls. The results show that no difference which could be attributed to the effect of different types of building materials upon the processes of silage formation were noted in the chemical changes of the silage in the three silos. Hence it is fair to presume that a high temperature is not an essential factor in the production of good silage.

Similar experiments have been carried on at the Wisconsin station with results as given by Mr. White, who has had charge of the work, practically the same as in Iowa. As good quality of silage has been found at the wall in either of the four types as at the center.

Save the Heifer Calves.

FAT cattle are bringing high prices. The average in this country for the past four years has been higher than for any like period that we have any record of. Stock cattle have been abnormally high; in fact, have been getting higher from year to year. These high prices are the result of two principal causes: Scarcity of cattle and high cost of feeding stuffs.

Cattle finishers, in spite of getting high prices, have frequently lost money, and as a general proposition have made only a small legitimate profit. Cattle raisers have not been getting rich either. Some, it is true, have done exceedingly well; but everything considered, the cattle raiser has perhaps, not fared much better than the finisher.

The question naturally arises as to where the trouble lies. Surely somebody ought to make a profit out of 8 and 10-cent beef. We believe that one of the faults with the beef-producing business as it is managed at present is that the cattle are kept too long before they are finished for the block. True, the marketing of baby beef is increasing quite rapidly, especially in the corn belt, where it is impossible to raise a steer till three years old and then sell him fat. But the practice should be more general. A well-bred range calf will bring from $35 to $40 after weaning, which represents a profit of from $20 to $25 per head—a larger profit than that calf will ever return in any subsequent year.

Logically, the bulk of our cattle should be raised in the range sections; first, because they can be raised cheaper there than in the corn belt, and second, because the range land is better adapted for grazing and live stock production than for the growing of grain crops.

To bring about such a change in the time of marketing range-bred cattle on a large scale will take time, because more cows will be required. The grass that is now being consumed by yearlings and two year olds would have to all be consumed by breeding cows, but a better time could not be found than now to do that very thing. While the change is being made, there will apparently be more beef produced than our present breeding herds can supply because half of each year's calves—the steers—in addition to a crop of yearlings or two year olds would be marketed in a single year on a given ranch making such a change, but with the present demand for stockers and feeders the market would easily take care of this extra supply.

Such a system would enable us not only to produce a great deal more beef from a given amount of feed, but also a much larger total quantity of beef. For example, the man who now runs 500 cows and sells his increase as two year olds to be finished in the corn belt on a three or four months' feed and reach the market at an average weight of say 1,350 pounds, could easily run 1,000 cows on the same acreage if his calves were sold at weaning time.

These 1,000 cows would produce about 800 marketable calves, which would be finished in the corn belt in six or seven months, weighing about 900 pounds each. Thus, from the 1,000 cows, 720,000 pounds of beef would be produced. By the other plan, from the 500 cows, there would be about 385 two year olds to sell each year. Finished in the corn belt on a three to four months' feed, they would probably average about 1,350 pounds per head and produce a total of about 520,000 pounds of beef. Thus, from the same amount of feed, by finishing all calves at from twelve to fourteen months old, we could produce 720,000 pounds of beef as compared with 520,000 pounds by finishing them at about thirty months old.

In view of the fact that there is a scarcity of cattle at the present time in this country, that Europe has almost exhausted her cattle supply, that there are approximately 25,000,000 men under arms at present who are consuming more than double the quantity of beef they consume in normal times, keeping the heifers with a view of increasing the breeding herds throughout the country and finishing more calves for the block, would appear to us, to be a sensible policy.

Alfalfa Hay as a Substitute For Grain.

AN INTERESTING experiment has been conducted at the North Dakota station, with the object in view of ascertaining the extent to which grain can be saved by feeding hogs liberally with alfalfa hay. The recent test at that station included fifty sows; forty of these were fed alfalfa hay with a limited grain ration, while ten of them were fed the same grain ration without alfalfa.

During this trial the hay was fed whole in cheap racks provided for the purpose. These racks were made with upright slats about eight inches apart or just close enough so that the sows could get their heads completely into the racks. In this way a comparatively small amount of the hay was wasted. The racks were placed along a fence, in protected places out of doors.

The grain was fed in troughs as a thick mash, warm water being used in mixing the mash. The grain used was composed of two parts crushed barley and one part bran by weight. The alfalfa feeding was begun December 27, 1915, at which time the sows were all weighed and found to average 310 pounds. The average weight of the sows not receiving alfalfa being within a couple of pounds of the average weight of those that received the hay. Due to the fact that some sows were sold and had to be shipped March 1st and others were due to farrow soon, the trial was closed at that time so far as keeping a record of the amount of alfalfa fed was concerned.

In feeding the alfalfa hay the principal object in view was to determine to what extent the hay could be made to take the place of grain and to study the effect of the hay feeding on both the sows and litters at and following farrowing time. Therefore, the sows were not weighed at the close of the trial, though judging from appearance all had gained as much through the winter as was consistent with proper condition of brood sows through the gestation period.

The feed record showed that during the sixty-five days of the trial the sows receiving grain only had eaten 1.8 pounds of grain per 100 pounds live weight per day. The sows receiving alfalfa hay had eaten 5,030 pounds of alfalfa hay and 9,672 pounds of grain. Using the initial weight this figures out on the basis of 1.2 pounds of grain per 100 pounds live weight per day, and 1.95 pounds of alfalfa hay per sow per day or .63 of a pound of hay for each 100 pounds live weight of sows per day.

According to these figures it was possible to replace .6 of a pound of grain with .63 of a pound of alfalfa hay. Another way of looking at it is that the sows getting the alfalfa required only two-thirds as much grain as those not getting it in order to keep them in equally as good condition. As it was the forty sows ate 9,752 pounds of grain and 5,030 pounds of alfalfa in the sixty-five-day period. On the basis of the amount of grain required by the sows not getting hay these sows would have eaten 14,508 pounds of grain. At a cost of 1 cent per pound, which was the actual cost of the feed, the total cost on grain alone would have been $145.08. By feeding the alfalfa a saving of 4,836 pounds of grain was effected, thus reducing the grain cost to $96.72. To replace the 4,836 pounds of grain, however, there was fed 5,030 pounds of alfalfa which at $10 per ton cost $25.15. Adding this to the $96.72 gives a total of $121.87, which still shows an actual saving of $23.21 in the feed bill for the forty sows, for the sixty-five-day feeding period brought about by the feeding of alfalfa.

Washing Wool Before Shearing.

IN SOME localities it is common practice to wash sheep quite thoroughly a few days before shearing on the theory that washed wool makes a better appearance and therefore brings a higher price on the market. There is, however, considerable labor attached to washing and some danger to the sheep, and the question as to whether it pays from a financial point of view was quite fully investigated by the Ohio Experiment Station during the years of 1912 and 1913. Four lots of Delaine Merino sheep, twenty-five to the lot, were used for the test. Two lots were sheared about the middle of April, of which one was washed before shearing and the other not; the other two lots were sheared June 1st, each year of which one was washed before shearing and the other not.

It was found that the washed sheep sheared in April produced on the average 10.33 pounds of wool, while the unwashed produced 11.82 pounds per head. In other words, the washing caused a shrinkage of about 1.5 pounds per head. The sheep sheared in June produced, for the washed lot, an average of 9.89 pounds of wool per head while those in the unwashed lot produced 12.53 pounds, showing a loss due to washing, in this case, amounting to 2.6 pounds per head.

These differences in the weight of the fleeces, of course, were due to the removal of a certain amount of dirt by the washing. While it is true that washed wool brings a somewhat higher price on the market than the unwashed product, the difference in market value was in no case large enough to leave any pay for the labor of washing; in fact, in some cases there was an actual loss in the gross income from the washed fleeces as compared with the unwashed, by not counting the cost of labor incident to washing. In other words, in some cases the washed fleeces at 35 cents a pound brought less money than the unwashed at 30 cents, and the difference in price is seldom greater than 5 cents a pound.

The conclusion reached therefore was that washing sheep before shearing does not pay. The reason for this is that the wool has to be scoured anyway whether the sheep are washed before shearing or not, and all wool prices are based upon probable scoured weights. The weight of the scoured wool was the same in all lots in the tests referred to, which extended through a period of two years.

The washing of the sheep had no effect upon the rate of gain or upon their general health, so no reason could be found to justify washing, no matter how conveniently the sheep man may be located for washing his flock.

The Morning-glory Pest.

STUBBORNNESS in plant form is well typified in the morning-glory or, as it is generally called, bindweed. One reason for its persistence is that the root lives over year after year, and when once an area becomes infested it is practically impossible to clean the land and at the same time produce intertillage crops like corn. A sufficient number of plants usually escape each year under that system so that the roots are nourished and these, in turn, produce new vines and thereby keep up a continuous performance. Bindweed is disagreeable to handle because of its trailing character, winding itself as it does, around cultivator shovels and thereby retarding the work.

Where these pests establish themselves in a given field a special program will have to be mapped out with their destruction as the chief object. It can be accomplished in some cases by obtaining a good stand of grass where clover is the dominating crop. Of course, morning-glories are a nuisance and a pest in thin meadows, and it is doubtful if it pays to allow a thin meadow that is infested to stand more than one season. If it can be plowed after removing the first hay crop and kept cultivated during the late summer and fall, such a field will be in good condition for corn the following season and the morning-glories will be so weakened that they will not put up much opposition. However, where meadows are thick the weeds will be partly smothered out and their destruction can be more easily wrought by using the grass land for pasture purposes during one or two seasons. Let the hogs have their liberty wherever morning-glories make their appearance and one may rest assured that their end will be in sight. Hogs find the roots of morning-glories palatable and they are willing, as a rule, to uproot them for the nourishment they obtain from the luscious roots.

It goes without saying that sheep will very quickly clean a field of morning-glories, because these weeds are included among the list of plants that are palatable to sheep. As a rule, those farms on which a few sheep are kept are always free from plants of this character and there are those who claim sheep to be highly profitable even if there is no cash income from the flock, because of their ability to keep such weeds as this in check.

Those who are troubled with bindweed and have to fight the matter out to the bitter end while they are producing such crops as corn and oats should bear in mind that good work can sometimes be accomplished with cultivators while the ground is sticky and wet. Ordinarily, it never pays to go into a field with cultivators while the soil is in that condition, but in dealing with bindweed this rule may be modified to advantage. We have in mind a number of instances where this plan has been followed persistently with excellent results by men whose method of farming compels them to emphasize the growing of corn and small grain. Such individuals have frequently claimed that they are able to keep the bindweed in check by following this plan.

In And Around Wisconsin.

Sauk County Country Life Picnic at Devil's Lake on July 27th—Other Items of Interest to Our Readers.

Wisconsin stood second in May in the list of states securing transfers of cattle ownership issued by the Holstein-Friesian Association of America. During a two weeks' period in May 467 transfers were issued to Wisconsin stockmen.

J. A. Newsome, Waupaca county, is a firm believer in alfalfa as the best forage crop for that locality and during the third week in June he had a field of alfalfa that yielded cuttings ranging from thirty-six to forty inches in length. This field was sown during the last of May a year ago.

The sixth annual picnic of the Sauk County Country Life Association will be held at the Kirkland shore of Devil's Lake on Thursday, July 27th. Committees have been chosen to make the necessary arrangements and as these meetings are always well attended a successful gathering this year is anticipated.

To determine the extent of co-operative enterprises in Wisconsin the college of agriculture has begun a careful study of these factors in twentieth century farming. B. H. Hibbard and Asher Hobson are in charge and the line of study mapped out has been divided into four main groups—general co-operation organizations, producers' organizations, buying and selling agencies and co-operative public service organizations. Besides the three national farmers' societies doing business in Wisconsin data will be collected regarding the various co-operative cow-testing associations and community breeding clubs, special cash crop and dairy produce clearing houses operated by farmers on the co-operative basis and such service organizations as packing plants, insurance, telephone and laundry companies.

A. J. Pierce, well known as a Holstein breeder, has sold his farm at Lauderdale Lake, Walworth county, to L. W. Swan, cashier of the State Bank of Elkhorn, who will continue to operate it. There are 117 acres in this farm, which is one of the best equipped in the county. Mr. Pierce recently disposed of his Holstein herd, but Mr. Swan plans to install a herd of his own this fall.

The "profitable and unprofitable" live stock exhibit which was given at several district fairs last year by the Wisconsin Stock Breeders' Association will be repeated this year at the following fairs: Baraboo Valley Agricultural Society, Reedsburg, August 1st-4th; Boscobel Agricultural Society, Boscobel, August 9th-11th; Rock County Fair Association, Evansville, August 16th-19th; Inter-County Fair Association, Marshfield, August 9th-September 1st; Marathon County Agricultural Society, Wausau, September 5th-8th; Langlade County Agricultural Society, Antigo, September 19th-22d; Dodge County Fair Association, Beaver Dam, September 25th-29th; Wisconsin State Fair, West Allis, September 11th-16th. The exhibit will be shown under a separate large tent at each of the fairs. It will be taken from place to place. Actual conditions, and no unfair comparisons, will be shown. Meat animals will be bought from the local markets and dairy cattle will be loaned to the exhibit by cow-testing associations throughout the state.

State Senator George Staudenmayer, a well-known farmer of Columbia county, has announced his candidacy for the democratic nomination for governor of Wisconsin. Senator Staudenmayer represented the counties of Sauk and Columbia in the upper house of the 1915 legislature. He was born in the town of Caledonia, Columbia county, and until elected to the senate he never held a public office.

J. W. Dunegan, cashier of the First National Bank, of Stevens Point, and the owner of Springbrook Farm in Stockton and Oak Grove Farm at Plover, believes in beautification of the farm and has employed a landscape architect to lay out plans for his two farms. Mr. Dunegan intends to locate windbreaks on his two farms and maps are now being drawn with this idea in view and next planting season the work will be carried out.

Farmers in the neighborhood of Stratford, Marathon county, are considering reorganizing a cow-testing association and the recent testing picnic there was addressed by H. C. Searles, state organizer, who brought out the fact that Wisconsin now has fifty-five associations operating. The latest to begin work were the Rosendale, Eldorado & Ladogac Association, with Frank Flynn as tester and the Empire association, with Roy Monroe as tester. Both are in Fond du Lac county.

The Dunn County School of Agriculture at Menomonie is carrying out its extension work among the farmers this summer and recently made tests of soil for forty-five farmers in that county. These tests were made in order that the farmers might determine in what respects their soil was lacking. Forty-two of the forty-five tests showed acid in varying amounts. Twenty-two of the acid samples did not contain sufficient acid to prevent the raising of successful crops of corn, oats or clover and on five of these slightly acid soils alfalfa is being grown successfully without the use of limestone to neutralize the soil acids.

Premiums aggregating $84,604.25 have been offered for the Minnesota State Fair, September 4th-9th. The greater share of the prizes offered are for horses, cattle, swine, sheep, wool, poultry and dairy products, the total sum amounting to $36,386. This amount is divided as follows: Horses, $12,000; cattle, $13,280; swine, $3,734; sheep, $3,672; poultry, $1,900; dairy products, $1,550; wool, $250. Including the $20,900 offered for the speed program, $57,286 is offered for the encouragement of better live stock. Nearly $15,000 are presented by the horticultural and agricultural departments. Agricultural exhibits, including the county exhibits, are given $9,343. In the horticultural department the prizes are as follows: Fruit, $1,800; flowers, $1,975; vegetables, $1,325. The dairy department is to give away $1,170.

New Richmond, St. Croix county, is becoming one of the large cheese centers of the state and there are now twenty-nine factories shipping their product into that city for distribution. Shipments have been very heavy during the past few weeks, which indicate the healthy condition of the trade and the big checks which are being paid to the farmers by the factories for their product.

Interest in boys' and girls' judging contests has become so pronounced that many of the district fairs this year have added judging classes. Among these fairs is the Fond du Lac County Fair, which will stage such a contest in co-operation with the breed organizations of the county. The Guernsey, Holstein and Jersey associations have each offered a pure-bred bull calf to the winner in each class and in addition the fair has added cash prizes for individual and team judging. Entries may be made with E. R. Zamzow, secretary.

The reliability of the factory tests of milk and cream is borne out by a recent experiment at New Richmond. Prof. H. M. Stephens, of the agricultural department of the high school, sells the cream from his cows to the New Richmond Cheese & Dairy Co. He made a composite test of the product from his cows, entirely unbeknown to Manager Olson, of course, and in a seven-day test Professor Stephens' test and that of the New Richmond Cheese & Dairy Co. varied but eighteen one-hundredths of a pound of butter fat on 140 pounds of cream.

GROUP OF WISCONSIN FARM BOYS WHO ATTENDED THE SHORT COURSE AT THE COLLEGE OF AGRICULTURE IN JUNE.

Permanent Hay Shed.

Drawings for a hay shed which is to be part of the permanent farm equipment have been prepared by the office of public roads and rural engineering of the department of agriculture, Washington, D. C., and working drawings, with a bill of materials, may be had upon application to that office.

The construction of this shed is such that it may be built in as many sections each sixteen feet long, as are needed to meet the different requirements of individual farms. The width is twenty-eight feet and the height to the eaves is twenty feet, with a quarter-pitch gable roof. If the building is more than three sections, or forty-eight feet long, there should be a hay door in each end. Each section, it calculated, has a capacity of about twenty tons of average hay, the exact capacity varying, of course, with the kind of hay and its condition when put in. With good alfalfa it may be possible to put as much as twenty-five tons into each section. In case the building is used for alfalfa a lean-to for storing baled hay may be built on one or both sides.

As planned, the shed is of the maximum width consistent with ease in mowing away the hay, and the interior has been left clear of braces in order that the hay may be gotten in and out without interference. In the drawing prepared by the department the top seven feet at the sides are covered, but if desirable the whole building may be inclosed.

Since this hay shed is to be permanent it should be located on well-drained ground and in a situation as convenient to as many fields as possible. The plans call for concrete piers in order to avoid the rotting of timbers from contact with the ground. The frame is strongly braced and intended to withstand any storm except a cyclone. As fire is the chief danger to a building of this kind, lightning rods should be installed. This will lessen the danger from this source.

The cost of such a structure will vary, of course, with the situation and local conditions. With lumber at $30 a thousand, however, it is estimated that the materials in a three-section shed, twenty-eight feet by forty-eight feet, should cost little more than $300. A shed of this size may be expected to hold about sixty tons of hay. Including the cost of labor, the shed should be built complete, with hay carrier and lightning rods, for approximately $450.

The COMO WASHER

IS THE ONLY WASHER ON THE MARKET TODAY

That will wash any and all kinds of dirty clothes clean, including the cuffs and neck bands of shirts, the seams of a garment and the bottom of skirts without the aid of a washboard. The COMO will wash any spot or portion, same as a washboard. 100 washers to be given away in return for services. Write for catalog.

LUCKEN MFG. CO.

1052 W. Minnehaha St., Saint Paul, Minn.

GRAIN BIN GUARANTEED 5 YEARS

BUT BUILT TO LAST A LIFE-TIME

A MONEY SAVER in Hauling, Insurance and Waste.

Most Easily ERECTED or MOVED

Fire, Rat and Weatherproof. Will pay for itself. Write for FREE CATALOG explaining how and illustrating full line.

BUSHNELL TANK WORKS, Inc.

Bushnell Dept. D Illinois

Cut Rates—Lumber, Shingles

OUR own Douglas fir and red cedar direct from our sawmill and factory to you. Don't delay. Tacoma dimension lumber, guaranteed full two inches thick, 20% stronger: Dakota clear shingles, guaranteed half-inch butts, everlasting. To insure lowest prices send list for estimate. We quote delivered; pay after inspection. Reference, any Tacoma bank. LOCAL LUMBER CO., 1111 Cushman Ave., Tacoma, Washington.

MAKE MORE MONEY

WITH less aggravation by attaching an adjustable stubble cutter to your corn harvester. Cuts the "stubs" while you cut the corn. Easily attached to machines of the Acme, McCormick, and Milwaukee type. Interesting book, "Comfort In the Cornfield," free. Give make of corn harvester when writing. Address CORN HARVESTER ATTACHMENT CO., 524 S. Dickinson Street, Madison, Wisconsin.

WITTE Engines

EVERY SIZE A BARGAIN. 2, 3, 4, 6, 8, 12, 16 and 22 H-P. Kerosene, Gasoline, etc.

WITTE ENGINE WORKS, 2711 Oakland Ave., Kansas City, Mo.

6 H-P, $89.90

FOR SALE 30 full blood Shropshire ewes and 20 spring lambs. If you want the right start in the sheep business you should buy the entire flock.

Milo W. Petersen Hartland, Wisconsin

PATENTABLE IDEAS WANTED. Manufacturers want Owen Patents. Send for 3 free books: inventions wanted, etc. I help you market your invention without charge. Address Richard B. Owen, 37 Owen Bldg., Washington, D.C

BALE YOUR HAY With the Lightning Line

MAKE BIG PROFITS Simplicity, strength, durability, make the Lightning Press the most economical to buy; big capacity, quick work, no trouble, lasts for years, best farm money-maker.

We make a complete line of both heavy and light presses, horse, engine and tractor power. We will make good terms to right customers.

Send name today for complete catalog, showing all styles and prices.

KANSAS CITY HAY PRESS CO., - KANSAS CITY, MISSOURI.

Weeds—Their Length of Life.

Nature of Pests Must Be Well Understood if Success Is Attained in Fighting Them, as They Vary in Their Root Habits.

IN fighting weeds it is extremely important to know how long they naturally live and their habits of reproduction. Weeds are divided into three classes according to their duration or length of life: (1) Annuals, (2) biennials, (3) perennials.

Annual weeds live only one year maturing their seeds and then dying. Ragweed, smartweed and crab-grass are examples of annual weeds. Some annuals germinate in the fall, live through the winter, and mature their seeds in the spring. These are called winter annuals. Examples of winter annuals are shepherd's-purse, peppergrass and fleabane.

Biennial weeds live two years. During the first year they grow rather slowly, producing usually a taproot and a rosette of leaves close to the ground, but the second year they send up flower stems that produce seed, and then die. Examples of biennial weeds are blueweed, bull thistle and wild carrot.

Perennial weeds produce each year underground parts which live over to the next year and produce top growth. These underground parts may be of various kinds. They may consist of long, more or less horizontal roots, as in the case of the bull nettle, milkweed and Canada thistle, or the underground parts may consist of rootstocks or underground stems, as in the case of quack-grass, Johnson grass and perennial sow thistle. Again, the underground parts may consist of bulbs that split up, as in the case of wild onion; or they may be more or less in the form of a taproot.

Far more important than to kill weeds is to avoid having weeds to kill. In other words, the farmer should aim to prevent rather than cure the evil. A farm can be made free of weeds by strictly observing the following principles: (1) Prevent weeds from going to seed on the farm; (2) prevent weed seeds being brought to the farm; and (3) in the case of perennial weeds, prevent them from making top growth and thus finally starve out the underground parts.

The application of the three preventive methods outlined here is fully discussed in the following paragraphs.

The annuals and biennials propagate themselves by seeds alone. In dealing with them it is necessary to observe only the first two of the above principles.

Most perennials propagate themselves by their underground parts as well as by their seeds; hence, even if prevented from going to seed they still keep on growing. In dealing with them, therefore, it is necessary to observe all three of the above principles.

The thorough preparation of the seed bed for every crop is an important part in the control of weeds. After plowing nearly all farmers use a disk or spike-tooth harrow to reduce the soil to a good seed-bed condition. Each of these harrowings destroys hosts of young weed seedlings. As it is only the weed seeds within a few inches of the surface of the soil that germinate and, as the harrowings encourage the rapid germination of the weed seeds, thorough harrowing at this period may be relied upon to kill a large portion of the weeds that will appear during the season. In fact, it sometimes happens that the seed bed has been so well prepared that after planting a cultivated crop, such as corn, cotton or potatoes, but little cultivation is required.

After planting the cultivated crop the same object, that of attacking the weeds when young, should be kept in mind. To this end a drag harrow or a spike-tooth harrow is frequently used, both before and after the crop comes up. More weeds will be killed by one dragging at this time than by several cultivations when the plants have become larger. The weeder is also a valuable implement for use at this stage. By removing some of the teeth of this tool it can be used in corn until the crop is nearly waist high. Indeed, some excellent crops of corn have been grown by the use of the weeder only. Some soils are too stony or otherwise not suited to the use of this implement, but where it can be used the weeder is one of the most valuable tools on the farm. The drag harrow and weeder may also be used to advantage with potatoes, cotton and other cultivated crops. After the crops have become so large that these implements can no longer be used, the tillage is performed with cultivators. Cultivators that destroy weeds most effectively should be used. The best tools for this purpose vary with the kind of crop and the type and condition of the soil, so that it is difficult to lay down exact rules as to the choice of cultivators. Intercultural tillage is especially effective in controlling weeds if the crop has been planted in checkrows so as to permit the implement to work in two directions.

Cultivated crops, therefore, offer abundant opportunity to rid a farm of weeds. If properly handled, they are rightly termed "cleaning crops." On the other hand, where these crops are not well cultivated, weeds are actually stimulated to vigorous growth and prolific seeding. Such crops are consequently a boon or a menace, depending upon how they are handled.

If the work of preparation and after tillage has been thorough, few weeds will come up and go to seed after cultivation stops. This is especially true where a winter cover crop, such as wheat, crimson clover or vetch follows the cultivated crop.

Besides the usual cultivated crops, small grain crops can also sometimes be cultivated to advantage in the spring with a spiketooth harrow or weeder. This does not permanently injure the young crop, and it kills hosts of small seedlings which would otherwise make trouble. Farmers in the upper Columbia River basin are able to control wild mustard by repeatedly harrowing fall-sown wheat in the spring; without this harrowing the mustard would be very troublesome.—[Bulletin.

Ira Vail Won $2000

Against the World's Great Racing Cars with a

Hudson Super-Six

The Only Car That Kept Going

The Hudson Super-Six is not built for a speed car. And we don't build special racing cars.

Our speed tests are made to show the endurance of our patented Super-Six motor. And here is one test which did it.

Met $10,000 Cars

The Metropolitan Race on the speedway in New York is the great racing event of the year. The world's best racing cars are entered. Their cost will average $10,000 each.

Ira Vail, of Brooklyn, entered that race with a Hudson Super-Six, which had been run for months. And everybody laughed. The motor was our regular Super-Six. The car, being a used car, cost him $1,300. For such a car to meet the world's finest racers seemed like David and Goliath.

It Never Stopped

The other cars ran faster, but they had to stop. The terrible speed called for repairs and adjustments. The Super-Six ran the 150 miles without a single stop. It was the only car that did that.

So the Super-Six defeated most of those racing cars. It won third place and $2,000. It was only five minutes behind the first car. All because this engine excelled all others in reliability.

1,819 Miles in 24 Hours

Another Super-Six ran 1,819 miles in 24 hours. That is as far as from New York to Denver. And one man drove it all the way.

That was a stock chassis, exactly the same as in the cars we sell. The A. A. A. officials certified to that. No other stock car has ever run more than 1,200 miles in that time.

That was due to endurance. The Super-Six kept an average speed of 75.8 miles per hour, and kept it for 24 hours.

Like 10 Years' Use

That same Super-Six has been run at top speed for 3,800 miles. And not a part or bearing in the motor shows evidence of wear. That means more strain than ten years' average use.

That is what we are proving—how the Super-Six will last.

This motor is a Hudson invention, controlled by Hudson patents.

By eliminating vibration—the cause of friction—the power is increased 80 per cent. So the Super-Six—a small, light Six—delivers 76 horsepower.

And that same utter smoothness gives this wondrous endurance.

Hudson Now Supreme

The Super-Six motor makes the Hudson car supreme. The man who owns one feels himself the master of the road. He meets no car so powerful, so speedy or so flexible. No stock car ever built has matched it in performance.

He meets no car more beautiful, more luxurious or impressive. He meets no car so durable. He goes anywhere and everywhere with a knowledge that none ride more safely or comfortably. And yet the owner of a Super-Six pays but a modest price.

Here is a car 80 per cent more efficient than Sixes used to be. When you buy a fine car you are bound to select it. So we want you to know the facts.

Good Growing Weather Is General

Winter Grains Are Turning---Oats Headed Out Well---Good Hay Crop Is Being Harvested---Corn Shows Improvement.

WISCONSIN.

Adams County—Rye and grasses are looking well and tame hay cutting is well advanced. Potatoes are coming on nicely. Corn is very backward. Cutworms are at work on high, light soils. —C. T. Leonard.

Bayfield County—Weather has been too wet for corn, oats and potatoes. Fields have been too wet to cultivate. Meadows look well. Clover is about ready to cut. Pastures are good. Live stock are doing well.—E. C. Stevens.

Buffalo County.—Small grains of all kinds promise to make fair crops. Corn is backward, but the last few days and nights of hot weather have pushed it along in fine shape. Potatoes are doing well and have bloomed heavily. Apple and plum trees will yield well. Farmers have been unsuccessful with young colts this spring. Young pigs are doing fairly well.—James G. Bates.

Chippewa County—All crops look well, except corn. For the last week, more favorable weather has caused an improvement in corn. The large acreage of potatoes planted is coming on fine and bugs are not troublesome. The hay crop is good and harvesting has commenced. Clover has an excellent stand; very little winterkilled. Pastures are in good shape, with plenty of young grass. Several cars of live stock were shipped last week.—Ernest Neitzel.

Crawford County—Crops look fine. Rye is beginning to turn; oats are headed out, with prospects of a good crop, although some smut is reported in them. Corn is behind, but is coming on fine since the warm weather began. Meadows are good and haying will commence in about a week. Pastures are good. Potatoes are growing nicely. Fruit and berry crops look well.—H. H. Stuckey.

Douglas County—Crops are backward. Too much rain and cold weather has caused corn and potatoes to rot in the ground. Pastures are good and hay promises to come up to average. Small grains have a good color but need warmer weather. With drier weather, the fruit promises fair, especially strawberries.—B. N. Stone.

Eau Claire County.—Grain crops look well, except on wet land, where they suffered from cold and rain. Potatoes are doing well on warm soil; on wet soil they are backward. Hay is a bumper crop and nearly ready to cut. Corn is about two weeks late, but is coming fine since the warm weather set in.—S. S. W.

Jackson County—Small grains are doing fine. Corn is backward, but the warm weather is bringing it along fine. Pastures are getting short, because the clover was killed out. Potatoes are looking well. Apples and plums are fair. The strawberry crop is small. Garden truck is doing exceptionally well.—C. G. Ristow.

Juneau County—Seasonable weather for the last week has helped corn. However, much of the corn is just up. Potatoes are looking well. There are more bugs this year than for several years. Small grain is good on high ground; on low ground it was damaged by the early rains and wet weather. A considerable amount of buckwheat is being sown. Hog crop is below average.—C. W. Hale.

La Fayette County.—Good, hot weather has improved the condition of all crops. Corn is doing well; some fields are normal, but others are small. Oats and barley look good; oats are heading and prospects are for a heavy yield. Potatoes are doing well, except there is some blight in the early ones. Farmers are putting up hay; the first crop of alfalfa is in; clover will make a heavy crop. Pastures are excellent and there is an abundance of white clover coming on in them.—W. F. Pease.

Langlade County—For the last few days crops have been growing rapidly. Winter wheat and rye are in blossom. Clover cutting has begun. Grass is heavy. Corn shows good color in hilly sections, but is poor on low land. Potatoes are looking well except in wet places. Strawberries are good.—Chas. Parsons.

Manitowoc County—Warm weather for the last few days has made a big improvement in the hay crop. Grain crops are an average. Corn is poor, especially that planted before the heavy rains. Some of it has just been planted. Peas look poor because they are bleached.—Otto G. Berge.

Marinette County—Decidedly warm weather during the last week has caused all crops to make a rapid growth. Cold, wet weather had retarded the corn and caused some replanting. Potatoes are in good condition at present. Small grains promise good crops. In the north part of the county clover and other hay crops are normal or above. If weather conditions allow good curing, hay will make a heavy crop everywhere in the county. Pastures are excellent. Fruits are doing well. The seventh load of grade and registered dairy cattle was brought in last week. These animals are bought upon a co-operative system which allows the farmer three years in which to pay for them.—W. E. Morton.

Marquette County—Weather is fine for corn, which has good stand and color, but is late. Oats look well. Rye is good, but thin on account of winterkilling. Pastures and marsh lands are good, but tame meadows are very light. Potatoes are all planted, some have come up nicely and others have rotted in the ground. A larger acreage of beans has been planted this year than usual. Cutworms are working hard on beans and corn so there is much replanting. The white grub is damaging strawberries and other crops. Live stock are in good health.—John M. Williams.

Pierce County.—We have had only a few hot days. Corn is about three weeks late. Rye has improved and the prospects are for a fair crop. All small grain looks fine, but is somewhat late. Clover cutting has begun and the crop is heavy. Pastures were never better and live stock are doing well.—G. K. Moore.

Portage County—Recent warm days have put new life into the corn, which was stunted and pale in color. Oats have had a light color, but are now doing nicely. About 75 per cent of the potato planting is up and growing well. Meadows were never better. Pastures are excellent. Creameries are doing a good business.—Arthur H. Peterson.

Price County—Weather is wet. Haying has begun and the crop will be heavy. Oats look well, except on flat lands, where it was damaged by excessive rains. Winter grain is a fair crop. Potatoes are late, but promise well. Pastures are excellent and live stock look fine.—C. F. Glissendorf.

Rusk County—Most fields of small grain look well. Corn is backward on account of heavy rains. Timothy and clover will make abundant crops. A few farmers have commenced haying and with favorable weather a good crop is assured. Potatoes look well, but the acreage planted is not large. Pastures continue to furnish ample feed and dairy cows are giving an exceptional flow of milk. Beef herds are improving rapidly.—T. M. Thomas.

Taylor County—Rye will be about half a crop; oats look fair; barley is poor. Corn is very poor and much of it had to be replanted because of cold, wet weather. There is little chance to have ripe corn this year. Potatoes are fair on high, rolling land, but on low lands there will hardly be half a crop. Hay is short and about two weeks late. Pastures are fair.—J. C. Hoffman.

Washburn County—Heavy rains delayed cutting of the clover hay crop, which is the largest raised in this county for several years. Timothy is heavy. Pastures are excellent. Oats, barley and rye promise well. Corn is backward, especially on heavy soils. Strawberry crop was large; other small fruits will yield average crops. A hail storm on June 25th did some damage to crops in the south part of the county.—L. D. Garnhart.

Washington County—Oats and barley are doing well on high land. Winter wheat and rye are fair. Peas look poor in this locality because the weather has been too wet and cold. Alsike clover is making good seed, and red clover hay is about an average. Timothy is short, but the stand is good. Corn and potatoes are backward due to cool, wet weather in June. Much replanting was necessary on account of the seed rotting. Pastures are somewhat bare in places. Strawberries were a good crop. Other fruits will be short in this section.—Milo P. Salter.

Waukesha County—Crops have improved. Barley and oats are a little thin, but well headed. Corn is growing very rapidly. The new seeding of alfalfa is one of the best ever raised in this country, and the first cutting was put in the barns in fair condition. The next crop is well started. Potatoes are in advance of last year's crop; early ones are in blossom.—W. J. Mann.

IMPORTANT ANNOUNCEMENT

Readers of The Wisconsin Farmer

We, the Federal Land Company, have just acquired the celebrated Hillsdale Ranch "in the heart of the Golden Prairie District" of Wyoming.

Sixteen thousand acres—one-half deeded—one-half state leased in alternating sections.

We will at once place the deeded land on sale in tracts of 160 acres and up, and with each farm sold will transfer, free, a five-year lease on equal acreage of adjoining state land.

Surrounded by improved farms, fertile soil, 2 to 7 miles from railroad town. Prices low; terms easy.

Please fill out and mail us the following coupon. It will bring you valuable information:

FEDERAL LAND COMPANY,
Burns, Wyo.

Gentlemen: Please mail me at once particulars of the Hillsdale Ranch which you are now offering for sale in farm tracts. Also Certificate of Guaranty, booklet on "Wheat Growing and General Farming," sectional plat and full particulars of the Golden Prairie District of Wyoming.

Address .....

Three Hundred Million Bushel Crop in 1915

Farmers pay for their land with one year's crop and prosperity was never so great.

Regarding Western Canada as a grain producer, a prominent business man says: "Canada's position today is sounder than ever. There is more wheat, more oats, more grain for feed, 20% more cattle than last year and more hogs. The war market in Europe needs our surplus. As for the wheat crop, it is marvelous and a monument of strength for business confidence to build upon, exceeding the most optimistic predictions."

Wheat averaged in 1915 over 25 bushels per acre
Oats averaged in 1915 over 45 bushels per acre
Barley averaged in 1915 over 40 bushels per acre

Prices are high, markets convenient, excellent land low in price either improved or otherwise, ranging from $12 to $30 per acre. Free homestead lands are plentiful and not far from railway lines and convenient to good schools and churches. The climate is healthful.

There is no war tax on land, nor is there any conscription. For complete information as to best locations for settlement, reduced railroad rates and descriptive illustrated pamphlet, address

GEORGE A. HALL 123 SECOND ST., MILWAUKEE, WISCONSIN

Canadian Government Agent.

No passports are necessary to enter Canada.

Give Your Soggy Acres A Job

Water-soaked soil can't raise crops. You'd hardly know you had the land if it wasn't for finding it on the tax duplicate. Drain that land. Change mud to money.

You save time and money and avoid hard labor when you use

The Pile
PATENTED
Riding Ditcher-Grader

Two or at most three horses pull it. Blade can be adjusted to cut any angle.

The operator rides. No fatigue. No weighting down with stones. It cuts straight to the line, to any depth and through any ordinary soil. Digs as fast as horses would pull an ordinary plow.

The Pile cuts a V-shaped ditch, the most practical type because it doesn't cave in and you can cultivate clear up to the water's edge. Also cuts a flat-bottomed ditch with sloping banks just as well.

Your increased crops on 12 acres will pay for the Pile.

Blocking Sugar Beets.

To the Editor:—When the sugar beets have put out the fourth leaf, it is time then to thin them in the row. At first the beets are blocked. This work is done with a hoe, leaving about a half dozen plants in a block every eight or ten inches apart. The next work must be done by hand, and this is usually done with cheaper labor—frequently it is done by children and women. The best plant in the block is singled out, and that one is allowed to stand and grow to become the desired beet plant. All the superfluous beets and weeds are pulled out by hand. The dirt is then pressed around the one selected. When the work is done properly, each row contains only single plants standing from eight to ten inches apart in a row.

Quite frequently, the following day, the beets in the field wilt, particularly when the weather is very warm. But in a few days' time the plants recover and erect themselves. Next in order will be cultivation, and it should be repeated several times or whenever necessary until the leaves grow so large that they might become damaged. The time to stop cultivation is when the leaves touch each other in the row. It is well to cultivate after rain, so as to conserve all the moisture possible. Sugar beets, so that they may grow best, need a large amount of moisture.

It is a good policy to have the sugar beets make their best growth early in the season. Let the leaves make their largest growth. It is in the leaves where the sugar is elaborated during the warm, sunshiny days of fall. It may increase the sugar 1 per cent a day, or two in times of favorable weather. When the leaves have turned a brownish color, and have lost their bright green, their work is done and no more sugar is elaborated.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

One Light Only on Ford Car.

I own a 1913 Ford car. I wish to run only one headlight with current from the magneto. How shall I arrange the switch and wires? What size light shall I use?

Answer.—Run a wire from the magneto wire terminal on the coil box to the light switch. From the other terminal of the switch, run a wire to the light. From the other terminal of the light, run a wire to the frame, and ground it. Use a sixteen-volt tungsten light of eight-candle power. Should you have any trouble with the light burning out, use an eighteen-volt light.

Engine Throttles Too Low.

I have a "Krit" car whose motor will not run as smoothly as I think it should. Sometimes it will stop when running slowly. It runs fine on the road. I have a Stromberg carburetor and set spark. What is wrong?

Answer.—The stop screw of the butterfly valve of the carburetor is adjusted so as to shut off too much of the gas when the motor is throttled clear down. Adjust the screw so that the motor will not slow down quite so much. It may be that you have air leaks at the intake manifold gasket, or around the intake valve stems. This would cause your trouble.

Gear-Shifting Trouble.

We have a 1915 Buick car. The gears may be shifted from low to intermediate and from intermediate to high, but cannot be shifted from high to intermediate. What is the trouble and the remedy?

Answer.—If your gears may be shifted when the engine is not running, your trouble is a "spinning" clutch; that is, your clutch does not come to nearly a standstill when released, as it should. The surest remedy is to locate a small leather disk in such a position that it acts as a brake on the rim of the clutch when the clutch is released. If it is impossible to shift gears under any condition, you better take the transmission apart, look for burrs on the clutch gear, broken gear teeth and burrs on the locating device.

Some Tractor Questions.

I have a ten-horse-power gasoline engine. At two miles per hour what would be its actual pull at the draw-bar? I intend to use a belt from the crank shaft to the jackshaft. What size pulleys should I use? I shall use five-foot drive wheels. What size sprockets must I use on the jackshaft and on the drivers?

Answer.—It may be of interest to our readers to know how to figure the draw-bar pull they can expect from an engine of given horse power. A part of the engine power—usually about one-third—is used up in driving the tractor. We will therefore say that the above ten-horse-power engine exerts seven horse power at the draw bar. Now, one horse power will exert a force of one pound through a distance of 33,000 feet in one minute. In other words, a horse power is equal to 33,000 foot pounds of work per minute. A "foot pound" is the product of the force exerted by the distance through which it is exerted, force being measured in pounds and distance in feet. If I am pulling with a force of five pounds and thereby move an object six feet I have done thirty foot pounds of work.

Now, if one horse power is equal to 33,000 foot pounds per minute; seven horse power equals 7x33,000 foot pounds=231,000 foot pounds per minute. In one hour this would amount to 60x231,000 foot pounds=13,860,000 foot pounds. The above tractor at two miles per hour will travel 2x5,280 feet=10,560 feet in one hour. To find the pull, divide the foot pounds by the distance moved. Therefore, for the above tractor the draw-bar pull equals 13,860,000÷10,560 =1,322 pounds. The weight of the tractor should be about double this amount, say 2,500 pounds.

You did not give the speed of your engine. We will assume that it is 250 R. P. M. In that case, use a pulley six-inch diameter and six-inch face on the engine; twenty-four-inch diameter and six-inch face on the jack-shaft. Use fifteen-tooth sprockets on the jack-shaft and seventy-five-tooth sprockets on the drivers, the sprockets being about inch and a half pitch.

Engine Will Not Run.

I have a three-horse-power Fairbanks-Morse engine that I cannot start. Apparently it has plenty of spark and the gasoline gets into the chamber. Do you think that it needs timing? How would you time it? New points were recently put on the make-and-break sparker. These are apparently very large. Would this be sufficient cause for failure to start?

Answer.—Any engine in good working order will start if it is timed correctly and has good compression, a good spark and the proper gas mixture. If you are doubtful about your timing notice your timing gears and see that the center punch marks or other marks come in line with each other when the engine is turned over. The exhaust valve should close soon after the piston passes dead center at the beginning of the intake stroke. The spark should occur at the end of the compression stroke, the spark control lever being in starting position.

See that you have a good spark by removing the igniter, running the ground wire to it and connecting the other wire to the terminal. Then work the igniter rapidly and the spark should show at the points. The size of the points should not matter. Keep the points clean. A defective spark is usually due to poor connections, defective wiring or weak batteries. Poor compression is usually due to leaky valves on new engines and worn-out rings on old engines.

Ford Motor Heats.

My Ford car has run 1,800 miles. The water boils in the radiator even if I only run five or six miles on good roads. It boils more now than it did when it had run only 1,000 miles. What is the cause?

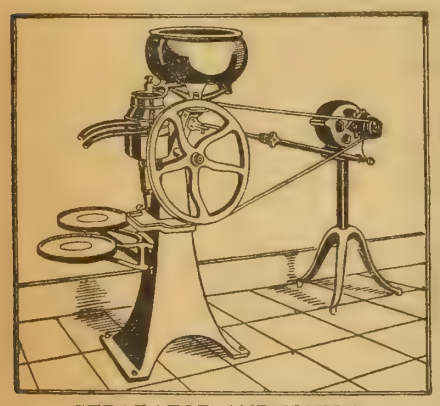
Answer.—Too much carbon has accumulated in your cylinders. Remove the cylinder head and scrape out the carbon. A loose fan belt, running with the spark retarded or stopped up water passages will also cause a motor to heat.

Electricity in the Farm Home

WHAT farm woman has not sighed a hundred times, as she lit the old kerosene lamp, or went out to pump a bucket of water? What farm woman has not longed for the luxury of electric lights and running water, such as her town friends enjoy? And now it is possible. Her wish may come true. For conveniences which long have been regarded as solely within the reach of the city dweller may now be had at a reasonable price for the farm home. Individual electric plants, which make possible, not only electric lights for house and barn, but running water, and a multitude of labor-saving devices for the housewife are being manufactured at as low a price as $250.

Think of having a farm house completely equipped with all modern lighting and labor-saving devices, at no greater expense than the city man must pay for his electricity! These individual plants are easy to handle—a child of ten or eleven can do it. Danger? There is none. The voltage is so low that anyone can handle the switchboard freely and not get a shock. All that is necessary to start the engine which generates the power is to press down a lever. The little plants include the engine, generator, switchboard and batteries.

The busy farm wife can put the little power plant to a greater variety of uses than she ever dreamed of. But first comes lighting. The little plant will run thirty-two 16-candle-power lamps at any time. Sixty or seventy lamps may be connected up, and if it should be necessary to run them all at once, the reserve electricity stored in the batteries may be drawn upon. In the average farm home only

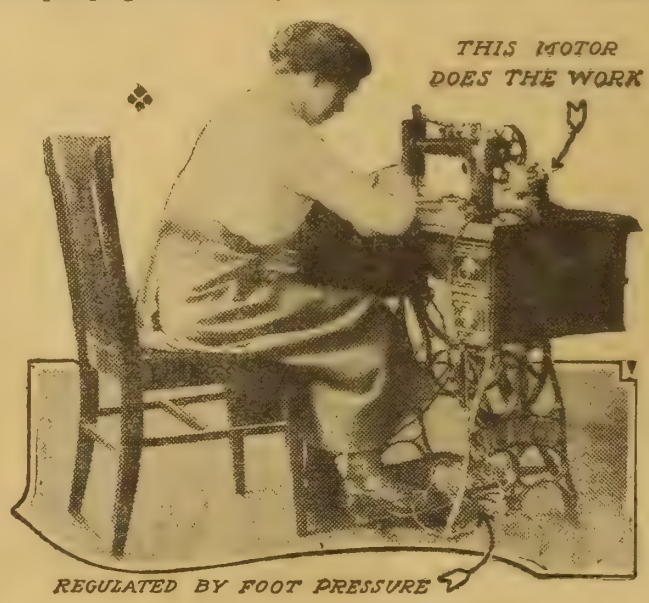


SEPARATOR AND MOTOR.

a few lights are burned at a time, leaving most of the power free to pull some of the many labor-saving devices with which the farm home may be equipped.

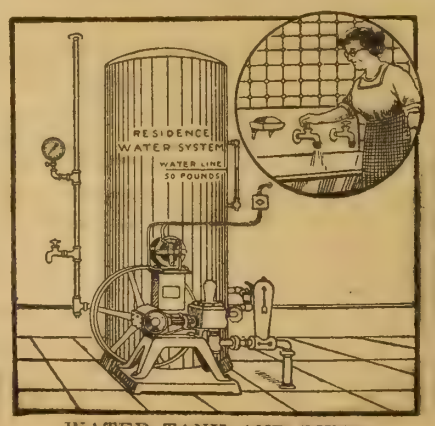
When it is not running this plant costs nothing. The city business men pay about the same amount for the electric light or power they use in the business district as the farmer can get them for with one of these home plants. In the residence districts of the city the charge is usually 10 cents and in the smaller towns it is frequently 15 cents for the same lighting service that can be had on the farm for around 7 cents.

Next to lighting, the water service is the most useful of the conveniences made possible by the little farm electrical plant. By its use, running water may be provided in the kitchen sink, in any room in the house, and in the basement or the barn. The water pump, tank, automatic controller and motor, shown in the picture, can be bought for $110. Or if there is a tank already in the farm house, the rest of the equipment may be attached to it, reducing the cost. The pump is operated by a one-eighth horse-power motor, which can be attached to any electric light socket. It will lift the water twenty-two feet; that is, from a well, where the surface of the water is twenty-two feet below the pump. It will bring it from a lake or a well 125 feet away. It pumps 160 gallons of water an hour. The automatic controller regulates the pump. When enough water has been used from the tank so that the water pressure goes below a certain point, then the pump begins to work and continues until the pressure is up again. It starts and stops automatically, requiring no more attention than city folks give to the pumping of their city water into the standpipe at their waterworks. The pump and equipment can be installed by the plumber who pipes the house for the water service.



MOTOR DRIVEN SEWING MACHINE.

The labor-saving devices which may be operated by this small plant seem almost endless. Electric washing machines are commonly used. These can be bought, already equipped with motor, for from $35 to $105. The average price is about $60. The washing and wringing machine, illustrated on this page, is one of the $105 machines. It has a copper tank, in which the drum of the washer is located. The drum is a big cylinder, perforated with small holes. The clothes are placed in the drum, and when the lever is pressed which starts the washer, the drum revolves, washing the clothes. The drum reverses automatically, turning first in one direction and then in the other. Turning on the wringer at the back, the clothes may be wrung in or out of the tub. The wringer is turned on by the lever on which the woman in the picture below is resting her left hand. Her right hand holds the cord which connects the one-sixth horse-power motor with the electric-light socket. The wringer and washer will operate at the same time, or either may be used alone. The machine will do an eight-hour washing for a cost of about 12 cents. The machine is comparatively light weight, and may easily be dragged around and attached to any convenient electric-light socket. Since it requires so little attention, the housewife may do her baking, cook dinner, or read The Wisconsin Farmer while her clothes are being washed. The same kind of a machine, with a galvanized instead of a copper tank, costs $85.



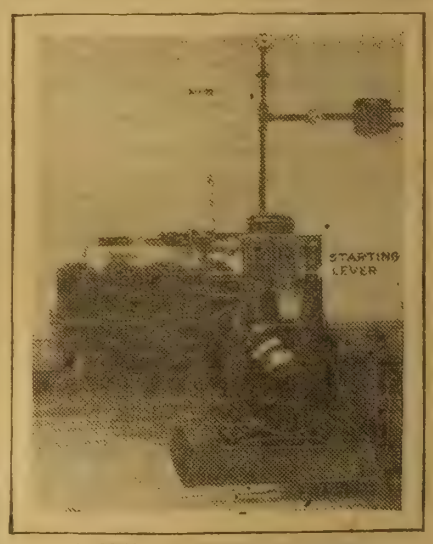
WATER TANK AND PUMP.

Another picture shows the housewife running an electric sewing machine. This motor, which costs about $15, can be attached to any machine. It is one-fourth horse power and costs only 1½ or 2 cents an hour to operate. The motor has varying speeds, which are regulated by pressing down on the foot pedal. To speed up the machine you press very lightly. The motor does not have to be clamped or screwed onto the machine. It is mounted on little legs with rubber tips, and sets on top of the sewing machine as shown in the accompanying illustration. There is a tiny wheel covered with cork, which fits tightly under the wheel of the machine when the spring is pressed down. The cork friction grips the wheel of the sewing machine and runs it. When the machine is not in use, the motor may be instantly released with one hand and set out of the children's reach. The sewing machine may be moved wherever convenient, and the motor attached to the nearest electric-light socket.

A motor can be attached to the cream separator, and to the churn, operating these for a few cents an hour, and relieving the housewife of much dreary, back-breaking toil. A general utility motor is now manufactured, one-fourth horse power, mounted on a stout tripod base, which may be connected with the cream separator, the churn, the washing machine, or any of half a dozen other labor-saving devices.

The housewife may equip herself with all sorts of electrical cooking utensils, which may be attached at any electric-light socket. El Boillo, an ordinary-looking metal bar, dropped in a basin, and with the current turned on, quickly heats the water to a boiling point. All sorts of utensils for toasting bread, making coffee, grilling meat, etc., can be used right on the dining-room table without ever going near the kitchen. The farm housewife can sweep with an electric vacuum cleaner, do her ironing with an electric iron, curl her hair on an electric curler. On hot days electric fans will keep a cool breeze circulating through the house.

Conveniences on the farm? No town house can beat that, and the farm housewife no longer has cause



A $250 ELECTRIC PLANT.

to envy the luxuries of her town friends.

The envy is now far more often directed the other way. The city woman, coming to visit her country friend, finds not drudgery, but comfort and luxury—all the conveniences to which she is accustomed at home, plus those provided by nature for the exclusive use of the country folk. The daughter in the modern, improved country home does not seek to escape it—she is proud of it; she knows there are none better.

Electrical systems for the farm home are following the automobile and the tractor into the modern farmer's equipment. Their part in making farm life more pleasant and the farm home more convenient and comfortable and in increasing the hours of pleasure is worthy of investigation and appreciation.

ELECTRIC WASHER AND WRINGER.

JERSEY INTEREST RUNS HIGH.

Great Enthusiasm For the Breed in Wisconsin Shown Since the State Gathering at Waupaca and Wauwatosa—Watchful Waiting Policy to Be Succeeded by One of Co-operation and Publicity.

JERSEY enthusiasm in Wisconsin was never greater than it is this summer and the breeders are determined that the watchful waiting policy that has been in vogue for so many years shall come to an end. The Jersey cow has been permitted to stand on her own merits too long and the activity of the Wisconsin Jersey Breeders' Association in behalf of the breed this year indicates that in the future Wisconsin breeders intend to see that the Jersey breed gets its just praise and recognition and that this breed pushes ahead with the co-operation of the breeders rather than in spite of the breeders.

This was the sentiment expressed this year at the two annual meetings of the state association, which were held on succeeding days, first on June 29th at the Red Oak Farm of Mr. F. R. Constance at Waupaca, and again on June 30th at the Fewacres Farm of Mr. Frederic Underwood at Wauwatosa. There was never more interest shown in the state gatherings and approximately 500 breeders were in attendance at one or the other or both of the meetings. Two meetings were held, one in the central part of the state and one in the southeastern part, in order that the greatest number of breeders might attend at the least expense in time and money and the plan worked out very successfully. The same speakers spoke at each meeting, so that those who attended one meeting were as fortunate in this respect as those who attended the other. The meeting at Waupaca was under the auspices of the Waupaca County Jersey Breeders' Association and the meeting at Wauwatosa in connection with the Waukesha County Jersey Breeders' Association.

DAIRY BARN ON THE FREDERIC UNDERWOOD FARM AT WAUWATOSA.

There are about 730 breeders of pure-bred Jerseys in Wisconsin, according to the records of the American Jersey Cattle Club, of which about 100 are members of the state association. With new blood in the American Jersey Cattle Club, interest has also increased in the state organization and the breeder who attended the state meeting this year went home convinced that he owns the most economical producers of dairy products and happy that he is a Jersey breeder, as every speaker, an enthusiast through and through, cited instance after instance of the merits of the breed. For breed enthusiasm the writer has never attended more enthusiastic gatherings and in the minds of the breeders present there is only one kind of a dairy cow and she is a Jersey. The thought every breeder wished to convey to the consumer is that there is only one kind of milk and that is Jersey milk.

For many years the Jersey breed has been permitted in Wisconsin to stand on its own merits. The same policy has prevailed in the American Jersey Cattle Club, the theory being that the Jersey is good enough to stand alone. With a more progressive policy in the national organization the Wisconsin breeders have come to realize that they must co-operate in advancing the interests of the breed and the new life that has been supplied to the state organization this year should net splendid results. The number of breeders has increased, interest in the county organizations has become more tense and an era of greater prosperity is in sight, the breeders believe. As one speaker expressed it, "The Jersey has for years succeeded in this country despite the breeders; now she is going to take the lead with the aid of the breeders." The policy of sitting idly by, contented with present conditions, several speakers pointed out, has been a costly one for the breed when with an economical producer of milk as a basis of their business the breeders of Jerseys could be creating the same market by constructive co-operative effort and publicity that the lovers of other breeds have created for their cattle.

Unfortunately Dr. M. D. Munn, president of the American Jersey Cattle Club, was unable to attend the state meetings as he had planned. He was attending a milk standardization meeting in Chicago. Mr. Wallace McMonnies, representing the national club, took his place on the program. Mr. McMonnies pointed out that the standardization of milk products will be of inestimable value to the Jersey breed and that with new interest and new blood among the 26,000 Jersey breeders in the United States that the fight for recognition now begun will bear the most wonderful results.

"With the country demanding milk containing a higher percentage of fat, more of the other solids and greater nutrition the Jersey breed cannot but advance by leaps and bounds, provided the breeders get behind and push and pull together," Mr. McMonnies said. "We have the breed that for economy, long life and early maturity is not equaled and with an abandonment of the 'good enough for me' policy the Jersey breed should go forward as it has never gone forward, although there are now more pure-bred Jersey breeders in this country than of any other breed."

Publicity and co-operation were the big topics for discussion. Wisconsin Jersey breeders have had this brought home to them very forcibly by the success which breeders of rival breeds have obtained in this state. Health departments in many cities, it was explained, are demanding milk containing not less than 8.5 per cent of solids, not fat, and a bulletin issued by the government shows the average composition of Jersey milk as 9.16 per cent of solids, not fat, and 4.956 per cent fat, making 14.11 per cent total solids. These are matters, speakers explained, which must be brought to the attention of the consuming public and that it can only be done through advertising and publicity. Once the demand has been increased for Jersey products the demand for Jerseys will increase accordingly.

Mr. McMonnies explained the new policy that has been inaugurated in the American Jersey Cattle Club under the administration of President Munn. The progressive element is now in control and it is a fight to win; a fight to show the conservatives that publicity and co-operation will do much to advance the breed. An extension department has been started by the club with organizers in each state and Mr. F. F. Showers, of Delavan, president of the Wisconsin association, has been chosen organizer for this state. As Mr. McMonnies explained, the policy now is to induce the farmer that the Jersey is the best cow for him and break down the old belief that she is a rich man's pet or a show cow. "Once, when persons spoke of milk they thought of only two kinds—Jersey milk and just milk," he said, "and it is our plan to get that idea back into the minds of every consumer of milk and butter in this country today."

The association was fortunate this year in choosing Waupaca and Wauwatosa for its meetings. Here the two contrasts were offered. On Mr. Constance's farm at Waupaca the Jerseys for years have been the mainstays; they have provided the living, the luxuries and the enjoyment on that farm. On the farm of Mr. Underwood, who is president of the Erie Railroad, experimental breeding has been carried on and cows have been fitted for the show ring. Mr. Underwood's farm and his Jerseys are his hobby. So it was evident to those who attended both meetings that the Jersey can be fitted into all conditions. Mr. Constance has a splendid herd, is now milking about twenty-six head, and it was indeed a pleasure to see them grazing and resting in the pasture just across the road from where the meet-

(Concluded on page 21.)

Group of breeders and their families listening to the speakers at the state Jersey meeting at Red Oak Stock Farm, Waupaca.

The welcome sign was prominently in evidence at Waupaca, indicating the new spirit among Jersey breeders.

Two year old in Underwood herd, now under test. She gave 550 pounds of fat in seven months ending June 1st.

THE JERSEY HERD OF MR. F. R. CONSTANCE, AT WAUPACA.

Good light and fresh air add to the comfort of the Jerseys at Fewacres Farm of Mr. Underwood.

Waupaca and Butternut Ridge.

Out of the 410 cows under test in the Waupaca and Butternut Ridge Co-operative Cow-Testing Association ninety-two produced over forty pounds of butter fat. The cow that produced the most butter fat was a grade Holstein, owned by Fred T. Jorgensen. Her record for the month was sixty-five pounds of butter fat, yielding 1,624 pounds of 4-per-cent milk. Mr. Herman Becker had twelve grade Jerseys that averaged 50.83 pounds of butter fat, and Mr. Ira Farley had twelve grade Holsteins that averaged 50.04 pounds of butter fat.

The following report includes cows that have produced more than forty-five pounds of butter fat.

Winnebago County Picnic.

To the Editor:—On account of the rain our association picnic which was planned to be held at the W. P. Bussey farm was held in Masonic Hall in Omro, June 10th. A large crowd was present, all the members and their friends being on hand for the basket dinner at noon. Ice cream and coffee was served by the association. Contests of various kinds were arranged. Everyone enjoyed the women's spike-driving contest. Among the speakers were R. T Harris, Charles Hill, Miss Nellie Maxwell, C. H. Everett, Prof. Emil Ranchenstein and A. R. House. The meeting was a rouser from the standpoint of creating interest in cow testing in Winnebago county. The following is the forty-five-pound list for May, with sixty-five cows in the list:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
H. R. Mosely					
Bessie, G. G.	7	4-20-16	1165	4.3	50.1
Goldie, G. G.	5	5-11-16	1206	5.0	60.3
Carrie, G. G.		3-17-16	1382	4.2	58.0

Rock County Testing.

Excellent records have been made by a few of the cows in this association for the month ending May 31st. The grade Guernsey that held first place for four consecutive months was beaten this month by a grade Holstein owned by A. Templeton, of Lima Center. This cow produced 1,349 pounds of 4.5 per cent milk, yielding 60.7 pounds of butter fat.

H. H. Little is the owner of a pure-bred Short-horn which was a close second, giving 1,428 pounds of 4.3 per cent milk and 60.4 pounds of butter fat. A good record was made by cows owned by J. B. Palmer, of Milton, for the month of May. Out of eight cows milked five produced over 45 pounds of butter fat. The report of Joseph Z. Feinberg, official tester, follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Lbs. butter fat
E. Balis					
Pet, G. H.	6	4-25-16	1361	3.4	46.2

The Dairy Calf in Summer.

To the Editor:—The unusual shortage of hay during the past spring is showing its evil effect on the season's crop of calves.

As one drives through the country, one is impressed with the unusual number of calves in pasture. Everywhere the calves have been "turned to grass." We see them in orchards, in paddocks, staked out, even in the brush. This is not as it should be. Ten dollars more spent on hay would have gone a long ways toward producing a better cream check for the farmer. It has long been demonstrated that pasture during the first season invariably ruins the dairy calf. The loosening effect on the bowels produces the characteristic, "big middle," arched-back and runted-appearing dairy calf.

We need to take better care of our calves. The dairy calf of today is the cow in the future. It is a safe assertion that the weakest point in the average Taylor county dairyman is in his calf rearing.

In the summer feed the dairy calf in the barn. If you think it prevents them from becoming "tough," remember we are not raising our dairy cows to be "tough." We want them to produce milk. There is no substitute for

Cut Corn when right for the Silo

Professor G. C. Humphrey of Wisconsin College of Agriculture, says: "Corn makes the best silage when the majority of the ears are dented or just beginning to glaze. If corn less mature is put into the silo, the silage becomes too acid or sour. If the corn is allowed to get ripe or dry out, it does not pack well, and is apt to produce moldy silage." MORAL: Own a

BLIZZARD Ensilage Cutter

—be *ready* this fall to hustle the corn into the silo when at its BEST. Your regular farm engine will furnish plenty of power. 100 foot silos are filled as readily as 20 footers. Enormous capacity—even cut silage—small repair cost—long life—are other Blizzard features.

WRITE TODAY for BOOKLETS and INFORMATION. Let us know the size of silo and engine, we'll tell you the size Blizzard to choose, and send you free: "Making Silage Pay Better," "What Users Say," "1916 Blizzard Catalog."

90 ft. Silos in Wisconsin

These silos on the Pabst Farm, Oconomowoc, Wis., are filled with the Blizzard. Fred Pabst says: "We used your Blizzard Cutter last fall in filling 3 silos, and are glad to say it gave satisfaction."

APPLETON Silo Filler

Actual records prove that Appleton Silo Fillers cost the least

per ton of silage put up or per year of life. Tremendously strong construction makes an Appleton practically proof against breakdown. Solid oak and steel frame, mortised, braced and bolted; impossible to pull out of line. Many exclusive power and labor saving features, such as independent belt driven blower allowing speed to be adjusted for minimum use of power for any height silo; frictionless feed table running on chilled iron rollers; knives spiraled to give clean shearing cut, requiring least use of power. (10 lengths of cut, 5-16 to 2½ inches.) Both feed rolls and table controlled by single lever. Positive self-working safety device.

Guaranteed to do more and better work with less power than any other silo filler.

Two Books Free: One on silo building and silage crops; the other a complete catalog of Appleton Silo Fillers in four sizes for 4 h. p. gasoline engines and up. Write

Appleton Mfg. Co., 4122 Fargo Street, Batavia, Ill.

Bigger Profits Better Bales and More of 'Em

There's money in baling hay—big money if you use the famous fast working Sandwich Hay Press (motor power). Bale your own hay—hold it for the top-notch market—make a nice, fat income baling hay for your neighbors—$10—$15—$20 a day clear profit is common with our outfits.

SANDWICH HAY PRESS

Solid steel construction. Sandwich Gas and Oil Engine, with magneto, mounted on same truck furnishes power. Complete outfit built in our plant, superior to assembled machines. Heavy steel chain transmission (no belt to slip). Simple self-feeder and block dropper. Turns out a continuous stream of solid, salable bales. Starts or stops instantly. Best press for alfalfa. We also make horse and belt power presses.

Send For Free Book

The TORNADO SILO FILLER

IF you want your silo filled with silage which will produce good, rich milk and plenty of it; also silage which will produce fat rapidly, fill it, or have it filled, with a **Tornado**, on account of the fact that the **Tornado** reduces it to a very fine condition.

By having it cut fine you get much more in the silo. It will settle closer, eliminating mould pockets, thus resulting in a much sweeter and better feed. Another reason why you should have it cut fine is that the cattle eat every particle, thus eliminating any waste.

By cutting it fine the cattle eat that part which contains the largest percentage of food qualities, which is the stalk.

The **Tornado** will be the means of bringing about these results.

skim milk as a calf feed. Supplement it with a mixture of grain, whole oats, corn meal and oil meal. Give them all the clover hay they will eat. Allow free access to fresh water and salt. Such treatment will produce cows.

R. A. Kolb,
Agr'l Rep., Taylor county.

Piping For Creameries and Cheese Factories.

To the Editor:—Will you please publish in your paper the following notice relating to the rules and regulations for the operation of cheese factories and butter factories prescribed, as provided by law, by the dairy and food commissioner:

That part of Rule No. 11 relating to factory utensils and apparatus (found on page 25 of the leaflet of Dairy Laws of Wisconsin, issued November, 1915) which reads as follows:

"Common iron piping, common galvanized iron piping and rubber hose shall not be used" is so modified that galvanized iron piping may be used when so constructed and installed that it can be kept clean and is kept clean. The connections should be used instead of the common round elbows, as well as proper union connections.

This modification has been made owing to abnormal market conditions which make it almost impossible to obtain the more expensive kinds of piping, and the greatly increased prices of the same, and to the further fact that it is found that galvanized iron piping, properly constructed installed and cared for, can be kept clean.

Inspectors of this department are instructed to act in accordance with the above modification of rule No. 11.

Geo. J. Weigle,
Dairy and Food Commissioner.

Rennet Will Cure Scours.

To the Editor:—In a recent issue of your good paper I see that there are two different men wanting to know what to do for the scours in young calves. I had a great deal of experience with that very same trouble when I was on the farm. My father was a subscriber to the old Western Rural (and I believe) American Stockman and he had clipped out a recipe from it which we have both used and always kept on hand and if it ever failed in any case that wasn't too far gone I don't remember it.

And here it is. Just go to the drug store and get a bottle of liquid rennet and if the calf isn't able to stand and suck take a long-necked bottle and put about one tablespoonful of the rennet in it and then milk about a pint of warm milk into it and give to the calf as a drench. He will like it. Repeat in from three to five hours with a little smaller dose. An ordinary dose is one teaspoonful given every three to five hours as directed above.

You must be careful, however, not to let the calf have too much milk at once for some time afterwards and give the rennet as directed just before letting them suck. Ira A. Merritt.

Pasteurize Skim Milk.

In the operation of creameries and cheese factories it is customary to return to the patrons the by-products (skim milk, buttermilk, and whey) to be used for feeding calves and pigs. The material that each man receives is necessary from the mixed milk of many herds, some of which may be diseased. For this reason, unless precautions are taken, the creamery and the cheese factory, through their by-products, may become disseminators of such animal diseases as tuberculosis, foot-and-mouth disease, and contagious abortion, should these diseases exist in the community.

Pasteurization of by-products has been advised as a preventive measure and has been practiced to a limited extent; at least two states have enacted laws requiring the pasteurization of all skim milk and whey returned to patrons for feeding purposes. In Denmark a law of this kind has been enforced for several years.

The advisability of pasteurization was illustrated during the recent outbreak of foot-and-mouth disease in the United States. At a certain creamery in New York state raw skim milk was being returned to seven patrons. Later five of these patrons were found to have foot-and-mouth disease in their herds. Of the other two, one boiled the milk before he fed and the other threw it away for fear of possible infection. It appears very probable that the disease was spread by feeding raw skim milk from a diseased herd.

At another creamery in the same state skim milk was being returned to thirty patrons, but in this case the milk was pasteurized properly before being returned. Foot-and-mouth disease was discovered in the herd of one of these patrons, and in the judgment of the inspectors the disease had then been present for at last five days. During this time the milk had been taken to the creamery and pasteurized skim milk returned to the thirty patrons. The disease, however, did not appear on any of the other farms. Had the skim milk not been pasteurized at this creamery it is possible that the disease would have been carried, by way of the creamery, from the one infected farm to all the rest of the thirty farms.

Skim milk, buttermilk, and whey may be pasteurized at a fuel cost of about 2½ cents for every 1,000 pounds—a cost that is negligible when compared to the financial loss that may result from feeding the products raw.

Skim milk, buttermilk and whey may be heated by the use of steam jets while being elevated into a tank. This practice, however, causes the milk solids to "cook" onto the interior of the pipe and cleaning is difficult. If cleaning is properly done each day, however, this method is not objectionable.

The simplest method of pasteurization may be to turn steam directly into the liquid in the tank until the desired temperature is reached. In this case a temperature of not less than 145 degrees F. should be maintained for a half hour. When, however, it is desirable to draw milk or whey from the tank as it is running in, it becomes necessary to complete the pasteurization before the product reaches the tank. This can readily be done by running a steam pipe into the skim milk, buttermilk, or whey pipe near the tank. A device of this kind is on the market and is known as a skim-milk pasteurizer. When this method is used the skim milk or whey should be heated to a temperature of 180 degrees F.

As creamery and cheese-factory by-products may, under certain conditions, be agencies in spreading live-stock diseases, and as pasteurization of these products is a preventive measure that is easily and cheaply effected, the adoption of this practice by all creameries and cheese factories is earnestly recommended by the Federal Department of Agriculture.

Stock Feeders

See how thousands of farmers cut feeding cost in half, save 1-5 to 1-4 power cost, and 1-2 labor cost of silo-filling and put better feed and greater tonnage in their silos in less time than ever before possible.

Smalley Silo Filler

Patented re-cutting attachment makes dandy Alfalfa Chop for fattening cattle, sheep, hogs and poultry. *Handles leaves, stems and all without waste or injuring color of the hay.* Sell your No. 1 hay and mill the *off-grades* for feeding. Make combination feeds from clover, rice straw, bean straw, pea vines, oats and rye, or dried cornstalks. Capacities 1200 to 2700 lbs. per hour. Re-cutting attachment on Junior Mill makes 500 to 800 pounds of meal per hour with 6 to 8 H. P. engines.

Powerful, whirling, bevel-edge blades slice like a lawn mower, fine even and uniform. Better silage and greater tonnage in the silo. Grip Hook Feed Table feeds automatically, saving expense of two or three men depending on size. Blower built independent of cutter so you increase or decrease fan speed without changing speed of knife shaft. Patented low-speed, one-pulley, chain drive saves 1-5 to 1-4 power cost, cuts out unnecessary wear on belt. Extension table on hopper makes faster, cleaner job.

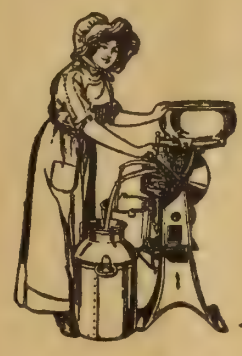
We can furnish Blower or Enclosed Steel Carrier as desired.

HOT WEATHER



the season a

DE LAVAL SEPARATOR

saves most over any other separator or skimming system

IT'S A GREAT MISTAKE FOR any dairy farmer without a separator or using an inferior machine to put off the purchase of a De Laval Cream Separator in the summer months.

GREAT AS ARE THE ADvantages of the De Laval over all other separators, as well as over any gravity setting system, at every season of the year, they are even greater during the midsummer season than at any other time.

THIS IS BECAUSE HOT weather conditions occasion greatest butter-fat losses with gravity setting and render it most difficult to maintain quality of product with any gravity system or unsanitary separator, while, moreover, the quantity of milk is usually greatest, and any loss in either quantity or quality of product means more.

THEN THERE IS THE GREAT saving in time and labor with the simple, easy running, easily cleaned, large capacity De Laval machines over all other methods or separators, which naturally counts for most at this time of the year.

HENCE THE GREAT MISTake of putting off the purchase of a De Laval Cream Separator in summer, whether you already have a poor machine or none at all, and every dairy farmer should keep in mind not only that a De Laval will pay for itself by next spring but may, if desired, be bought on such liberal terms as to actually save its own cost while being paid for.

EVERY CLAIM THUS MADE is subjet to easy demonstration, and every De Laval local agent is glad of the opportunity to prove these claims to you, in your own dairy, without cost or obligation on your part.

IF YOU DON'T KNOW THE nearest De Laval agent please simply write the nearest main office as below.

Benefits of Boys' and Girls' Club Work.

There is a steadily growing interest in the work of the boys' and girls' club work as organized by the United States Department of Agriculture in co-operation with the state colleges of agriculture. The department reports that during the year 1915 in the northern and western states 290,178 boys and girls made application for membership in the club work.

The members participating in this club work are divided into two classes, the profit-making and the nonprofit-making, according to the nature and outlined plans of the work undertaken by the members. Sewing clubs, bread clubs, farm and home handicraft clubs are called nonprofit-making because the things produced are not sold, but used in the home for the comfort and convenience of the entire family, while the profit-making projects provide for a business marketing or selling with a view to a net profit on investment as a result of the effort of the club member. Canning clubs, poultry clubs, corn clubs, sugar beet clubs and others of similar nature are profit-making clubs.

One hundred and twenty-seven thousand eight hundred and eighty-two young people who made application for the work actually undertook and carried on a part or all of it during the season. The balance of those enrolling, for lack of land, time and opportunity, were limited to study of the subjects and meeting with the club groups in their regular meetings and were not in a position to handle the work of the home project.

The young people engaged in the profit-making work sold their products at a total value of $509,324.24, thus giving an average of $20.96 for each club member engaged in the work. The per capita cost of the club work for the past season in the northern and western states was eighty cents on the total enrollment, while the per capita cost of the work based upon members engaged in profit-making enterprises only was $2.02.

The results indicate that the benefits of boys and girls' club work cannot be entirely measured by the results in dollars and cents, or net profit. Account must be taken, for example, of the influence of the club members' work upon parents and neighbors in increased crop production, as well as in the influence upon the club member in not only conserving him for rural life but in making him more efficient and contented.

One definite illustration of how the club activities influenced adults may be shown by the fact that demonstrations in home canning and exhibits of the canning club work by boys and girls aroused such interest that 26,534 adults wrote to the department and asked for children's canning instructions for use in their home work.

State co-operative leaders in charge of the work and their assistants secured 11,478 local people to assist and co-operate with them in the conduct of the boys' and girls' work, all of these without salary or reimbursements for supervision expenses. The regular state and assistant leaders conducted 1,670 canning demonstrations with a total attendance of 156,580 during the canning season. Three thousand eight hundred and twenty-nine field meetings were held. One group of 3,015 adults who requested the boys' and girls' canning instructions canned 275,856 quarts of fruits and 270,659 quarts of vegetables.

Remedies For "Chiggers."

If a bath in hot water, or in water containing salt or strong soap, is taken within a few hours after exposure in shrubbery and weeds infested with "chiggers" or "red bugs" no ill effects will be experienced. After a long exposure, however, a bath has practically no effect and direct remedies are necessary.

After irritation has begun and small red spots appear the application of a moderately strong solution of ammonia to the affected parts will be found beneficial. A strong solution of bicarbonate of soda or common cooking soda will also afford relief. Frequent applications should be made until the irritation subsides. If the suffering is severe a dilute tincture of iodine or collodion should be lightly applied.

To Make Cockroach Powder

The cockroach is a hard insect to destroy and success usually results only from long, careful, persistent

JESSIE AND VERNON HUNTRODS.

treatment with either one of the better powders sold on the market for that purpose or with a mixture of three parts of flour with one part of plaster of Paris. Set this dry mixture in a low flat dish where the roaches can reach it and put a saucer of water beside it. Any roach that eats and drinks at these two dishes will cease to be troublesome. Powdered sweet chocolate mixed with equal parts of borax and scattered about cracks and crevices will also help to reduce cockroaches.—[L. Haseman, Missouri College of Agriculture.

Salad Suggestions.

In making salad observe the following points: Cut pieces large enough so that they are distinct. Have all ingredients cooled. Have salad dressing well seasoned. Combine flavors that blend well. Mix just before serving. Serve attractively.

Care of Fern.

To the Editor:—I have a sword-leaf fern which is sending out a multitude of runners from the roots of the plant and I wonder if some of your readers can tell me what to do. Should these runners be allowed to grow or should they be removed? What causes them to grow? Does one start new roots from them, and, if so, how? I should be glad if someone would write to the Home page and give some advice on this subject. Inquirer.

To Remove Grease Spots.

To the Editor:—I think if Mrs. E. C. J. will use turpentine she can get the grease spots out of her rain coat. Turpentine will not injure the color of the material. Take a piece of cloth, wet it with turpentine and rub the spot well. The spot will disappear and leave the garment as good as new. Mrs. M. D.

How do You Clean Braid Hats?

To the Editor:—Will some reader please tell me how to clean a hemp braid hat? I have been trying to clean one, but have not had very good luck and I would not only be glad to have some advice but think likely there are others who would also.

Miss S. Z.

Easy Way to Make Lemonade.

Do you relish good lemonade during the hot weather? Then make it the following way: Buy a number of lemons, extract the juice, strain and add to a rich boiled sirup made of plain sugar and water. Place the solution in self-sealing fruit jars and place on ice or in a cool place. When you want a cool, refreshing drink add a spoonful of this mixture to a glass of water.

Buying in Dozen or in Quantity.

How to buy effectively is the housewife's most important need in her problem of high cost of living.

In so far as she practices economy in the use of her husband's income, so

DONNA VERA HUNTRODS.
Daughter of Mr. and Mrs. Huntrods, at age of five weeks.

far does she become a producer as well as the biggest consumer of the income. The thrifty housewife has learned the secret of careful buying. It is necessary that a purchaser of foods know food values and know the different grades of foods in order to buy with good judgment.

How many women know the simplest commercial food terms, the different grades of canned or package goods and even in many instances how much a pound they are paying retail for their foods? How many learn the wholesale prices by watching quotations? To be the most efficient buyer the housewife must know the market prices of the things she uses in her home just as the efficient buyer for a factory or store must know the market prices of his materials used.

There are some wholesale markets which will sell direct to the consumer, giving wholesale prices. Also foods may be purchased from retail dealers at much lower prices when purchased in quantities. A storeroom in a home is a great money saver, especially in homes where there are large families. This permits the buying of materials in large quantities which reduces their cost. When the family is small or the housewife has insufficient storage room for large quantity purchases she may join with some neighbors and all get the benefit of reduced prices by purchasing in large quantities.

Following are some suggestions for buying: (1) If you do not can your own vegetables and fruits buy in dozens to get discount offered; one dozen cans of each of the staples such as corn, peas, beans, tomatoes, etc., is not too many. (2) Dry groceries—one dozen or half a dozen packages of cornstarch, gelatine, tapioca, macaroni, raisins, currants, rice, etc. (3) Buy sugar, flour and apples by the bag or barrel. (4) Buy soap by the box, cleaning powders by the dozen packages. Starch, bluing, stove blacking, etc., may be purchased in large quantities and at a great saving of money thereby. Buy meats by the quarter or side and either freeze or put in cold storage or cure to keep it.—[Laura Breese.

Household Hints.

Before washing ebony-backed hair brushes rub a little vaseline over the backs. This prevents the ammonia in the water from injuring the ebony. The vaseline should afterwards be rubbed off and the backs polished with a dry cloth.

Always thoroughly wash figs, prunes, dates and other dried fruits before using them. The sugary stickiness readily collects dust, making this precaution a very necessary one.

In preparing a lunch for a journey bake the bread in empty baking powder cans. After slicing and spreading replace it in the cans, put on the cover and the bread will be as fresh at the end of the trip (although it may be several days) as when it was first packed.

The pulley clothesline makes the work of hanging out the clothes much easier, as one may stand upon the porch and pin the clothes on the line which can be extended as needed by means of the pulley.

For sprinkling clothes use large bottles with "cork sprinklers" and the work is accomplished in much less time. These sprinklers sell for 5 and 10 cents.

Recipes.

Buttered Parsnips.—Peel and slice thinly enough parsnips for the meal, cook in boiling salted water until tender, drain and season with butter and salt, mashing coarsely with a wire potato masher. Serve very hot. Parsnips are also most appetizing cooked without peeling, then cut in halves after removing the skin and brown in butter.

Tomatoes With Cheese.—Tomato sliced, placed on buttered toast, sprinkled with grated cheese, then placed in the oven long enough to melt the cheese, is an appetizing dish to serve for lunch or supper.

Rice Pudding.—Boil a cupful of rice in a double boiler with a pint of boiling water until dry. Add a quart of rich milk, and cook until it is all absorbed. Stir in the yolks of three eggs well beaten, and add six tablespoonfuls of sugar with the rind of a lemon grated. Cook ten minutes and cover the rice placed in a baking dish with the whites of the eggs beaten stiff and mixed with six tablespoonfuls of sugar and the juice of the lemon. Brown in the over. Serve cold or hot.

Pineapple Rice Pudding.—Two cupfuls steamed rice, one-half cupful sugar, three eggs, one-half cupful milk, one-half can grated pineapple. Beat the yolks of the eggs well and mix with the rice. Add sugar, milk, and pineapple. Fold in the stiffly beaten egg whites. Pour into a buttered baking dish and bake one-half hour. Serve with whipped cream.

Cocoanut Puffs.—One egg, half cup sugar, one tablespoon melted butter, half teaspoon salt, one-fourth cup flour,

two-thirds cup rolled oats, one-third cup shredded cocoanut, one-fourth teaspoon vanilla. Beat egg, add sugar, then butter and salt, then flour, rolled oats, cocoanut and vanilla. As you add the ingredients stir briskly. Drop by teaspoonful on buttered baking sheet; bake in moderate oven. This recipe will make about twenty-five puffs. They are fine for lunches or parties.

Salmon Cutlets.—Flake a can of salmon into bits. Fry a slice of onion in a tablespoonful of butter, then remove onion and rub in tablespoon of flour. Add slowly a cup of milk and stir until smooth; then beat in the salmon, season with chopped parsley, pepper and salt. Take mixture from fire and add beaten yolks of two eggs. Put on ice until quite stiff, then mold into cutlets. Dip cutlets into crushed cracker crumbs, into egg and again into cracker crumbs, and fry in hot fat until golden brown. This will serve five.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Likes to Hoe in the Garden.

Dear Young Folks:—I have been reading your letters and am interested in them.

I am eleven years old and in the sixth grade. I go to school every day. I like my teacher very much and hope she will come back when school starts again this fall.

I am spending my vacation with my grandparents who live in the country. They have 160 acres of land. They have fifteen young geese, thirty ducks and 100 chickens. I like to feed them every day. We get about four dozen eggs every day and I like to look for them. Grandfather has eighteen head of cattle and four horses.

They have a big garden, too, and I like to work in it. My aunt and I hoed the mangels and the rest of the garden vegetables for three days.

I saw a letter that a girl named Helen wrote and she said she would like to know some cake recipes. I know one and I will send it for Helen. It is a cream cake. We take four eggs, one cupful of cream, one and one-half cupfuls of sugar, three level teaspoonfuls of baking powder, a little vanilla and three cupfuls of flour. I hope Helen will like this recipe.

I think the answer to Inez's riddle —A houseful, a yardful, can't catch a thimbleful—is smoke. I will ask a riddle, too. What big cat do you keep in the library? I know so many riddles I can't think of them all.

—Hilda.

Wants to Buy a Piano.

Dear Young Folks:—I am a little girl nearly five years old and I want to send a letter to the Young Folks page. I enjoy reading your letters so much. I have mama read them to me every week.

I want to send an answer to Esther's riddle. I think a clock is bashful because it keeps its hands over its face all the time.

I have one cow and two calves. I want to sell my calves and save the money until I have enough to buy a piano. Papa will sell the calves for me and when I get the piano I will take music lessons.

I live four miles from town. I go to town every time I can when the wagon goes. I would go every time if I could.

I have one little brother and I think lots of him. He is a year old. I take lots of care of him and help mama out. We call him Earle. He has a calf, too, all his very own. He is just beginning to talk a little. We like to play out of doors together.

—Velva Belle.

Watched Canary Build Her Nest.

Dear Young Folks:—I want to join your circle because I enjoy reading your letters so much. I am eleven years old and am in the sixth grade at school.

I am going to tell you a story about a canary that mother and my brothers and I saw build its nest in a bush. My brother laid some sticks and straw on the bushes and she started to build her nest. Before she laid her eggs he would come to the porch and mother would give her some bread crumbs and she would eat them and then fly up into a large tree and sing. When she was through singing she would go to her nest. She laid four eggs, but she only hatched one, and the blue jays killed it. After that the little canary mother went away. This is a true story. —Samuel.

Dear Young Folks:—As I enjoy the letters so much from the boys and girls in this department I thought I would write, too. I am a little girl eight years old. I go to school and am in the fourth grade. I have one sister and one brother. I live on a farm of 160 acres.

My mama has lots of chickens, turkeys and guineas. I help my mama care for them.

My brother has a pony that I can ride. I have three little pet rabbits. I wish you all could see them, they are so cute and playful.

I liked the "Endless Tale" very much. —Opal.

International Sunday School Lesson.

Lesson for July 16, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Paul at Athens.

LESSON TEXT—Acts 17:16-34.
GOLDEN TEXT—In him we live, and move and have our being.—Act. 17:28.

Athens! What a name to conjure with. Athens has always epitomized the acme of intellectualism, culture, art, and esthetic accomplishment. Driven from Berea, and alone, Paul fled to the coast, and taking ship, crossed over to the Thessalonian peninsula. Entering the city—he beholds its statuary, meets its philosophers and views its moral degradation, and its myriad manifestations of heathenism. Outwardly cultured, molding the thought of the world, yet it passed from its pinnacle of power, because it knew not God. Paul saw the pantheism of the cultured Stoics and the Epicureans, who, because of their distant and but little concerned gods, enjoyed the pleasure of wealth and ease.

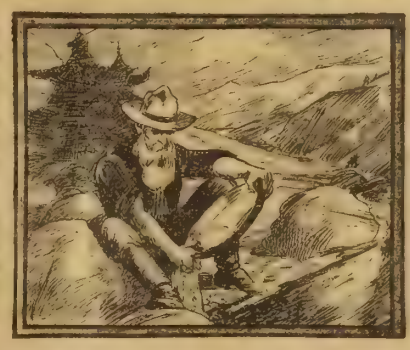
I. Paul Brought to Trial (vv. 16-21). Such sights stirred the spirit of Paul. The marvel is how indifferent we may become in the presence of the great spiritual poverty of our time. His spirit stirred within him, when he saw the city crowded with idols. As Paul followed his custom and began his preaching in the synagogue, he also took advantage of the opportunity to do open-air work in the market place. Here a small group and there another. This he did daily until the teachers (v. 18) began to take knowledge of his presence in their city. Some in contempt called him a "babbler," while others concluded that he represented some new religion, though he set before them the same message of salvation in Jesus Christ which had caused such remarkable results elsewhere. That they might hear him more fully, and without the interruption of the mart of trade, Paul is taken to the Areopagus, or Mars Hill, where from time immemorial the greatest criminals had been sentenced and the most solemn questions of religion settled.

II. The Unknown Made Known, (vv. 22-29). Such idle speculation (v. 21) was of no value to the Athenians. This Paul knew, yet he began his address in a most conciliatory manner (v. 22 R. V.). He would win their favorable attention before he called them to repentance. Keenly observant, Paul had seen among the many inscriptions one "to the unknown God," and this one whom in ignorance they worshipped, he would set forth. Many today are in blindness, seeking to know God when he has already been made manifest (to be seen). (John 1:18; John 5:20; John 14:19, II Cor. 4:6.) It is man's own fault if he does not know God (Rom. 1:20-22, 28; II Cor. 4:4), and no knowledge is more important (John 17:3). Paul's opening words in verse 24 were but to seize a well-known object of their street decoration and discussions, and with it to lead on to the great truth he yearned to have them comprehend. This caught the philosophers as well as the idle curious. God is not a philosophic conception of the mind. He cannot be confined to temples made with hands, nor does he need the services of our hands, seeing he created all things and giveth to all things life. Paul's next point was that "He hath made of one every nation of men." As yet, how little men really believe that truth—witness the Euro-

$3,500 IN FREE PRIZES

What sort of scene does this picture to the right show? Couldn't you decide on a good name for that picture?

You don't have to INVENT a name for the picture—just pick one out of a list!



1st Prize **$1,250 CASH**
2d Prize **$625.00 CASH**
3d Prize **$350.00 CASH**
4th Prize **$250.00 CASH**
5th Prize **$150.00 CASH**
6th Prize **$100.00 CASH**
7th Prize **$75.00 CASH**
8th Prize **$50.00 CASH**
9th Prize **$20.00 CASH**
10th to 24th prizes **Each $2.50 CASH**
25th to 419th Prizes **Each $1.50 CASH**

No prizes will be divided. Full prizes will be paid final tying contestants.

419 Cash Prizes

See that picture above? It's one of a series of 32 pictures. Each picture is just as plain and clear as that one.

If you had a list of titles couldn't you find one that would be a suitable title or name for it, and for each one of the 32 pictures?

That is all there is to our pleasurable Picturegame—choosing, from the list, the titles that best describe or fit what the pictures show.

Then you write your selected titles in the Reply Book, and send it in, with your name and address written on the cover. The sets of answers are checked over, and whoever has submitted the largest number of winning titles will receive the $3,500 in cash as listed to the right. Today's Magazine, and a Committee of Judges composed of eminent men and women, will see that absolute fairness to all is assured.

Read our offer carefully It presents you the 32 pictures, the List of Titles, and the Reply Book (complete outfit for playing) with Today's Magazine for **two full years**—all at a special combination price.

THIS DIAGRAM

To the right shows an example picture, a page from the List of Titles, and a page from the Reply Book. It shows just what you will do. (1)—You look at a picture. Here you see a picture of four feathers. (2)—You glance through your List of Titles for a title to fit the picture. Here you see the title "Four Feathers." (3)—You write your chosen title (or titles) in the Reply Book. Here you see the chosen title, "Four Feathers," written in the Reply Book.

THE PICTUREGAME

You see, is just a common sense test of picking out the best fitting names for the pictures. No work to do, no learning needed at all. Everybody plays on equal terms. Rules are free to everyone; they tell how all may compete without expense. Get the outfit at once, free as a gift, with Today's Magazine, all at the regular price of the magazine alone!

An Example Picture to show you how to play is printed to the left. The best fitting title for what the picture shows is "Under Two Flags," in the List of Titles. Every member of the family will become intensely interested in playing this home amusement—and think of the great cash prizes!

Today's Magazine, which will be yours for two years, is a delightful arrival each month to all the household. No man could give a more appreciative gift to wife, sister or sweetheart than a subscription to Today's; no woman could secure a more interesting, helpful, entertaining friend.

Take Today's yourself for the 2 years, or secure a 2-year subscription from some other person; or take Today's for 1 year, getting another 1 year subscription; or secure 2 subscriptions of 1 year each, collecting 50 cents from each subscriber. Send in the $1.00 with your order. You'll get the outfit at once, free and postpaid.

Send Me the $3,500 Cash Game
With Today's Magazine for 2 Years

Picturegame Editor, Today's Magazine
461 Fourth Avenue, New York City

Dear Sir: Enclosed find $1.00, for which send me Today's Magazine for 2 years. This is the regular subscription price of the magazine (50 cents per year).

For taking advantage of this subscription, mail me at once, free and post paid, the complete $3,500 Cash Picturegame Outfit of 32 pictures, List of Titles and Reply Book, so that I can start at once to amuse myself with the home game, and try for one of its cash prizes. Also send Rules, full instructions, etc., free.

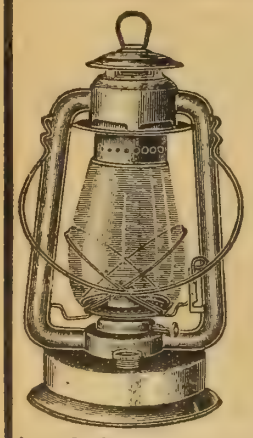
SAFETY STORM BLAST LANTERN FREE



This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

pean conflict and the economic, racial and social differences of this land. Negro segregation and Asiatic exclusion are but illustrations of our separation from the teaching of the brotherhood of man. But this brotherhood is not alone for altruistic service, but "that they should seek God." This was his great and glorious purpose in creating the nations of the earth, in setting the seasons in motion, to minister to their needs, and in appointing the bounds of their habitations; yet, how far man has departed from that ideal (Rom. 1:28). It is of the highest importance that men should seek God, and he is not difficult to find for those who seek him (Jer. 29:13).

III. **What the Athenians Lacked** (vv. 30-34). Thus far Paul's auditors must have followed him keenly, and it was the goal toward which he had been driving so relentlessly. Such sublime conceptions, keen logic and quotations from their writers won their attention. He then delivered a keen thrust at this, the "psychological moment," by calling upon them to "repent." The Athenians lacked a realizing sense of the personality of God—that man could have personal and intimate relations with God, or that a man could or had risen from the dead.

Any candid seeker after truth, who will examine the evidence, will be convinced of the truth that Jesus of Nazareth, crucified upon a Roman cross, rose from the dead.

These Athenians also lacked the ability to accept this fact, and to yield their lives in obedience to it, and so some tried to sneer away the truth, but that did not alter it.

Some were amused, and some evidenced a curious interest, saying, "We will hear this again," but certain men, Dionysius and Damaris, "believed." Such has ever been the manner of the reception of glad tidings.

Wisconsin Good Enough.

August Kluender, a Sauk county farmer, who recently returned to this state after leaving it for a few years, has decided Wisconsin is good enough for him and recently penned the following lines, which we clip from the Baraboo News:

They talk of California,
They say the climate's grand.
They sing of old New Hampshire,
Also of "Dixie land."
They sing of Dear Old Georgia,
And Sunny Tennessee.
I'll sing of Old Wisconsin,
It's good enough for me.

In Nebraska there's a cyclone;
In Kansas there's a flood;
While down in Old Missouri
They wade knee-deep in mud.
In Texas there's the terror of
Submersion by the sea.
In Wisconsin we have neither,
It's good enough for me.

The east coast has its hurricanes,
The west coast has its fogs,
The north is full of snow and ice,
The south is full of bogs.
I've traveled Uncle Sam's domain,
And some across the sea;
But life in old Wisconsin,
It's good enough for me.

Wisconsin, where the farmers' crop
Was never known to fail,
When fruits all miss in other states
We've plenty here for sale.
But for living in Wisconsin
My reasons first are three:
There's sunshine, health and happiness,
It's good enough for me.

According to the census publications, the United States produced $13,764,357 worth of barbed wire during the year 1914. This would be a little over $2 worth of barbed wire for each farmer in the United States. It is interesting to note that we produced about $6,000,000 worth more of woven wire and poultry netting than of barbed wire. During the five years prior to 1914 the wire industry in the United States had been practically stationary. Figures since that date are not available, but will probably show a greatly increased production of barbed wire, on account of the large use being made of it on the battle-tanglement as a protection to the fields of Europe. In trench warfare when there is time for doing this, barbed wire is used to form an entanglement as a protection to the trenches. It is loosely strung on posts but it has been found almost equally as effective when simply unrolled, fastened at both ends, and pegged down to the ground occasionally.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

Blouse 1766-Skirt 1765—A splendid suit for sport wear. Pattern 1766 supplies the blouse, and 1765 the skirt. Both are cut in 4 sizes: 14, 16, 18 and 20 years. To make the suit of one material will require 8⅛ yards of 36-inch material for a 16-year size. Two separate patterns, 10 cents for each pattern.

9306—A comfortable play suit. The pattern is cut in 3 sizes: 2, 4 and 6 years. It requires 2¾ yards of 36-inch material for the 4-year size.

1777—A set of smart dress accessories. These chemisettes are practical and easy to develop. The pattern including all styles is cut in 3 sizes: Small, medium and large. It requires for No. 1, 1¼ yards; for No. 2, ⅞ yard; for No. 3, ¾ yard of 27-inch material for a medium size.

Waist 1770-Skirt 1769—A picturesque model. The waist pattern 1770 is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. The skirt pattern 1769, is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 7¾ yards of 36-inch material for a medium size, without folds. Two separate patterns, 10 cents for each pattern.

1306—Ladies' "Middy apron" to be slipped over the head, or closed at the back. The pattern is cut in three sizes: Small, medium and large. It requires 5 yards of 36-inch material for a medium size.

1784—A neat blouse dress for mother's girl. The pattern is cut in 4 sizes: 6,8, 10 and 12 years. It requires 3¼ yards of 44-inch material for a 10-year size.

9503—Two practical simple ideas, for lingerie, a one-piece corset cover and one-piece drawers. The pattern is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 2⅝ yards of 36-inch material for the medium size.

1773—A smart party or best dress, with sleeve in wrist or elbow length. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires, with double skirt, 4⅛ yards of 44-inch material for an 8-year size; with single skirt, it requires 3⅝ yards.

1278—Ladies' house dress with sleeve in either of two lengths, with regulation or reversible closing, and normal or raised waistline. The pattern is cut in 6 sizes: 34, 36, 38, 40,42 and 44 inches bust measure. It requires 6⅜ yards of 44-inch material for a 36-inch size.

1517—Ladies' waist with or without jabot trimming. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2¾ yards of 36-inch material for a 36-inch size, with ⅝ yard of 27-inch material for jabot.

1764—Boys' Middy suit. This design is a popular style, good for wash and woolen goods. The pattern is cut in 5 sizes: 3, 4, 5, 6 and 8 years. It requires 3¾ yards of 27-inch material for a 4-year size.

1649—Girls' one-piece dress, with or without added pointed sections, with shield and with sleeve in either of two styles. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. Size 4 years requires 2½ yards of 44-inch material for the dress without yoke sections and 3⅛ yards with yoke sections.

1682—Ladies' seven gore skirt, with or without yoke and pockets, in raised waistline. The pattern is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 4¾ yards of 44-inch material for a 24-inch size.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

SYNOPSIS OF PRECEDING CHAPTERS

The prologue, or Part First, is laid in New Orleans and concerns two brothers, one of whom has proved faithless to the girl who trusted him, the other one marrying the girl and giving her the name and home which the faithless brother had well-nigh robbed her of. The scene then shifts to the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold and "bunking" with an old Scotchman, named MacDougall, his only companion, save his beloved horse, Mowitza. A neighbor, named Hardy, comes to their camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. He becomes well acquainted with his employer's sister, Rachel Hardy, who takes a great interest in him and is much in his company, although she is warned by her friends that his name is probably an assumed one and that he may, indeed, be a squaw man, with an Indian wife living somewhere, as nothing is known of him. Genesee Jack overhears a conversation between Miss Hardy and her aunt, from which he learns that he is not "fit company for a lady"—this is the aunt's view—and the relations between Rachel and the guide are not quite cordial.

CHAPTER V.

At Last Camp.

AFTER their stop at the Indian camp, which Genesee explained was a berrying crowd from the Kootenai tribe, there was, of course, comment among the visitors as to the mixed specimens of humanity they had seen there.

"I don't wonder a white man is ashamed of an Indian wife," said Mrs. Houghton. "What slouchy creatures!"

"All the more reason for a white man to act the part of missionary, and marry them," remarked Rachel Hardy, "and teach them what the domestic life of a woman should be."

Genesee turned square around to look at the speaker—perhaps she did not strike him as being a domestic woman herself. Whatever the cause of that quick attention, she noticed it, and added: "Well, Mr. Genesse, don't you think so? You must have seen considerable of that sort of life."

"I have—some," he answered concisely, but showing no disposition to discuss it, while Mrs. Houghton was making vain efforts to engage Miss Hardy's attention by the splendid spread of the country below them; but it was ineffectual.

"Yes, Clara, I see the levels along that river—I've been seeing them for the past two hours—but just now I am studying the social system of those hills;" and then she turned again to their guide. "You did not answer my question, Mr. Genesee," she said, ignoring Mrs. Houghton's admonishing glances. "Do you not agree with my idea of marriages between whites and Indians?"

"No!" he said bluntly; "most of the white men I know among the Indians need themselves to be taught how people should live; they need white women to teach them. It's uphill work showing an Indian how to live decently when a man has forgotten how himself. Missionary work! Squaw men are about as fit for that as—as hell's fit for a powder-house."

And under this emphatic statement and the shocked expression of Clara's face, Miss Hardy collapsed, with the conviction that there must be lights and shades of life in the Indian country that were not apparent to the casual visitor. She wondered sometimes that Genesee had lived there so long with no family ties, and she seldom heard him speak of any white friend in Montana—only of old Davy MacDougall sometimes. Most of his friends had Indian names. Altogether, it seemed a purposeless sort of existence.

"Do you expect to live your life out here, like this?" she asked him once. "Don't you ever expect to go back home?"

"Hardly! There is nothing to take me back now."

"And only a horse and a gun to keep you here?" she smiled.

"N—no; something besides, Miss. I've got a right smart of a ranch on the other side of the Maple range. It's running wild—no stock on it; but in Tamahnous Hill there's a hole I've been digging at for the past four years. MacDougall reckons I'm 'witched' by it, but it may pan out all right some of these days."

"Gold hunting?"

"No, Miss, silver; and it's there. I've got tired more than once and given it the klatawa (the go-by); but I'd always come back, and I reckon I always will until I strike it."

"And then?"

"Well, I haven't got that far yet."

And thus any curiosity about the man's life or future was generally silenced. He had told her many things of the past; his life in the mines of Colorado and Idaho, with now and then the diversion of a government scout's work along the border. All of that he would speak of without reserve, but of the actual present or of the future he would say nothing.

"I have read somewhere in a book of a man without a past," remarked the girl to Mrs. Hardy; "but our guide seems a man utterly without a future."

"Perhaps he does not like to think of it here alone," suggested Tillie thoughtfully; "he must be very lonely sometimes. Just see how he loves that horse!"

"Not a horse, Tillie—a klootchman kiuatan," corrected the student of Chinook. "If you are going to live out here, you must learn the language of the hills."

"You are likely to know it first;" and then, after a little, she added: "But noticing that man's love for his Mowitza, I have often thought how kind he would be to a wife. I think he has a naturally affectionate nature, though he does swear—I heard him; and to grow old and wild here among the Indians and squaw men seems too bad. He is intelligent—a man who might accomplish a great deal yet. You know he is comparatively young—thirty-five, I heard Hen say."

"Yes," said Mrs. Houghton sarcastically; "a good age at which to adopt a child. You had better take him back as one of the fixtures on the ranch, Tillie; of course, he may need some training in the little courtesies of life, but no doubt Rachel would postpone her return East and offer her services as tutor;" and with this statement Mistress Houghton showed her disgust of the entire subject.

"She is 'riled,'" said the girl, looking quizzically after the plump retreating form.

"Why, what in the world—"

"Nothing in the world, Tillie, and that 's what's the matter with Clara. Her ideas of the world are, and always will be, bounded by the rules and regulations of Willow Centre, Kentucky. Of course, it isn't to be found on a map of the United States, but it's a big place to Clara; and she doesn't approve of Mr. Genesee because he lives outside its knowledge. She intimated yesterday that he might be a horse-thief for any actual acquaintance we had with his resources or manner of living."

"Ridiculous!" laughed Tillie. "That man!"

The girl slipped her arm around the little wife's waist and gave her a hug like a young bear. She had been in a way lectured and snubbed by that man, but she bore no malice.

The end of their cultus corrie was reached as they went into camp for a two-days' stay, on the shoulder of a mountain from which one could look over into the Idaho hills, north into British Columbia, and through the fair Kootenai valleys to the east, where the home-ranch lay.

Houghton and Hardy each had killed enough big game to become inoculated with the taste for wild life, and the ladies were delighted with the idea of having the spoils of the hunt for the adornment of their homes; and altogether the trip was voted a big success.

Is there anything more appetizing, after a long ride through the mountains, than to rest under the cedars at sunset and hear the sizzle of broiled meat on the red coals, and have the aroma of coffee borne to you on the breeze that would lull you to sleep if you were not so hungry?

"I could have eaten five meals during every twenty-four hours since we started," acknowledged Rachel, as she watched with flattering attention the crisping slices of venison that were accumulating on a platter by the fire.

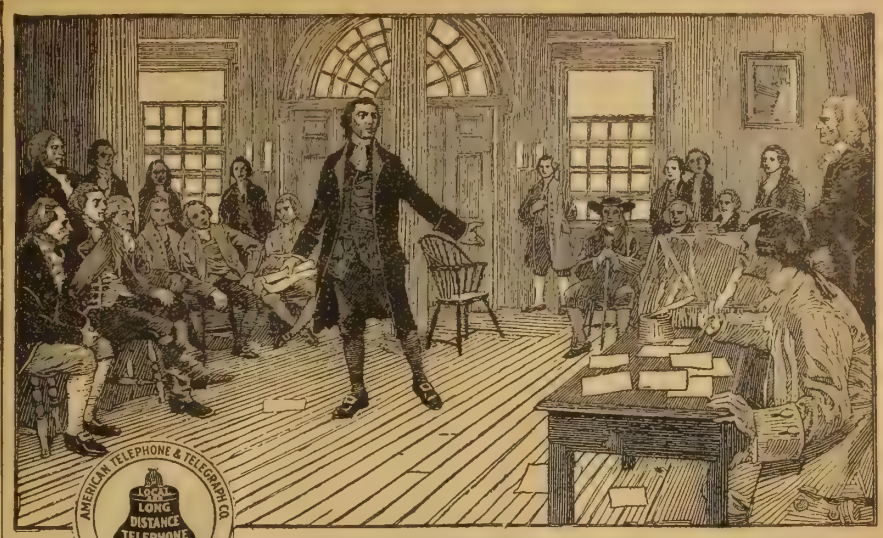
And she looked as if both the appetite and the wild living had agreed with her. Clara complained that Rachel really seemed to pride herself on the amount of tan she had been able to gather from the wind and the sun, while Hardy decided that only her light hair would keep her from being taken for an Indian.

But for all the looks that were gaining a tinge of wildness, and the appetites that would persist in growing ravenous, it was none the less a jolly, pleasant circle that gathered about the evening meal, sometimes eaten on a large, flat stone, if any were handy, and again on the grass, where the knives and small articles of tableware would lose themselves in the tall spears; but, whatever was used as a table, the meal in the evening was the domestic event of the day. At midday there was often but a hasty lunch; breakfast was simply a preparation for travel; but in the evening all were prepared for rest and the enjoyment of either eatables or society. And until the darkness fell there was the review of the day's hunt by the men—Hardy and Houghton vying with each other in their recitals—or, as Ivans expressed it, "swappin' lies"—around the fire. Sometimes there would be singing, and blended with the notes of nightbirds in the forest would sound the call of human throats echoing upward in old hymns that all had known sometime, in the East. And again Tillie would sing them a ballad or a love-song in a sweet, fresh voice; or, with Clara, Hardy, and Houghton, a quartette would add volume to some favorite, their scout a silent listener. Rachel never sang with the rest; she preferred whistling, herself. And many a time when out of sight of her on the trail, she was located by that boyish habit she had of echoing the songs of many of the birds that were new to her, learning their notes, and imitating them so well as to bring many a decoyed answer from the woods.

Between herself and the guide there was no more their former comaraderie. They had never regained their old, easy, friendly manner. Still, she asked him that night at "last camp" of the music of the Indians. Had they any? Could he sing? Had there ever been any of their music published? etc.

And he told them of the airs that were more like chants, like the echoes of whispering or moaning forests, set to human words; of the dusky throats that, without training, yet sang together with never a discord; of the love-songs that had in them the minor cadences of sadness. Only their war-songs seemed to carry brightness, and they only when echoes of victory.

In the low, glowing light of the fire, when the group around it faded in the darkness, he seemed to forget his many listeners, and talked on as if to only one. To the rest it was as if they had met a stranger there that



Patrick Henry Addressing the First Continental Congress, Philadelphia, 1774

One Nation; One People

WHEN Patrick Henry declared that oppression had effaced the boundaries of the several colonies, he voiced the spirit of the First Continental Congress.

In the crisis, the colonies were willing to unite for their common safety, but at that time the people could not immediately act as a whole because it took so long for news to travel from colony to colony.

The early handicaps of distance and delay were greatly reduced and direct communication was established between communities with the coming of the railroads and the telegraph. They connected places. The telephone connects persons irrespective of place. The telephone system has provided the means of individual communication which brings into one national family, so to speak, the whole people.

Country wide in its scope, the Bell system carries the spoken word from person to person anywhere, annihilating both time and distance.

The people have become so absolutely unified by means of the facilities for transportation and communication that in any crisis they can decide as a united people and act simultaneously, wherever the location of the seat of government.

In the early days, the capital was moved from place to place because of sectional rivalry, but today Independence Hall is a symbol of union, revered alike in Philadelphia and the most distant American city.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

One Policy *One System* *Universal Service*

evening for the first time, and found him entertaining. Even Mrs. Houghton dropped her slightly supercilious manner toward him, a change to which he was as indifferent as to her coolness. It may have been Tillie's home-songs in the evening that unlocked his lips; or it may have been the realization that the pleasure-trip was ended—that in a short time he would know these people no more, who had brought him home-memories in their talk of home-lives. It may have been a dash of recklessness that urged him to enjoy it for a little only—this association that suggested so much to which he had long been a stranger. Whatever the impulse was, it showed a side of his nature that only Rachel had gained any knowledge of through those first bright, eager days of their cultus corrie.

At Tillie's request he repeated some remembered fragments of Indian songs that had been translated into the Red's language, and of which he gave them the English version or meaning as well as he could. A couple of them he knew entire, and to Tillie's delight he hummed the plaintive airs until she caught the notes. And even after the rest had quietly withdrawn and rolled themselves in blankets for the night's rest, Hardy and his wife and Genesee still sat there with old legends of Tsiatko, the demon of the night, for company, and with strange songs in which the music would yet sound familiar to any ears used to the shrilling of the winds through the timber, or the muffled moans of the wood-dove.

And in the sweet dusk of the night, Rachel, the first to leave the fire, lay among the odorous, spicy branches of the cedar and watched the picture of the group about the fire. All was in darkness. save when a bit of reflected red would outline form or feature, and they looked rather uncanny in the red-and-black coloring. An Indian council or the grouping of witches and warlocks it might have been, had one judged the scene only from sight. But the voices of the final three, dropped low though they were for the sake of the supposed sleepers, yet had a tone of pleasant converse that belied their impish appearance.

Those voices came to Rachel dreamily, merging their music with the drowsy odors of a spruce pillow. And through them all she heard Tillie and Genesee singing a song of some unlettered Indian poet:

Lemolo mika tsolo siah polaklie,
Towagh tsee chil-chil siah saghallie.
Mika na chakko?—me sika chil-chil,
Opitsah! mika winapia,
Tsolo—Tso-lo!

Wild do I wander, far in the darkness,
Shines bright a sweet star far up above,
Will you not come to me? you are the star,
Sweetheart! I wait,
Lost!—in the dark!

And the white girl's mouth curled dubiously in that smile that always vanquished the tender curves of her lips, and then dropped asleep whispering the refrain, "Tsolo—tso-lo!"

(To be continued.)

Try Cow-Ease. Money Back If You Are Not Satisfied—

I will pay you your money back. My personal guarantee shows my own confidence in this wonderful fly repellent.

COW-EASE

Keeps Flies Off Cattle and Horses

Sold by Reliable Dealers Everywhere.

A gallon of Cow-Ease will spray one cow 200 times. Its cost is trifling, and it will positively keep flies away. It is perfectly harmless, does not gum the hair or blister the skin.

I know what I am talking about, for I originated Cow-Ease fifteen years ago, and have sold it to hundreds of thousands of dairymen and farmers.

I stand ready to guarantee it—and that means I will give you your money back, without fuss or argument, if you are not satisfied. Is there any stronger argument than that?

TRIAL OFFER
If your dealer cannot supply you, send me his name and $1.25, and I will deliver prepaid to your address a half-gallon can of COW-EASE and SPRAYER for applying. For west of Missouri River and for Canada, above Trial Offer, $1.50.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

A Bad Habit.

I have a two-year-old colt that has got to chewing the manes and tails of my horses and colts. He will trim the hair off clean to the stub. Is there anything I can do to stop him?

This is simply a bad habit and will probably be hard to overcome. Some mechanical means might be devised, such as a muzzle, but even that would be very clumsy.

Supernumerary Teats.

I have a cow with a little teat grown on the side of one of her teats. It is a nuisance when the cow is milked, as it leaks milk when the teat is squeezed. I have burned it with carbolic acid, but it did no good, as it leaked as badly as ever as soon as the scab was gone. How can it be stopped permanently?

It is possible for a skilled man to remove this teat and sear it, thereby causing it to heal over, closing the duct. This is best done while the cow is dry.

Castration of Young Bulls.

Can you inform me of some remedy where young bulls can be castrated and not be bothered with flies and swelling?

There is usually very little trouble following the castration of young bulls if the job is done in a clean as well as professional way. We have very little trouble of this kind to contend with in our practice. The use of 2 per cent creolin solution applied to the wound, two or three times daily, will serve to keep flies away.

Bloat in Cow.

I have a young red heifer a year old last March and during this last week her sides have bloated up three different times. Will you please tell me what is the cause of it and what I could do for her? Last night I gave her about three tablespoons of saleratus and this morning a dose of salts. After pressing on her sides and rubbing her it seems to pass away. She isn't pastured in and has free range here to run. There is an abundance of clover here and, of course, here in the woods a great many other things growing also.

This is caused from some substance which the cow gets, which brings on indigestion and consequent bloating. Clover may be the causitive agent. Give your animal one-half ounce of carbonate of ammonia, dissolved in pint of water. Repeat every half hour until relieved. If she suffers a bad attack give from one to one and one-half pounds epsom salts. Change of pasture is in order.

Blindness or Corneal Opacities.

I have a buckskin horse about eight years old which is nearly blind. No treatment has been given. About one year ago a white substance that glistens has formed over his right eye. There is a small white substance forming in the center of his left eye. What treatment is there for this, if any?

The one eye is in all probability beyond repair. You may be able to do some good for the other eye by using a 1 per cent solution of silver nitrate in it once daily. This should be applied with a soft feather.

Bone Spavin.

I have a horse with a bone spavin. Can it be killed by blistering and after it is killed will he ever go lame in it? What would you advise to put on it?

Sometimes the growth and lameness of a spavin can be overcome by blistering, but there are some which blistering will have no effect on. If a spavin is completely "killed" it may not come on again, although we have known where the trouble was seemingly overcome and yet came back in a year's time. The use of a veterinary blistering ointment, which can be obtained at your local drug store, may be of benefit. The horse should have rest and the blister applied every two or three weeks.

Sore Navel.

I have a colt six weeks old that is doing well, but its navel does not heal up. It looks sore, but it does not leak. Please give me a treatment for it. About the middle of April I had a colt and I ordered a 1-500 solution of corrosive sublimate and I put it on the colt's navel and about three inches aound it, and it ate the skin and the navel in and about an inch deep and it killed the colt, so I was afraid to use any more of it. Is there anything I could do about it? The bottle is labeled 1-500 solution corrosive sublimate, but I am certain that it is stronger than that because I have used it other years with good results, and what I got this year is water color, and other times it was blue.

Apply iodine to the navel once daily for a while and this will possibly dry it up. In regard to the use of the corrosive sublimate solution, will say that possibly this colt upon which you used it may have been more susceptible to the effects of this drug than the usual colt, hence the caustic action. A 1-1,000 solution is a better strength for this purpose.

Contracted Tendons.

I have a two-year-old mare that had h r right leg hurt in a mower about four months ago. The leg seems to be doing nicely, but she puts weight on toes of left foot whenever she trots. There is no sign of hip sweeny whatever, but cords of leg seem to be shortened.

The tendons are probably shortened following the injury and may permanently lame the mare unless some radical means is resorted to. Have some competent veterinarian examine this mare and find out positively if the above-mentioned trouble is existing, and then he had best apply treatment.

Enlargements on Hind Legs.

I have a colt that will be three years old the 24th of this month. It has lumps on its hind knees. They might be shoe boils. Does a horse get shoe boils if it is not shod. What would you recommend for this?

Your description is not clear enough for us to be able to tell the exact location of the growths or the character of them, therefore, a positive diagnosis is not to be made. It will cost you very little, if anything, to have a veternarian look at this animal, if you take it to him, and he can tell you what is causing the growth.

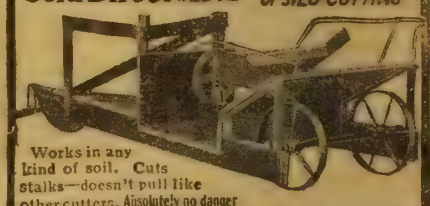
Inflammation of Bowels.

I had a young colt three weeks old out in the pasture with its mother. Am not working the mare at all. The colt was doing well, but one day I went to the pasture to look at my stock and noticed the colt strained as though he were trying to make his water. Otherwise he seemed all right. The next morning I went back to look and he was a very sick colt. He was standing with his head down and back arched up. He had a bad case of scours. His bowels were as thin as water, blue, slimy stuff, it would keep running out of him and I could not get him to walk at all. He would just stand with his head down all the time and panting and breathing hard all the time. He seemed to be too sore to move. I got a doctor at noon. He didn't say what was the matter with the colt, but gave me some medicine to give the colt two doses, one at noon and one at night. The colt seemed a whole lot better at night and his bowels stopped. The next morning he was worse and died with inflammation of the bowels. Now in all this time I did not see the colt make water. Would not being able to make water cause a disturbance of the bowels or would too sudden a stoppage of the bowels cause inflammation? What is good for a colt when it can't make water.

Your colt has probably been troubled with severe indigestion which was followed by scouring and later inflammation of the bowels. This condition is met with quite often and is many times hard to overcome, the animal dying quite often in the course of a few hours after inflammation has begun. We could not advise you what to do in case a colt can't urinate, as there are so many conditions that might cause that trouble. The cause would have to be ascertained before treatment was begun.

The PERFECT CORN HARVESTER

Sold Direct $19.50 JUST the THING for SHOCK or SILO CUTTING



Works in any kind of soil. Cuts stalks—doesn't pull like other cutters. Absolutely no danger

Cuts Four to Seven Acres a Day

with one man and one horse. Here is what one farmer says:

Frederick, Wis., Feb. 4, 1916
Love Mfg. Co.: Dear Sirs: Your machine will work where it is too soft for a binder. It cut my corn and did not pull any up. As nearly as I could figure it did the work of four men. Yours truly, F. J. Stoner

SOLD DIRECT TO THE FARMER

UPPER WISCONSIN

Value of Good Potatoes.

To the Editor:—In June, 1915, a Texas buyer and grower of Triumph seed potatoes came to Oneida county, looked over our potatoes and then contracted for four carloads of the Triumph seed, later including two more cars in his order. The man was so well pleased with his seed that a few days ago he came again to the county and this year contracted for twenty-five cars and took an option on fifteen more cars of common stock and ten cars of certified stock. He pronounced Oneida county seed the best received in his district last year. This means that Oneida county's reputation as a center for the production of pure-bred seed potatoes is still growing. It should mean, too, that every grower in the county will take great pride in keeping his stock up to standard. Minnesota and Maine have heretofore furnished practically all of the southern seed, but the growers in these states have not kept their varieties pure, and have made no extra effort to eradicate the common diseases. If we will but look to these two things, orders for our seed will increase each year.

The two diseases the southern growers guard against are common scab and rhizoctonia, or black scurf. We are not troubled to any extent with the scab, but the black scurf is really getting serious. So far no reliable information concerning the control of the scurf disease has been published, but by next spring we hope to have the matter thoroughly worked out, as R. E. Hartman, of the State Experiment Association, has 400 ex-

DEDICATION OF NEW CREAMERY AT EUREKA CENTER, POLK COUNTY, WHICH WAS BUILT WHEN THE OLD CREAMERY BURNED.

periments he is conducting at the farm of Chas. Lyman, near Rhinelander, all dealing with the control of this disease. Each grower should be anxious to gain this information and do all he can towards the prevention of this disease. Its control will mean a bigger yield of better potatoes.

It should be our aim to grow the best potato in Oneida county that is grown anywhere in the country today. Keep the crop up to standard, and at all times let other people know the quality of seed stock produced. Then there will be no trouble in selling our product at prices far above the average, and potato growing will be profitable even in season of low prices. W. D. Juday.

Oneida Co.

Potato Growers Organize.

Recently, potato growers of Waushara county have met at important shipping points and have organized local associations for the special purpose of growing standard stock for both seed purposes and for commercial table stock. The last association organized was at Wautoma on June 28th. A call was signed by thirty growers to meet at the courthouse. J. G. Milward, secretary of the State Potato Growers' Association, met with the growers and discussed plans for the coming state convention at Eau Claire in November. Another very important matter taken up by this association was the work of seed potato inspection and certification. Several of the growers have made application for inspection this year. The association of growers passed motion unanimously favoring the employment of a county agricultural agent by Waushara county at the very first opportunity presented under the law authorizing the employment of county representatives. Preceding the convention of the state association at Eau Claire, in November, the potato growers of Waushara county will meet at an annual county meeting and exhibit to organize and arrange for a Waushara county exhibit to the state show.

Oconto County Records.

Adolph P. Lehner, of Oconto Falls, secretary of the Oconto County Holstein Breeders' Association, organized about a month ago, is compiling records of various cows owned by members of the association. All of these records were made on ordinary feeding, without any attempt being made to crowd the animals. In fact, they were not fed during the late spring and summer months, but were out in the pasture the same as the other stock.

Resthaven Princess, owned by Thos. Staszak & Sons, during the last nine months gave 10,025.6 pounds of milk. She will, by the time she is dried up, have given over 11,000 pounds of milk.

Princess De Kol Posh 2d gave 15.093 pounds of butter fat in seven days. Her two nearest dams gave 21.07 pounds and 19.54 pounds of butter fat in seven days. Pet von De Kol gave 16.075 pounds of butter fat in seven days, while her two nearest dams gave 18.097 pounds and 20.40 pounds of butter fat in seven days. Pet Maid De Kol gave 15.795 pounds of butter fat in seven days while her two nearest dams gave 17.89 pounds and 15.15 pounds of butter fat in seven days. These three cows are owned by E. B. Dutton, of Abrams, president of the local association. Mr. Dutton is one of the country's pioneer Holstein breeders.

Belle Paul Mechthilde Johanna gave 11,401 pounds of milk in 243 days. This is at an average of 46.9 pounds of milk per day. On her best day, being one day late in October, she gave somewhat over fifty pounds of milk. Johanna Susie Netherland produced 13,313 pounds of milk in 304 days. She gave 1,742 pounds for the month of January, being an average of 56.19 plus per day. Her average for the entire time is 43.79 pounds per day. These two cows are owned by L. Fields, who has been in the business the last nine years.

Barron Dairymen Meet.

More than two hundred breeders attended the meeting of the Barron County Guernsey Breeders' Association at Barron on June 29th, while the Holstein sale and picnic, on June 21st, was attended by about 800. J. W. Hicks, president of the State Potato Growers' Association, gave the address of the day at the Holstein gathering and G. R. Ingalls, of Eau Claire, told the Guernsey breeders how the farmers of his county bought a carload of pure-bred Guernseys. Before this meeting was over the Barron county breeders organized and are in position now to buy a car or two of pure-bred Guernsey heifers. These two picnics were successful in every way and indicate the great advancement being made along dairying lines in Barron county.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

White Diarrhea in Chicks.

"Mrs. J. W. G." is so unfortunate as to have a fine lot of young chickens become infected with white diarrhea after they had reached the age that they should be safe from infant mortality. She writes:

I have 160 chickens that are nearly feathered, but they are beginning to die. They stand around with their heads under their wings, and "cheep" in a dismal way. Each morning I find several dead. The droppings are a whitish looking slime. They were hatched under hens, and the hen has left them. They have a warm, comfortable place at night, and are fed wheat, ground oats mash, and a poultry compound. The medicine does not, I think, help them a bit. They seem to get worse after taking it. Is there any help for the white diarrhea? I fear that is the trouble, and do not know what to do for it.

There is no certain cure for white diarrhea, though sour milk fed from birth is thought to be a preventive. Prevention is the only thing to be recommended in this awful disease, which causes more mortality than any other one thing in chickendom.

The chickens are hen hatched, which would lead one to suppose that either the trouble was carried to the place or else the hens were affected, causing the chicks to be born with it. If so, all that is possible to do is to dispose of your flock and start over with fresh fowls from the flocks of someone whom you know to a certainty has never had it. Vigorous measures are very necessary to clear the premises of it.

In a few cases chickens recover from this trouble only to cause more trouble next season. A cured chick, kept for a breeder, will transmit the trouble to its offspring another year, and so there you are.

If kept for market purposes they never pull together and do any good either for themselves or their keeper. In fact, a chick with white diarrhea is worse than a dead chick and the sooner it succumbs and is burned the better. Regret to be so positive about the matter, but it is a hard fact.

More than 150 granges have been organized during the last quarter. Ohio leads in the number of new granges, Kansas second and Colorado third. This movement is fast spreading throughout the country.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Atwater Buys Great Boars.

WE RECENTLY spent the day at the home of L. F. Atwater, Bangor, Wisconsin, and incidentally to see the herd boars recently purchased by Mr. Atwater. Knowing about what he was looking for, we felt sure that when he found the boar or boars to his liking, some more of the breeders would have to take off their hats to the "Atwater Durocs." The writer never saw Marion's Wonder, but he has seen a good many of the famous sons of Crimson Wonder Again and H. A.'s Queen and the get of the various boars, but I will say with all due credit to the other good boars of this cross, that I have seen more good Durocs sired by Marion's Wonder than any of the others. The best sows in Wisconsin are sired by Marion's Wonder and the sows that have been winning at the Wisconsin State Fair have been strong in Marion's Wonder blood—this line of breeding is no experiment, it has made good. We know of a couple of good boars in Iowa sired by Marion's Wonder, but we don't consider him a boar sire, but as a sire of smooth, big sows, he is one of the best that ever lived. We simply mention Marion's Wonder so that you will appreciate the breeding of one of the boars Mr. Atwater recently purchased. Realizing what he had in Marion's Wonder, Mr. Atwater decided he would get a boar bred along the same lines, but it has taken him some time to find one that could be bought. The boar purchased is sired by the immortal Crimson Wonder Again out of H. A.'s Queen and he is six months older than Marion's Wonder would be if he was living. This boar will be seven years old in September and it is useless to say that he is right, for if he wasn't Atwater wouldn't have purchased him. Of all the boars of advanced age that we have seen, we never saw a better boar than this one. We firmly believe that he could be made to weigh 1,000 pounds. He hasn't a wrinkle on him, has a wonderfully strong back, and the way he stands on his feet is remarkable considering his age and the hard usage he has had. Mr. Atwater doesn't expect to show this hog, but at that he would cause no little attention in the show ring. We have seen some gilts sired by this boar and these "samples" were outstanding in every respect. The second boar purchased by Mr. Atwater is a three-year-old son of the grand champion, Illustrator. Here is the boar that is going to cause some trouble at the fairs this fall. When he arrived at the Atwater farm he weighed 865, in ordinary condition, for the former owner did not intend to show him. We feel safe in saying that this boar will be shown weighing between 950 and 1,000 pounds. Here is a real boar and the Duroc boar that beats him this fall will have to be an outstanding hog. The day the writer was there, the fall boar—senior pig—arrived and although he had been in the crate for three days he is the biggest boar of his age that we have seen this year. In the first place he is long, has a good back with an excellent spring of rib, a nice head and ear, the best of feet and bone, in fact, a typical show boar. He is sired by Cherry Chief out of a Proud Col. dam, and all students of pedigree know that it would be hard to improve on that breeding. Mr. Atwater is one of the best swine feeders we have ever met and it is needless to say that when he brings his show herd out this fall they will be in show condition. He will have a herd of sows at the fairs that are going to be hard to beat. His spring pigs are doing fine and he has raised around 160 of them, so the buyers this fall will have a large number to pick from. No spring boars will be sold, as the tops are being retained for the boar sale to be held this fall. The only thing he has for sale is a few sows that are bred for fall farrow—there are some good buys among these sows. If interested, write.—Adv.

A Popular Remedy for Horses.

ABSORBINE is a popular remedy for horse ailments. For many years it has held the favor of horsemen because it heals sores, sprains, cuts, bruises and similar afflictions of horses. J. L. Huye, Lancaster, Pa., writes, "I have been using 'Absorbine' for some time and have removed many bunches on sore legs of horses and mules. A mule on my farm had a bunch on his front ankle as large as a hen's egg, and the neighbors laughed at me when I told them I would take it away in four weeks with Young's 'Absorbine.' In four weeks the bunch had entirely disappeared and I sold the mule for $300." "Absorbine" is sold by leading druggists at $2 a bottle, or sent direct, charges prepaid, upon receipt of the price. A free pamphlet, telling what this remedy will do for horses, will be sent on request to W. F. Young, P. D. F., 101 Temple St., Springfield, Mass. See page 18.—Adv.

The "Perfect" Corn Harvester.

ONE of the most valuable machines for use on the farm that has come to our attention, is the "Perfect" corn harvester, made by the Love Mfg. Co., of Lincoln, Ill. Five or six acres of corn can be cut in a day without unusual effort and the stalks will be cut off smoothly and evenly. The danger of the operator of being thrown in front of the knife has been entirely eliminated by a guard rail. The cost of the machine is far less than the ordinary corn binder, and the fact that one horse and a man can run it brings down the operating cost to a minimum. The Love machine is well worth anyone's careful consideration if he is a corn raiser. Write the company today for their illustrated folder. The advertisement appears on pgae 18.—Adv.

A Rich Duchess Ormsby Herd.

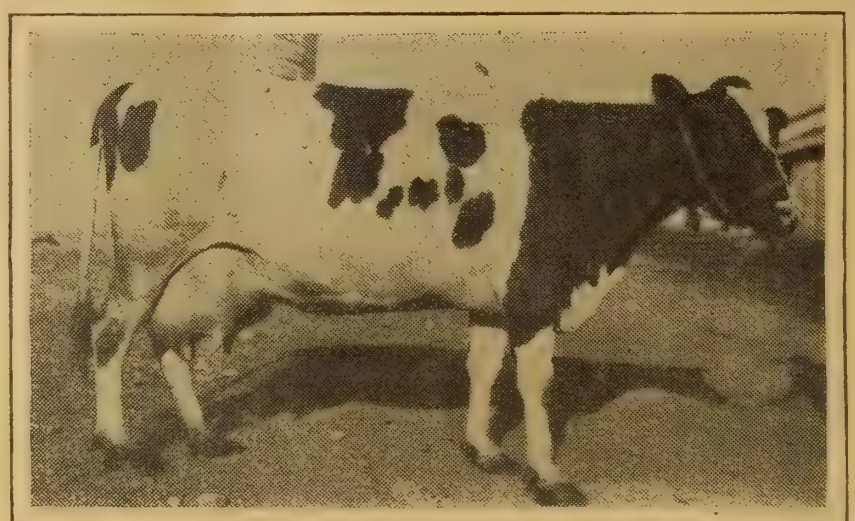
A RICHLY bred Duchess Ormsby bull is advertised for sale on page 22 by E. E. Rosenkrans, LaBelle View Farm, Oconomowoc, Wis. There is a good bunch of heifers growing up on this farm that are bound to make good when come into milk. They are sired by Hillvale Champion 98112, a young Ormsby bull, whose six nearest dams have a 4 per cent test, one over 5 per cent. He is also a grandson of Sir Ormsby Hengerveld De Kol, that is the grandsire of the great cow, Duchess Skylark Ormsby, the dairy queen of the world, whose record is over 1,500 pounds of butter in one year. Mr. Rosenkrans intends to let the good work go on, for he has just purchased a half interest in Hillvale Dandy 80730, an Ormsby bred bull. His dam has a record of thirty pounds butter and over 700 pounds of milk in seven days. He is a half brother to the sire of Ormsby Jane Segis Aggie with a record of 44.42 pounds of butter fom 721.40 pounds of milk in seven days (a world's record). Hillvale Dandy will be mated to the Ormsby heifers at Labelle View Farm and in time there should be a combination of Ormsby blood that will be hard to excel, as this last cross of Duchess Ormsby blood will intensify this breeding to a greater extent than in any other herd in the state, that the writer knows of at the present time.—Adv.

Endurance of Super-Six Cars Shown by Speed Tests.

AT the great Metropolitan Race on the speedway in New York, a regular Hudson Super-Six won third place and $2,000 against the world's best racing cars. It was the only car that traveled a distance of 150 miles without stopping. The explanation lies in the wonderful endurance and reliability of the Super-Six motor. The Hudson Super-Six is not a racing car, but speed tests are frequently made to show the dependable qualities of its motor. The owner of a Super-Six feels that he is master of the road; all the advantages of flexibility, durability, power and speed are at his command, and the beautiful lines of his car give him just cause for pride wherever he goes. For a great car at a medium price, the prospective buyer should consider the Hudson Super-Six. See advertisement on page 7.—Adv.

Tile Silos That Last and Give Service.

SILOS built of Brazil Vitrified Clay Tile are permanent; they stand like rock against the strongest winds and are proof against fire and decay. No attention is necessary because painting, repairing or rebuilding are not required by B. V. T. silos. Steel rods, embedded in dovetail mortar grooves, re-enforce the tile and produce one of the strongest silos on the market. Ensilage keeps perfectly in these silos. No air can attack it, because triple air spaces in the tile and tongue-and-groove mortar joints make the walls absolutely air tight. It interested in silos, you will surely profit by getting the free Silo Book E. of the Brazil Hollow Brick & Tile Co., Brazil, Ind. Write for it today, mentioning The Wisconsin Farmer in your letter. See page 13.—Adv.



DINAH JOHANNA ABBERKERK 2d, A. R. O. record 28.71 pounds butter in seven days. She is the dam of Calumet Johanna Abberkerk Champion, the sire of the calves advertised for sale on page 22 by A. G. Pingel, Chilton, Wis.

McDonald's Quality Big Types.

WE WISH it were possible for all hog men to visit the different herds as a field man does, for many of them could learn a great deal by visiting their fellow breeders, and see how "they do it." Most anyone could get some pointers about feeding and care of young stuff from J. D. McDonald, North Bend, Wisconsin. He is another one of the Wisconsin swine feeders that gets results. We have said a good deal and perhaps "raved" a little about J. D.'s herd boar, Mac's Chief, but it is because he is the type that we feel is needed in Wisconsin. We like to "rave" about a good boar when we see one, whether Tom, Dick or Harry owns him, for this Northwest needs more good boars, and as we find the good ones from time to time we are going to let our readers know about them. Two months ago in "writing up" the McDonald herd we said that Mac's Chief would easily weigh 1,050 pounds by fair time—we were informed that on the 28th of June he weighed 1,035 pounds, so we won't have to back up on this boar. We don't say that this hog can win, but if the judge will look at the big ones this boar will cause trouble. As all our readers know, the McDonald herd is full of good hogs, sows that have been champions many times and others that have been first prize winners. Big, smooth sows predominate on this farm, the kind that weigh 700 and 800 pounds, and if you want a boar that will put some size in your herd—and you must have it—McDonald can ship you a spring boar pig that will please you. He has the breeding and individuality and he prices them at what they are worth. Get particulars, and don't forget to mention The Wisconsin Farmer. —Adv.

D. & E.'S JUMBO, A JUNIOR YEARLING BELONGING TO DOBSON & EASTMAN, LANCASTER, WIS. A GOOD YEARLING.

Build With "Old Faithful" Hemlock.

FOR the car owner who needs a garage, the farmer who must have a new barn, the head of a household who wants a new dwelling, and for anyone else who expects to build for permanence, the Hemlock Manufacturers, Oshkosh, Wis., have an important message. They want to advise you to build with "Old Faithful" hemlock lumber, the wood that costs mighty little, but gives excellent service and will last almost forever. Those who write for this message will receive a new booklet, just off the press, which shows pictures of garages, barns, houses and other buildings, for which free plans and complete specifications for building may be obtained. The book contains a coupon which is good for any two sets of plans desired, when presented to a local number dealer. If he does not have the plans on hand, he can get them from the manufacturers. Anyone wanting the new booklet should write to the Hemlock Manufacturers, Oshkosh, Wis. See page 2.—Adv.

Booklet for Motorists on Starting and Lighting Systems.

THE Willard Storage Battery Company, Cleveland, Ohio, has issued a booklet on starting and lighting systems for motor cars. The relations of the starting motor, engine, charging generator and batteries are clearly set forth and the troubles which frequently arise in these parts are discussed. Since a knowledge of these parts is essential to the best car management, this little booklet will prove of great value to motorists. It will help in keeping all parts of the starting and lighting system of working together. This means elimination of trouble. The booklet is free and we suggest that all of our readers who own or drive cars write for a copy of it; simply ask for booklet F-67 and address one of the houses named in the advertisement on page 9. —Adv.

The French government is still buying American horses, having within the the last two weeks placed contracts for 10,000 head, the order to be filled by July 15th. Omaha is the concentration point for this shipment. One hundred and sixty-five dollars a head is the price under the contract, making the total expenditure for this shipment $1,650,000. Most of this money will go to horse raisers in Nebraska, though some horses will be taken from Kansas, Iowa and South Dakota.

BULLS from A. R. O. dams, of the right type to improve your herd. Prices reasonable.
W. W. Bird - - Cambria, Wisconsin

Good For Sour Soils.

"Slaked lime, if it can be had at less cost than ground limestone, and if in condition to spread well, is entirely satisfactory for correcting acidity in sour soils." This is the reply of the soils department at the experiment station to numerous inquiries as to which of the two is the better. Outside of the cost, the relative value and merits of these two forms of lime depends on their dryness or fineness, for these factors influence the readiness with which the lime can be spread on the land.

Chemically, slaked lime is practically the same as the limestone unless it is slaked enough to make it unfit for mason's use. In such case, it may still be quite caustic and have many lumps. Caustic lime is nearly twice as effective as the ground limestone in neutralizing acidity pound for pound, but it costs more and is much harder to distribute because the lumps, at least, must be water slaked. For these reasons the ground limestone is usually preferable when it can be had at a reasonable price.

In regard to the crops for which lime is applied, one caution especially must be observed, and that is not to put caustic lime on land that is to be planted to potatoes the first year.

Jersey Interest Runs High.

(Continued from page 11.)

ing was held on the Constance lawn. Mr. Underwood has a herd of about fifty-five head, headed by the bulls, Brookhill's Financial Count, Primrose Raleigh Lad and Frederic Pogis, a grandson of Sophia 19th. One of the interesting sights at the Underwood farm is the milk house and small creamery where all the cream from this herd is turned into butter that finds its market in New York and on Baltimore & Ohio Railroad dining cars. This butter brings Mr. Underwood an average of about 60 cents a pound. The breeders were all guests of Mr. Underwood at luncheon at his farm, while at Waupaca they were guests of the wives of the Jersey breeders who provided a picnic lunch which was spread under the big elms on the Constance lawn. Too much credit cannot be given Mr. and Mrs. Constance, the Waupaca county breeders and to Mr. Underwood and the Waukesha county breeders for the success of the gatherings, the memory of which will remain for many months with those so fortunate to attend.

Mr. F. F. Showers, of Delavan, is president of the state association and is giving freely of his time this year to increase the membership and the scope of work of the organization. Mr. W. H. Clark, of Rice Lake, is vice president and Mr. E. E. Wyatt, of Tomah, secretary and treasurer.

Mr. Underwood now has six cows under official test and Irenis Cherry 285828 promises to acquit herself with honors at the end of her year. During the first seven months, ending June 1st, she had given 550 pounds of fat and during the fifth month of her test she gave 76.5 pounds of fat. She is a two year old.

The state association was fortunate in securing the speakers this year, and among others who spoke at the two meetings were Mr. F. H. Scribner, of Rosendale; Prof. A. C. Oosterhuis, of the College of Agriculture, who gave demonstration talks; Mr. Harry Jenkins, of the Jersey Bulletin; Mr. C. P. Norgord, commissioner of agriculture. These were in addition to addresses of welcome and responses by the members of the local and state organizations.

SIR NONESUCH ORMSBY, of La Belle View, a sample of the Ormsby calves raised by E. E. Rosencranz, Oconomowoc, Wisconsin, whose advertisement appears on page 22.

A machine which plants from 10,000 to 15,000 forest tree seedlings a day is now being used at the Letchworth Park Forest ad Arboretum, in Wyoming county, N. Y., according to officials of the forest service, who are acting as advisers in the work. Previously the planting has been done by hand at the rate of 1,200 to 1,500 trees each day per man. The machine was designed to set out cabbage and tomato plants, but works equally well with trees. It is about the size of an ordinary mowing machine and is operated by three men and two horses. One man drives the team while the other two handle the seedlings.

Regular price per year	$3.00	You Save $1.50

If none of the above combinations suit you, you can make your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World, and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wisconsin.

A New Book for Hog Raisers.

AN attractive book, called "Growthy Hogs," has just been issued by Montgomery Ward & Co., Chicago and Kansas City. It contains interesting and readable information for the hog raiser, together, with complete catalog of supplies needed in this line. A copy of the book will be sent postpaid, without charge or obligation, to those who send in a request to either the Chicago or Kansas City house of the company named above. When writing, kindly mention this paper.—Adv.

Fred Harford **Kaukauna, Wis.**

Keep Your Pigs Free From Worms.
NO matter how well you feed your pigs, if they are worm-infested, they are bound to be undernourished. Wormy sows can't produce large, healthy litters, and wormy hogs never grow and lay on fat as they should, because the voracious worms feed on the food they eat and thus keep vitality constantly at a low ebb. Consequently, you can't get the money out of them that you should. It is the same with all stock—poor health means poor prospects for profit making. Digestive, bowel trouble and worms are the most common ailments and it is always advisable to have a reliable remedy on hand. The ideal medicine is that which fulfills the functions of tonic, laxative and worm destroyer, such, for instance, as Dr. Hess Stock Tonic, a favorite with farmers and stock raisers for the last twenty-four years. This is compounded according to Dr. Hess' own formula—and he is a doctor of medicine as well as a doctor of veterinary science and widely regarded as an authority on all the ailments of stock and poultry. An interesting feature of this preparation is the broad guarantee of the manufacturers. If the Stock Tonic fails to do all that is claimed for it, dealers will accept your empty packages and refund your money. The fact that the Dr. Hess & Clark preparations are sold by over 28,000 dealers throughout the United States and Canada indicates a popularity which could only be based upon actual merit. —Adv.

H. P. WEST **RIPON, WISCONSIN**

What's Going On
—in the automobile industry

THE automobile has come into your life permanently—or it soon will—to serve you day in and day out, on down through the years.

Its appeal is irresistible.

It is a fundamental factor in the affairs of modern, everyday life.

In the car you now select you are casting your lot with the fortunes of some one producer—or should be—for it entails needless expense to switch from one make of car to another.

It's time to "get right" on the automobile question.

So it is important to know what's going on in the automobile industry—more important than ever before.

Automobile producers have settled down into three fairly clearly defined groups.

Whether you own and drive your car on an extravagant or an economical basis depends first upon which group you cast your lot with.

You can drift into extravagance by following either of two groups, both of which make a strong appeal to the unwary.

✣ ✣ ✣

To follow one of these groups is to fall into the extravagance of cheapness—the appeal, of course, is price.

The extravagantly cheap cars are necessarily undersized—too small for comfort and as a rule lack equipment.

You begin by buying at retail prices the needed equipment.

Before you are through you have spent the price of a better car.

And in the end you sell out or trade in, take your loss and charge it up to experience.

✣ ✣ ✣

In casting your lot with the other of these two groups you fall into the other extreme of extravagance.

The appeal is individuality—exclusiveness.

This group embraces the great majority of producers but their output is small so they do not provide the machinery and facilities for large production

They must perform laboriously and expensively by hand many operations which could be done better, quicker, more uniformly, accurately and economically by great machines.

The price of these cars must cover extravagant manufacturing and selling costs.

And upkeep is correspondingly expensive for garage men are unfamiliar with these cars and service charges run high because mechanics must spend as much time learning what to do and how to do it as in actually doing the work.

✣ ✣ ✣

The third group comprises the large producers of quality cars.

The Willys-Overland Company is by far the largest producer in this group.

Season after season, for many years, the Overland output has far exceeded that of any other producer in this class.

As the Overland output has been greater, Overland material cost, manufacturing cost advertising and selling costs have been correspondingly lower, per car, than that of any other producer in this class.

And we have always given buyers the benefit of our lower costs.

Certain it is that we have led the way in all the great price reductions which have finally placed quality cars within the reach of the many.

Certain it is that those who have followed the Overland fortunes from the beginning have owned and driven their cars on a more economical basis than those who have followed any other producer. ✣ ✣ ✣

Past performance is the best promise of future performance, and several very great advantages of the present point to future advantage for those who cast their lot permanently with Overland.

Between the small, light Overland Roadster and the Willys-Knight Limousine at prices ranging between approximately six and eighteen hundred dollars, you have the most complete opportunity for selection within the entire "economy range"—excluding both the extravagant ranges of the cheap and of the fanciful, which fall outside any true idea of economy.

From season to season you may switch from one car to another as fancy or expediency may dictate, and without the needless loss entailed by changing from one make of car to another.

Whether you buy the small four cylinder Overland or a larger Overland Four, the big Overland Six or a Willys-Knight, you get the lowest possible first cost for a car of its class—the result of the greatest production attained in quality automobiles.

✣ ✣ ✣

And just as standardized manufacturing methods applied to the largest output have resulted in lowest possible first costs—

So also have standardized service methods applied to the largest number of running cars resulted in minimum upkeep costs.

Not only are Overland service stations everywhere, but garage men and mechanics everywhere have twice the experience and knowledge of Overlands as they have of any other car because there are about twice as many Overlands running as there are of any other make of cars of the same class.

And the inevitable result is economy, for everywhere men know Overlands and the quickest and shortest way to render almost any service in connection with them.

✣ ✣ ✣

So, if true values sway you—true values in every phase and all phases wherein the automobile touches your life—then consider these things and reach your decision and with your purchase this season cast your lot permanently with those who have established and are continuing to establish these very real and true values which determine true automobile economy.

See the Overland dealer now. Talk matters over with him frankly. He will help you from his rich experience, to decide which Overland or Willys-Knight will serve your particular needs with greatest economy.

Get right on the automobile question.

Catalogues on request. Please address Dept. 700

A BREATH OF SUMMER

CURRENT EVENTS

THE arrival of a submarine freighter, the Deutschland, from Germany, bearing a million-dollar cargo of German dyes and drugs, was the talk of the United States the past week. Practically ever since the European war began, now almost two years ago, Great Britain has maintained domination of the seas and German commerce has been driven therefrom. With the powerful navies of the allies patrolling the oceans it was next to impossible for any German freighters to slip by this cordon of steel and shell and continue the foreign trade which Germany had well-nigh monopolized prior to the war. But last week there arrived at Baltimore a 300-foot submarine, bearing a cargo, which had slipped by or under all the patrolling boats and made a new epoch in marine commerce. The new submarine is capable of diving to a depth of 300 feet and remaining under water for four days. In fact, traversing the British channel it did dive under water and remain there for more than ten hours, being almost directly underneath the warships which were on the lookout for it. The Deutschland's captain asserts that he and his crew celebrated their strategy by drinking French wine and singing good American songs, all unknown to the watchers in the battleships above them. When the coast was clear the submarine continued on its way, being obliged to submerge but ninety miles out of the 3,800 traversed in crossing the ocean. It is announced that this is merely the first of a fleet of submarine freighters which will attempt to open up German commerce with the outside world. The Deutschland will attempt to evade the battleships waiting for it off the United States coast and return to Germany with a cargo of much-needed rubber and nickel.

DANGER of war with Mexico becomes more and more remote day by day, President Wilson intending to accept Carranza's latest friendly note as evidence of his intention to restore order below the Rio Grande and punish the bandits whom the United States troops went in search of. Strife within the ranks of Carranza commanders is indicated in a report that General Jacinto B. Trevino, commander-in-chief in northern Mexico, has been deposed by order of Minister of War Obregon, and General Ignacio Enriquez, former civil governor of Chihuahua, appointed in his place. It was General Trevino who ordered the attack on General Pershing's troops, resulting in the battle of Carrizal. While this is going on, the United States troops have been withdrawn until they are now but sixty or seventy miles below the border. There has been but little movement of state troops during the past week, although it is still expected they will be used to patrol the international border until peace and order have been completely restored.

THE terrific drive of the Russians, British and French against the German lines, in the great war, continues and to an onlooker at this distance it would appear as though the allies had at last succeeded in turning the tide of battle against the Teutons. However, a Washington newspaper dispatch which purports to set forth what army experts in this country believe to be the situation, has this to say: "The situation in a general way, therefore, is generally regarded as favorable to Germany so far as any attempt to wear down the Teuton forces is concerned, but dangerous to the Teuton forces if the present concentrated drive unveils sufficient weakness at any one point to let the allied forces through en masse. The difficulty in breaking through the Teuton lines in decisive fashion is described here as due to the problem of taking advantage of the drives which pave the way. In several instances of the present fighting the French have opened up gaps, but have been unable to send troops through in cohesive form. This was the case in the French drive in September, it was explained. Only a thread separated the French forces from the Rhine, but the exhaustion of the effort in smashing through had been so great that there was no adequate force left to take advantage of the situation." The allies are now said to be plentifully supplied with guns and ammunition and probably have more men to fall back upon than have the hard-pressed Germans and Austrians. Some of the fiercest fighting of the two years of the war is now in progress, the allies attempting to relieve the pressure on Verdun, which the Germans are still attacking.

THE democratic majority in the United States senate has finally agreed upon a government shipping bill to upbuild the American merchant marine. The bill has already passed the house, but the senate proposes the following amendments: The government shall not purchase any ship which flies the flag of a European nation at war nor any ship already engaged in American trade unless it is about to be withdrawn from that trade. No ship shall be acquired by the government which is below 75 per cent of its original efficiency. The government shall not undertake to operate merchant ships unless all efforts fail to negotiate satisfactory leases or sales to private corporations for that purpose, the government reserving the right, however, to prescribe conditions under which ships shall be operated and in what service they shall engage. With these amendments it is proposed to push the bill through the senate as rapidly as possible so as to restore the Stars and Stripes to the high seas without undue delay. For a time it appeared as though a serious difference of opinion among the democrats would retard legislation along this line, but this difference now seems to have disappeared.

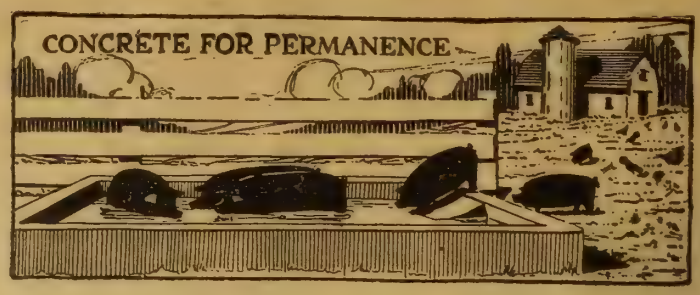
A BIG slump is looked for in the business of making munitions for the allied European powers and, in fact, has already set in. Thousands of men have been dismissed by firms who have closed plants created for the purpose of putting out arms, ammunition and war material for England, France and Russia. Most of the early contracts have been filled. In many cases there were no renewals. One reason is the fact that some of the output has proved inferior in quality. The main cause for the let-up, however, is that the allied countries have now sufficiently mobilized their industries to turn out their own arms, ammunition and material. For about two months the slump will not be very noticeable, experts predict, but after October it is asserted that the many factories will either have to return to their original lines or close down. Raw materials will still be furnished to the allies. There is a great need for metals and castings. This business is expected to offset somewhat the drop in the shipment of ammunition.

If Men Bring Mud in House.

Every comfortable farm could afford to have a small room in the rear of the house where those who do the farm chores or who come from the fields with muddy boots or wet clothing may leave their working garments and wash before entering the dining room. Every one of the plans which won prizes in the recent contest conducted by the agricultural engineering department of Iowa State College to secure ideas for a model Iowa farm house had this feature in them and it was taken into consideration by the judges who made the awards.

This wash room could be provided with hooks upon which clothing may be hung and space provided where the men folks may leave their field shoes when they enter the house, or their house slippers when they go to the field. The best plans provide for an entrance directly from this room to the dining room or kitchen. The kitchen should be protected though from interference with the work of preparing meals. Properly arranged kitchens today are small and are not used as a living room.

It is important that some place other than the kitchen should be provided where the men coming from the barn or fields can clean up before entering the house proper. When placed adjacent to the kitchen, this wash room can be used as an improvised laundry for small work, thus saving many trips to the basement. It should be well ventilated and lighted so that wet clothing hung in it will have a chance to dry. In summertime wet clothing, if not dried, will blue-mold and give off odors.



THE BETTER THE WALLOW THE FATTER THE HOG

Build your wallow of concrete and *waterproof* it. Wallows built with

Medusa Waterproofed Portland Cement

won't soak up moisture, hence are more sanitary and easily cleaned.

Medusa Waterproofed Portland Cement contains just the right amount of Medusa Waterproofing ground up with the cement at our mill. If you had rather,

Medusa Waterproofing

may be bought separately in either paste or powder form. Two per cent. of Medusa Waterproofing thoroughly mixed with any cement makes the concrete weather-proof—prevents cracking and discoloration.

It is far cheaper, too, than to use a very large proportion of cement—and fully as satisfactory for many kinds of work. Does not impair the strength or setting qualities of the concrete.

No waiting. You can get the Medusa products in prompt shipments—either from your Medusa dealer or, if you can't find him, direct from our factory.

SANDUSKY PORTLAND CEMENT COMPANY

Write today for our free booklets, "How to Make Concrete Watertight" and "The Medusa White House."

If none of the above combinations suit you, you can make your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World, and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wisconsin.

The Wisconsin Farmer

THURSDAY, JULY 20, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

INCOME TAX DOUBLED.

FARMERS who have been obliged to pay an income tax the past two years—and judging from the fact that the annual revenue per farm in the grain belt is $4,584 in North Dakota, $3,814 in South Dakota, $3,498 in Iowa, $2,836 in Wisconsin and so on, with an average for the ten states of $3,040, thousands have done so—will be obliged to pay just double the amount next year, provided, of course, that their 1916 income is as large as their 1915. This is no discrimination against the farmer, but applies equally to the city man. Congress has been obliged to double the rate in order to make up the immense amount needed for the preparedness program. Heretofore, the man or woman, whose income has been under $20,000 a year, has paid 1 per cent of the amount in excess of $3,000, if single, or $4,000, if married. After this, the percentage to be paid will be two instead of one. By doubling the income tax in this manner, congress proposes to raise $100,000,000, to devote to the manufacture —I sincerely hope not to the use—of arms and ammunition.

The income tax was not placed upon the statute books of the nation until a majority of the states had declared in favor thereof, so we cannot argue that it is a ruling of the minority. When the law went into effect, I urged upon all my readers that they comply with its requirements strictly, for it is the law of the land, and all good farmers are punctilious law obeyers. I cannot but regret, however, that we should be obliged to wring such a heavy toll from our fertile fields for no better purpose than to enrich the manufacturer of arms and ammunition, and those who will profit by the present hysterical craze for larger armament. Many a wagonload of corn and oats and many a fat steer will be wasted to no better purpose than to gratify the wishes of the jingoes and add to the already plethoric fortunes of the war lords of our fair land.

Speaking of farm revenues, I wonder how many of my readers know that the annual income per farm here in the grain belt is more than double what it is in the other states? I made thorough investigation of this matter when the United States Department of Agriculture issued its final crop estimates for last year and found, on careful figuring, that the annual income per farm here in the grain belt is $3,040, while in the balance of the United States it was but $1,310. In 1915 the farmers of the grain belt made an average of almost $400 more than they did the year before. If we have another good crop season this year—and it looks as if we would—the farmer will be a still heavier income taxpayer.

FROM OX TEAM TO AUTO.

WITH almost a million automobiles dashing back and forth along the city streets and country roads of the grain belt, it is difficult to remember that there are men still among us who came here behind a yoke of oxen "when wilderness was king." Yet, such is the case, as is proved anew by this interesting clipping from a grain-belt newspaper:

Sixty years ago J. M. Kimball, of Manhattan, Kan., was one among the founders of that now thriving city. He is eighty years of age. He has prospered along with the country and retains his vigor and vitality as well as his interest in men and affairs.

Recently Mr. Kimball purchased an automobile which he very soon learned to drive. As a result of his purchase he attracts considerable attention among people who know him and have knowledge of the period of history through which he has passed.

When Mr. Kimball went west from Goffstown, N. H., sixty years ago the railroads ended at St. Louis. From that point he came up the Missouri river to Kansas City and from there he went on west with an ox team. Little did he dream that sixty years later he would be driving a gasoline propelled car over the paved streets of a modern city where he was then whanging oxen over the grass grown roads of a straggling frontier village.

I had the pleasure of meeting an old subscriber a year or two ago, who had taken this paper almost ever since it was established, and who remembers, as plainly as though it were yesterday, when the Indians were frequent visitors to his farm home, although he now rides to and from town in a six-cylinder automobile and has as many neighbors now in a square mile as there were in the whole county forty years ago. We are making history rapidly in the grain belt nowadays; nothing proves this better than the fact that there are men who can recall the ox yoke and the ox goad, and who now interest themselves in gears and clutches and other evidences of our mechanical and commercial progress.

It is interesting to stop and conjecture if the next sixty years will bring forth as many changes as the last sixty have brought, and will the automobile be supplanted by some new method of communication, just as it has supplanted the ox team and the prairie schooner, or have we reached the last stage in the transformation? Who among us is hardy enough to venture a prediction, in view of the many wonders of the present time?

It seems to me that the stories of such men as Mr. Kimball should be secured without delay and preserved carefully, for they are the record of the development of a wonderful empire, than which there is none richer or fairer under the sun. I am proud to be a part of a country which can develop so rapidly, and I am indeed glad that Mr. Kimball has been spared to enjoy his share of the prosperity and the progress which is the result of the splendid manner in which he and his fellow pioneers laid the foundations of this great nation of ours.

THE SOLDIER VOTE.

I WONDER how many of my readers recall the manner in which the soldier vote was collected and recorded in the civil war, and have stopped to think that if our soldier boys are sent down to Mexico, or even to do border duty, that history will repeat itself this year and 100,000 soldiers will demand the right to say whether the next president shall be Wilson or Hughes. I was quite interested, in my reading last night, to find this matter discussed in one of our national weeklies. It turned time back a half century for me to find these facts set forth:

Before the war between the states began provision had been made in some of the states for taking the votes of soldiers absent with the army. Other states adopted such provisions during the war. The army votes for president in 1864, which were counted in canvassing the returns for electors, were as follows: Maine, 4,174 for Lincoln and 741 for McClellan; New Hampshire, 2,066 for Lincoln and 690 for McClellan; Vermont, 243 for Lincoln and 49 for McClellan; Pennsylvania, 26,712 for Lincoln and 12,349 for McClellan; Maryland, 2,800 for Lincoln and 321 for McClellan; Kentucky, 1,194 for Lincoln and 2,823 for McClellan; Ohio, 41,146 for Lincoln and 9,757 for McClellan; Michigan, 9,402 for Lincoln and 2,959 for McClellan; Iowa, 15,178 for Lincoln and 1,364 for McClellan; Wisconsin, 11,372 for Lincoln and 2,458 for McClellan; California, 2,600 for Lincoln and 237 for McClellan. The total vote counted as a result of that compaign, including both the home and the army votes, was 4,166,537, and Mr. Lincoln's plurality was 494,567. The army votes of Vermont, Kansas and Minnesota, which arrived too late to be counted, and certain votes rejected for informality in Wisconsin, would have brought up the total to about 4,175,000, and Mr. Lincoln's majority to a number in excess of half a million.

Most of our states have "absent voters" laws, or otherwise provide for the vote of the soldier boys being taken and recorded. One thing is certain, the farm boy and the city boy, who rally to the flag and go forth in defense of their country or at the call of Uncle Sam, are entitled to vote, and every consideration should be paid to them when it comes to determining who shall sit in authority at Washington the next four years. I yield to no one in honoring our brave soldier boys, even while decrying the spirit which sends them to war and regretting that jingoism should be so rampant in our beloved country. But our soldier boys are the pick of the land—boys from the furrow and feed lot and boys from the office and factory—and we must not forget or ignore them if it turns out that they are still away from home when November election day comes.

FARM MOTHERS AND WAR.

WAR WITH Mexico seems now remote, yet our boys of the state guard are being sent down to the Rio Grande and many must fall, if not before the bullets of the Mexicans, then before the darts and arrows of disease and pestilence, for climatic and sanitary conditions are vastly different along the Rio Grande from what they are here in the grain belt. Many a boy, who threw down the plow lines and the pitchfork when the summons came to the colors, will come back wan and wasted, for seldom, if ever, has there been a war when the ravages of disease were not as heavy as the toll of the leaden bullets.

I have had many letters the past few days from farm mothers and farm fathers, whose hearts are heavy because their boys have been taken from them. It set me to thinking of the days when my own mother's eyes were filled with tears, back in the sixties, and of how I, too, following in my father's footsteps, left the old home rooftree and enlisted for Old Glory, with a boy's enthusiasm and patriotism, not thinking of the heartaches it must of necessity bring my already-suffering mother. When war's alarms sweep across the land, who suffers more than the mother who kisses her boy good-by and sends him away to possible death, holding back the tears until he is out of her sight, smiling bravely in order that he may not know the pain which tugs at her heartstrings? I may have printed this before, but I cannot refrain from passing on to you again the words which our own grain-belt philosopher, the dearly beloved "Bob" Burdette, wrote in his tribute to the mothers of our soldier boys, a tribute which brings the tears to my eyes every time I read it. Here it is:

When has woman ever shrunk from going to war? "She risked her life when the soldier was born." She wound her arms around him through all the years of his helplessness. Night after night, when fell disease fought for the little soldier's tender life, she robbed her aching eyes of sleep, a faithful sentinel over his cradle. She nourished him on her own life, a fountain drawn from her mother-breasts. She stood guard over him, keeping all the house quiet when he would sleep in the noisy daytime. She stood on the firing line, battling with the foes of uncleanness, contagion, sudden heat and biting cold, protecting her little soldier in the clean sweet fortress of his home. She taught him his first cooing words that some day he might have a mighty voice and brave words of defiance to shout against his enemy's foes. She taught him his first step—such a wavering, uncertain little step—that some day he could keep step to the drum beat and march with the men—a free swinging stride—as they followed the flag. She trained him up to be a manly man, to hate a lie and despise a mean action, to be noble and chivalrous. She builded a strong man out of her woman's soul.

And then one day, when the bugles shrilled and the drum beat, she kissed him and sent him forth at the wheels of the guns—her beautiful boy—to be food for the fire-breathing maw of black-lipped cannon! Her boy! Heart of her heart! Life of her life! Love of her soul!

The exultant news flashes over the wires, "Glorious victory," shout the papers in crimson headlines, "ten thousand killed!"

And in the long list there is only one name she can read. It stands out black as a pall upon the white paper—characters of night against the morning sunshine—the name she gave her first-born.

And that is the end of it all. All the years of tender nursing; of tireless care; of patient training; of loving teaching; of sweet companionship; and of all the little walks and talks; the tender confidences of mother and son; the budding days; the blossoming years—this is the harvest. This is war.

When was there a generation since boys were born that women did not go to war? Never a bayonet lunged into the breast of the soldier that had not already cooled its hot wrath in the heart of a mother. While the soldier has fought through one battle, the mother has wandered over a score of slaughter fields, looking for his mangled body. He sings and plays the rough games of out-of-door men, in camp for a month, and then goes out to fight one skirmish. But every day and night of the thirty the mother has waked through a hundred alarms that never were. She has watched on the lonely picket post. She has paced the sentry beat before his tent. She has prayed beside him while he slept. The throbs of her heart have been the beads of her rosary.

I have never seen a more powerful arraignment of war or a more splendid tribute to the motherhood which furnishes the soldiers, unless, perhaps, it is this little poem, entitled "Motherhood—1916," which I found in one of our magazines just last night:

The night comes down and the wind is chill,
(Are both of my boys asleep?)
Daylight tinges the distant hill,
(Why is it I cannot weep?)

A passing lad and a whistled tune,
(France is so far away!)
Roses bloom and the month is June,
(The heat is the worst, they say.)

The list was long in the morning's news,
(They are so young to die!)
Which strong heart will the bullet choose—
Where will his body lie?

Boys go clattering down the street,
(Which will come back to me?)
I hear the tramp of the soldiers' feet,
(Dear God! That such things be!)

What will they buy with the blood of men?
(Hearts break, but they do not die),
Victory, Honor—and War again!
(Dead faces turned to the sky).

How can anyone of us read this poem and these words of "Bob" Burdette and be in favor of any war which is not the last resort to maintain unsullied our national honor or preserve undying some great principle? Before the sacrifices of motherhood, the jingoes should bow and bare their heads in most miserable shame.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

Farmers' Bank Deposits Grow.

MR. C. P. HINN, president of the First National Bank of Fennimore, Grant county, Wisconsin, has been giving some serious thought recently to the relation of the farming interests to the banking business. Although Grant county is not so exclusively devoted to dairying as many others in Wisconsin, Mr. Hinn attributes the great growth of the banking business there, during the last quarter of a century, to dairying and place farming, as it should be placed, as the foundation of the banking interests of that county. Mr. Hinn recently, at a meeting of the Grant County Bankers' Association, summed up for those present the importance of both the farming and banking business, and it is so interesting in showing the increased prosperity of the farmer and his more modern ways of doing business that we are pleased to quote the following from his remarks:

Twenty-five years ago there were only a few banks in Grant county, with limited deposits and still more limited capital. Few farmers then had money on deposit in the banks. Few of them really had any ready money at all, and those who did have a little bought United States bonds or other securities they thought were absolutely safe investments, for the banks at that time did not enjoy the confidence placed in them today. Not a single farmer paid out money by the check method. Business men were the only ones to allow themselves this luxury. The banking business in Grant county played only an inferior part in its affairs twenty-five years ago. But what do we find today? Nearly all the financial business of Grant county, not only that of merchants and other business men, but also the farmers and the working man, is done through the banks. There is now a bank in every town in Grant county of any size, and the larger places each support two, three and as many as four banks. The deposits are something enormous and reach the almost unbelievable sum of about $9,000,000. This proves to the world what a strong and wealthy country we have—a leader in everything, and absolutely unsurpassed in its rich productiveness.

Where does this huge sum of money on deposit in the banks come from? The greater part of it comes from the farmers. And how does it come that they have money to put in the banks, and in such large amounts, when only twenty-five years ago they had to do their store trading on credit, run an account for the whole year and pay it in the fall when they sold their hogs or other stock—and, if they couldn't pay all would have to give their notes, before starting the next year's account? Well, for one thing, the big increase in the price of land made some of them rich, and the others have become well-to-do through the large returns of late years from stock raising, and their labors, and again more improved methods have helped very materially, but above all else, the development of the dairy industry is what I would ascribe Grant county's wonderful prosperity to.

No other line of business in Grant county has made such strides and such wonderful advancement in the past quarter century as has the banking business. You can all remember when farmers made their own butter and sold it for 5 to 10 cents a pound. It was all good in their eyes, even if wrapped in a turkey-red handkerchief, as some women used to bring it to our store. The low price they received hardly compensated them for their work, and they got no money either, they took it out in trade. Now the average farmer can pay his entire grocery bill for the year with one month's cream check.

The establishment of creameries and cheese factories in our county keeps him in ready money—all the year round. And he can put the proceeds of other sales in the bank, start a savings deposit account, and soon be independent. So, when it is simmered down, the phenomenal development of the banking industry in Grant county is due directly and primarily to the farmers, who now have the cash to support the banks, keep them going, and, as the farmers get most of their cash through their cows, so the flourishing condition of the banks of Grant county are in must be laid to the cow, and at our bankers' banquet everyone ought to drink milk to her honor as our great benefactor.

The history of Grant county in this respect, as outlined by Mr. Hinn, is the history of scores of other Wisconsin counties. It has been only a few short years since the farmer traded his produce for merchandise and visited his banker only to get a loan. It can equally be said that it has only been in recent years that the banker came to recognize the importance of the farmer in his business and that co-operation between banker and farmer is as essential as co-operation between banker and merchant. The new era is here—the era in which the banker seeks the aid and counsel of the farmer and how important this is from either the banker's or the farmer's standpoint is well indicated by the statistics cited by Mr. Hinn to the Grant county financiers.

Seeding Alfalfa in Wisconsin.

CONSIDERABLE seeding of alfalfa will be done during the coming three weeks in Wisconsin and it is important to bear in mind at this time that experiments have shown that seeding of this crop after August 15th is almost always likely to result in failure. Many farmers are increasing their alfalfa acreage, realizing how essential this roughage is to feed in conjunction with corn silage for large and economic milk and butter-fat production, while others are reseeding plats which winterkilled last spring. Reports indicate that many are undertaking alfalfa for the first time, in which case it is well to select a desirable plat, which lies well and is well drained, and then observe all the precautions such as liming of acid soils and inoculation that are essential to success.

There is no more certain method of securing a stand of alfalfa in Wisconsin than to seed during July and early August without a nurse crop. For the beginner, Mr. L. F. Graber, secretary of the state alfalfa order, says that seeding the alfalfa alone gives the best results, and experiments conducted by the order bear out this contention, as in 323 tests in 1913 there were twice as many failures when seeded with a nurse crop as seeded alone. This disposes of the fear of the beginner that failure may mark his efforts if he tries seeding alone at this particular season, and in this connection it is interesting to note experiments carried on last year by the state order to determine the best rate of seeding.

This test is running for two and three years, and the results, reported in the fall of 1915, on the seeding of ten and twenty pounds to the acre, as announced by Mr. Graber, are as follows:

Questions asked members who conducted the test	Replies	Started 1912 No.	%	Started 1913 No.	%	Average 1912-1913 No.	%
Did weeds and blue grass cause greater trouble with 10-lb. rate?	Yes	20	69	30	91	50	81
	No	9	31	3	9	12	19
Which alfalfa gave best quality of hay?	No diff.	5	19	4	13	9	16
	10 lbs.			2	6	2	3
	20 lbs.	22	81	25	81	47	81
Which gave the thickest and best stand?	No diff.	4	14	2	6	6	10
	10 lbs.						
	20 lbs.	25	86	32	94	57	90
Which gave the best yield?	No diff.	4	13	1	3	5	8
	10 lbs.						
	20 lbs.	26	87	32	97	57	92
Which is best rate of seeding on weed-free not acid, inoculated and carefully prepared soil?	No diff.	1	4	1	3	2	3
	10 lbs.	2	8	6	19	8	14
	15 lbs.	9	34	12	38	21	36
	20 lbs.	14	54	13	40	27	47
Which is the best rate of seeding where alfalfa is seeded for the first time on soil fairly well prepared but somewhat weedy?	10 lbs.			1	3	1	2
	15 lbs.	2	7	2	6	4	7
	20 lbs.	22	82	29	88	51	84
	25 lbs.	3	11	1	3	4	7
	30 lbs.						

The matter is best summed up by the showing that the best yields and quality of hay is secured by seeding twenty pounds to the acre and that where only ten pounds was used, blue grass and weeds gave considerable trouble. Naturally, the farmer would prefer the lighter rate of seeding if it would give him the best results, because it would lower the seed cost; but these experiments bear out the belief that twenty pounds is the better, especially where alfalfa is seeded the first time. Elsewhere in this issue Mr. Graber gives the results of experiments with different kinds of seed, and it will be worth the time of any farmer, interested in alfalfa, to read of these experiments.

Seeding with a nurse crop, Mr. Graber points out, always gives good results on fields where alfalfa has been grown successfully before, but where the land has been put in condition and the weeds eliminated during the early summer, seeding alone between now and August 15th is almost certain to result in success, provided, of course, that other precautions are observed, such as the need of overcoming the acidity in the soil, if any exists, inoculation, etc. In many sections where canning peas were grown this year and are harvested in June or early July, alfalfa is being sown, which Mr. Graber says is usually followed with success. Many farmers, who had winterkilled plats, turned them to early potatoes and seeding alfalfa after the potatoes are harvested, provided not later than August 15th, is also generally successful. So valuable is alfalfa, as a source of roughage and for soiling purposes, that some should be grown on nearly every farm, and the success farmers are having with it in Wisconsin accounts for the great amount of new seeding being done this season.

Wisconsin Boys' Corn Contests.

CULTIVATION, which is occupying the particular attention just now of the thousands of Wisconsin boys engaged in the various county and district corn contests, will soon be followed by the problem of selection for exhibitions. As interest in these contests was never greater than this year, the field-crops department of the college of agriculture has issued some timely tips for the boys, so that they may secure the best results from their contest acres. There is a contest in almost every county this year, and the entry of boys has been large despite the discouraging results last year. However, with indications for a ripe crop this year, the boys are going at the work with much enthusiasm and vigor and some surprising yields are anticipated. The following hints from the field-crops division will also be of considerable service to older corn growers, containing, as they do, some very practical advice:

Keep up the cultivation whatever comes. Never let the soil become caked and hardened after rains. Always have a loose blanket of pulverized soil between the hot summer air above and the moisture at the corn roots. It prevents evaporation, which turns corn yellow and saps its vitality.

Remember that corn more than a foot high should seldom be stirred around its roots deeper than two inches. After the corn gets well along and begins to tickle one's ears, hitch a horse to the single cultivator and go after the weeds again.

Hand pull all weeds growing close to the hills, especially after rainy weather. Weeds grow faster than corn and will rob the maise amazingly if not attended to at once.

When the ears get well formed, select the plants having the best developed grain. Do this before it is ripe. At cutting time, pick the best ears and put them in a good drying room.

Save more seed than you think necessary for your own needs. It gives a larger selection, and perhaps someone else will be looking for just the kind of corn you have grown—after you win that county or state prize, anyway.

In making selections for exhibition, always take uniform ears, true to the variety grown. Uniformity means ears that are as nearly alike as possible in size, shape and color.

Off-color ears are too common faults in corn shows. This may take the form of Silver King corn tinged with yellow here and there, and with pinkish cobs, or the Golden Glow samples may have white tipped kernels and white cobs. Watch for these errors and never place such corn in line for prizes.

Tiling Land Is Scientific Proposition.

WE HAVE the utmost respect for men who have mastered the practical details of land drainage. The old-time ditcher, in many cases, develops a sixth sense, as it were, when it comes to the matter of running a line of tile, and he will obtain a marvelous degree of accuracy without the use of scientific instruments or levels of any kind. On the other hand, in every community where the draining of land has become a large industry, there can be found individuals who follow the calling and who do their work unscientifically and, indeed, bunglingly. These individuals usually belittle the effort of those who pin their faith to transits and levels, and they give themselves over to the solution of drainage problems by guesswork, when, as a matter of fact, the problems are, in many cases, only solved by instruments of great accuracy. These men, in many cases, are actual pests to the community, and it would not be putting the matter too strong to say that they have cost farmers of the corn belt millions of dollars because of their bungling work.

In a bulletin published by the Wisconsin Station attention is called to the fact that tile may be laid, in some instances, without the use of the level where there is sufficient water and soil to indicate the amount of fall. Beginning at the outlet and starting the ditch at the desired depth at that point, the experienced man can run a line of tile accurately, the depth at any point being determined by the flow of the water. It would not be expected, however, that a "greenhorn" or inexperienced man can accomplish this feat. He will have too many depressions in his line, and this means that the tendency will be to partially fill up the tile with silt so that sooner or later the line will be stopped up. In every case where the fall is light, it will pay to have the line surveyed and staked. This applies to the main as well as to the laterals.

After it has been staked, it is a simple matter to run a grade line at a given height above the line of tile, thus affording an opportunity to make measurements every few feet and thereby keep the grade uniform. On the question of marking and determining the grade, the author of the Wisconsin bulletin, above referred to, says:

After the type of system desired has been decided upon, the laterals, sub-mains, and main should be staked out. One hundred feet is a convenient interval for guide stakes in the proposed line of tile. Then the final levels should be taken. Elevations should be taken at each guide stake. If a small drainage level is used, then it had better be set up midway between two stations so that the difference in elevation may be computed by a reading taken upon each at fifty feet. Where a larger level is used, the elevation of a number of stations may be ascertained from a single position of the level. It is almost impossible to make the ditch straight without the use of a string. The width of the ditch at the top will be determined by the cut, and strings should be stretched at each side of the ditch twelve or sixteen inches apart, as circumstances may require. The strings can be removed as soon as the sod is cut or marked with a spade. In tough sod, time is saved by cutting it with a spade or hay knife to the depth of four or six inches. When the laterals are curved, either to make a better juncture with the main or for other reasons, the strings must be laid on the ground in the form of a curve without being pulled taut. If this method is followed, a much more uniform curve can be laid out than if it is marked with a spade at random.

The next step is the determination of the grade line, or ditch bottom, upon which the tile is to be laid. If it is desired to lay the tile three feet deep at the outlet and only two and a half feet at the head of the lateral, 600 feet away, and the surface of the ground at the head is one foot higher than that at the outlet, a total fall of one and a half feet is available. Dividing this by six, the number of stations, gives the fall per one hundred feet, or three inches. A greater fall could be obtained by laying the tile deeper at the outlet and shallower at the head.

With the grade line determined and the ditch

marked out, "grade stakes" are driven in at each station, whose tops are to be a known distance, as five feet above the grade line. If a string is stretched tightly from top to top, every part of which, except for a slight sag, will be five feet above grade. The ditch should be dug until a five foot stake can be just held vertically between the grade string and the ditch bottom. To eliminate the error which is almost inevitable, due to sagging, the sighting method may be used. In case, the grade stake consists of a vertical stake, driven at the side of the ditch, with an arm at right angles, which extends over the ditch. The stake should be driven down until the target rod properly set and held upon the horizontal arm is exactly hit by the horizontal crosshair in the level. The ditch may be completed without disturbing the stakes. Even though a level be used, a little water facilitates the finishing of the ditch.

Care must be taken not to dig the ditch too deep in any place. If the soil is clay, the depressions can be filled and firmly tamped so that tile may rest upon a firm foundation. With a peat soil, this is impossible, for the peat put back to fill the depressions cannot be tamped to its former firmness. It is always best to leave the ditch a little too shallow, rather than too deep, as it is easier to remove some earth in the ditch bottom at the time of laying the tile than to fill in.

It is not expected that the average man is going to survey and lay out his own drains, as this is actually the work of a specialist. It adds something to the cost of the system of drainage to be sure, but the percentage of cost is so small that it will always pay to assume this extra expense in those cases where the services of an experienced tiling man cannot be obtained, and also in those instances where the fall is very light. On lands that are nearly level, running an inch to two inches of fall to 100 hundred feet no man ought to be trusted to do the tiling without his having a competent man lay out the entire system.

Sheep Can Utilize Practically Any Kind of Feed.

CONSIDERABLE experimental work has been done at the Illinois station for the purpose of demonstrating the practicability or impracticability of converting farm foodstuffs into mutton and wool. So far the evidence tends to show strongly in favor of the practicability of increasing the number of sheep raised in the corn belt. The work at this station is in charge of Prof. W. C. Coffey, and recently Professor Coffey prepared the following interview for the press:

In the corn belt we must realize that conditions have changed and that raising sheep successfully by the methods of a decade ago is impossible. Expansive pastures, once common, are disappearing and sheep need range. Flock owners do not know how to meet new conditions, for when they ripped up their pastures sheep went to the stockyards. Others are keeping flocks almost the year around on five to ten-acre blue grass patches along with cattle, hogs and horses. On these overpastured, worm-infested spots, successful sheep husbandry cannot be carried on. In most cases the flock would fare better if no such pasture existed on the farm. The problem we have to wrestle with in the farming area is how to provide feed and proper range for the flock, with extensive pastoral areas a thing of the past.

Few animals excel sheep in handling various kinds of feed; in other words, sheep can utilize practically any feed the farm produces. It is amazing what methods of fattening, and I use the term advisedly, may be prosecuted with success. For example, the ration may be very carbonaceous in nature and still yield fair results. We have fattened lambs on corn silage with a small quantity of clover hay and secured excellent gains. Corn, silage and oats straw fed to yearling wethers was little behind corn and alfalfa in putting on weight. On the other hand, I know of a concern in Nebraska that starts western lambs on prairie hay and linseed oil meal in self-feeder, later substituting half of the oil meal with corn. Satisfactory gains are secured by this method and the feeders have the utmost confidence in a ration decidedly overbalanced with protein. Any of the grasses or legumes are acceptable forages to sheep. The public is tired of hearing of their fondness for weeds, but several years ago the Minnesota experiment station made a test in which sheep ate with relish 576 out of 600 varieties of weeds. On western ranges most weeds are considered as valuable as grasses for sheep feed. The lesson of all this is that sheep can be utilized to harvest almost any crop and nearly every acre on the farm ought to be gleaned over some time during the year by them.

Such gleaning cannot be done, however, without sheep tight fences, and a farmer with a determination to raise wool and mutton should consider this a preliminary necessity. It is true that this involves expense, but so does any other scheme of stock farming. A successful sheep man once said: "My neighbors say they cannot afford to fence their sheep; I cannot afford not to fence them." Sheep growing cannot be made successful, however, merely by fencing the farm and giving the flock the waste and residue from cash crops. Such a system would be preordained to failure. Some crops, or part of them, must be designed for the flock. If the farm is without permanent pasture, there should be a field or fields in rotation growing legumes on which the sheep may graze. If I were located in Indiana, Iowa or Illinois, I would prefer a field of clover and timothy in rotation for my flock than an equal area of blue grass. Clover alone is good forage and sweet clover is receiving attention as a grazing plant for sheep, promising to be an excellent forage. Alfalfa causes bloat, otherwise it is an excellent field feed. Rape has an established reputation as a fattening forage with considerable carrying power on fertile areas. Soy beans and cowpeas are also worth reckoning with. Rye is valuable early in the spring before other green feeds are ready for pasturing.

Such fencing as is required to restrain sheep will answer the purpose of restraining hogs in an ideal way. More and more we are coming to believe that cheap pork making necessitates the hogs having access to the entire farm, and, even to a greater extent, this applies to sheep raising. The ability of sheep to consume an almost endless variety of roughage gives them a place in the economy of production that is not equaled by any other farm animal. The genuine Simon-pure sheep breeder does not relish the idea that sheep should be kept as scavengers. Nevertheless, the fact that sheep have been known to consume between 500 and 600 different weeds indicates that advantage should be taken of this normal or abnormal appetite so that farms may be freed from weeds and, in addition, the income from live stock augmented through the sale of wool and mutton.

Wisconsin Beautiful.

SOME months ago, or some weeks ago, we were privileged to hear a paper read before the Wisconsin State Horticultural Society by Mr. William Toole, of Sauk county, on "Wisconsin Beautiful." Mr. Toole took occasion to point out a few of the beauty spots in Wisconsin, and traveling about the state the last month we have been forcibly reminded of his remarks. We quote from Mr. Toole's address, in which he calls attention to some of the scenic portions of our state:

Nature has blessed Wisconsin with not only many beauty spots, but also large expanses of picturesque scenery. In southeastern Wisconsin, the people appreciate their lake surroundings, and have improved their opportunities for enjoying them. About Lake Geneva one sees fine examples of what the wealthy can do with natural opportunities, and we may take from them some lessons of landscape art and the value of shrubbery in beautifying home surroundings. Just across the state to the west in Crawford and Richland counties, instead of the rolling prairies we see a variety of rugged hills and narrow valleys with much of nature still in its primitive grandeur. Now that people have found their opportunities for combined fruit growing and dairying, we hope such touches will be given to the landscape here and there as may be had by leaving a natural grove, planting evergreens and birches on prominent points, and other little helps to nature which individuals can often give. Between these extremes we have the rolling country about Madison—beautiful lakes with many a vista of lovely scenes, when looking across the country which is to be seen between the highest points. Along our western borders in the St. Croix region, we see another type of scenery.

For beautiful drives and picturesque scenery, we think Sauk county compares favorably with the best. With our little touch of combined lake and mountain-like scenery, rocky river canons, ferny dells, picturesque water falls, long distance views of river valley, native evergreens, trees and shrubs, distant and near-by hills, prairie and woodland, we have a country to charm the artist and the lover of nature. From where we live I can see in the distance bare rocks where not long ago and for many years, grew a beautiful clump of white pines which was a picturesque feature of the landscape. A change of ownership of land led to utilizing the beautiful trees for part of a barn frame. The trees were not ours, yet we feel their loss. In another direction, miles away, we can see on a bluff a farm home where about fifty years ago were planted some young white pines from the woods near by. Now they are large trees and help to make the landscape effect more pleasing. Would that someone with wealth might feel the impulse of desire to save for all time some of the little beauty spots where grow the native ferns and other plants which are becoming rare.

When our cut-over lands have become covered with farm homes, we can imagine the pictures possible in the future. There will be varied degrees of taste in home surroundings. Some neighborhoods will care nothing for comfort or beauty, and will be content merely to exist. Others will make homes, which will be pleasing pictures to travelers. One sees a great future for the city of Superior and the country tributary to it.

So too we see great possibilities for the country extending eastward from Superior to Ashland and north over the Bayfield peninsula. Of course, there will be a long time ahead before human beings will have availed themselves of all the chances which nature offers them to help make Wisconsin more beautiful. Viewing the country near Bayfield we marvel at the mixture of natural beauty, with subjugation of the wilderness in the rough, the sudden transition going on from the old-time lumberjack conditions to the present-day influence of landscape art. Now we flit to Door county, and here again the scenery is different and we enjoy the blending of water views, and wooded hills, adorned with evergreens and a great variety of other native sylva. Again we shift the scene and take time to admire the surroundings of Milwaukee and the lakes near Waukesha and Oconomowoc.

Mr. Toole has done a great deal toward educating the farmers of his county and state along the line of beautifying farm properties. If every neighborhood in Wisconsin had a man with such tastes as Mr. Toole has and with such influence, we would see a wonderful change in the appearance of Wisconsin farms.

Favorable Season in Wisconsin.

NATURE always seems to do her part, and this has been generally true in Wisconsin this summer. When it has been too wet for the corn or the tobacco, it has been splendid for pastures, the alfalfa and the clover, and when the warm weather came and started the corn to grow, it helped the harvesting. Wisconsin, we believe, with its great diversified farming interests and its enjoyable climate, is unbeatable, and we must not lose sight of the great part nature plays in the farming life of this state.

This has been a remarkably favorable milk-producing season in Wisconsin, and when the cows are giving a heavy flow and the dairy-products prices are staying up, it means a great deal to a state which is producing a sixth of the butter and more than half of the nation's cheese. Dairymen tell us that they have never known a season when the milk flow was heavier than during May and June, although the hot weather of early July intended to deplete pastures to a small extent. But this was welcome as it started the corn to grow; it has assured in most parts of the state a ripe corn crop this year, as our crop reports in another column of this issue indicate, the small grains are all doing nicely, taking the state as a whole, and all because nature is doing her share in providing the right kind of weather at the right time. The heavy milk flow has brought about a condition that is unusual, but, as our readers know, the Milwaukee shippers have solved this by their new contract with the Milwaukee dealers, by which they take all the milk produced by the shippers and the matter of disposing of the surplus, is up to the dealers. Cheese prices are higher than at this season last year, with all the factories working to capacity and the creameries and condenseries are breaking old records for the amount of milk handled.

On every hand, as the writer travels through the state, new dairy barns are to be seen in the course of erection; new silos and additional silos are being built to provide the rich, winter feed so essential to economical milk production; many new farm homes are going up and everywhere there is the evidence of the prosperity indicated by the fine crops and fields. When we sum it all up—when we think of Wisconsin and its fine farms and its fine herds and flocks—is it any wonder that Wisconsin is buying automobiles faster than ever before, and that the 100,000 mark will be passed this year? Prosperity and optimism prevail everywhere.

What Is a Good Bull Worth?

DID YOU ever ask yourself that question? Those who have given it the most attention find it one of the most difficult questions to answer. The average man is apt to compare the price asked for a good bull with the cost of a scrub or a grade that can be bought at a trifle above beef value, notwithstanding the fact that from a money-making standpoint such a bull is usually by far the most expensive for anyone to buy.

Too much cannot be said on this bull question, because its importance is very imperfectly understood. Let us for a moment look at some bull experience by the Ohio Experiment Station. The value of a dairy-bred bull is determined by the increase in production of milk and butter fat by his daughters as compared with the yield of their dams. Some years ago the Ohio station purchased a bull from one of the best dairy herds in its own state, but the ancestors of that bull had no official milk and butter-fat records; hence, the general appearance of the bull himself was the only thing the station authorities had to go by in making their selection. The cows this bull were bred to have an average production record of 5,275 pounds of milk and 287 pounds of fat. The daughters of these cows by the bull mentioned now have an average record of 4,588 pounds of milk and 248 pounds of fat per head per year. In other words, the daughters are inferior to their dams to the extent of 687 pounds of milk and thirty-nine pounds of fat.

This first bull was finally disposed of and a second purchased. The latter has given a better account of himself. His heifers have, on the average, produced 752 pounds of milk and thirty-two pounds of fat more than the daughters of the first bull, still most of the daughters of the second bull have had only one calf, indicating that they will develop into reasonably good cows as they reach maturity. The net result of the use of these two bulls for ten years is that the herd of cows, including the young ones that have been added, is still on the same production plane it was when the first bull was purchased. In other words, there has been no improvement in that ten-year period. What were those bulls worth? The first diminished the net income of the heifers, figuring milk at $1.50 per cwt., to the extent of $10.30 per year. He was, therefore, very expensive even as a gift.

Now, let us contrast with this experience the work of another bull used in another herd. The average production of the cows in this herd was 7,392 pounds of milk and 273 pounds of fat per year, while the daughters from these cows by this bull averaged 11,599 pounds of milk and 384 pounds of fat. In other words, they showed an increase in production of 4,207 pounds of milk and 153 pounds of fat. Again, what is a bull worth?

This last-mentioned bull came from high-producing ancestors, and, of course, cost considerably more than either of the other two, but had two such bulls been used in the first herd, instead of making no progress in ten years, production would have been doubled. The income from the daughters of the bull in the second herd, figuring milk at $1.50 per cwt., was $63.10 more per year than from their dams. Of course, the feed cost would also be greater, but it is evident that the net profit, due to improved blood, was very much enhanced in this case.

The point is that one cannot be too careful in selecting bulls for one's herd. A person is justified in paying almost any reasonable price for a sire that comes from high-producing ancestors. Of course, not all bulls prove to be valuable breeders, even though bred in the purple, but the chances of getting a good sire is multiplied many times when one with good breeding back of him is selected.

While these illustrations are taken from dairy cattle, they apply with equal force to beef cattle, and illustrate very forcibly the difference in a good and a poor sire, and that it is poor economy to buy a bull just because he is cheap. It is difficult to express the value of a sire in dollars and cents, but a first-class bull, barring accident, is invariably the cheapest in the end.

SHEEP BOUGHT HIS FARM.

Polk County, Wisconsin, Farmer Who Started With an Old White-Faced Ewe Has Earned For Himself a Fine 320-Acre Farm Through Intelligent Breeding and the Use of Pure-Bred Rams.

Mr. Clark's foundation ewe, a white face with no breeding. She sheared only three pounds of wool a year.

MUCH has been said in favor of the pure-bred ram, but there remains no greater testimonial to his value in building up the flock than the experience of a Polk county, Wisconsin, farmer, J. E. Clark, of Dresser Junction. Starting with an old white-faced ewe without any breeding back of her and three grades given him by his brother, Mr. Clark in twenty-four years has earned for himself a well-equipped farm of 360 acres, and has 250 head of sheep in addition to rearing a fine family of eight children. To use his own expression, "Sheep have been the backbone of it all."

The old saying that the ram is half the flock has more than proven true in Mr. Clark's case. In fact, his success has been due entirely to the use of pure-bred rams, without which he would doubtless have failed in this branch of live stock farming, as no inferior ram ever helped in the improvement and upbuilding of a flock. A good ram is not only necessary to the farmer who wishes to produce good mutton but he is also necessary to the farmer who wishes wool production, as Mr. Clark has found in his experience that it costs just as much to keep a sheep that will shear three pounds of fleece annually as it does to keep one that will shear twelve pounds.

Sheep raising is still in its infancy in Wisconsin, but the success of Mr. Clark indicates its possibilities and should prove an encouragement to Wisconsin farmers and especially settlers who are so situated as to give a flock plenty of pasturage and shelter. His flock, it must always be borne in mind, is the result of breeding up from the original four ewes with which he started twenty-four years ago and what improvement has been made in his flock in that time has been transmitted by pure-bred sires. It is true that he took up sheep raising as a mainstay and not a side line as many farmers do today, but what is true in flock improvement in one case is equally true in the other case.

Mr. Clark started to make his farm in Polk county in 1891 when that section of Upper Wisconsin was little known and when lumbering was in its prime. He bought eighty acres, all in timber. The land was fertile and it was only necessary to clear it, but in those days modern stump pullers and present-day methods of cleaning up the land were not known. So it was slow, tedious work and Mr. Clark soon realized that sheep would prove an aid to him in brushing down the land covered with small growth while he carved out his farm in the timber. That was the thought that drew him into the business which he now admits was the backbone of his success and his experience will be interesting to thousands of Upper Wisconsin farmers who today are facing the same situation in neighboring counties.

The first cross ewe by a pure-bred sire. At one year she sheared twelve pounds of wool.

THIS EWE, FOUR YEARS OLD, AND HER LAMB REPRESENT THE FOURTH GENERATION. SHE YIELDS TWELVE POUNDS OF WOOL ANNUALLY.

One white-faced ewe of no breeding whatsoever and a yoke of oxen made up the live stock inventory at the beginning. He realized that he could not long continue in the sheep business with ewes which yielded only three pounds of wool, as this original white face sheared. He also realized that the use of a scrub ram like the ewes he owned would degenerate his flock as a scrub will degenerate any flock. So he immediately began using a pure-bred ram which has more than paid him for the few dollars originally spent, as the following season he began having a better crop of lambs and this improvement in the flock has continued ever since.

THE FLOCK WHICH MR. CLARK BUILT UP FROM A START WITH FOUR INFERIOR EWES AND BY THE USE OF A PURE-BRED RAM.

The illustrations on this page illustrate very forcibly the improvement made in the Clark flock. They show the process of building up, stage by stage, starting with the original white-faced ewe which when she was first served by a pure-bred sire sheared less than three pounds of wool a year and cost as much to keep as a sheep that would shear four times that much wool. The improvement was noticeable in the first cross, as the first ewe by this service sheared at one year old twelve and one-half pounds of wool and was fifty pounds heavier than the mother. The second and third cross showed improvement as well as the fourth cross. The fourth generation, represented in the illustrations, shows a ewe with her lamb. This ewe, an offspring of the original white faced, was four years old when this picture was taken and not long continue in the sheep business with ewes which yielded only three pounds of wool, as this original white face sheared. He also realized that the use of a scrub ram like the ewes he owned would degenerate his flock as a scrub will degenerate any flock. So he immediately began using a pure-bred ram which has more than paid him for the few dollars originally spent, as the following season he began having a better crop of lambs and this improvement in the flock has continued ever since.

MR. CLARK'S FAMILY OF CHILDREN.

The illustrations on this page illustrate very forcibly the improvement made in the Clark flock. They show the process of building up, stage by stage, starting with the original white-faced ewe which when she was first served by a pure-bred sire sheared less than three pounds of wool a year and cost as much to keep as a sheep that would shear four times that much wool. The improvement was noticeable in the first cross, as the first ewe by this service sheared at one year old twelve and one-half pounds of wool and was fifty pounds heavier than the mother. The second and third cross showed improvement as well as the fourth cross. The fourth generation, represented in the illustrations, shows a ewe with her lamb. This ewe, an offspring of the original white faced, was four years old when this picture was taken and raises two lambs a year and shears on an average about twelve pounds of wool. Through all the years since Mr. Clark entered sheep raising this building up has been going on until the present flock consists of about 250 animals and on the small start with four ewes of inferior breeding.

The yoke of oxen with which Mr. Clark started have given way to horses and in their place he has eight well-bred animals. His original eighty acres has grown to be 360 acres and the twenty-four years that he has been enjoying this constructive farming he has been surrounded with a family of growing children, as indicated in their group photograph on this page. So Mr. Clark has reason to look back over his residence in Polk county with pride and contend that sheep are responsible for what he has accumulated in a financial way and that the pure-bred ram is particularly to blame for his success.

THIS EWE AND HER LAMB ARE THE THIRD CROSS FROM THE ORIGINAL WHITE FACE. THE RESULTS OF GOOD BREEDING.

Mr. Clark's experience bears out the advice given by experienced flock owners that it is possible to start with a small flock and make a success of it. The settler, especially, with only a few cleared acres, should begin with a small flock, for it is not wise to buy in large numbers and then find it necessary to dispose of some of them. It is far better to start with a small flock and then let the flock grow in size as the settler's knowledge of the sheep grows. This was Mr. Clark's plan when he settled his eighty and by consistent breeding with good sires he won out. As sheep multiply rapidly, a large flock can be secured from a small beginning in a comparatively short time.

That a good start can be made from inexpensive females is also borne out by Mr. Clark's experience. The improvement in the offspring can be secured just as Mr. Clark secured it—by the use of pure-bred sires. In the fall young breeding ewes of the Merino type can be bought from western ranches for from $5 to $8 a head. These will afford the settler of today a good start. As a rule, western ewes are good mothers and producers and by breeding to pure-bred rams of some good mutton type a good-sized flock is the result in a few years. One of Mr. Clark's cautions to the settler is to start with a small flock, just as he did, and not to endeavor to get into sheep raising on too large a scale at the beginning. Too often the mistake is made, especially by settlers, in getting more sheep than they have pasturage or shelter for and the result naturally is some losses.

Weather Favorable For Harvest.

Good Hay Crops Were Put Up in Fine Shape---Small Grains Are Ripening Well---Corn Continues to Improve.

WISCONSIN.

Barron County.—All small grain looks well. Barley is heading out with good long heads. The hay crop, especially the new seeding, is better than for several years. Since the beginning of warm weather, corn has done nicely. Potatoes are looking fine; peas for canning are good and the factory has started canning. Small fruits are good.—Wm. Bartlett.

Chippewa County.—Haying is in full swing and the average yield is good. Barley is headed out and looks well, except on low spots and sandy places. Oats are fair, but poorer than expected. They are heading out now. If this weather continues without getting too hot, we will have some good oats this year. Corn is doing very well and will make enough fodder to fill silos and, perhaps, some mature corn also. Potatoes are good, but the bugs are at work. Pastures are showing the effects of a dry spell, but cattle are still doing well. Hogs are healthy and growing. Cattle around here have been tested for tuberculosis and herds are free from this plague. Small fruits are fair.—Jas. A. Smith.

Crawford County.—Weather has been very warm for the last two weeks, with very little rain. Moisture is needed badly at present. Corn is doing very well. Small grain, especially oats, need rain or they will ripen too fast and the grain will be light. Winter wheat and rye are good crops and will be harvested this week. Barley is also good. Hay and pastures are fine. Early potatoes are an edible size and the crop is fair. Garden truck looks well, but shows need of rain. Fruit crops promise fair yields.—George Ashbacher.

Dodge County.—Extreme heat of the last week has burned the barley some. Late oats look rather slim. Corn and potatoes are fairly good, but in general crops are suffering from lack of rain.—E. R. F.

Dunn County.—All crops are excellent, except corn, but the weather since July 1st has been ideal for corn—warm nights and days make corn prospects good.—E. A. Finley.

Eau Claire County.—Early oats are heading out, but the crop will not be good because it is so uneven. Barley, also, is uneven, but is heading and filling out well. Corn is growing rapidly and indicates a fair crop. We are having good haying weather and good crops of clover and timothy are being cut. Pastures are short. Rye is well filled and starting to ripen. Both early and late potatoes are good, but bugs are troublesome. Live stock look well.—C. A. Koll.

Florence County.—All hay and grain crops are in good condition. Pastures look well. Potatoes are good. Fruit crops, especially apples, are light.—Phill Kelmes.

Forest County.—Hay is above the average and will make a fine crop. Oats, barley and wheat are normal. Corn is only fair, with a condition of about 75 per cent normal at this time. Potatoes are good. Too much hot weather will cause a deterioration in some of the crops.—H. A. Kamm.

Grant County.—Crops look fine with the exception o corn, and it is improving rapidly since the warm weather began. However, it needs a lot of good weather yet. Hay is a tremendous crop and pastures are excellent. Small grain looks fine and will soon be ready for harvest. Early potatoes will make a very good crop.—Al Vesperman.

Green Lake County.—Small grains are light on hillsides where leaching, due to heavy rains, was great. Barley is better than oats. Corn has done very well since the warm weather began. In general tame hay is light, because there is little clover. Pastures are suffering from hot weather.—G. B. W.

Iron County.—Weather is quite warm. Potatoes, oats and meadows are in fine condition. Haying has just started. Pastures are good because of plenty of rain in June.—J. A. Becker.

Juneau County.—Recent hot weather has pushed corn wonderfully, but it is not up to average yet. Haying is progressing and the yield and quality are good. Small grain crops are uneven—they are poor on low, undrained land. Considerable buckwheat was sown this season.—J. H. McNown.

Kewaunee County.—Oats, barley and peas are splendid. Rye is filling out nicely. Corn has picked up wonderfully the last week. Meadows appear good, but the red clover is missing in most of the fields. Pastures are getting short. Potatoes and garden truck are good. Crops are later than usual, but doing well.—Fred Lutz.

Marinette County.—Warm weather for the last two weeks has improved the outlook for small grains and corn wonderfully. Too much rain during May and June damaged the corn and potato crops by rotting the seed, thus causing replanting. Good weather is pushing these crops at present. Haying has begun and the crop runs from fair to good. New meadows are excellent. Pastures are very good and the dairy business is developing rapidly.—H. B. Pederson.

Ozaukee County.—Dry weather is damaging barley on high and sandy lands and will cause the oats to be short in straw. Much smut is in the grains, especially barley. Corn and potatoes are growing slowly. Hay crop will be less than last year on account of wet weather in early June.—Nic J. Mueller.

Oneida County.—No rain has fallen for about eight days and the weather is very hot. Corn is growing about an inch a day. Haying has begun and the cutting is exceptionally heavy. Potatoes are very good and the acreage planted mostly to the Triumph variety, is larger than ever before. Oats do not look as well as last year due probably to hot weather and lack of moisture.—Clyde Burkhart.

Polk County.—Weather is hot and dry. Corn is growing rapidly and stands nearly hip high. A heavy crop of clover is being cut. Timothy also is heavy and will be ready to cut soon. Wheat, barley and oats are headed and look well. The new seedings of clovers and grasses are good. Prospects for a crop of ripe corn are very favorable at this time. Potatoes promise a big crop. Hot, dry weather, if it continues, will reduce the berry crop. Milk cows and other live stock are doing well. Beef is worth 6 cents on the local market. Butter fat brings 28 to 30 cents at the creamery and the run is heavy.—Wallace Fountain.

Price County.—Hay making has started; big crops are in sight; and weather is fine for curing. Corn is in good condition. Small grains are booming because of the warm weather. Pasture is pleniful and doing fine. All garden truck is doing well, especially early potatoes. Prospects for good crops of apples and small fruits are favorable. Berries will soon be ready to pick.—J. W. F.

Richland County.—Corn is improving, but needs rain. It is knee high on the average. Oats are nearly all headed out and doing fine. Some farmers are making hay; the new seeding is good, but old meadows are light. Pastures need rain. Bugs are injuring the early potatoes some. Gardens are looking well, but lack moisture.—E. C. Stewart.

La Crosse County.—Two weeks of warm, dry weather have helped along the corn crop. Some rye fields are ready to harvest and a good crop is looked for. Early potatoes are yielding well and selling for $1.20 to $1.40 a bushel. Late potatoes are slightly bothered with bugs. Pastures on low lands are still flooded, while on high ground they need rain. Raspberries are yielding better than was expected.—S. J. D.

Sauk County.—Ideal weather conditions prevail and the hay crop is being rapidly harvested. The yield will average about two-thirds that of the 1915 crop. Hot weather has benefited corn immensely. Many fields show places injured by grub worms. Oats, barley, wheat and rye continue to show up well. Pastures are gradually drying up. Strawberries were light; there were no cherries; apple trees are not heavily loaded.—Richard F. Klemm.

Shawano County.—We have had fine growing weather. Corn is picking up fine. Potatoes look well. Insects are not as bad as usual. The hay crop is immense; much of it was put up without a drop of rain on it. Rye is good. Small spring grains are doing well. Pastures are fine. First crop of alfalfa is cut and in barns; the stand is good and the second crop is doing well. The only backward crop is corn and, if present weather continues, there may still be a fair crop of corn—at least plenty for silage.—M. J. Wallrich.

Sheboygan County.—Recent warm weather has been boosting the corn, which is not very good and should have favorable conditions to make silage. New seedings of clover have yielded heavy crops of hay. Barley looks very well and promises a heavy yield. Early planted oats also look well. Potatoes are only fair; in wet soil, some replanting was necessary. Recent warm, dry weather has cut down the strawberry crop about one-half. Rain is needed for pastures.—W. J. Hoppert.

Taylor County.—We have had fine growing weather for three weeks and all crops look fine, except barley. Hay harvest is at hand and the prospects are for a fine crop. Oats and potatoes are good. Corn is small, but doing well. Garden stuff is late and not very good.—John E. Miller.

Walworth County.—Pastures and corn are fair. Potatoes are poor. Grain looks well. An abundance of fine hay is being put up in excellent condition.—Ora P. Taylor.

Winnebago County.—Hay has improved wonderfully since the weather settled and the harvest is well under way. Corn is starting up well; it was nearly all planted in June and is small at present. Potatoes were planted late and the main part of the crop will be poor, although there are some good patches. Apples are very promising and crop conditions, in general, have improved since the warm weather began.—Seymour L. Smith.

MINNESOTA.

Goodhue County.—All grains are looking fair, but are about three weeks late because of the wet spring. Corn is so far behind that there is little chance for it to mature. Potatoes are late, but still have plenty of time to grow. Hay bids fair to be a bumper crop. Clover is rank in growth. Pastures have been very good, except in the river bottoms where the land was covered with water. Gardens are fair, but cucumbers, melons, etc., are too late to mature. Apples and raspberries will make medium sized crops.—Otto W. Kolshorn.

Wisconsin Crop Condition.

Wisconsin's corn crop will yield 10,000,000 more bushels this year than in 1915, according to the July 1st estimate of the United States Department of Agriculture. The predicted corn production for the state is 51,000,000 bushels. The forecast for the country as a whole is 2,870,000,000 bushels against last year's yield of 3,054,535,000 bushels.

The state's wheat crop will be less this year than in 1915 the estimate for winter wheat being 1,470,000 bushels as compared with a total production of 2,300,000 a year ago. Spring wheat is slated for 2,040,000 bushels this year against 2,362,000 produced in 1915.

Indications point to a much smaller Wisconsin oat crop this season, the forecast being for 78,500,000 bushels, while last year produced 99,750,000 bushels. Barley production in the state will be less this year by nearly 3,000,000 bushels, the estimate being 20,500,000 bushels. Rye production is placed at 6,000,000 for this year as compared with 7,700,000 a year ago.

Indications are that the tobacco crop will be considerably better this year with 50,100,000 pounds predicted for Wisconsin, compared with a production of 36,900,000 pounds in 1915.

Hay condition in the state is placed at 90, three points ahead of the eight-year average. Pasture condition is 98, while the ten-year average is 89.

Wisconsin's apple crop will approximate 1,130,000 barrels as compared with 1,473,000 a year ago. For the country as a whole there will not be a perceptible apple shortage, the production being estimated at 72,500,000 barrels, as against 76,670,000 in 1915.

The price conditions of staple articles for state and nation is given as follows, the first figure being the average on July 1st and the second the average on July 1st a year ago:

State—Wheat, 100 and 115 cents per bushel. Corn, 77 and 36. Hay, $12.90 and $11.20 per ton. Eggs, 20 and 17 cents per dozen.

United States—Wheat, 92.9 and 102.8 cents per bushel. Corn, 75.4 and 77.7 cents. Oats, 40.5 and 46.7 cents. Potatoes, 102 and 52.1 cents. Hay $12.10 and $11.70 per ton. Cotton, 12.5 and 86 cents per pound. Eggs, 19.7 and 16.8 cents per dozen.

A Fly Decalogue.

Three years ago the health department of Asheville, N. C., issued what it termed "The Good Citizen's Decalogue," dealing with the fly as sanitary problems as follows:

1. Remember thy garbage can to keep it covered, lest thy garbage become a stench in the nostrils of the people and breed flies.
2. Thou shalt cut the weeds in thy vacant lot, lest it become a hiding place for old tin cans, which catch water and breed mosquitoes; papers and divers sort of trash.
3. Thou shalt bear witness against thy neighbor's rubbish heap, likewise his dirty back yard.
4. Thou shalt clean out the habitation of thy horse and thy cow frequently, lest the stable fly flourisheth and spread infantile paralysis, and the house fly breed by the thousands and millions, and annoy thee and thy beast and produce much sickness in thy family.
5. Thou shalt prevent the breeding of the fly in the springtime, that thy children unto the third and fourth generation need not swat it later.
6. Remember thy back yard and alley to keep them clean. Six days shalt thou labor to keep thy premises clean, and if yet the task is not accomplished thou couldst do worse than continue on the seventh.
7. Thou shalt covet all the air and sunshine thou canst obtain.
8. Look not upon the milk when it cometh from the unclean dairy; for the doctor will not hold thee guiltless if thy infant sickeneth therefrom and die.
9. Remember thy cleaning up day and keep it wholly.
10. If thou dost hearken unto these sayings, to do them, thou shalt live long in the land.

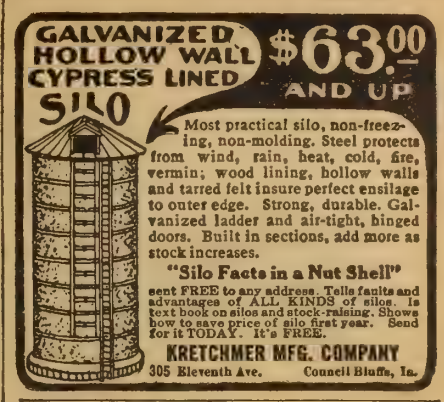
Determine Acid Soil.

Sooner or later the problems of soil acidity will have to be met on nearly every farm in the state.

Farmers are often surprised to find that fertile soils become acid after being cropped for some time.

The reason is evident when we consider that soils are composed largely of acids and bases like lime and magnesia which in the proper proportion form a neutral or alkaline soil. The bases are, however, removed by crops and by leaching much more rapidly than the acids. For this reason, as they are cultivated, upland soils gradually become acid. Marsh soils may become acid through the accumulation of acids formed in the decay of the vegetable matter in the soil. When soil acidity becomes marked the growth of such lime-loving plants as alfalfa and red clover is affected and the availability of the phosphorus in the soil is lessened.

A bulletin, "Soil, Acidity and Liming," has just been published for the benefit of Wisconsin farmers who may obtain copies by applying to the agricultural experiment station, Madison.



Explosives For Land Clearing.

Last year one manufacturer of explosives sold in Wisconsin over 3,000,000 pounds of explosives, a large quantity of which was used for land clearing purposes. Most of that used in this way was 40 per cent product. The recent demonstrations showed that beyond all doubt on the loams and clays, 20 per cent would do the same work as 40 per cent, making a saving of 3 cents a pound and that on the lighter soils 30 per cent would do equally as good work as the 40 per cent at a saving of 1½ cents a pound. This means that by using these lower grades a saving of 12½ to 25 per cent may be effected in the dynamite bill.

The value of the combined use of dynamite and stump pullers was pounded home until there is not much room for argument that it is the cheapest and quickest way of getting rid, especially, of the old pine stumps.

Neatly Packed Butter.

Co-operating with the office of markets of the United States Department of Agriculture, B. H. Hibbard and Asher Hobson, of the University of Wisconsin, have carried on a study of marketing conditions which obtain with reference to Wisconsin butter. This includes not only the marketing of farm butter but the organization of creameries, methods of fixing the prices for butter after purchased, and the shrinkage of butter in transit to the wholesale markets. The results already secured would indicate that the quality does not result in a material difference in price. The uniformity in product adherent to the package and advertising given to the product appear to be factors of no small moment in the determination of price.

If all the urban population of the United States were supplied with filtered water, or water of equal purity, the urban typhoid fever death rate would be fourteen per 100,000. A reduction of 67 per cent in the typhoid rate immediately following filtration has been amply demonstrated. The average typhoid fever death rate among the urban population of the United States in 1913 was twenty per 100,000. By reducing the rate to fourteen about 3,000 lives would be saved annually.

In and Around Wisconsin

Highest Price Ever Paid For Fat Cattle on St. Paul Market Is Paid Pierce County Feeders---Other Items of Interest.

The Barron co-operative creamery is now receiving milk from 871 farms. The new addition for cold storage is now ready to be occupied.

The state has begun stocking the lakes of Waukesha county with fish and 5,000 black bass from the hatchery at Delafield were recently placed in LaBelle and Fowler lakes at Oconomowoc.

The Brown County Fair at De Pere has set aside $100 for a "better babies" contest at the fair this fall. This will not be a baby show, but a contest to determine the physically fit children of the county and a large entry of country children is anticipated.

Cottony maple scale has been discovered on about 1,000 shade trees in Madison. This disease is controlled by the use of kerosene emulsion and a movement is on foot to start a general spraying clean-up such as has been done in Milwaukee, Kenosha and Racine.

The sheep meetings held recently in the Kickapoo valley by Frank Kleinheinz, shepherd at university farm, under the direction of the Wisconsin Live Stock Breeders' Association, were all that could be desired. Great interest was shown and in all nine meetings were held on farms in the valley at Viola, La Farge, Gays Mills, Reedstown and Soldiers Grove.

Most of the eighty odd pea canneries in Wisconsin began operations this month with prospects for a good canning season. Reports indicate that the pea crop has been generally up to normal, although low-lying fields suffered from the wet, cold weather, indicating the need of good drainage, as peas can withstand almost anything except wet "feet." In most sections the crop is normal, although a little late and the canneries will be in full operation during the next few weeks.

Washington county farmers are planning a demonstration meeting late this summer at the county farm at West Bend. Alfalfa, grains and forage crops will be discussed. The date and speakers will be announced later.

The highest price ever obtained for fat cattle from Wisconsin at South St. Paul was received by Will Guiser, of Martell, twenty-one steers averaging 1,340 pounds sold at $10.25 per hundredweight, which is also the highest price ever paid for cattle in carload lots on the South St. Paul market. He had a load of fat cattle on the market the week before that brought $9.85. Mr. Guiser and his brothers are among the largest live stock feeders in Wisconsin. This is a big boost for Wisconsin, particularly for Pierce county.

A monster exhibition of how reduced prices on foodstuffs and farm products can be obtained by co-operation of producer and consumer will be held in the form of a two-day conference and picnic at State Fair Park, Milwaukee, on August 26th and 27th, under the auspices of the American Society of Equity and the Federated Trades Council. This festival, it is thought, will demonstrate clearly the necessity of a co-operative distributing agency which has already been organized by farmers and incorporated for $50,000.

The new Wisconsin capitol, which has been in process of erection for ten years, will be completed by January 1, 1917, Sec. Lew F. Porter, of the capitol building commission, said on Tuesday. The total cost of the building so far has been $6,655,917.66.

What looked like a serious situation for the farmers supplying the condensery at Delavan, Walworth county, was averted recently by a compromise by which the farmers are receiving $1.60 per hundred for their milk. This price went into effect July 1st, although last spring the condensery agreed to pay $1.70. When July 1st came the condensery insisted on paying the old price of $1.50 for July, but the producers cut off the supply and the condensery closed until an agreement for $1.60 was made a few days later. The farmers were not in position to take care of their oversupply, as the neighboring creameries could not care for so large an additional surplus.

One thousand dollars for a six-year-old ram shows that American breeders are beginning to appreciate the true value of a sire. The Geo. McKerrow & Sons Co. have just sold a half interest in the great Shropshire breeding ram, Senator Bibby, to T. F. Jones, of Everly, Iowa, who paid $500 for a half interest. This sale is a great tribute to the tried sire. Senator Bibby is an American-bred product, raised under American farm conditions and this is especially interesting because the majority of the high-priced rams have been imported from England. He is a son of Blatherwick (256115) who has sired eighty-nine first prize winners at state and world fairs. His progeny won the get of sire prize at the world's fair at Seattle and three times at the Wisconsin State Fair. Senator Bibby's dam is Bibby's 133, champion ewe at the 1908 International show and also at the Wisconsin state fairs. She was also the dam of the noted prize-winning ram, Bibby Champion.

Under the Wisconsin state aid highway law, which became operative in 1911, 4,000 miles approximately of state aid highways have been constructed. These 4,000 miles, however, are scattered in 3,000 pieces of roads of various types and today in Wisconsin there is not a stretch of continuous highway, constructed under the state aid law, more than twenty miles in length. The Good Roads Association of Wisconsin, which was recently organized and has opened up its headquarters at Madison, has for its main purpose the solution of the problem presented—the development of legislation which will result in joining the scattered pieces together or securing continuous highways. The officers of the association are as follows: Chas. C. Jacobus, Wauwatosa, president; Elmer S. Hall, Green Bay, vice president; Ernest J. Perry, Fond du Lac, treasurer; William H. Reese, Milwaukee, secretary; E. A. Cannon, executive secretary, Madison, and R. W. Davis, Bangor; A. R. Hirst, Madison; Charles Liehe, Chippewa Falls; Walter H. Reed, Racine; A. H. Zimmerman, Wausau, directors. There are seventy-one vice presidents, one for each county in the state, taken from men in all walks of life.

Railroads carrying wool from Chicago to points in Wisconsin, Minnesota and Iowa have been ordered by the interstate commerce commission to establish lower rates for car lot shipments.

Clarence Sheridan, of Fond du Lac, son of B. F. Sheridan, of the Certified Milk Farm, won first place in the judging contest at the county Guernsey picnic recently. Paul Bonnell, of Ripon, was second; Carl Kolb, of Berlin, third.

Interest is running high in the pig feeding contests being conducted this summer in several Wisconsin counties for the boys, and in Rock county about twenty-five boys have pigs entered. This number is being increased weekly and the following advice from the Wisconsin Live Stock Breeders' Association, which is co-operating in the contests, will be of interest to every boy and every swine breeder:

Your profits as a pig raiser depend largely on the brood sow that you select. The successful live stockman has to be a good judge of live stock, and so we want to tell you boys some of the things that will help you to pick out a good brood sow.

If you are raising pigs for market only, the sow need not necessarily be pure bred. But see to it that she resembles the breed that you have chosen to raise, and then if you use a pure-bred boar of the breed you can get most rapid improvement. Select your brood sows from your own herd as much as possible and each time get a better one than you had before.

In picking out a sow the first consideration should be its size. When we sell the pigs we are paid by the pound and, of course, the more pounds the better. Don't select a sow that is undersized for her age.

In order to get good size the first thing you want to look for is length of body. You must have length in order to have a good frame upon which to put lots of weight. No one ever grew a big hog out of a short-bodied, chunky pig.

EIGHTEEN PROGENY OF "SENATOR BIBBY," HIGHEST PRICED SHROPSHIRE EVER SOLD IN AMERICA. FOR A HALF INTEREST AN IOWA BREEDER PAYS A WISCONSIN BREEDER $500, AS OUTLINED ELSEWHERE ON THIS PAGE.

IMPORTANT ANNOUNCEMENT

Readers of The Wisconsin Farmer

We, the Federal Land Company, have just acquired the celebrated Hillsdale Ranch "in the heart of the Golden Prairie District" of Wyoming.

Sixteen thousand acres—one-half deeded—one-half state leased in alternating sections.

We will at once place the deeded land on sale in tracts of 160 acres and up, and with each farm sold will transfer, free, a five-year lease on equal acreage of adjoining state land.

Surrounded by improved farms, fertile soil, 2 to 7 miles from railroad town. Prices low; terms easy.

Please fill out and mail us the following coupon. It will bring you valuable information:

FEDERAL LAND COMPANY,
Burns, Wyo.
Gentlemen: Please mail me at once particulars of the Hillsdale Ranch which you are now offering for sale in farm tracts. Also Certificate of Guaranty, booklet on "Wheat Growing and General Farming," sectional plat and full particulars of the Golden Prairie District of Wyoming.

Address .....

PROSPERITY IN CANADA

$900,000,000 in new wealth added in 1915. Enormous crops and low taxation make farmers rich. Wheat average, 36.16 bushels per acre in Alberta, 28.75 bushels per acre in Saskatchewan, 28.50 bushels per acre in Manitoba. Taxes average $24 and will not exceed $35 per quarter section, includes all taxes; no taxes on improvements. Free schools and full religious liberty, good climate. Get your farm home from the Canadian Pacific Railway. 20 years to pay. Good land from $11 to $30 per acre; irrigated lands from $35, and the government guarantees your land and water titles. Balance, after first payment, extended over nineteen years, with interest at 6%; privilege of paying in full any time. Before final payment becomes due your farm should have paid for itself. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land itself. Particulars on request. Ready made farms for sale. Special easy terms. Loans for live stock. In defined districts, after one year's occupation, under certain conditions, we advance cattle, sheep and hogs to farmers up to a value of $1,000. We want you; we can afford to help you. We own the land; we want the land cultivated. Our interest are mutual. Buy direct and get your farm home from the CANADIAN PACIFIC RAILWAY. Send for free book. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Ave., Calgary, Alberta, Canada.

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

MAKE MORE MONEY

WITH less aggravation by attaching an adjustable stubble cutter to your corn harvester. Cuts the "stubs" while you cut the corn. Easily attached to machines of the Acme, McCormick, and Milwaukee type. Interesting book, "Comfort In the Cornfield," free. Give make of corn harvester when writing. Address CORN HARVESTER ATTACHMENT CO., 524 S. Dickinson Street, Madison, Wisconsin.

GOOD CLAY LAND

FROM owners direct, in Wisconsin's Clover Belt, where it's a pleasure to live, where little money will buy and locate you. Near markets, schools churches. Good roads. Big crops of everything. Ideal for stock. Write or come. Flambeau River Lumber Co., Station D, Ladysmith, Wisconsin.

FARMS for sale. Wonderful bargains in five states with crops and stock. Send for catalog. D. B. Cornell Co., Gt. Barrington, Mass.

FOR Minnesota improved farms and land bargains, write or call on H. A. Hanson, 242 Temple Court, Minneapolis, Minnesota.

Advertiser Enjoys Good Business.

IT gives us pleasure to advise our readers that the Munson Manufacturing Company, of Winterset, Iowa, manufacturers of the Daisy cultivator shield, a device that fits any cultivator and prevents the covering and destroying of the young corn when cultivating, report that their sales of these shields the past season far exceeded their expectations. In fact, the demand was so great that long before the end of the season they were entirely sold out. This concern was a regular advertiser in our paper the past season and they wish to thank our readers for their excellent response to their advertising and to advise you one and all that they will again be an advertising patron of this paper next season and will be prepared with sufficient supply of their product to take care of all orders.—Adv.

Soil in Its Relation to Dairying.

This Topic Was Discussed Exhaustively at a Recent Wisconsin Dairy Meeting by Mr. A. R. Whitson, of the Wisconsin Station.

TO PREPARE ourselves to understand the relation of the soil to dairy farming we must first form an idea of the probable future of dairying. Let us consider:

A FEW FIGURES.

During the decade of 1900 to 1910 the population of the United State increased 21 per cent.

The number of dairy cows increased 20 per cent.

The number of other cows increased 4 per cent.

The number of steers and bulls decreased 21 per cent.

From these figures we can draw some conclusions:

1. Dairy products are not increasing more rapidly than population.
2. Dairy breeds must furnish an increasing per cent of our beef.
3. Dairy farming will continue to expand for many years.

With these conclusions in mind, let us consider the relation of dairy farming to our soils and climate. Dairy farming is good for Wisconsin soil and climate because

1. It makes the maintenance of fertility easy.
2. It occupies the farmer's winter profitably.
3. It gives largest average returns per acre.
4. It makes best use of new land being cleared.

Dairy farming should, therefore, be followed on most land in the state which is well adapted to the chief crops needed as feed.

The most important crops for the dairy farm are: (1) corn, (2) clover or alfalfa, (3) pasture grass.

This means that soils of intermediate texture, such as silt and clay loams which are adapted to all of these crops and having good topography have first value for intensive dairying and should be used for dairy farming almost exclusively. Other soils having adaptations to other special crops should be used for mixed farming, including dairying and the raising of those special crops to which the soil is best adapted.

The right way to maintain and increase the fertility on any farm depends on the kind of soil and the system of farming and products sold. On good upland silt loam soils such as predominate in southern and north-central Wisconsin dairy farming will be followed almost exclusively. Here practically all crops are fed and in addition some grain is purchased. The chief products sold are milk or cream, and live stock such as hogs, veal calves and old cows.

On these farms the chief problems in regard to fertility are the maintenance of organic matter, phosphorus and freedom from acidity by the use of lime for clover and alfalfa. It is quite generally assumed that the use of stable manure on the stock farm is entirely sufficient to maintain or even increase the organic matter of the soil. It must be remembered, however, that only a third, or at most a half, of the total organic matter in the feed is returned to the soil in the manure and that this organic matter is in such a condition as to decompose with rapidity and it does so rather than accumulate in the soil. It is this very process of decomposition which gives manure its value as a fertilizer. But when an increase in the total amount of organic matter is necessary the use of some form of green manuring crop supplementing stable manure should be practiced.

The element phosphorus is the only one of the essential elements of plant food liable to considerable loss on the dairy farm. The supply of nitrogen on these farms can be maintained and largely increased through the growth of clover or alfalfa which are needed for feed. The element phosphorus, however, is lost to some extent in the milk sold and to a considerable extent in the bones of hogs and old cattle necessarily sold from the dairy farm. It is also lost by leaching from the manure and undoubtedly to some extent even from the soil itself. Since the supply of this element in even virgin soil is small, it must be maintained and should frequently be considerably increased so that the use of some form of phosphorus fertilizer on the dairy farm, no matter what the character of the soil, is important. Untreated ground rock phosphate is by all means the cheapest form of this element and when properly used, being thoroughly incorporated with the manure or with fresh organic matter in the field, will be one of the most satisfactory forms in which to secure this element. Ground steamed bone meal, a product of the stockyards, is another very desirable form and simply returns to the soil what was previously taken from it.

Lime, to fit ground for clover and alfalfa, is also an important item on the dairy farm. New land seldom fails to produce good clover even when quite acid, but later on difficulty with clover is encountered and even on new soils which are acid alfalfa does not thrive. The use of some form of lime, of which ground limestone is available in largest amount and has many advantages, is necessary on a large part of even the best soils of the state. Even the soils of the southeastern part, which contain large quantities of limestone ground up by glacial ice, are becoming acid in patches and liming will be necessary, especially for alfalfa. Alfalfa can undoubtedly be grown successfully on nearly all farms of the region underlaid by limestone forming the eastern, southern and western part of the state.

Whether alfalfa will replace clover in the large area of silt or clay loam soils in the northern part of the state remains to be seen. The soils of this area are acid and for alfalfa will probably require an initial application of from three to five tons of ground limestone per acre followed by two tons each time it is reseeded to alfalfa. Under these conditions it will be best to grow alfalfa on but one field. Let that be one having good drainage. See that it is well limed and inoculated when first seeded. Then keep the whole field in alfalfa two years and beginning on the third year break up one-fifth each year, plant to corn and reseed to alfalfa the following year. In this way one-fifth of the field will be in corn, one-fifth will be new seeding and three-fifths will be in alfalfa each year. This field thus becomes a nitrogen mine for the farm. The remainder of the farm will then be in a rotation of corn, grain, clover or clover and timothy, and for the present at least without lime. It may later prove profitable to lime all acid soils. Alfalfa, lime, phosphorus and care of manure are the chief items in the maintenance of fertility on the dairy farm on silt or clay loam soils.

There is probably no important factor in dairy farming to which less attention is given in proportion to its merits than that of pasturage. The farmers of European countries appreciate the fact that much of their most profitable land is in pasture. No labor is involved in the harvest and the product is of the very best character. In this country almost no attention is given to pasture, and, as a rule, only a fraction of its possible value is realized.

In many cases a comparatively little expense for the cutting of brush and weeds will increase the growth of grass materially. But the need of fertilization is by far the most important. It seems to be the general impression among farmers that pasture grass should continue to grow indefinitely without the use of fertilizers, although they recognize clearly that other crops on adjoining land will not do so. It is almost the universal practice on the best pastures of Europe to use fertilizers regularly. On land which has become acid the use of ground limestone or other form of lime will encourage the growth of blue grass and other grasses of the best sorts. The element phosphorus is being constantly exhausted and also nitrogen. Unless the pasture is rotated so as to include a legume for the accumulation of nitrogen some form of nitrogen fertilizer should be used. There is probably no better fertilizer than well-rotted manure and the regular practice of applying manure to a portion of the pasture each year in rotation will produce surprising results. The manure not only fertilizes the ground, but temporarily prevents the cattle from cropping the grass closely, giving it a better chance to become established and more deeply rooted and so greatly lessen its tendency to suffer from drouth during the dry periods of the summer and fall.

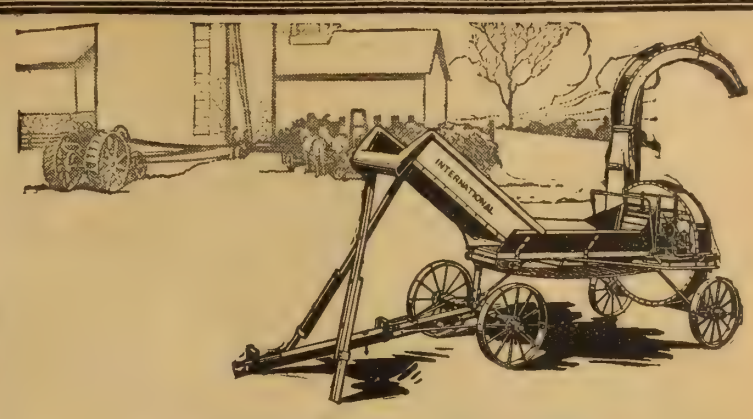
Good blue grass pastures on silt and clay loam soils should support a dairy cow on from one to one and a half acres, while the average is three or four acres per cow. When the saving in expense in tillage, harvesting of crop and feed is considered it is evident that there is probably no other crop on the dairy farm which gives so high a net return per acre as good pasture.

Sandy soils cover approximately 8,000,000 acres in Wisconsin. A considerable part of the area having these soils is especially adapted to potatoes and other truck crops, provided they are maintained at a high state of fertility. But the profitable employment of the farmer's time during the winter requires that even on such land some class of stock be kept. Mixed farming in which rotation is so planned as to include one year for the special crop and a proper balance of the other crops grown for feed should be followed on such land. In very few cases will it be found profitable to use more than one-fourth or one-fifth of the land for the growing of crops to be sold. Under these conditions on sandy soils the use of larger amounts of phosphorus fertilizers and also of fertilizers containing potassium as well as of sufficient lime to keep the land in prime condition for clover or alfalfa are the essential points. The maintenance of organic matter is more difficult than on the heavier soils used entirely for dairying and the plowing under of a second crop of clover or even the use of the land one year in the rotation entirely for the plowing of a legume crop to be plowed under as green manure to increase the organic matter and nitrogen is necessary at least on the lighter soils.

It is undoubtedly true that there are thousands of sandy farms in the central part of the state on which more potatoes could be grown than are now produced if a less acreage were planted and more attention given to the conditions for the growth of clover and other legumes to be used for stock feed. The use of lime and some commercial fertilizers and proper care in seeding, avoiding the use of a nurse crop on the lighter sands, would make it possible to maintain twice as much stock and at the same time very materially increase the yield of potatoes, thus greatly increasing the net profit.

Marsh soils occur widely scattered over most sections of the state and amount altogether to approximately 2,500,000 acres. Their possibilities and value have been the subject of much discussion throughout the state during the past few years. A considerable part of the development of these lands where they occur in large blocks has been due to the activities of the land promoter, who has considered this an opportunity to make large profits through the purchase of the raw land at a very low figure and the expenditure of a small amount for drainage and then advertising it as first-class agricultural land, already fit for farming. The sad experience of large numbers who have been thus misled has had a very discouraging effect on the development of this class of lands in the state. Many of these purchasers have been misled, first in regard to the degree of drainage which the original plans would give, and second in regard to the fertility of such soil after reclamation. It is probably true that not 10 per cent of the land now in drainage districts in the state, amounting to approximately 750,000 acres, has adequate drainage and the installation of proper drainage systems will involve a further expense of from $10 to $25 per acre. It is, of course, true that the final cost of the land, even at this figure, will still compare favorably with that of equally productive upland soils. But the difficulty is that people who have purchased it under the impression that they were getting thoroughly drained and productive land have been misled and are not in position to make the further improvement necessary.

Furthermore, it must be recognized that marsh soils are very unbalanced in their chemical composition. They have enormous amounts of organic matter and nitrogen, but are relatively low in phosphorus and potassium. Under these conditions barnyard manure is not the most satisfactory fertilizer, since nitrogen is one of its essential constituents and it is not relatively high in phosphorus or potassium. Better results can be secured through



Fills Highest Silo

AN **International** ensilage cutter, Type A, filled a Pennsylvania silo 110 feet high and 27 feet in diameter, said to be the highest silo in the world. This machine has tremendous capacity. It pours a stream of ensilage into the silo at the rate of 16 to 25 tons an hour, cutting as fine or as coarse as may be desired. This is our largest cutter. Type B cuts 12 to 16 tons; Type E, 10 to 12 tons; and type F, 3 to 6 tons per hour. On all models knives and blower are attached to the flywheel, the simplest arrangement and the one that uses the least power. The knives can be adjusted to absolute accuracy, and, once set, are held firmly in place. Their clean shear cut begins at the outer edge, throwing most of the work close to the center, where the power is greatest. No power is wasted.

International ensilage cutters are safe. All working parts are carefully housed. The lever that starts, stops, and reverses the machine is so placed that a man cannot reach his hand as far forward as the knives without stopping the machine.

The power cost is low. The machine will fill any silo. The operators are carefully protected from injury. Here are three good reasons for seeing the machine at the local dealer's place of business, or writing to us for full information.

the use of commercial fertilizers containing these essential elements.

The best muck lands are adapted to special crops, such as cabbage, sugar beets, celery, etc., and when used for that purpose should be heavily fertilized with commercial fertilizers of the right composition. But by all means the most important crops for lands of this character, especially in the northern part of the state, are the grasses for pasture and hay. Even when used for these crops it will be found highly profitable to make reasonable application of the proper commercial fertilizers rather than to use stable manure, at least after a first light application of stable manure has been made. In the central and southern part of the state corn and potatoes are among the most important crops for these soils and the use of fertilizers will be very profitable and should be greatly increased.

Many experiments have shown that the yields can be doubled or trebled by the use of potash and phosphorus fertilizers in moderate amounts. In experiments at Marinette the yield of potatoes was increased from eighty-six bushels on untreated land to 196 bushels on land receiving a ton of ashes and 300 pounds of acid phosphate and from sixty-seven bushels per acre to 164 bushels by the use of fifty pounds of potash and 400 pounds of acid phosphate. At Phillips the yield of timothy and alsike clover hay in 1905 was increased from 2,700 pounds on untreated land to 4,800 pounds by the use of 100 pounds of sulphate of potash and 275 pounds of acid phosphate per acre. In Rock county the yield of corn silage was increased from two tons per acre to fourteen and one-half tons per acre by the use of a mixture of 200 pounds of potash and 400 pounds of acid phosphate. The cost of this treatment was $7.75 per acre, but unquestionably an important part of the fertilizer was left in the soil to be used by the crop the next year. Many similar results have been secured in various parts of the state as well as in other states and in the northern part of Europe where the management of marsh soils is much more highly developed.

In looking forward to the development of marsh land in Wisconsin much more emphasis should be put on the importance of the development of the small areas of marsh land on farms otherwise already well developed than on the drainage and improvement of the large areas of marsh land. The character of the soil on the small marshes is ordinarily much better than that of the large areas and small fields of marsh soils can be used to greater advantage on farms the remainder of which are upland soils than is possible where the entire farm consists of marsh land.

While we thus recognize the great possibilities of dairying in Wisconsin and the fact that this system of farming makes the maintenance of fertility comparatively easy, we must not fail to recognize that there is still a large place for the profitable use of commercial fertilizers in the state. During the first period of development of new land their use is relatively unimportant, but as the further improvement of our soils progresses the proper use of fertilizers will become more and more important. While it is true that fair yields are now being produced and can be maintained without their use, it is undoubtedly equally true that these yields can be greatly increased and in many cases doubled by a more thorough system of cultivation and soil management involving better tillage and the use of green manure, lime and other fertilizers as demanded by each type of soil. To rest satisfied with present yields and production would be to neglect the greatest opportunity we have for the advancement of not only dairy farming in Wisconsin but of agricultural production as a whole. Wisconsin now has approximately 3,000,000 cows. There are about 30,000,000 acres of arable land in the state. Assuming that on 15,000,000 acres of the heavier soils three acres will support a cow and on the other 15,000,000 acres of soils partly used for other cash crops five acres will support a cow we have an estimate of 8,000,000 cows as the easy possibility of Wisconsin's dairy herd.

Which Kind of Alfalfa Seed?

Experiments by Wisconsin Growers Show Nebraska and Kansas Seed Will Be Adapted to Our Conditions—By L. F. Graber.

JUST what effect the kind of seed has on the winterkilling of alfalfa stands is an exceedingly important problem which is now being worked out by the members of the Wisconsin Alfalfa Association. Southwestern-grown alfalfa seed has generally been considered less hardy than that produced in the more northern states where winters are more rigorous. While sufficient work has not been carried on to definitely determine this matter, reports and experiments conducted so far seem to indicate that Kansas and Nebraska and other southern seeds may be adapted to our conditions. Excellent seed can be secured from the southwest and in dry years when there is a big crop it sells for from $2 to $4 less than the northern-grown strains. If southwestern-grown seeds are hardy here in Wisconsin it is of great importance that our alfalfa growers should know it. In view of this three years ago two pounds of Oklahoma-grown seed were sent to a number of members, for growing and comparison with northern-grown alfalfa seed. Thirty-eight reports on this test which has now been running two years are summarized as follows:

Questions	Answers	Numbers	Per cent
Has southwestern alfalfa seed winterkilled?	Slightly	1	3
	Yes	7	19
	No	29	78
Has northern-grown alfalfa along beside it winterkilled?	Slightly	3	8
	Yes	4	11
	No	30	81
Which gave the best stand and yield?	No difference	24	70
	Southwestern better	5	15
	Northern better	5	15
From your experience with this test what do you think of southwestern-grown alfalfa seed for your vicinity?	O. K.	20	72
	Superior	2	7
	Slightly inferior	4	14
	Noticeably inferior	2	7

In analyzing this data it is clear that for the second year there was little difference in the winterkilling of the southwestern and northern-grown alfalfa seed. At least it can be said that the southwestern-grown alfalfa has proven itself practically as hardy and productive as the seed from more northern states.

A more comprehensive state-wide test was begun in 1914 when approximately 116 members were supplied with Nebraska-grown seed, ninety-six with Kansas, 111 with Dakota and ten with Grimm alfalfa seed for comparison with two kinds of Montana-grown seed. There was little difference in the growth and stand of the two kinds of Montana alfalfa seed No. 1 and No. 2. No. 1 seed came from a very old field in Montana and No. 2 from newer fields. Of the 453 reports 99 per cent could see no difference and about 1 per cent declared that No. 1 produced little better than No. 2.

Those trying Dakota seed found it to be very satisfactory in this first year's trial. Out of forty-nine reports received to date 82 per cent declared it equal to, and in every way as good as Montana and 9 per cent thought it was better than Montana and 9 per cent thought the Montana better than the Dakota.

Seventy-two reports from members trying out Kansas and Nebraska alfalfa seed indicate that at least for one winter the Kansas and Nebraska alfalfa seeds have proven to be as hardy and productive as the northern-grown alfalfa seed. Sixty-three per cent of these reports declare that the Kansas and Nebraska alfalfa seed are equal to Montana and Dakota seed; 14 per cent thought Kansas and Nebraska seed better than Montana and Dakota seed, while 23 per cent felt that these seeds were inferior to Montana and Dakota-grown strains.

One hundred and seventy-six of the members who were not conducting this test gave their opinions and experience as to the value of Kansas and Nebraska alfalfa seed for Wisconsin conditions.

Of these 80 per cent reported favorably, while only 20 per cent felt Kansas and Nebraska alfalfa seed were not as hardy as the Montana-grown strains. It would seem that the results of these tests indicate that on the whole Kansas and Nebraska-grown alfalfa seed will prove to be adapted to Wisconsin conditions.

[Editor's Note.—This report on the seed experiments was compiled by Mr. Graber, who is secretary of the alfalfa order, for the annual meeting at Madison last February.]

Farmers' Open Forum

Suggests Wisconsin Cheese Prize.

To the Editor:—On my travels through Wisconsin this summer I was impressed by the number of cheese factories in the state, also by the fact that, while many of the factories made excellent cheese, the product of other factories might be much improved. It occurred to me that offering a prize, say $1,000, for the best cheese made in the state might improve the quality of cheese put out by some of the factories. The recipe by which the cheese was made, together with the time for each detail, should accompany each sample, then the recipe for the cheese that took the premium should be copied and sent to every cheesemaker in the state.

This same plan, offering a prize for the best butter made, might also improve the quality of butter produced by the buttermakers of the state.

Martinius Larsen.

Trempealeau Co., Wisconsin.

Finds Inspiration in Reports of Others.

The article in the July 6th issue of The Wisconsin Farmer concerning the Barron Creamery is of unusual interest to us, as we had heard before that the Barron Co-operative Creamery was the largest creamery in the state, and it was through the reports of this and other creameries that the farmers of Seymour were induced to organize a co-operative creamery. Accordingly, on the 1st of June, 1915, the Seymour Co-operative Creamery, Dairy & Produce Company started in business after buying out the local creamery. A partial statement for May, 1916, being the last month of the first fiscal year, follows:

Total number pounds of milk received	50,514
Average test of milk	3.601%
Total number pounds cream from all sources	130,447
Average test of cream	25.6785%
Pounds of butter fat received	35,266.5
Pounds of butter made	42,847
Gain of churn over test	21.942%
Pounds of butter fat received from home stockholders	17,806.5
Pounds of butter fat received from home non-stockholders	5,954.2
Pounds of butter fat received from route stockholders	6,723.9
Pounds of butter fat received from route non-stockholders	4,781.9
Price paid for butter fat to home stockholders	32¾c
Price paid for butter fat to home non-stockholders	31¼c
Price paid for butter fat to route stockholders	31¾c
Price paid for butter fat to route non-stockholders	30¼c
Average Elgin price	29 2-3c

In this statement 245 patrons are represented. My individual check for the month was $258.03 and for June will be about $325. There are fifteen other creameries and cheese factories in the radius from which we draw our supplies.

We are now entering upon a new enterprise, that of manufacturing casein from the surplus skim milk. This product is sold to the paper mill industry. In this way we hold our patrons who wish to sell their skim milk instead of feeding it to pigs and calves. Our factory is growing in popularity and patronage and is the leading industry of the city of Seymour. Our butter always scores high, brings the top market price and is in great demand. Monthly statements are issued which keep the patrons fully informed. We appreciate the efficiency of our secretary and of all the employes. Our officers are: Wm. M. Hurst, secretary; Peter Tubbs, Chas. Wussow, S. G. Knox, Emil Mueller and Edward Witte, directors; H. Recknagel, buttermaker; R. M. Simpson, Jr., assistant buttermaker; A. Ohlrogge, tester.

We write this hoping to bring out statements from other factories.

Peter Tubbs, Pres.

Outagamie Co., Wisconsin.

LAW QUESTIONS.

Official Malfeasance.

A Subscriber, Franksville, Wis.—Has a town board in Wisconsin a lawful right to furnish steel culverts for private driveways leading onto a state highway, and to furnish crushed stone for leveling up said driveways?

Answer.—A town board has no right to do such a thing. It amounts to an unlawful diversion of public money to a private purpose. The members of the board would be civilly liable therefor and could be prosecuted for malfeasance in office.

Renter Entitled to Apples.

Mr. Wm. Montreal, Bayfield, Wis.—On May 1, 1916, a certain man leased to me for six months from that date, by a written contract, forty acres of land for cash rent, $35.00 paid in advance, and balance to be paid in monthly installments. He said nothing at the time about the apples on the land. A few weeks ago he wrote me saying that he wanted part of the apples on the place. Can he take them without my consent?

Answer.—He cannot. You are entitled to all the apples that become mature before the 1st day of November, 1916.

Private Road in South Dakota.

A Subscriber, Imlay, S. D.—The accompanying diagram represents the adjoining lands, belonging to A, B and C with section lines, road, creek, etc. In order to go from his house to town, A has to cross the lands of B and C and go through gates. The eastern portion

of the lands of A and B is too rough and hilly for a road. (1) Can A compel B or C, or both, to sell to him a private road or lane through their lands, and if so, how? A would also like to have a road from his house running west or northwest through C's land. How can he get it?

Answer.—(1) The law of South Dakota provides that any person may have a private road laid out upon presenting to the board of county commissioners a petition for that purpose. When the commissioners make an order for such road the petitioner must open it and keep it in repair at his own expense.

QUESTIONS AND ANSWERS.

A High-Tension Magneto.

Is the "Dixie 40" a high-tension magneto?

Answer.—It is.

Power of Engine—Effect of Flywheel.

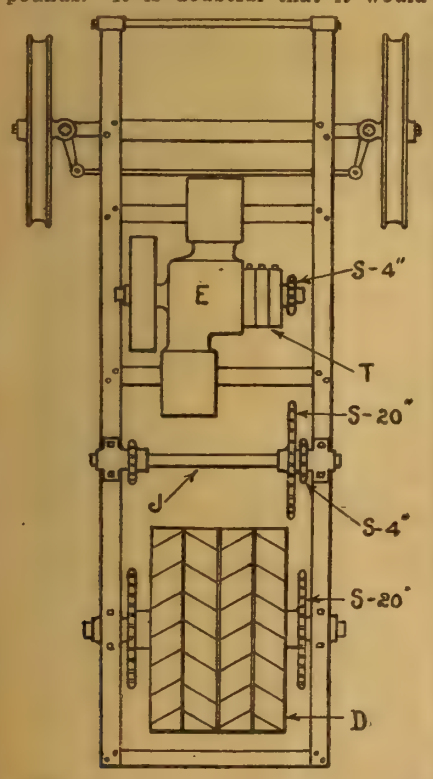
I have a steam engine with a seven and one-half-inch bore and six-inch stroke. The flywheel is forty-eight inches diameter. What is the horse power? Would it be all right to use a forty-two-inch flywheel if properly balanced? How much more horse power would I then have?

Answer.—Your engine should develop twenty horse power at a boiler pressure of 100 pounds and a speed of 300 revolutions per minute. You could use the smaller flywheel, which should weigh somewhat more than the larger one. The power of the engine would not be affected very much.

A Home-Made Tractor.

As I find in your paper questions and answers about farm machinery, such as tractors and plows, I will send you a diagram of a homemade tractor, and I would like to know how it would work and if it is strong enough to plow with. Is the frame strong enough to stand the pull? Will the front wheels stand the work without rubber tires on them? Will the engine have power enough to pull three plows? Will the twenty-inch chain wheel on the jack shaft have to be a differential or a solid wheel shaft ande and one-half inches in diameter be large enough? The engine has a five and one-half inch bore, six inch stroke. What is its power, and how fast will the tractor run?

Answer.—The figure shows the general arrangement of this tractor, E being the engine, T the transmission, J the jack shaft, D the drive wheel, and S the sprockets, the diameter of each sprocket being given in inches. The frame is strong enough. The front wheels should be fairly durable without tires, but it would be better to insert wood blocks in the rims to protect the rims. Your engine should develop twenty horse power, and should pull two fourteen-inch plows nicely if the tractor weighs not less than 3,000 pounds and not over 4,000 pounds. It is doubtful that it would



work well with three plows. The large chain wheel on the jack shaft should be solid unless the drive wheel is divided in half, each half driven independently on a stationary axle. No differential would be required unless the drive wheel is over twenty inches wide. The wider the drive wheel, the harder the tractor will steer unless a differential is used. The drive-wheel shaft should be two inches diameter, though you might "get by" with a one and one-half-inch shaft if the drive wheels come close to the bearings. A two-inch shaft would be much better. With drive wheels thirty inches diameter, the tractor would make three miles per hour when the engine is running at 800 R. P. M.

Notice The Exhaust.

How can one tell by the exhaust of an auto engine whether it is burning too much or too little gasoline? How about the oil?

Answer.—Too much gasoline causes a sooty smoke or a red flame; too much oil a white smoke. The flame is blue and irregular for too little gas; blue and regular for a correct mixture.

Series and Multiple.

What is meant by connecting batteries in series and in multiple? What is the difference in results?

Answer.—To connect cells in series, connect the carbon of the first to the zinc of the next. To connect in multiple, connect all carbons to one wire and all zincs to another wire. For low voltage and strong current, connect in multiple. For high voltage and weak current, connect in series.

Effect of Poor Compression.

We have a 1911 Reo touring car that we cannot make hit. The magneto, plugs and wiring are all good. It has a new Holly carburetor. Does poor compression have anything to do with it? How large is the automobile race track at Indianapolis?

Answer.—Poor compression causes a motor to lack power and may also prevent it from firing regularly. In an old motor, one of the most common causes of misfiring is air leaks around the intake valve stems. It may be that the carburetor you are using has not been regulated to fit your motor. If you still have trouble after obtaining good compression and stopping the air leaks, write to the Holly people, giving them the size of your engine and the number of your carburetor, and obtain their advice.

One lap on the Indianapolis speedway is two and one-half miles.

Auto Used to Fill Silo.

How may I equip an automobile so as to run a silo filler? How much power is required to run an eighteen-inch cutter?

Answer.—The easiest way is to block the auto so that it cannot move; jack up one rear wheel and put a belt pulley on it. However, this brings the driving strain on the differential gears, which is not very good for the gears. A better way is to block the auto and install a shaft under the rear wheels, allowing the rear wheels to run on two wide-faced pulleys on the shaft. The cutter may be driven from a belt pulley on the shaft.

You better write direct to the manufacturer of your cutter to find out how much power is required, as there is a large variation of power with different machines and different conditions. About twenty horse power is usually required where an air lift is used, and even thirty may be used to advantage if the ensilage is very wet. For short and medium lifts, the mechanical elevator requires less power than the air lift.

Igniting by Dynamo.

We are talking of buying a two and one-half horse-power engine, jump spark ignition from a battery. Would it be possible to buy a dynamo and wire it to the engine like a magneto? I want some small electric lights in the milk house, cellar, etc., and if the dynamo will work like a magneto I would save buying a magneto. Dry cells are too expensive to operate both engine and lights. The engine pulley is ten inches diameter and runs at 400 R. P. M. I think it would be better to run the dynamo from a line shaft. The dynamo should be large enough to light six six-candle-power lights. What size pulley should I use on the line shaft?

Answer.—You can ignite your engine from the generator, but you will require a battery for starting. Your engine must run smoothly if you run your lights direct from the generator. A throttle-governed engine is preferable for generating a lighting current. You require an eight-volt, ten-ampere generator. You could use a generator of higher voltage if you connect a sixteen-candle-power lamp in series with the coil in order to protect the coil. If your generator runs 1,800 R. P. M., drive the line shaft by a ten-inch pulley, and place a fourteen-inch pulley on the line shaft to drive the generator, which should have a three-inch pulley. A two-inch belt would be large enough to drive the generator.

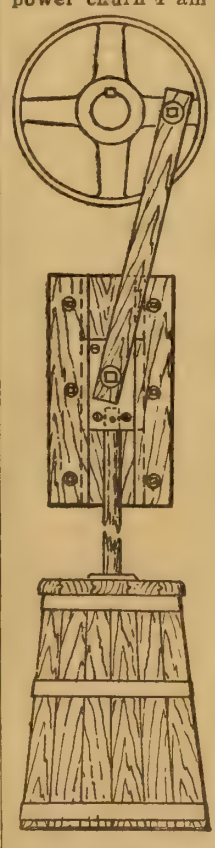
Pumping From Two Cisterns.

Will a three-inch houshold force pump draw water from a cistern ninety feet away, with a ten-foot lift? Would having a drop of one foot from the cistern to the pump—making the lift eleven feet—be of any advantage? Would not one-inch suction pipe do as well as one and one-quarter inch? I would like to install a three-way cock so as to draw water from a cistern ten feet from the pump as well as from the cistern ninety feet from it. Would this be practical?

Answer.—Any pump in good condition should draw water up a ten-foot lift, the distance lengthwise—within reasonable limits—making but little difference. It would be easier to prime your pump, or keep it primed, if you have a drop of one or two feet; otherwise there would be no advantage in having a drop. Your pump will work easier if you use the one and one-quarter-inch pipe. It is practical to pump from two cisterns by using a three way cock, but trouble will result if the cock is not air tight.

Running a Churn by Power.

I am sending you a diagram of a power churn I am thinking of making.



The pulley, shown at the top of the diagram, is at the end of my line shaft, and has a pin in one spoke to act as a crank to drive a cross head, working in a slide above the churn. There is a six-inch pulley on the other end of the line shaft, driven from a gas engine. What size pulley should be used on the engine and at what speed should the engine run? I have a two and one-half inch rubber belt that I use with the other machinery. Would this belt be all right? How far should the crank pin be from the rim of the pulley, which is five inches in diameter? How would I lubricate the slide? Would I have to use iron for the slide, or would this belt be all right? Is this outfit practical? Would a one and three-fourths horse power engine pull it?

Answer.—We are publishing an end view of your outfit. It is entirely practical. It might be possible to do away with the slide altogether. The slide could be made of wood. Use soap for a lubricant. The dash handle should be held in the cross head, or slide, by a nail that can be easily withdrawn. The crank pin should be located about two inches from the center of the shaft. The shaft should make about 100 revolutions per minute. Use a pulley two inches in diameter on your engine if it runs 300 revolutions per minute. Your belt is all right. Your engine has plenty of power.

Horse Power of Steam Engine.

What is the horse power of a two-cylinder steam engine, the cylinders being two and one-half inches diameter and the stroke four inches?

Answer.—With a boiler pressure of 100 pounds per square inch, and a speed of 480 R. P. M., the above engine should develop two and one-half horse power if it is double acting; that is, if steam is used on both sides of the piston. If it is single acting, it would have only half as much power. It should have only half as much power at a speed of 240 R. P. M. It would have more than twice as much power at a boiler pressure of 200 pounds per square inch.

A Heavy Tractor Engine.

We have a twelve-horse-power gasoline engine that weighs about 2,800 pounds. We are thinking of making a tractor out of it, but some people think that it won't pull itself. Now, I want your opinion. If it will pull itself, how much weight will it pull on the road? How many fourteen-inch plows will it pull? It has a speed of 300 R. P. M. How fast will it travel?

Answer.—If your engine is in good condition it should pull two fourteen-inch plows under favorable conditions, or two twelve-inch plows under any reasonable condition. The tractor should be geared to two and one-half miles per hour. It should pull a weight of one ton, mounted on a wagon or truck. It should have a drawbar pull of 1,000 pounds.

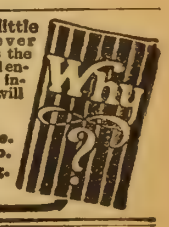
BUILT BY EXPERTS



DAIRY

The Milk House on High Ground.

The building in which the milk is handled should be convenient to the barn, but so placed as to be free from dust and stable odors. The ideal place for it is in a well-drained spot, somewhat higher than the barn. It should not be near the barnyard, pig pen, privy, or other source of contamination. In cold climates it may be connected with the stable by a covered but well-ventilated passageway with self-closing doors at each end to prevent odors passing from the stable to the milk house. With proper precautions, the milk house may be in the same building as the stable, but it should be provided with a separate entrance, and the walls between should be tight and without a communicating door or window.

The principal purpose in building a milk house, is to provide a place where dairy products may be handled apart from all other operations. To carry out this idea, it is necessary to divide the interior of the building into two or more rooms, in order to wash the utensils and handle the milk in separate rooms. The milk house and all its equipment should be so planned that unnecessary steps will be avoided and labor economized to the greatest extent.

Thorough cleanliness must always be kept in mind, therefore, there should be no unnecessary ledges or rough surfaces inside the building, so that it can be quickly and thoroughly cleaned. Milk-house floors should be of concrete and pitched to drain through bell traps. Round edges at the walls will prevent the collection of dust and dirt. The walls and ceilings may be made of matched boards, but cement plaster or painted metal lathing is better. Ventilators are necessary to keep the air in the milk room fresh and free from musty and other undesirable odors, and to carry off steam from the wash room. Windows are of prime importance, as they let in fresh air and sunlight and facilitate work. In summer the doors and windows should be screened to keep out flies and other insects.

It is imperative that there be a plentiful supply of cold, running water at the dairy house. If it is not possible to have a gravity system, the supply may be piped from an elevated tank, fed by a hydraulic ram, engine, windmill, or hand pump. The dairyman can ill afford to spend his time in carrying water in a pail to cool his milk and wash his utensils. Provision must also be made for supplying an abundance of hot water to clean and wash utensils. The water supply should be clean and abundant as well as convenient; otherwise the cleaning will not be thorough. Impure water is a source of contamination that under no circumstances should be allowed on a dairy farm. Outbreaks of typhoid fever in cities have been traced to dairy farms where the wash water was impure. Water which comes from shallow wells receiving surface drainage, or seepage from barnyard or house wastes or from pastures, is impure and should not be used.

Eight Dollars Each Day From Cows.

Fourteen cows is a rather unimportant sideline, but that is exactly what a farmer, who has fourteen good grade Guernseys, calls it. He has enlisted the interest and help of his family, and the work lasts only a hour and a half twice each day, when the milk is all drawn and separated, ready to go to the creamery.

This man has exploded the theory that it is not advisable for a renter to run a dairy. He rents 200 acres of grain land, and twenty-five acres of pasture. The former for half; the latter for cash rent. Primarily, he is a grain farmer in the grain belt. Secondarily, he runs a farm dairy; and viewed from a financial basis, the latter is in reality the money mint.

Being a grain belt farmer is not necessary to his success. Indeed, he brought his ideas and training from a dairy state, where selling grain from the farm is practically unknown, only via the stock. While his farm dairy is bringing him close to the $3,000 mark each year, by proper rotation, legumes and silos, he is selling grain as well as the other farmers of his community.

The silo question was made possible only by the advantage of a long lease on the land. Five years ago he installed a silo himself; the landlords of that part of the country are not interested in the future of their farms. To get everything possible to keep up running expenses in the nearby towns, they prefer keeping about three-fourths of the land in corn, and a tenant must, first of all, sell grain. Even clover is considered a luxury by these landowners. One field, that has had no clover on it for eighteen years, has since been alternated with oats and corn, and the yield is growing smaller each year. This up-to-date young man was also compelled to buy a silage cutter himself; not enough of his neighbors could be interested to do anything of this sort, and they thought he was on a straight road to become poverty stricken when he began installing such questionable "nonsense."

This renter uses limestone, and both alfalfa and sweet clover seed lavishly. His landlord came across with $100, to help defray the expenses of these, but the rest was all borne by him. The alfalfa is for hay, and the sweet clover to be plowed under in the spring. This tenant plans to have twenty acres each of alfalfa and sweet clover. Thirty acres are in pasture.

The cows are fed a little alfalfa on pasture, and a little grain. By a careful estimate, it was found that the winter feed, extending through six months, is not more than sixteen cents each day per head. The feed is ground corn, bran, alfalfa hay, and silage.

The average cream supply from the fourteen cows is nine gallons per day, which is sold at eighty-five cents per gallon. There is 400 pounds of skim-milk to be fed to the fourteen calves and a lot of pigs. It is the aim to later raise and feed a carload of hogs, and as soon as possible to feed all the tenant's grain to stock.

This man is an advocate of good roads, legumes, giving the soil whatever it is starving for, all modern methods that are practical, farm advisers, good gardens and fruit raised at home for family use, and "living and letting live."

An up-to-date, hustling working farmer, such as this is, is of untold value in a community. It is a matter of regret that the owners of the farms in that community cannot, or will not, do such things themselves. If a renter, who must break even with his landlord on the grain question, can afford to use modern methods, then is it up to the kickers to stop the "No farmer can afford to use the university methods in common, everyday life!"

Tuberculosis-Free Herds.

There is a movement on foot in Minnesota to establish tuberculosis-free herds of pure-bred cattle, for which there seems to be more or less favorable sentiment. Minnesota has for many years been weeding out and slaughtering all registered cattle reacting to the tuberculin test, and it is claimed that the percentage of reactors is now reduced to about 1 per cent the state over. In view of this the advocates of tuberculosis-free herds claim that the establishment of such herds would be taking a step in advance that would do no one any serious harm, and would greatly benefit those whose herds are able to measure up to such requirements as might be established for herds to be classed as tuberculosis free.

Dr. M. H. Reynolds, of the Minnesota Experiment Station, contributed an article for a recent issue of Hoard's Dairyman, in which he makes the following recommendations as to requirements that might be made to place a herd on the state accredited list:

SPECIFICATIONS.

The regular temperature test, according to existing standards, of the sanitary board is to be the standard for admission and continuance in this list, but when thought advisable, a simultaneous test may be directed by the board.

RECOGNITION.

(1) Herds which have passed two negative annual or three negative semi-annual tests on all animals over six months of age.

(2) Herds having not more than two reactions, and these of cattle not of the owner's breeding and which have not been in the herd over ninety days.

CONTINUANCE.

(3) Continuance on the specially ac-

SHARPLES
SUCTION-FEED
CREAM SEPARATOR

The only separator that skims clean whether you turn it fast or slow. Saves $40 to $60 a year extra, due to this wonderful Suction-feed feature (the feed varies with the speed). Has other fine advantages—no discs to wash, knee-high supply tank, ball bearing, etc. Over one million users. Send for catalog.

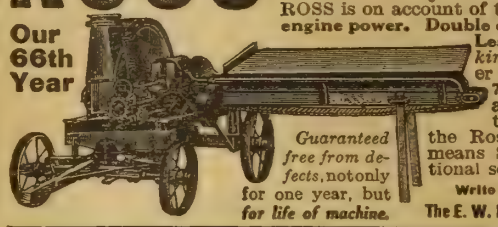
ROSS SILO FILLING MACHINERY
Especially Made for Wisconsin Trade
The reason why Wisconsin Silo Filler Buyers demand the ROSS is on account of their being specially designed for gas engine power. Double capacity with the same power and Less Speed. *The only Silo Filler of its kind on the market.* The Ross Silo Filler delivers silage into a silo at 600 to 700 R. P. M. Owners of 6-8-10-12 and 14 H. P. gasoline engines can fill their silo and do their own work with the Ross Silo Filler. Low Speed means Safety and years of additional service.
Our 66th Year


Guaranteed free from defects, not only for one year, but *for life of machine.*

credited list shall be permitted to herds under the following conditions:

(a) Satisfactory, regular official test once a year.

(b) So long as there are not more than two reactions in one test and these only in case of purchased animals which have not been allowed to mingle with the healthy animals during that time.

(c) So long as all cattle over six months old including nurse cows, show steers, etc., introduced into the herd have been officially tested.

(d) Reactors must be at once removed from herd and may not be subsequently readmitted to the herd even though subsequent tests are negative.

(e) There must be prompt and thorough disinfection of infected premises according to regulation.

(f) Cattle coming from without the state must conform to the statutes covering certificate of tuberculin test.

(g) The sanitary board shall have a special blank form certificate for such herds. Such certificates must be renewed annually.

RECOMMENDATIONS.

(1) We recommend that cattle over six months of age for addition to these accredited herds should come from tuberculosis-free herds.

(2) Cattle over six months of age intended for addition to the herd, e. g., by purchase or otherwise, should be kept in isolation until after a home test, made in not less than ninety days, can be made and such animals have passed clear. It is rarely safe to risk infection of a valuable herd solely on certificate of tuberculin test made in another herd and perhaps in another state.

If a law were passed, embodying the above suggestions, it would, of course, be optional with any breeder as to whether he might wish to have his herd qualify or not. If such a law were rigidly enforced and no one allowed to obtain a tuberculosis-free certificate for his herd unless every condition were complied with, undoubtedly a strong effort would be made by a great many breeders to completely get rid of tuberculosis. Whether it is possible to completely eradicate this disease from the bovine race may indeed well be questioned, but there is no doubt but that ideal conditions can be much more nearly approached than is the case at present.

Fond du Lac County.

Francis Woodward, Official Tester.
Garrett T. Hughes, President.
James L. Chrowser, Secretary.

Columbus Dairy Improvement Association.

The following gives the names and records of the cows in the association that have produced forty-five pounds or over of butter fat the past month:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Lbs. butter fat
John Swarthout					
Bridget, P.B.H.	10	5-16-16	1482	3.2	47.4
H. H. Huggett					
No. 6, G. H.	7	5-12-16	1731	3.0	51.9
A. L. Leffingwell					
Jennie, G. J.	6	3-8-16	963	6.6	63.6
Eddy, G. J.	5	11-24-15	771	6.9	53.2
R. C. Webster					
Flossy, P. B.G.	4	5-7-16	1074	4.4	47.3
Ruby, P. B. J.	5	3-26-16	951	5.4	51.4
John R. Jones					
Lucy, G. H.	4	3-7-16	1266	3.6	45.6

Credit must be given Rheinold Kalkhorst for having three cows that would have made forty pounds of butter fat if they had not been tested immediately after three days' cold rain.

Comparisons Between Herds.

Owner of herd	Highest average milk produced	Highest average fat produced	Highest returns per $1 feed
H. H. Huggett	993.0		
John R. Jones	992.1	36.2	8.01

These figures are not entirely true comparisons between the two herds, because some may be partially or about wholly dry and others may be entirely fresh. But to a certain extent this is an interesting basis for comparison. C. F. Wehweins, Tester.

Sentence of six years' imprisonment with hard labor has been passed on an Austrian dairyman by a court-martial sitting at Graz for supplying watered milk to military hospitals.

Silver's "Ohio"

The Logical Silo Filler

Silverized Silage

Brings Dairy and Fat Stock Profits

Because Silverized silage gets *all* of the *good food value* out of the corn. Cuts fine—in half-inch lengths—packs air-tight in the silo—properly mixes with the sugar juices from the cornstalk—goes through the right fermenting process and cooks into a soft, *nutritious, semi-pulp.* Just the right kind of silage to bring *maximum milk yields* from dairy cows or to put weight on fat stock.

Note the records given here. The secret of mixing Silverized silage is in the construction of Silver's "Ohio"—the logical silo filler. You can set the length of cut just where you want it, *and you'll get what you want.*

World's Champion Four-Year-Old
Daisy Grace Dekol
21718.3 lbs. milk; 1203.49 lbs. butter in 365 days
Owner writes: "We feed silage to all of our stock—could not get along without it. The ('Ohio') Cutter has given perfect satisfaction."—THE MAPLECREST STOCK FARM COMPANY, Kalamazoo, Michigan.

Garclaugh May Mischief
25328 lbs. Milk; 1056 lbs. butter in 365 days
Owner writes: "We have fed these cows all the silage they would eat. Have used an 'Ohio' cutter for past eight years."
PENSHURST FARM, Narberth, Pa.

Knives are of the sturdy cylinder type, with accurate, patented adjustments. Let us send you our catalog and let us tell you about the big "Ohio" features. For example, the beater self-feed—saves the work of a man at the feed table—beats the cornstalks down into position to be carried forward onto the knives. Largest bundles of corn go through the machine without attention. *Explosion-proof blower fan. Direct drive*—power pulley, knife cylinder and blower fan are all on one shaft, thus reducing friction in the machine—saving power and lessening chances for breakages. The single lever control and friction reverse

Write for Catalog and Booklet on Silverized Silage

Get the facts on making good silage. See how and why it is to your advantage to get an "Ohio" for your own work, or hire an "Ohio" owner who can *Silverize your silage* for you. Silver's "Ohio" is made in seven popular sizes to fit the needs of any size farm. Four horse-power gasoline up to the steam tractor. 40 to 300 tons capacity. Write today.

SAFETY STORM BLAST LANTERN FREE

This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

SYNOPSIS OF PRECEDING CHAPTERS

The prologue, or Part First, is laid in New Orleans and concerns two brothers, one of whom has proved faithless to the girl who trusted him, the other one marrying the girl and giving her the name and home which the faithless brother had well-nigh robbed her of. The scene then shifts to the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold and "bunking" with an old Scotchman, named MacDougall, his only companion, save his beloved horse, Mowitza. A neighbor, named Hardy, comes to their camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. He becomes well acquainted with his employer's sister, Rachel Hardy, who takes a great interest in him and is much in his company, although she is warned by her friends that his name is probably an assumed one and that he may, indeed, be a squaw man, with an Indian wife living somewhere, as nothing is known of him. Genesee Jack overhears a conversation between Miss Hardy and her aunt, from which he learns that he is not "fit company for a lady"—this is the aunt's view—and the relations between Rachel and the guide are not quite cordial. However, Jack continues to act as a guide for the party, entertaining them with stories of Indians and wild life, although the formerly friendly relations between him and the girl are never resumed.

CHAPTER VI.

Tsolo—Tso-lo!

The retracing of steps, either figuratively or literally, is always provocative of thought to the individual who walks again over the old paths; the waning of a moon never finds the same state of feelings in the heart that had throbbed through it under the gold sickle. Back over how many a road do we walk with a sigh, remembering the laughter that had once echoed along it! Something has been gained, something has been lost, since; and a human sigh is as likely to be called forth by one cause as the other.

Miss Rachel Hardy, who usually laughed at sighs of sentiment, did not indulge in them as one by one the landmarks of the past three weeks rose in sight. But different natures find different vents for feeling, and she may have got rid of hers by the long gallops she took alone over the now known trail, priding herself on her ability to find her way miles ahead of the slower-moving party; and resting herself and horse in some remembered retreat, would await their coming.

Through these solitary rides she began to understand the fascination such a free, untrammeled existence would have for a man. One must feel a very Adam in the midst of this virginity of soil and life of the hills. She had not Tillie's domestic ideas of life, else the thought of an Eve might also have occurred to her. But though she wasted no breath in sighs over the retraced cultus corrie, neither did she in the mockery that had tantalized Clara in the beginning. That lady did not find her self-imposed duty of chaperon nearly so arduous as at first, since, from the time the other ladies awakened to the fact that their guide had a good baritone voice and could be interesting, the girl forgot her role of champion; also the study of mongrel languages; for she dropped that ready use of Chinook of which she had been proud, especially in her conversation with him, and only used it if chance threw her in the way of Indians hunting or gathering olallie (berries) in the hills.

Genesee never noticed by word or action the changed manner that dropped him out of her knowledge. Once or twice, in crossing a bit of country that was in any way dangerous to a stranger, he had said no one must leave the party or go out of hearing distance; and though the order was a general one, they all knew he meant Rachel, and the ladies wondered a little if that generally headstrong damsel would heed it, or if she would want willfully to take the bit in her teeth and go as she pleased—a habit of hers; but she did not; she rode demurely with the rest, showing the respect of a soldier to the orders of a commander. Along the last bit of bad country he spoke to her of the enforced care through the jungle of underbrush, where the chetwoot (black bear) was likely to be met and prove a dangerous enemy, at places where the trail led along the edge of ravines, and where a fright to a horse was a risky thing.

"It's hard on you, Miss to be kept back here with the rest of us," he said, half apologetically; "you're too used to riding free for this to be any pleasure, but—"

Don't distress yourself about me." she answered easily, but without looking at him. "I have felt a little lazy today, so has Betty, and have been satisfied to loaf; but now we are at the edge of this bad strip, and just down over this bend ahead is a long stretch of level, and I think—yes, I am quite sure—I am ready now for a run."

And without waiting to hear either assent or dissent to h r intention, she t uched Betty with the whip, and Mowitza and her master were left behind, much to Mowitza's dissatisfaction. She gave one plunge ahead as if to follow, but Genesee's hand on the bridle had a quick, cruel grip for a moment, and in slow silence they made their way down the timbered slope to the lower levels. The girl, free from companionship save her own thoughts, galloped through the odorous, shadowy table lands, catching here and there a glimpse of glistening water in a river, ahead as it trailed its length far below the plateau, and shone like linked diamonds away toward the east.

She remembered the river; it was a branch of the Kootenai. To be near it meant but a short journey home; two days more, perhaps, and then—well, their outing would be over. She would go back East, and say good-by to Betty; and then she began to think of that man who belonged to these hills and who never need leave them—never need go a mile without his horse, if he did not choose; and she envied him as she could not have thought it possible to do six months before—to envy a man such a primitive existence, such simple possessions! But most human wants are so much a matter of association, and Rachel Hardy, though all unconscious of it, was most impressionable to surroundings. Back of her coolness and carelessness was a sensitive temperament in which the pulses were never stilled. It thrilled her with quick sympathies for which she was vexed with herself, and which she hid as well as she could. She had more than likely never tried to analyze her emotions; they were seldom satisfactory enough for her to grant them so much patience; but had she done so, she would have found her desires molded as much by association and sentiment as most other human nature of her age.

Once or twice she looked back as she left the timber, but could see nothing of the others, and Betty seemed to scent the trail home, and long for the ranch and the white-coated flocks of the pastures, for she struck out over the table lands, where her hoofs fell so softly in the grass that the wild things of the ground-homes and the birds that rest on the warm earth scampered and flew from under the enemy's feet that were shod with iron. A small herd of elk with uncouth heads and monstrous antlers were startled from the shelter of a knoll around which she cantered; for a moment the natives and the stranger gazed at each other with equal interest, and then a great buck plunged away over the rolling land to the south, and the others followed as if they had been given a word of command.

The girl watched them out of sight, finding them, like the most of Montana natives, strange and interesting—not only the natives, but the very atmosphere of existence, with its tinges of wildness and coloring of the earth; even the rising and setting of the sun had a distinct character of its own, in the rarefied air of this land that seemed so far off from all else in the world. For in the valley of the Kootenai, where the light breaks over the mountains of the east and vanishes again over the mountains of the west, it is hard at times to realize that its glory is for any land but the mellow, sun-kissed "park" whose only gates open to the south.

The late afternoon was coming on; only an hour or so of sun, and then the long flush twilight.

Remembering the camping spot they were making for, she gave Betty rein, thinking to reach it and have a fire built on their arrival, and her hard ride gave her a longing for the sight of the pack mules with the eatables.

Another of those ugly, jolting bits of scrub timber had to be crossed before the haven of rest was reached. Betty had almost picked her way through it, when a huge black something came scrambling down through the brush almost in front of them. The little mare shied in terror, and the girl tried to make a circuit of the animal, which she could see was an enormous black bear. It did not seem to notice her, but was rolling and pitching downward as if on a trail—no doubt that of honey in a tree. Managing Betty was not an easy matter, and it took all of the girl's strength to do so until the black stranger passed, and then, on loosening the bridle, the terrified beast gave a leap forward. There was a crash, a growl from under her feet, and an answering one from the huge beast that had just gone by them; she had been followed by two cubs that had escaped Rachel's notice in the thick brush, as all her attention had been given to the mother; but Betty's feet coming down on one of the cubs had brought forth a call that the girl knew might mean a war of extermination. With a sharp cut of the whip, Betty, wild from the clawing thing at her feet, sprang forward over it with a snort of terror, just as the mother with fierce growls broke through the brush.

Once clear of them, the little mare ran like mad through the rough trail over which she had picked her way so carefully but a little before. Stones and loose earth clattered down the gully, loosened by her flying feet, and dashed ominously in the mountain stream far below. The girl was almost torn from the saddle by the low branches of the trees under which she was borne. In vain she tried to check or moderate the mare's gait. She could do little but drop low on the saddle and hang there, wondering if she should be able to keep her seat until they got clear of the timber. The swish of some twigs across her eyes half blinded her, and it seemed like an hour went by with Betty crashing through the brush, guiding herself, and seeming to lose none of her fright. Her ears were deaf to the girl's voice, and at last, stumbling in her headlong run, her rider was thrown against a tree, knowing nothing after the sickening jar, and seeing nothing of Betty, who, freed from her burden, recovered her footing, and, triumphant, dashed away on a cultus "coolie" (run) of her own.

When Rachel recovered her powers of reasoning, she felt too lazy, too tired to use them. She ached all over from the force of the fall, and though realizing that the sun was almost down, and that she was alone there in the timber, all she felt like doing was to drag herself into a more comfortable position and go to sleep; but real sleep did not come easily—only a drowsy stupor, through which she realized she was hungry, and wondered if the rest were eating supper by that

time, and if they had found Betty, and if—no, rather, when would they find her?

She had no doubt just yet that they would find her; she could half imagine how carefully and quickly Mowitza would cover the ground after they missed her. Of course there were other horses in the party, but Mowitza was the only one she happened to think of. She did not know where she was; the mare had struck into a new trail for herself, and had dropped her rider on a timbered slope of one of the foot-hills, where there were no remembered landmarks, and the closeness of night would prevent her from seeking them.

Twice she roused herself and tried to walk, but she was dizzily sick from the wild ride and the fall that had stunned her, and both times she was compelled to drop back on her couch of grass. The stars began to creep out in the clear, warm sky, and up through the timber the shadows grew black, and it all seemed very peaceful and very lovely. She thought she would not mind sleeping there if she only had a blanket, and—yes, some hot coffee—for through the shadows of the lower hills the dew falls quickly and already the coolness made itself felt with a little shiver. She searched her pocket for some matches—not a match, therefore no fire.

A sound in the distance diverted her thoughts from disappointment, and she strained her ears for a repetition of it. Surely it was a shot, but too far off for any call of hers to answer it. She could do nothing but listen and wait, and the waiting grew long, so long that she concluded it could be no one on her trail—perhaps some of the Indians in the hills. She would be glad to see even them, she thought, for all she met had seemed kindly disposed.

Then she fell to wondering about that half-breed girl who had hid back of the ponies; was it Genesee she was afraid of, and if so, why?

Suddenly a light gleamed through the woods above her; a bent figure was coming down the hill carrying a torch, and back of it a horse was following slowly.

"Genesee!" called a glad voice through the dusk. "Genesee!"

There was no word in answer; only the form straightened, and with the torch held high above his head he plunged down through the trees, straight as an arrow, in answer to her voice.

She had risen to her feet, but swayed unsteadily as she went to meet him.

"I am so glad—it—is—you," she said, her hands outstretched as he came close. And then that returning dizziness sent her staggering forward, half on her knees and half in his arms, as he threw the torch from him and caught her.

She did not faint, though the only thing she was still conscious of was that she was held in strong arms, and held very closely, and the beat of a heart that was not her own throbbed against her rather nerveless form. He had not yet spoken a word, but his breath coming quickly, brokenly, told of great exhaustion, or it may be excitement.

Opening her eyes, she looked up into the face that had a strange expression in the red light from the torch—his eyes seemed searching her own so curiously.

"I—I'm all right," she half smiled in answer to what she thought an unspoken query, "only"—and a wave of forgetfulness crept over the estrangement of the late days—and she added —"only—Hyas till nika" (I am very tired).

Her eyes were half closed in the content of being found, and the safety of his presence. She had not changed her position or noticed that he had not spoken. His hat had fallen to the ground, and something almost boyish was in the bend of his bared head and the softness of his features as his face drooped low over her own. Death brings back the curves of youth to aged faces sometimes—is it the only change that does so?

She felt the hand on her shoulder trembling; was it with her weight—and he so strong? A muttered sentence came to her ears, through which she could only distinguish a word that in its suppressed force might belong to either a curse or a prayer—an intense "Christ!"

That aroused her to a realization of what she had been too contented to remember. She opened her eyes and raised her head from his arm, brushing his lips with her hair as she did so.

"Were you so much alarmed?" she asked in a clearer, more matter-of-fact way, as she propped herself up on his outstretched arm; "and did you come alone to find me?"

He drew back from her with a long, indrawn breath, and reached for his hat.

"Yes," he said.

It was the first time he had spoken to her, and he did so with his eyes still on her face and that curious expression in them. He was half kneeling, his body drawn back and away from her, but his eyes unchanging in their steadiness. As the girl lay there full length on the mountain grass, only her head raised and turned toward him, she might have been a Lamia from their attitudes and his expression.

"It seemed long to wait," she continued, turning her eyes toward Mowitza, who had quietly come near them; "but I was not afraid. I knew you would find me. I would have walked back to meet you if the fall had not made me so dizzy. I am decidedly wake kloshe" (no good); and she smiled as she reached out her hand to him, and he helped her rise to her feet. "I feel all jolted to pieces," she said, taking a few steps toward a tree against which she leaned. "And even now that you have come, I don't know how I am to get to camp."

"I will get you there," he answered briefly. "Did the mare throw you?"

"I am not sure what she did," answered the girl. "She fell, I think, and I fell with her, and when I could see trees instead of stars she had recovered and disappeared. Oh! Did you see the bear?"

"Yes, and shot her. She might have killed you when her temper was up over that cub. How did it happen?"

Each of them was a little easier in speech than at first, and she told him as well as she could of the episode, and her own inability to check Betty. And he told her of the fright of the others, and their anxiety, and that he had sent them straight ahead to camp, while he struck into the timber where Betty had left the old trail.

"I promised them to have word of you soon," he added; "and I reckon they'll be mighty glad you can take the word yourself—it's more than they expected. She might have killed you."

His tone and repetition of the words showed the fear that had been uppermost in his thoughts.

"Yes—she might," agreed the girl. "That is a lesson to me for my willfulness;" and then she smiled mockingly with a gleam of her old humor, adding: "And so in the future, for the sake of my neck and the safety of my bones, I will be most obedient to orders, Mr. Genesee Jack."

He only looked at her across the flickering circle of light from the torch. It must have dazzled his eyes, for in putting on his hat he pulled it rather low over his forehead, and turning his back abruptly on her he walked over for Mowitza.

But he did not bring her at once. He stood with his elbows on her shoulders and his head bent over his clasped hands, like a man who is thinking—or else very tired.

Rachel had again slipped down beside the tree; her head still seemed to spin around a little if she stood long; and from that point of vantage she could easily distinguish the immovable form in the shifting lights and shadows.

"What is the matter with the man?" she asked herself as he stood there. "He was glad to find me—I know it; and why he should deliberately turn his back and walk away like that, I can't see. But he shan't be cool or sulky with me ever again; I won't let him."

And with this determination she said:

"Genesee!"

"Yes," he answered, but did not move.

"Now that you have found me, are you going to leave me here all night?" she asked demurely.

"No, Miss," he answered, and laid his hand on the bridle. "Come, Mowitza, we must take her to camp;" and striding back with quick, decided movements that were rather foreign to his manner, he said:

"Here she is, Miss; can you ride on that saddle?"

"I don't know, I'm sure. I—I—suppose so; but how are you to get there?"

"Walk," he answered concisely.

"Why, how far is it?"

"About five miles—straight across."

"Can we go straight across?"

"No."

She looked up at him and laughed, half vexed.

"Mr. Genesee Jack," she remarked, "you can be one of the most aggravatingly non-committal men I ever met. It has grown as dark as a stack of black cats, and I know we must have an ugly trip to make with only one horse between us. Do you suppose I have no natural curiosity as to how we are to get there, and when? Don't be such a lock-and-key individual. I can't believe it is natural to you. It is an acquired habit, and hides your real self often."

"And a good thing it does, I reckon," he returned; "locks and keys are good things to have, Miss; don't quarrel with mine or my ways tonight; wait till I leave you safe with your folks, then you can find fault or laugh, whichever you please. It won't matter then."

His queer tone kept her from answering at once, and she sat still, watching him adjust the stirrup, and then make a new torch of pine splits and knots.

"What do you call a torch in Chinook?" she asked after a little, venturing on the supposed safe ground of jargon.

"La gome towagh," he answered, splitting a withe to bind them together, and using a murderous looking hunting knife on which the light glimmered and fretted.

"And a knife?" she added.

"Opitsah."

She looked up at him quickly. "Opitsah means sweetheart," she returned; "I know that much myself. Are you not getting a little mixed, Professor?"

"I think not," he said, glancing across at her; "the same word is used for both; and," he added, thrusting the knife in its sheath and rising to his feet, "I reckon the men who started the jargon knew what they were talking about, too. Come, are you ready?"

Assuredly, though he had hunted for her, and been glad to find her alive, yet now that he had found her he had no fancy for conversation, and he showed a decided inclination to put a damper on her attempts at it. He lifted her to the saddle, and walking at Mowitza's head, they started on their home journey through the night.

"The moon will be up soon," he remarked, glancing up at the sky. "We only need a torch for the gulch down below there."

She did not answer; the movement of the saddle brought back the dizziness to her head—all the glare of the torch was a blur before her. She closed her eyes, thinking it would pass away, but it did not, and she wondered why he stalked on like that, just as if he did not care, never once looking toward her or noticing how she was dropping forward almost on Mowitza's neck. Then, as they descended a steep bit of hill, she became too much lost to her surroundings for even that speculation, and could only say slowly:

"Tsolo, Genesee?"

"No," he answered grimly, "not now."

But she knew or heard nothing of the tone that implied more than it expressed. She could only reach gropingly toward him with one hand, as if to save herself from falling from the saddle. Only her finger tips touched his shoulder—it might have been a drooping branch out of the many under which they went, for all the weight of it; but grim and unresponsive as he was in some ways, he turned, through some quick sympathy at the touch of her hand, and caught her arm as she was about to fall forward. In an instant she was lifted from the saddle to her feet, and his face was as white as hers as he looked at her.

"Dead!" he said, in a quiet sort of way, as her hand dropped nerveless from his own, and he lifted her in his arms, watching for some show of life in the closed lids and parted lips. And then with a great shivering breath, he drew the still face to his own, and in a half-motherly way smoothed back the fair hair as if she had been a child, whispering over and over: "Not dead, my pretty! not you, my girl! Here, open your eyes; listen to me; don't leave me like this until I tell you—tell you—God! I wish I was dead beside you! Ah, my girl! my girl!"

(To be continued.)

The condition of the cotton crop as of average date of June 22d is 78.8 per cent of normal, according to the reports of correspondents. This compares with the government condition of 77.5 per cent on May 25th of this year, 80.3 per cent on June 25th last year and the ten-year average for this date of 80.2 per cent. Boll weevil are numerous in almost all previously infested areas and some damage is already reported as having been done, although this is small to date. Farmers are making a stiff fight against the pest, but the latter seem to be gaining headway in most districts.

Frozen Desserts For Hot Weather.

During the hot summer months frozen desserts are much more appetizing than pastry, they are better for the system and they save the housewife much hot work over the stove. It does not take any longer to make a frozen pudding or a freezerful of sherbet or ice cream than it does to make a pie or a cake and when properly packed they may be kept for many hours before use.

In freezing puddings or creams chop the ice very fine and use it in the proportion of three parts of ice to one of coarse salt. Do not put anything in the freezer can until it is thoroughly cold. Usually from five to ten minutes is long enough to turn the freezer. Then remove the dasher, pour off the water, repack, and your dessert is ready whenever you choose to use it. Do not think you are being extravagant with ice and salt, for you will find that they pretty evenly balance the cost of fuel used in baking.

One may tire of plain ice cream, but there is such a variety of puddings and fruits that may be used as frozen desserts that there is no need of repetition and a dainty and appetizing dish may be placed before your family each time you bring the freezer into use in preparing a meal.

A Dainty Frozen Pudding.—One quart of very ripe blackberries, two cupfuls of water, one and one-half cupfuls of sugar, a pinch of salt, one tablespoonful of lemon juice, one-fourth cupful granulated tapioca, one cupful of whipped cream. Cook and mash the blackberries through a very fine strainer. Add the sugar and salt. Boil the tapioca in the two cupfuls of water until clear. When cold add the blackberry and lemon juice, and freeze. Serve in ice cream glasses.

Frozen Currant and Raspberry Punch.—Two cupfuls of very ripe currants, two cupfuls of very ripe raspberries, two cupfuls of sugar, two cupfuls of water, one-half cupful of orange juice. After crushing the currants put them into an agate saucepan with one cupful of water. Boil for three minutes and mash through a fine strainer. Mash the raspberries, cover with one cupful of cold water for ten minutes. Boil the sugar and water for three minutes and cool. Put all in the freezer and freeze.

Frozen Tapioca Pudding.—One quart of milk, one-fourth cupful of granulated tapioca, one cupful of sugar, two eggs, one-half teaspoonful of salt, one-half teaspoonful of vanilla. First put the milk on in the top of a double boiler; add the tapioca, and cook until clear. Beat the eggs and sugar together until light, and add them to the boiling tapioca; remove from the fire (the heat of the boiling tapioca cooks the eggs), add the salt and flavoring. Cool and freeze.

Frozen Banana Pudding.—Three cupfuls of milk, one-fourth cupful of cornstarch, one-half teaspoonful of salt, two cupfuls of mashed bananas, one cupful of sugar, one teaspoonful of lemon juice. Put the milk on in a double boiler; when hot, add the cornstarch, sugar and salt, mixed with cold milk until smooth. Cook for twenty minutes. When cold, add the bananas, which have been skinned, scraped and mashed through a wire strainer. The lemon juice is added just before closing the freezer. Freeze.

Frozen Tapioca Fruit Pudding.—Two cupfuls of grape or other fruit juice, two cupfuls of water, one-fourth cupful of granulated tapioca, one cupful of sugar, one-half teaspoonful of salt. The tapioca should be put on in the two cupfuls of water and boiled until clear. Add the fruit juice, sugar and salt, and boil for five minues. When cold, freeze. If you are using a fruit juice that is very sweet add only enough sugar to suit your taste. A teaspoonful of lemon juice will help to bring out the flavor.

Frozen Caramel Custard.—One quart of milk, two cupfuls of sugar, one-half teaspoonful of salt, one teaspoonful of maple flavoring, two eggs, four tablespoonfuls of cornstarch. Heat the milk in a double boiler. Mix the cornstarch with a little cold milk, two eggs, well beaten, and one cupful of sugar. Add salt. Cook for ten minutes. One cupful of sugar is melted and slightly burned. To it add half a cupful of cold milk and add to the custard. When cold add the flavoring, and freeze.

Pretty Lace Edge.

The edging here illustrated is a pretty pattern to use on towels or even on petticoats, and we have seen it made of rather coarse ecru thread and used on table runners and scarfs. Following are the directions:

Chain 20.

First Row—One treble in 5th stitch from hook, chain 2, skip 2 stitches in chain, 1 treble in 3d stitch, repeat twice; skip 2 stitches, 2 trebles, chain 3, 2 trebles in same stitch, forming shell, chain 2, 1 treble in last stitch of chain, turn.

Second Row—Chain 4, 1 treble in last stitch of shell, chain 2, shell into shell, 1 treble in top of treble before shell, 1 space, 4 trebles in next space, 2 spaces, turn.

Third Row—Chain 4, 4 spaces, shell into shell, chain 2, 1 treble in last stitch of 2d shell, chain 2, 1 treble, repeat to end, making 3 spaces from shell, turn.

Fourth Row—Chain 4, 4 spaces, shell into shell, 1 space, chain 2, 4 trebles in 2d space, chain 2, 1 treble, repeat to end, turn.

Fifth Row—Chain 4, 4 spaces to shell, shell into shell, chain 2, 4 spaces to end, turn.

Sixth Row—Chain 4, 6 spaces to shell, shell into shell, proceed as in 4th row, turn.

Seventh Row—Proceed same as in 5th

row to shell, shell into shell, 3 double crochet into each space to point, 6 double crochet in space at point, 3 double crochet in remaining spaces, to beginning of chain, turn.

Eighth Row—Chain 4, 1 treble in 3d stitch of double crochet, chain 2, 1 treble in next 3d, repeat to shell, shell into shell, repeat 6th row, turn.

Ninth Row—Proceed same as in 7th row to end of shell, 1 treble in top of last treble before shell on 8th row, chain 5, 1 double crochet in center of 1st space, repeat around whole point, turn.

Tenth Row—Chain 6, 1 picot, chain 2, 1 double crochet in center of last 5 chain, repeat to shell, shell into shell and repeat 8th row.

This finishes one point and you now proceed as in first row to form succeeding points.

To Remove Wagon Grease.

To the Editor:—In a recent issue of your paper I read of someone who wanted to know how to remove wagon grease from clothing. If she will pour a little clear kerosene on the grease spot and rub it briskly with the hands, repeating as often as necessary, then wash in suds the usual way the grease will all disappear. I seldom have to repeat it more than twice and I have used kerosene on most everything.

Scouring powder is fine to remove grease from the hands or from overalls. Use a good scrub brush on the overalls and they can be cleaned quickly and easily in this way. I hope some of the readers will try this.

Will someone please tell me how to make ripe tomato catsup? I have received much help through the Home page and hope someone will send in a good recipe. A Reader.

Butter Color Stain.

To the Editor:—I am coming to the Home department readers for a little advice. Can anyone tell me how to remove butter color stain from percale? I spilled some on a new dress, black and white check, and want to know how to get it out. Can anyone help me? M. R. B.

Good Way to Clean Silver.

To the Editor:—I saw an article on the Home page giving an easy way to clean silverware by leaving it in hot salty water for a few minutes. If one will put a small piece of zinc, about four or five inches square, into the water it is still easier. I have done this for the last three years. It will not polish them, but removes the tarnish and it then takes only a few minutes to polish them with a good silver polish. It is not nearly as hard on the silver as using the polish alone.

Now I wish some of the Home Department readers would tell me how to make chocolate cake look red.

Mrs. G. B.

Cucumber Pickles.

To the Editor:—I have taken your paper for a year and have gott n quite a few helps from it. Would like to know if anyone can give the recipe for cucumber pickles like you buy from the grocery store. My cucumber pickles are soft and mushy instead of being firm. Mrs. O. L.

Tests For Jars For Canning.

The following tests are suggested by the Office of Extension Work, North and West, States Relations Service, to determine if jars are defective for canning purposes:

Screw-top jars.—(1) Place top on jar without the rubber. Turn down tight. If the thumb nail can be inserted between top and glass, the top is usually defective. (2) Place rubber and cap in position and screw down lightly. Pull rubber from position; release. If the rubber returns to position between top and jar, the top is defective.

Glass-top jars.—(1) Place glass top on jar without rubber. Tap with finger around the outer edge of the top. If the top rocks it is defective. (2) Wire bail placed over the top of cover should go in with a snap, even when tightening lever or clamp spring is up. If it does not, remove bail from tightening lever and bend to make tight. This tightening of bail should be done every year.

Suggested Bills of Fare For the Children's Home Lunch.

1. Eggs, boiled, coddled, poached or scrambled; bread and butter; spinach or other greens; cake.

2. Beef stew with vegetables; milk; crisp, thin tea biscuits; honey.

3. Dried bean or pea puree; toast; baked apple; cookies.

4. Vegetable-milk soup; swieback; rice with maple sugar and butter or with milk or cream.

5. Potato chowder; crackers; jelly sandwiches.

6. Cold meat; creamed potatoes; peas; bread and butter; frozen custard or plain ice cream and plain cake.

7. Lamb chip; baked potatoes; bread and butter; sliced mixed fruits; cookies.

8. Baked omelet with spinach, kale or other greens; bread and butter; apple sauce; cake.

9. Milk toast; string beans; stewed fruit; cake.

10. Boiled potatoes; codfish gravy; bread and butter; lettuce; custard.

How to Press.

Good pressing is not only an important part of dressmaking and tailoring but it is also one of the most important features in the care of clothing.

Skirts should be pressed over an ironing board.

The board should not be too heavily padded. The covering should be drawn tightly and should be of a firm, smooth material that will not leave the imprint of the texture or weave.

Darts and curved seams should be pressed over a curved surface such as a tightly padded cushion.

Sleeve seams may be pressed over the handle of a broom after covering it smoothly with cloth.

Use the curved edge or side of the ironing board when pressing open seams. This prevents the edge of the seam being pressed into the garment.

Nearly all pressing is done on the wrong side of the garment.

The seams may be dampened if the material permits. For surface pressing lay over the material a damp cloth and press dry. When pressing on the right side a firm dry cloth is first placed over the garment.

Use a rather heavy iron for pressing.

Press slowly. Lift and place the iron bearing down heavily.

Always avoid a sliding motion, as it is apt to stretch the material.

White Baby Dress Must Go.

There is danger in dressing the baby in white. The continual glare of light reflected from a white surface is likely to injure the child's nerves and eyesight, say the home economics authorities at Iowa State College.

Clothing a baby in a white dress, placing him in a crib with white coverlets underneath, above and on all sides with perhaps a white ceiling to gaze at, is as hard on the eyesight of the child as squinting at glaring white snow is on that of a grownup.

To change the custom, centuries old, of dressing the baby in white will be a hard task, but the really sensible mother will realize that baby will be loved just as much and be just as pretty dressed in pale shades of pink, green, yellow and blue as in white and is much more likely to grow up with better eyesight.

Feathers Bring Good Money.

There is a ready market for prime feathers that have had proper care, according to N. L. Harris, superintendent of the poultry farm at the Kansas State Agricultural College, and the farmer's wife who is anxious to make extra money should look after this side line. Feathers bring in good money as a by-product. Feathers of ducks and geese bring approximately 50 cents a pound, depending on the kind.

The feathers should be picked when ripe, says Mr. Harris. In other words, all the animal matter should be out of the quill. At this stage they are easily plucked without damage or inconvenience and will not spoil or become moth eaten. It is advisable to separate the body feathers from those of the tail and wing and assort them according to color. White feathers are particularly valuable.

They should be kept in a cool airy room either in jute sacks, which allow the free circulation of air among the feathers, or in open bins where they can be frequently forked over to keep them from matting.

Recipes

Apple Sponge.—Half cup sugar, half cup milk, two eggs, one and one-half cups flour, two teaspoons baking powder, half teaspoon salt, five sliced apples. Beat eggs, add sugar, flour in which baking powder has been sifted, and milk. Beat well, add apples, pour into buttered baking dish, bake in moderate oven one hour, serve with sugar and cream.

Marshmallow Dainty.—Cut half pound marshallows into small pieces. Add to them one cup whipped cream, one and one-half tablespoons sugar, stiffly beaten whites of two eggs, one cup sliced bananas, one cup chopped nut meats; flavor to taste. Set in a very cool place one and one-half hours and serve in sherbet glasses.

String Bean Salad.—String the beans and boil whole; when tender and cold, slice each lengthwise and place them carefully crosswise on a platter. Season them an hour or two before serving, with a marinade of a little pepper, salt and three spoonfuls vinegar and one spoonful of olive oil. Just before serving drain off and mix with salad dressing.

Strawberry Cream.—To two cups boiling water, two cups sugar and juice of one lemon add half box plain gelatin

dissolved in a little cold water. When it begins to congeal whip thoroughly, add one pint whipped cream, add one cup mashed strawberries and one cup walnuts. Whip all until very light. Harden in molds, or it can be frozen.

Ripe Gooseberry Catsup.—Cook the gooseberries in a little water until soft. Press through a colander to remove skins and then through a sieve to remove seeds. Add two-thirds as much sugar as fruit, and cinnamon and cloves to taste. Cook slowly one-half hour and bottle hot.

Cherry Olives.—Do not remove stems from cherries used for pickling. Wash the cherries and pack lightly into sterile jars. Pour the following mixture over one quart of cherries: One tablespoonful salt, three-fourths cup vinegar. Fill up the remaining space in the jar with cold water. Place on rubber and cover and seal. Jars with glass covers are best to use with vinegar, since they will not corrode.

Dill Pickles.—Take medium sized cucumbers. Let them stand in water overnight or twenty-four hours. Remove, wash and dry. Put grape leaves on the botto ı of a stone jar, then pack in a layer of cucumbers very solid and cover with dill and cherry leaves. Repeat this process, being sure that the cucumbers are packed in solid and that plenty of dill is used. When the jar is full, cover with dill, cherry leaves and grape leaves; some horseradish may be added. For a two-gallon jar mix one-half cup coarse salt, one cup vinegar, and one gallon of water until the salt is dissolved. Pour over the cucumbers, place a plate on top and a weight on top of the plate. It is essential that cucumbers be held down solid. Do not put into a cool cellar for ten or twelve days. Remove pickles as needed, replacing weight each time.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1754—A dainty lingerie style ladies' envelope chemise. The pattern is cut in 3 sizes: Small, medium and large. It requires 3¼ yards of 36-inch material for a medium size.

1776—A pretty frock for mother's girl. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3 yards of 44-inch material for a 6-year size.

1684—A charmingly comfortable and unique sleeveless dress, with guimpe, having sleeve in either of two lengths. The pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 1½ yard for the guimpe, and 4½ yards for the dress of 27-inch material for a 12-year size.

1277—A simple serviceable apron model. The pattern in cut in 3 sizes: Small, medium and large. It requires 5½ yards of 36-inch material for a medium size.

1782—A simple frock for the little miss. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3 yards of 44-inch material for an 8-year size.

1759—A practical house dress. Percale, gingham, chambray, serge, challie and fiannelette are popular materials for this style. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 36-inch material for a 36-inch size.

1316—A chic and practical dress. Dress for misses and small women. The pattern is cut in 4 sizes: 14, 16, 17 and 18 years. It requires 4⅜ yards of 44-inch material for a 16-year size.

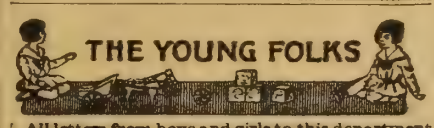
1775—A pretty dress for many occasions. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 8 yards of 36-inch material for a 36-inch size.

Waist 1603-Skirt 1602—A style with newest lines. Comprising ladies' waist pattern 1603 and ladies' skirt pattern 1602. The waist pattern is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. The skirt in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. To make the dress will require 5⅞ yards of 44-inch material for a 36-inch size. Two separate patterns, 10 cents for each pattern.

1756—A new skirt model. The pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires for a 26-inch size, 3⅝ yards of 44-inch material.

1201—A practical "short clothes" outfit, comprising dress, petticoat and drawers. The pattern for this excellent trio of garments is cut in 4 sizes: 1, 2, 3 and 4 years. It requires 2¾ yards of 27-inch material for the dress, 2⅜ yards for the petticoat and ¾ yard for the drawers for a 3-year size.

1761—A popular model. Tub silk or taffeta, washable satin or linen would be nice for this. The pattern is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3¼ yards of 44-inch material for a 36-inch size.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Likes the Riddles.

Dear Young Folks:—I read the young folks' letters every week and enjoy them very much. I live on a 160-acre farm with my parents and my sisters. We have horses, cows, pigs, chickens and geese on the farm. We milk nine cows and I help nearly every morning and night.

I thought that the cover on the paper of the 29th was so pretty that I cut it out and mounted it upon cardboard and I am going to hang it up in my room. I think the song, "The Star Spangled Banner," is very pretty.

We live one mile from school. My two sisters and I went all last term without being absent. We all liked our teacher very much. She taught us sewing and handiwork. On the last day of school we had some of our work on exhibition. We had a program and then we served ice cream and cake. We then played games and everybody had a good time.

DADDY'S HELPER.

I enjoyed Mr. Miller's letter and am sure that all the young folks did. I wish he would write more about his South African home. It must be very different from our homes here in the United States.

I think giving riddles in our letters is lots of fun. I will give one. What can go up a stovepipe down, but can't go down a stovepipe up? This is a very common riddle and perhaps many know what the answer is without guessing.

—Carrie.

Will Mr. Miller Write Again?

Dear Young Folks:—It has been nearly three years since I first wrote to this dear page of ours and now I want to come again.

Before I say anything about myself I want to urge Mr. Miller to write again and tell us more about his faraway home, and I know all the other young folks are with me. Are you not?

I am a farm girl, of course, or I wouldn't be such an interested reader of this good old paper. There isn't a thing in it from cover to cover that isn't worth the reading.

I am mother's housekeeper. My father passed away to his beautiful home above in April and now while mother manages the farm I keep house. I have blue-gray eyes, brown hair, am five feet six inches tall and seventeen years young.

I am sending a recipe for jelly roll for Helen to put in her book. Four eggs, one cupful of sugar, one cupful of flour, pinch of salt; flavor to taste, two level teaspoonfuls baking powder. Mix well; spread thin in a square pan and bake in a quick oven. When done turn out on a wet cloth, spread quickly with jelly and roll while hot.

Here's to The Wisconsin Farmer,
The best farm paper yet,
For every week it comes around
And you know what you will get.

There's something for each kiddie,
And always for father and mother;
To beat this dear old paper, friends,
I don't think you will find another.

—Patty.

Belongs to a Bird Club.

Dear Young Folks:—I am interested in the Young Folks page, so I thought I would write to you. I joined a bird club last spring and I put up two houses for them. There are now two pairs of wrens in each house.

I am fourteen years old and am in the seventh grade. I live on a farm of 200 acres. I can crochet and tat.

I think the answer to Marguerite's riddle, "What has four fingers and a thumb, but is neither flesh, fish nor bone," is a glove. I will give a riddle, too. Which hen lays the longest?

—Bertha.

Can't Wait Till the Mail Comes.

Dear Young Folks:—I can hardly wait till the mail comes, so I can read the Young Folks department. I live on a 160-acre farm. I have a cat about four years old. She has two kittens named Buttercup and Snowball. The old cat's name is Flossy. I also have a dog named Dewey and a Shetland pony that I ride to school. Our school was out the 26th of May, and we had a picnic and program. I am nine years old and am in the fifth grade.

I think the answer to Mae's riddle, "What makes more noise than a pig under a gate?" is two pigs. Here is another riddle for you: Up and down, up and down, touching neither sky nor ground.

—Hazel.

International Sunday School Lesson.

Lesson for July 23, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Paul at Corinth.

LESSON TEXT—Acts 18:1-22.

GOLDEN TEXT—Be not afraid, but speak, and hold not thy peace.—Acts 18:9.

I. Paul's Companions. (vv. 1-6). Paul's coming to this city after his experiences in Athens is significant when we read I Cor. 2:1, 2. He found a home as usual at first among his Jewish countrymen. Aquila and Priscilla were not only fellow Christians, but fellow craftsmen (v. 3). Paul supported himself, as Jesus did for thirty years, as a carpenter. This gave opportunity to reach the people naturally as one of them. At the same time he set them the example of doing good (I Cor. 10:31; I Cor. 9:6-12; II Thess. 2-9). Paul did not think it a lack of faith to do manual labor or secular work for his own support because God had called him to preach. In the midst of his labors (v. 5) Silas and Timothy came to him from Philippi and Berea. The Philippians had sent him aid and brought news of the abundant harvest of faith and love in that church. Paul was weak and sick and dejected in spirit (II Cor. 2:3), probably bodily sickness. He was also in want (II Cor. 11:9). As he meditated on the word, it had so got hold on him that he could not keep still. It overpowered him with the thought that Jesus was the Christ and that he must

tell it out, but the Jews were not willing to receive his testimony. "They opposed themselves and blasphemed" (v. 6). The good news these helpers brought encouraged him in his conflict (v. 6).

II. **Paul's Compulsion.** (vv. 7-11). The opposition of the Jews did not prove his testimony to be untrue or that it had been unwisely presented, but rather it revealed the iniquity of the hearts of the men who were the religious leaders. To their faces Paul could exclaim, "I am clean" (v. 6). It is a great thing for any man to be able to say this, and it is the privilege of every believer (Acts 20:26). Then we can say with Paul: "I shrank not from declaring unto you the whole counsel of God." (R. V.) If we do not declare unto men the way of life, then their blood is upon us (Ezekiel 33:4, 8, 9), but are we indeed clean of the blood of all in our own homes, in our churches, in our Sunday School classes, in our communities and in the lands beyond the sea? This compulsion disconnected Paul from the false religionists of his day. "From henceforth I will go unto the Gentiles." The advantage of the house of Justus was (a) that the owner was a proselyte, not a born Jew. (b) The place was close to the synagogue so that his preaching would be a standing invitation to the Jews, and (c) Justus was evidently a Roman citizen, and Paul would gain access through him to the more educated people of the city. Moreover he would have greater advantage of the Romans than of the Jews for protection of the Christian converts. We do not infer that he left his lodgings in the home of Aquila and Priscilla nor ceased his work of tent making.

Paul's testimony after Athens was based only on the cross (I Cor. 2:1, 2) and it was that which turned "impure, sinful souls into pure brides whom he conducted to Christ" (see I Cor. 6:9-11). This vision kept Paul in the city where he founded one of his strongest classes (vv. 11, 18).

III. **Paul's Contest,** (vv. 12-17). Gallio, the brother of Seneca, listened to the charges, but threw the accusations out of court (vv. 14, 15). Sir William Ramsey calls this decision the "charter of Christian freedom." Freedom of religious speech was granted over the entire Roman empire so far as Roman authorities were concerned, and the door was open for Paul to make his way throughout the civilized world. Thus we have further evidence that all of Corinth was no match for Christ. The Lord had people there who must be called by the spoken word, and Paul was the one to speak the word. The Lord only allows us to be hurt when both we and the work can be helped thereby. He never really allows us to be hurt (Rom. 8:13; Isaiah 54:17). Christian workers in this land are confronting the same Corinthian evils in every great city; intemperance, crime, graft, dishonesty, white slavery, oppression of the poor and other works of the flesh.

It is the business of every preacher and Christian to pray and teach and work and live to save men from these evils and to convert them to righteousness.

There are also Corinthian evils in the heart, and in order to overcome them we must put on the whole armor of God, and be filled with the Spirit of Christ.

Summary: At Corinth Paul worked at his trade, converted his fellow workmen, preached to Jews and Gentiles, founded a strong church, wrote letters to the Thessalonians, had two helpers, Silas and Timothy, accepted aid from the Philippians, received a vision in the night from God, was delivered by the Roman governor, stayed nearly two years and used the city as a strategic center.

The Blue Bird Brings Happiness

according to Maeterlink's story and this is proved true by the delight of the woman who receives our **Blue Bird China Ware.**

Special July Offer

A set of six fruit or sauce dishes will be sent prepaid to any one who will send a club of only 5 one-year subscriptions to The People's Popular Monthly, at 25c each.

This is just the season of the year when fruit dishes are needed most and this beautiful Blue Bird pattern can be used on any occasion.

Remember All that is necessary for you to do is secure the subscriptions of only 5 friends for The People's Popular Monthly, at 25c each, and the six Blue Bird pattern fruit dishes will be sent you prepaid.

A subscription for two years at 50c counts the same as 2 one-year subscriptions at 25c each

This is a special offer for July only and you are urged to be prompt in sending your club list to secure these fruit dishes. Address all mail to

The People's Popular Monthly, Dept. H

Des Moines, Iowa

New Creamery Grows.

The new creamery at Superior, which was opened last fall by the farmers' co-operative company, is growing rapidly, as indicated by the June statement of business. This was the record month and approximately ten tons of butter was churned, which is a splendid showing for a creamery in a county so new as Douglas county.

The record churning for one day was made recently when the creamery force turned out 2,000 pounds of butter. The daily average churning is now 1,000 pounds a day. All of the product is disposed of right in the Twin Ports. No trouble is experienced during the warm weather in keeping either the cream or the butter cool and fresh, for the collection of cream is done by means of refrigerating cans and the refrigerating room at the creamery is large enough to accommodate all the output.

Sheep For Finishing.

Carlson Bros., of Iron River, Wisconsin, are planning to ship into Upper Wisconsin about 3,000 western sheep the latter part of July to be finished for the Chicago market on the cut-over lands of Douglas and Bayfield counties. This experiment will be watched with interest, although Carlson Bros. have been shipping in and pasturing western sheep for several years. Mr. H. A. Johnson, of Superior, is also enthusiastic over buying Montana sheep and shipping them into Upper Wisconsin for finishing. These sheep are bought in Montana and other points and billed to Chicago on a through bill of lading, with a stop-over feeding privilege which enables them to turn the sheep out on the cut-over lands in Bayfield county in the vicinity of Iron river where they are fattened in a period varying from thirty to ninety days. They are then reshipped for the small charge of $5 per car. "Without doubt, every farmer in Douglas county ought to have a few sheep," said Mr. Johnson, "as a nucleus of a larger flock. Wool is high and mutton is high and have every prospect of remaining so. Sheep are very useful in clearing the land, as they eat a great variety of stuff—shrubs, weeds and grass. Last year Carlson Bros. made the mistake of bringing in the sheep too late—some time in October. They ought to be here now. They should be kept on the grass here from 60 to 90 days. Farmers who have tried sheep farming are not willing to go back to cattle raising or mixed farming."

Cow-Testing Circuit.

Mr. G. M. Householder, the new agricultural representative of Rusk county, is organizing cow-testing circuits so that each member of a circuit may have his individual cows tested for milk and fat production. Circuits have been formed at Hawkins, Glen Flora, Tony, Conrath, Ladysmith, Atlanta, Weyerhauser, Town of Rusk and Murry. In urging every farmer to join a cow-testing circuit Mr. Householder points out the following practical reasons:

1—Because the test not only points out the poor cows, but the good ones also. Many cows are considered only average and are found to be the best in the herd when the real records take the place of the "guess system." Sentiment is a strong factor in selecting the cows worthy of being retained in the herd. The cows' disposition and temper enters seriously into the matter. With records such minor things are overlooked in the real producer.

2—Because persistency of milk flow is the one qualification that outranks all others in worthy cows, is very hard to estimate under the "guess system," but is easily brought to the owner's attention through the test.

3—Because the test develops better feeders, deeper thinkers, better dairy men, and better methods of caring for dairy stock. It checks overfeeding and insures greater net profits.

4—Because the monthly visit of the tester and the conversation held with him, and the tendency it creates to increased discussions with the neighbors, help to broaden the mind, induce reading and studying, in fact, make better dairymen and better citizens.

5—Because cows from regularly tested herds will sell for more money, and so do their offspring.

6—Because the herdsman takes greater interest in the herd that is tested than in the untested herd.

7—Most important of all is the fact that no other factor so interests the boys and girls and attaches them to the farm and the dairy as that of accurate records. If you do not believe that records of dairy cows are interesting to children, try it on your youngsters and you will soon be convinced.

Good Alfalfa Yield.

That Upper Wisconsin is well suited to alfalfa is well illustrated by the experience of one Barron county farmer, Mr. F. J. Fuller, who at the first cutting this year secured 840 pounds of hay from a plot measuring twenty-four rods square. This would be equal to two and three-quarters tons to the acre for one cutting. It was cut and allowed to cure in the field for nine days.

Dairy herd of John Jolman, near Mellen, Ashland county, grazing in a pasture which fifteen years ago was heavily covered with native timber.

Leaves Marinette County.

Prof. D. S. Bullock, well known in Upper Wisconsin especially because of his connection with the agricultural department of the Marinette County School of Agriculture, has joined the faculty of the state college of agriculture. He will be in the field extension work of the animal husbandry department and will organize breeders' associations, judging contests, etc.

FARMERS' CONGRESS.

Annual Session to be Held in Indianapolis in October.

That the farmers of the United States are taking more than a passing interest in the next session of the Farmers' National Congress, U. S. A., to be held in Indianapolis, Indiana, October 17, 18, 19 and 20, 1916, is evidenced by the numerous inquiries which are being received daily by Dr. J. F. Griffin secretary of the organization.

Prof. Henry G. Bell, an agronomist of national reputation, has accepted an invitation to address the congress and has chosen a subject of vital interest to every farmer, "Managing Soil for Profit." As the title implies, it has to do with the use of fertilizers and in order to more forcibly impress his audience Professor Bell will use an illustrative apparatus. He has given this lecture a number of times, and everywhere his hearers have been loud in their commendations.

A large bacteriological laboratory in the vicinity of Indianapolis has invited the delegates to spend a morning during the session going through their plant. This ought to prove very instructive, as the different processes of serum production for the cure of hog cholera will be shown, and the farmers will also be given an insight into the various elements of sanitation, feeding and general care necessary to prevent losses from this and other diseases affecting swine.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Force the Pullets Along.

The increase in egg prices will begin about October 15th and will continue to soar for a couple of months at least. This is due to the fact that old hens are molting and the majority of the pullets are still immature. Between these dates the market is practically dependent on eggs that have been previously stored.

Pullets that have properly matured should commence laying at the age of six months. Some of the smaller breeds will lay sooner than this. Many fail to comprehend just how important it is that the pullets should reach maturity at an early age. Where one has a flock of several hundred fowls it will mean a considerable profit in the business to have them begin laying early.

The principal reason why pullets do not mature sooner is lack of food. To short change them on their ration will check their growth, consequently delay the laying period. Then it may be that they have been well fed, but have been overcrowded in their quarters. This is a very serious mistake. It means a lot of stunted pullets that will seldom make good layers. The pullets should be separated from the old hens by the time they are two to three months of age. They will get their growth much sooner than if they were continually being pecked at by the older hens. Then it is very seldom that they get enough to eat where they run with the hens.

The young pullets should have all the green stuff they will consume. If they are on limited range green-cut clover should be fed them and they will consume large quantities of it every day. They must have a liberal amount of grain and fed some form of meat, as they will not find enough bugs to supply their demands. Beef scrap is probably the best animal feed for poultry. Plenty of sweet milk will largely take the place of meat. It is hardly necessary to add that they must have pure drinking water.

The pullets should be separated from the roosters at an early age. In fact, I think it best to separate them as soon as the sex can be distinguished. Where they are allowed to run together the cockerels will invariably get the largest end of the feed, causing the pullets to be "runty."

It is a good plan to sell off a large number of the old hens in the fall and make more room for the pullets. They should be habituated to their winter quarters early—at least a month before they begin to lay. Often birds are changed abruptly from free range to yarded houses, and do not get enough green food. This should be carefully looked after, as it will retard the egg production quite a while.

The house should have a thorough cleaning before the pullets are put in them. The house does not need to be tight, but must be warm with sufficient ventilation to keep the fowls healthy. If the house is not well ventilated, saw out some windows and tack screen wire over the holes. In real cold weather, and on cold, damp nights, a muslin curtain can be tacked over these. The house should be sprayed and cleaned from top to bottom, the roosts and nest boxes included. When it has been given a liberal coat of whitewash, it will be ready for the reception of the fowls, provided it has been properly repaired, and I think the pullets will be perfectly content in a clean, comfortable house, if they are given plenty of the right kind of feed.

It is claimed that it is a good idea to force the pullets slightly about a month before they mature. At this time the pullets will take on a glossy appearance, with a bright red comb. It is almost a sure indication that she is getting ready to begin laying. A dry mash should be fed, of wheat, bran, and corn meal in equal parts, and about the same amount of beef scrap. This should be kept before them. A scratching feed of cracked corn, wheat and oats should be fed in a litter at night and morning.

One of the most certain methods of increasing the production of your flock, is to mark the early layers and breed from them. Each pullet can be leg-banded when it begins to lay, making a record of it. Unless something is done to determine the early layers, one is likely to breed from a fowl that began laying two or three months later than others. If you have pullets on hand that have not matured as they should, it is a good plan to dispose of them, as it is hardly probable that they will make profitable keepers.

Confining Poultry.

To the Editor:—On the farm it sometimes becomes necessary to confine the poultry for a short time. In case small fruits such as blackberries, raspberries, etc., are grown near the house, or when other products of the farm are just coming through the ground (such as corn, beans and peas) a large flock of poultry will do a lot of damage by eating every berry that shows signs of ripening, and pecking up every hill of corn and peas as fast as they peep through the ground.

We have an inclosure around the henhouse, of chicken wire, in which there are shade trees under which our flock may seek shelter from the hot sun when thus confined. One of the most important things to consider when the flock is in confinement is to furnish them with a certain amount of vegetable and animal food to make up for the loss of that that the fowls secure for themselves when out on free range. To supply this deficiency we feed our poultry an abundance of lettuce, onion tops, red and white clover, green grass, cut up fine.

We have found nothing better than sweet milk as a substitute for the animal food for fowls kept in confinement when fed liberally. We feed whole and cracked corn, wheat screenings, sunflower seed, wheat bran and all table scraps to make a variety which is essential for fowls at any time and needed more especially when thus confined. We also keep the hens with young chicks inside the enclosure at this time, but allow the chicks to go in and out through the wire at will, as they will not wander far from the mother hen and will do but little damage anyhow. We provide fresh water for the fowls when kept up, twice daily and keep the drinking vessels in a shady place. We see no difference in the egg production when the hens are thus confined, and we are sure that this is owing to the good treatment given them.

A Subscriber.

Good Words For Horticulturist Patten.

To the Editor:—I have just spent four days with Hon. C. G. Patten at Charles City, Iowa, who is doing more for the horticulture of the northwest than Burbank is doing for California. Mr. Patten has been working for the improvement of fruits for forty-eight years and for twenty-eight years he has been experimenting on the Chinese Sand pear as a stock to produce a strain of pears blight proof, perfectly hardy, good bearers and excellent quality. He has already produced two kinds that fill this bill and has hundreds of trees of hundreds of crosses just coming into bearing in his seventeen acres of trial orchard besides 5,000 choice seedlings three feet high of many choice crosses that must be transplanted into orchard rows next spring to fruit.

Beside the work on the pears Mr. Patten has hundreds of crosses on the 7,000 trees of apples in the trial orchard that are just coming into bearing. He has produced several seedlings that stand high in the apple lists for size, quality and productiveness. Among these are "Patten's Greening," hrady enough to go to the northern limit of apple growing. "Brilliant," "Silas Wilson" and others are choice new varieties that will take a wide range. Beside the pear and apple experiments he has hundreds of crosses of plums. He has already produced two kinds better than any of our American kinds that are now full of fruit, showing a hardy type of bloom that escaped the killing weather that came in blossom time destroying nearly all the fruit of our standard hardy varieties. If the hardiness of the bloom of these new kinds prove they can stand bad weather conditions, that one item will be worth millions of dollars in plum growing.

Mr. Patten is breeding "form" to the trees of apple, pear and plum, putting on the branches at right angle to the central trunk so that, no matter how much weight, those branches will never split down. This is a point, I believe, no other trial station in the world has even attempted.

The state of Iowa and the horticultural department at Washington are slow to appreciate the work of Mr. Patten. He is receiving some little help, but he needs more money, more land and a number of experts to aid him while Mr. Patten can furnish the brains to contrive these experiments. Mr. Patten was born in 1832 and he needs the help now that will be able to carry on this work for twenty-five years to complete the crosses already under way. Silas Wilson, of Nappa, Idaho, says, "Mr. Patten is a greater man than Burbank, of California."

We know he is doing a great work and the department of horticulture ought to sustain and complete the good work under way.

The prospect in this part of the state is poor for a crop of tree fruits.

Geo. J. Kellogg.

AILING ANIMALS.

Injury to Carpus or Knee.

I have a dark bay horse about eighteen years old weighing about 1,100 pounds. His left knee has a lump on it which was caused by being cut by a plow about a year ago and he walks stiff with this leg, dragging it slightly, which makes him stumble at times on the road. While plowing with him this spring the cut opened up once and a drop or two of blood came out but did not fester. Would like to know what to do for him to draw the swelling out and take the stiffness out.

Probably the joint was injured when the accident happened. This may always leave the joint stiff. The old wound broke open from slight injury. You did not say what the character of the lump was. It will be hard to get results here. Try the use of some such agent as caustic balsam and it may be of some benefit.

Bloody Milk.

I have a young cow that gives bloody milk. She gives a lot of milk. What can I do for her? She was fresh about two months ago.

Blood may escape with the milk when the udder has been injured by blows, also when it is congested or inflamed when the circulation through it has been suddenly increased by richer and more abundant food or when the cow is under the excitement of heat. It may also come about from the eating of acrid or irritant plants. Deposits of tubercle or tumors in the udder or induration of the gland may be sufficient causes, the irritation caused by milking contributing to draw the blood. The treatment will vary with the cause. In congested glands give one pound epsom salts and daily thereafter one-half ounce saltpeter, with a dram of chlorate of potash; bathe the bag with hot or cold water and rub with camphorated lard. If the food is too rich or abundant it must be reduced. If from acrid plants these must be removed from feed. Careful milking is imperative.

Nervousness.

I have a gray horse about twenty years old. Whenever he is hitched up double he insists upon going at a gallop all the way, not stopping for hills or anything. He is driven seventeen miles every day, which is hard on him and the other horse to go all the way at such a gait. I can't hold him down with any kind of sharp bits, although they cut his mouth until the blood drips from it. It only makes him all the worse. He started to act that way a year ago and seems to be getting worse. Before then he was gentle as any horse. Can you tell me what the cause is and what I can do to control him?

It seems your animal has some nervous trouble, the nature of which would be hard to tell without a thorough examination of the animal. In cases of this kind severe bits only tend to make a sore mouth and do not correct the condition. Why not have your local veterinarian look him over and see if he can find the cause of the trouble?

Mare Losing Colts.

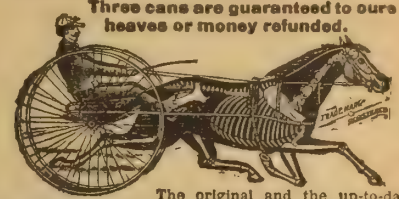
I have a black mare fourteen years old that has lost her colt two years now. They come and live a few days or a week. Their eye ball and the lids and also the lips on the inside are yellow. The bowels were all right in both cases, but the urine was quite yellow. I asked a veterinarian about it and he said he didn't think it could be jaundice in such a young colt. The mare is fat and healthy all the time, has raised six colts. Would you breed her again or would you breed her to a jack? I have a cow that gives bloody milk in one teat. Great clots come out at first. She was all right when she was first fresh.

If this mare has raised several colts previous to these two I would breed her again, but I would try another horse or a jack. In regard to your cow giving bloody milk you will find this answered in answer to another party inquiring about this condition in his cow.

DEATH TO HEAVES

NEWTON'S Heave, Cough, Distemper and Indigestion Cure.

Some cases cured by 1st or 2nd $1 can. Three cans are guaranteed to cure heaves or money refunded.



The original and the up-to-date Standard Veterinary Remedy for Heaves; free booklet explains fully. 34 years sale and veterinary use.

CURES HEAVES BY CORRECTING CAUSE—INDIGESTION. IT'S A GRAND CONDITIONER AND WORM EXPELLER

Safe. Most economical. Excellent for Cattle and Hogs. $1.00 per can at dealers, at same price by parcel post.

THE NEWTON REMEDY CO., Toledo, Ohio

Shoo-Fly THE ANIMALS' FRIEND

For keeping flies and many other insects off of animals—in barn or pasture—longer than any imitation. Used and endorsed since 1885 by leading dairymen.

$1 WORTH SAVES $20.00 in milk and flesh on each cow in a single season. Excellent for galls. Allays itching. Aids in keeping animals from irritating sores by rubbing or stamping. Excellent for lice and mites in poultry houses.

$1.25 ($1.50 west of Mississippi River) will bring you enough Shoo-Fly to protect 10 cows 2 weeks, also our 3-tube gravity sprayer. EXPRESS PREPAID. Money back if not satisfactory. Name Express Office. Booklet FREE. Special terms to agents.

Shoo-Fly Mfg. Co., Dept. 21, 1310 N. 10th St., Phila. Editor knows from experience Shoo-Fly is O. K.

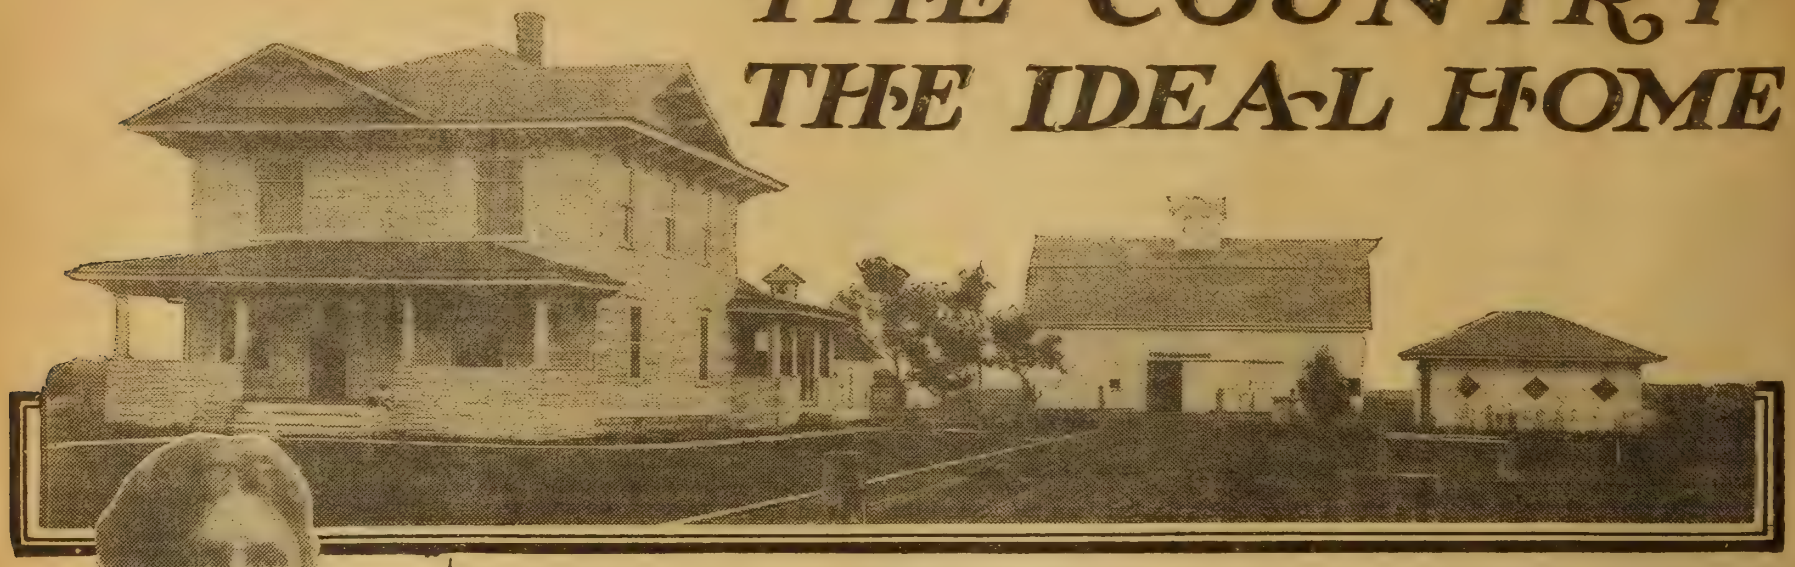
EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

THE COUNTRY THE IDEAL HOME



Miss Margaret Dolliver

MISS MARGARET DOLLIVER, the sixteen-year-old daughter of the late United States Senator J. P. Dolliver, of Iowa, represented the Fort Dodge High School recently in a discussion contest, the other competitors being eight boys, representing as many other high schools. Five subjects were announced prior to the debate, the one to be actually debated being announced but a few hours in advance of the contest. Miss Dolliver won the decision over the eight boy contestants, setting fourth the advantages of the country over the city. That she has inherited her gifted father's eloquence and debating ability is thus conclusively proved. Miss Dolliver has written this article especially for this paper, following the lines of her prize-winning debate effort.

IT HAS always been the ambition of our whole family to go back to the country. So it was a great pleasure to me to find the favorite topic of our family discussions heading the list of questions of the day which were proposed for discussion. After I found that I was to represent my school in the first annual discussion contest I read over the list of questions more thoroughly. They were as follows:

Resolved, That the rural home having consolidated school advantages is better than the town or city home for boys and girls under college age.

Resolved, That athletics calculated to bring out champions will encourage a wider student interest and participation than athletics restricted to the requirements of the student.

Resolved, That since over one-half of the words in the English language are derived from the Latin, it ought to be a required study in the grade schools.

Resolved, That military discipline destroys individual initiative and should not be introduced in the public schools.

Resolved, That unusual opportunity had more to do with the fame of Lincoln than unusual talent.

These were surely fine questions for a discussion, but after reading them all over I came back to the first one.

The more I studied it the more I wished that it might be decided upon for the final contest. The day came, all the competitors were gathered ready to hear which one of the five questions they would discuss. When the news came that the first one had been decided upon no one was more pleased than I. I spent the few remaining hours perfecting what I was to say, hoping against hope that when the time came I might be able to say what I really thought about country life. I am giving you what I found words to say on that memorable night, but I still believe that the best arguments for the free life of the open country lie hidden in the minds of those who have had the good fortune to get into closer contact with it.

The question of the rural home against the city home is one that vitally interests all of us, for the boys and girls of today are to be the men and women of tomorrow. And on their education and development depends the future of our whole nation. It is not a question as to the advisability of the country for life, but as to whether or not the foundation of the child's character ought not to be laid in the rural districts. Of course, comparisons must be made on the basis of relative merit. Rural slums must be compared with city slums and the city avenues with the prosperous districts of the country. Then the contrasts will not be so lurid and we will be able to see the facts in their fair perspective.

I believe that the rural home with consolidated school advantages has just as fine school advantages as the home in the small towns or cities, for boys and girls under college age. The consolidated schools all over the country are new, have fine scientific equipment and good teachers. They also provide a social center in no way inferior to that enjoyed by the children in the small towns and cities. Consolidation has proved a decided success in thirty states of the Union, as successful in Oregon as in Massachusetts, Wyoming, Indiana, Illinois, Wisconsin and Ohio. In our own state of Iowa, as we find in the report of the board of education, there are one hundred and twenty-seven consolidated schools which are no longer an experiment but a success. In short, the consolidated school has revolutionized the life in the country, as we see by visiting the rural districts in Orange township. Robert J. Aley says, "Consolidated schools are built to make the opportunity of the children in the country equal to that of those in the city." And he further adds that wherever they have been tried they have surely accomplished their purpose.

Having proved that the educational advantages are equal it only remains to establish the proposition that the rural home is superior to that in the small town or city.

First the physical development is far superior to that in the city, for the boys and girls have fresh air and pure food. In the Patterson (New Jersey) Guardian there was a cartoon that shows the true condition clearly. Mr. Ruralite is shown standing at the cross roads between the city and the country life. The smoke of a city factory in the istance takes the form of outstretched hands pointing back to the country. On one hand is written in flaming letters "poor health" and on the other "bad food." It will not be long till the whole country can read those flaming letters and the cry will arise, "Back to the country to bring up our boys and girls."

Too, the child in the country comes in contact for the first time with real work. This thing in itself builds physical prowess. It puts iron in the blood and prepares him to meet life squarely. Let us look at the city boy in this respect. Compare the two; the country bred boy in overalls, rough, rugged and ready, always whistling at his work, and the city chap with his curled ringlets, Lord Fauntleroy suit and mammoth white collar deep in some tale of adventure and always "too tired." This last life dulls the fighting edge and takes away all thought of the climbing life. Ask yourselves the question, which of these two would you rather have your child like? The answer, if recognized, would drive every parent back to the country. In fact it has been truly said that the city is the graveyard of the national physique.

Next the mental vigor is far higher in the rural districts. There the boys and girls mold their constructive instincts into a lasting initiative. William James in his "Talks to Teachers" says that before a child is nine years old he either knocks down or builds up. In the country the child cannot tear down, for all about him the upbuilding of nature is going on. The child is bound to create something and thus we see the first mark of individual initiative, the thing which is to make the man. A child, as we all know, performs in his later life just as he has been taught in his early youth. What a world it would be if every person in it would use his initiative and construct instead of tear down. The more things a child comes in contact with the more he feels himself a part of the world in which he lives. Every nail he pounds into the wagon box he is building is a nail driven into his character to strengthen him so that he may successfully fight the battle of life. Also the child learns concentration of mind and energy. He learns how to utilize the twenty-four hours in the day to the best advantage. Nature demands her duties and on time, the grain must be sowed, cultivated and reaped all in season. Thus the child in the country has one of life's greatest lessons instilled in his very character, while the city child does not learn until he has had many long lessons in the hard school of experience.

Again, the quiet life of the country encourages study. There you do not feel the "pull of the world" away from study to diversions. Here is no evidence of the city pace, the pace that kills. Washington Irving says, "There is nothing mean and debasing about life in the open country. It leads you on to heights of grandeur and beauty and leaves you there to the workings of your own mind, operated upon by the most elevating of external influences." Is there anything that proves these statements? We find in Prof. Fisk's "Challenge of the Country" these interesting facts. At a meeting of the successful business men of New York in New York City out of five hundred present over ninety per cent had been reared in the country. Do not these facts prove what we have long believed to be true?

Lastly, no one can deny that contact with nature is far more ennobling than contact with the vice and corruption of the city. Bryant says, "To him who in the love of nature holds communion with her visible forms she speaks a various language." This is indeed true. This inspiring language comes to the ear of the country lad in place of the rattle and bang of the streets. The child in the country has no moving picture show, but he has the ever moving panorama of human life. He has no bowling alley, but he has the broad sweep of the prairie. He has no pool room where he spends his time and skill with the cue, but he has the farm and some instrument of husbandry with which to do something worth while. He has the inspiration of the budding spring, the icy winter, the full blown summer and the fruit-laden fall, while in the city these things are dulled and hidden by the veneer of civilization. Mother nature is recommended by all who know and love her as the best one to teach high ideals and aspirations. Also it is in the rural districts that you meet and learn to love real folk, friends that are good and true. The glare of the city does not hide their real character and we find once more that the boy or girl in the country is ahead of his brother in the city, for he is equipped with the greatest necessity of life: true friends. There is above all a close relationship between parent and child. Here the father and mother stand on their proper pedestal of honor and trust. The boys and girls in the city, as we all have to admit, leave their home in the early morning and do not return till late at night, leaving the home. the greatest of our American institutions, an empty shell.

In short, the modern, progressive farmer, with his automobile and telephone, has brought the very best in city life to his very door, leaving behind those corrupting and degenerating influences which pervade the city. There will soon be little or no argument on the negative, for the farmer will have taken the best from the city and the best from the country to make an ideal environment in which to develop the physical, mental and moral life of his children. Above the Union Depot in Washington is a classic inscription which embodies the whole idea. We can see it from some distance and as we reread it we realize its significance. It says, "The farm; the best home of the family; the foundation of civilized society."

Early Day Pupils Were Polite.

The idea of William McAndrew, associate superintendent of the New York City schools, that "the greatest need in the public schools is a thorough course in good manners," is interesting, but it is hardly new. Some pioneer rural school teachers of Missouri made regular daily instruction in good manners an important part of the course.

Dr. J. F. Cross, of Macon, Mo., says he went to school to a professor from Hoop Pole county, Indiana, long before the civil war. The school was of logs and had oiled paper for window lights. Good English and good manners were a hobby with the teacher. If a boy forgot to take off his hat on entering the school, and neglected to bow to the teacher, there was a black mark in his deportment report. It was a misdemeanor for a boy to address a girl by her first name. She was always "Miss Sallie Jones;" never Sallie.

On Friday afternoon the old stickler for etiquette would divide the school, the boys on one side and the girls on the other, the biggest boy at the head of the line on his side and the biggest girl at the head of the line on her side. Then, at a signal, the head boy would take the head girl and introduce her to all the other scholars, one at a time, and also to the visitors, if any happened to be present. Then the next boy would take the next girl and proceed in the same way until everybody had been formally and correctly introduced. If a mistake was made anywhere along the line, the delinquent would have to go back and do it all over again, or else take his seat in disgrace.

Burnett County Jersey Breeders.

Farmers Awaken to Dairy Possibilities---More Than 100 New Silos Put up There Last Year---Association Growing

THE Burnett County Jersey Breeders held two picnics in succession, one on June 22d at the A. J. Dufty farm three miles north of Webster, and the other at Hertel on June 23d. Owing to the unfavorable weather conditions the attendance was small, but the interest displayed made up for the lack of numbers. The beginning of the program for the 22d was the introduction of County Agricultural Agent George Briggs, who in his few remarks assured those present he would assist to the best of his ability in bettering the dairy, agricultural and social conditions of Burnett county. His remarks won for him a host of friends who unanimously agreed to stand back of "George" and push. Professor Oosterhuis, of the college of agriculture, followed with an address on the developing and judging of the dairy cow. It is hardly necessary to say his talk was thoroughly appreciated and that he is a young man of rare ability. A. J. Dufty, secretary and treasurer, gave a brief history of the association. Hugh Jefferies gave an address on Hansen's Siberian alfalfa, its origin, development and culture, citing its adaptability to our lighter soils with samples as proof that no farmer need fear to risk the expense of either seeding or setting out this wonderful plant. Mr. Jefferies has five acres set in drills at the rate of 5,000 plants to the acre and about eight acres seeded this year, all of which is making a wonderful showing.

There were thirteen head of registered females, two registered bulls and twelve head of grade Jerseys on the grounds. Following the program Professor Oosterhuis, upon request, went over each head, pointing out the good and bad points of the individual.

Owing to the rain the amusements had to be dispensed with.

On the following day the program

ROAD GRADING DEMONSTRATION AT THE BURNETT COUNTY JERSEY BREEDERS' MEETING.

was practically a repetition of the day before with the exception of a talk by Mr. Briggs on establishing a co-operative creamery and by Mr. Jefferies on the subject of better roads. Mr. Jefferies gave a demonstration by grading half a mile of road with a grader, supplementing horse power with tractor power.

The Webster band furnished music and on the whole the picnics were a success and without doubt will be made an annual occurrence.

That the farmers of Burnett county are awake to the possibilities of developing their county into one of the leading dairy centers is found in the fact that last year over 100 silos were erected and an even larger number are going up this year, also large and commodious barns with late methods of ventilation. Brush and stumps are disappearing and in their wake appear the mammoth clover crops that only this northern country can produce, also corn for silage.

On August 28, 1915, the Burnett County Jersey Breeders' Association was organized with only eight members, but has now grown to a membership of twenty-seven and they have been instrumental in bringing in seven registered bulls and sixteen registered females and expect to greatly increase this number before the association is a year old. The Guernsey, Red Polled, Brown Swiss, Roan Durham and Holstein are also represented in the county by registered sires and dams.

Pedigree Rye.

For fourteen years the experiment station has had under test pedigree strains of rye which have been developed with special reference to their adaptability to Wisconsin conditions. In many situations rye is equal or superior to wheat as a money crop.

On the lighter sandy soils, it is the most profitable cereal and the experimental work has resulted in a material improvement of the original strain, developed from the Schlansted variety. This improved variety, known as Pedigree No. 1, has an exceedingly stiff straw, enabling it to stand up well even on rich soils. That the milling qualities are also excellent is attested by the fact that a Toledo firm offered 5 cents a bushel above the market price for all the crop they could procure this year.

This rye has now been tried out by the Wisconsin Agricultural Experiment Association with marked success. Last year on a Rock county farm it yielded under field trials forty-six and one-half bushels an acre, or fourteen and one-half bushels an acre more than common varieties grown under the same conditions.

The "Best" Potato Digger

Must Satisfy You or Money Back.

Here is a time-saver and money-saving Potato Digger so successful in its work that we can safely ship it on a "money-back" guarantee. Try it at our risk. If not perfectly satisfied, the test of the "BEST" POTATO DIGGER costs you nothing. The "BEST" POTATO DIGGER is the result of many years of experiment. Hundreds of tests were made in all kinds of soil before the machine was perfected. It is perfectly balanced. Lift ing device enables one man to lift 500 lbs. on the shovel with ease. Adjustable seat to suit height of operator. Positively no injury to the crop. no cutting or bruising as with hoe or fork.

Fifty Galloway Cows for Sale.

ON this page C. S. Hechtner, Chariton, Iowa advertises to sell fifty head of high-class registered Galloway cows and heifers, and here is a great opportunity for some man who wants to start a Galloway herd. Among these are some imported cows, and the most of them are sired by imported bulls and are out of imported cows. Among these are quite a number of daughters of Standard Favorite, probably one of the most noted Galloway show and breeding bulls that ever was exhibited in this country. The Hechtner herd is one of the most noted herds in the United States. He wants to reduce his herd, and, therefore, is making this special offer. He also offers fourteen splendid young Galloway bulls for sale. When writing Mr. Hechtner about these cattle, kindly mention this paper. —Adv.

Short-horn Herd Books.

A FEW shares of stock and herd books are in the hands of the American Short-horn Breeders' Association and for sale. There are three complete sets and incomplete sets, ranging from Volumes 40, 45, 50 and 70 on, and three shares without volumes. The association has followed the practice of furnishing the volumes free, as issued, to shareholders. Those desiring to become members of the association will find it to their interest to acquire a share of stock and a set of books while this limited supply lasts. The announcement appears on page 23.—Adv.

Velie Six for 1917 Just Out.

THE new Velie Six for 1917 is out and thousands of motorists are calling on the Velie dealers to see it. It is a wonderful car, offering greater value than the 1916 Velie, which has attained such widespread popularity. On the new car the body has ben lengthened four inches, thus giving greater room, and the construction of the body has been strengthened—the rigid oak framework and heavy steel supports mean unusual durability. The lines of the body are smooth and symmetrical, giving the car extreme beauty in appearance. The special features of the 1917 Velie are listed on page 24, which anyone interested in new cars should look over. In spite of the increased cost of automobile materials, there has been no reduction in Velie quality; in fact, the new car is larger and better than ever. The buyer who chooses a Velie has eight body styles to choose from. These are also listed on the page mentioned above. The Velie Motor Vehicle Co., Velie Place, Moline, Ill., invites those interested to call on any Velie dealer and see the new car, of which all Velie men are justly proud.—Adv.

A Reliable Potato Digger Saves Time and Money.

THE farmer who will soon have a crop of potatoes to dig should have a good potato digger, because they greatly reduce the time and labor required for harvesting this crop and the potatoes are not cut or bruised as with a hoe or fork. A good potato digger is the result of many tests and years of experience—it must be tried out in all kinds of soil, under all conditions, must be perfectly balanced and sound in construction. The Wabers Mfg. Co., Racine, Wis., are confident that their machine meets all requirements and, therefore, they guarantee satisfaction to the buyer. They have spent much time and effort in perfecting the digger they now have on the market and potato raisers will do well to write them for free catalog, terms and prices before the crop is ready to be harvester. See this page.—Adv.

Guernsey Bulls for Service.

SOME choice Guernsey bulls are being offered for sale on page 22 by S. A. Merriman, Ft. Atkinson, Wis. Two of these are ready for service and two others will be early in the fall. They are all well marked, being fawn and white in color. They are well grown for their age and of good, straight, level type. In breeding they are in the purple, being backed by heavy producing ancestry. They were sired by the bull, John of Riverside, an outstanding individual of excellent dairy type. He is a son of Mayflower Castrilius by the noted bull, Castrilius, which has fifteen A. R. O. daughters. Castrilius is an A. R. bull and was by Derilius by Filius by Springer, all of which are Advance Registry sires. Mayflower Castrilius was out of Mayflower Eagle, which made 406.22 pounds of fat and gave 8,518 pounds of milk. She was by Dido's Standard by Standard by Springer, all of which are A. R. sires. The dam of Joker of Riverside was a daughter of the great sire, Starlight's Excelsior, that has many A. R. daughters and stood at the head of Ex-Governor Hoard's herd for many years. His dam, Starlight of Geneva, made 570.32 pounds of fat in a year. The dams of the bulls offered for sale are heavy producing cows, one is now giving fifty-four pounds of milk per day. Send for pedigree and price on these bulls.—Adv.

Some Good Holstein Sales.

RUST BROTHERS' STOCK FARMS, West Allis, Wis., where there is established one of the oldest and best Holstein herds in Wisconsin, have been consistent advertisers in The Wisconsin Farmer. They have been breeding Holstein cattle since the early 80's and have bred and developed many noted animals. The noted cow, Duchess Ormsby, was bred on this farm and her offspring have made the name of Duchess Ormsby a by-word to every Holstein breeder. Rust Brothers report the following sales during the past few weeks: A 33.65-pound bull to B. F. Winckler & Sons, Medina, Wis.; a 29.50-pound bull to H. F. Wittig, Denmark, Wis.; a 27.50-pound bull and an eighteen-pound bull to the Arixonia Holstein-Friesian Farm, Phoenix, Ariz.; a 27.50-pound bull to Daggett Holstein-Friesian Association, Daggett, Mich.; a 27.54-pound bull to H. V. Greethurst, Lewiston, Minn.; a bull and heifers to C. W. Conkling, Tekamah, Neb. Rust Brothers feel highly satisfied with the results obtained through their advertisement in The Wisconsin Farmer and have increased their space for the coming year. See their advertisement on page 22.—Adv.

TOO LATE TO CLASSIFY.

50 HEAD OF REGISTERED GALLOWAY cows and heifers for sale; all bred. Some are imported cows and out of imported dams. Also 14 bulls. C. S. Hechtner, Chariton, Iowa.

Machinery for Making Good Silage.

IN order to have sweet, juicy ensilage of high feeding value, the corn should be cut fine—in half-inch lengths—and packed air-tight in the silo. Then it will go through the right fermenting process and becomes a soft, nutritious pulp, which will promote maximum flow or put weight on feeding stock. Silver's Ohio silo fillers will fill the silo with this kind of silage. It cuts fine with its sturdy, cylinder-type knives having accurate, patented adjustments. It fills the silo without delay from breakage and with small amount of labor; the explosion-proof blower fan, attached to main shaft, operates consistently and efficiently. And it may be depended upon to give service year after year because of its unusual durability. The beater self-feed beats the cornstalks down so that they are delivered to the knives properly and no attention is required, even for the largest bundles. Thus the work of one man at the feed table is eliminated. Many other features of Ohio cutters and fillers make them very desirable machines. These points are discussed in the catalog and booklet, "Silverized Silage," issued by the Silver Mfg. Co., Salem, Ohio. Their advertisement appears on page 13, and we suggest that anyone who has a silo to fill this season write to the company for full information regarding Silverized Silage. —Adv.

SHEEP.

FOR SALE 30 full blood Shropshire ewes and 20 spring lambs. If you want the right start in the sheep business you should buy the entire flock.
Milo W. Petersen Hartland, Wisconsin

Prairie Dog Edible.

As an article of food the lowly prairie dog is a rival, and a strong one, to the toothsome rabbit. The only thing against the prairie dog is that he is called "dog." The authority of the statement is R. T. Jackson, who is in charge of the prairie dog eradication work for the department of agriculture in Wyoming and South Dakota. Mr. Jackson backs up his assertion by saying that he has eaten prairie dogs and found them fine; that he has prepared them for others who have eaten them and pronounced them fine, under the impression that they were eating rabbit, and that the prairie dog leads a life which fits him exactly for human food. In preparing them, Mr. Jackson says, the meat is treated exactly as rabbit meat is treated.

10 REG. HOLSTEIN HEIFERS

1 TO 4 months old; 2 registered cows, both short one quarter; 4 high-grade cows, good producers. Yearling bulls ready for service. All are well bred and good type. Prices low for quick sale. Address

BONNIE MEAD STOCK FARMS, Randolph, Wis.

Purebred Registered
HOLSTEIN CATTLE

Notable characteristics of the registered purebred Holstein-Friesian cattle are health and a hardiness adaptable to all climates, a high standard of vital force, large and easily raised calves, ability to digest and consume the roughage of the farm and transmute it into the valuable products, milk, butter, veal and beef, and surpassing all other breeds in the profitable production of milk and butterfat. The auction prices of this big "Black-and-White" breed have doubled in the past few years. Investigate them.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

1917 Velie Six

The New "Biltwel"

Bigger—Better—More Power

THE Greater Velie for 1917 is out. Thousands have gone to the Velie dealers' salesrooms to see it. Multitudes who wondered at the Velie values for 1916 asked us how we could improve it. We simply added more values.

Four more inches of body length—with corresponding increase in room—give even more style and riding luxury. You have to compare The Greater Velie with cars costing $500 to $1000 more to find bodies like our splendid new 1917 body. The substantial, rigid oak framework and extra heavy steel, with mirror finish twenty operations deep, insure a fine looking body after years of hard use. And there is *real comfort* in its deep-tufted genuine leather and curled hair upholstery.

1917 Velie "Biltwel" Features

Six-cylinder Velie-Continental Motor.
Timken Axles, Front and Rear
Removable Cylinder Head for Inspection
Helical Gears in Motor—no chains
Enclosed Multiple Dry Disc Clutch
Hotchkiss Drive—no noisy torque arm
Spiral Gears in Floating Rear Axle
Remy Automatic Ignition—Push Button Starter
Double Bulb Headlights—Dash Light
All Wires Enclosed in Metal Conduits
Rear Gasoline Tank—Vacuum Feed
Simple Rocking Gear Shift Lever
Luxurious Body, 4 Inches Longer.
Unusually Wide Doors—Easy to Enter
High Grade Leather Upholstery

Everything in and on—ready for the road

Timken Axles Front and Rear

Timken Axles Front and Rear are but an evidence of the quality and superior specifications found throughout the new car. Recognized as the standard of excellence. *Money cannot buy better.*

Many subtleties of engineering refinement *give more power*, silence, suppleness—securing every ounce of energy out of every drop of fuel.

All this and much more can now be obtained in the new Velie at the low price of $1085.

Low Price Due to Tripled Output

In spite of the greatly increased cost of materials, and notwithstanding the many additional improvements and values, Velie Quality has been strictly maintained—and the price is only $1085.

The enormous increase in the Velie demand alone keeps it in its low-price class. For months this demand has tripled the Velie output. *This is why you can get The Greater Velie at $1085.* Back of this great car is the Velie Prestige—half a century of manufacturing experience—the reputation of one of the most substantial organizations in America. "The Name Insures the Quality."

8—Body Styles—8

A body for every want and purpose. Read the list—the line is complete.

1917 Velie "Biltwel" Line

Model 28, five-passenger Touring, $1085; four-passenger Companionable Roadster (original and exceptionally smart type), $1085; two-passenger Roadster, $1065.

Enclosed bodies, exclusively designed: Cabriolet, $1485; Touring Sedan, $1685; four-passenger Sociable Coupe, $1750; Town Car, $2200.

Model 27, seven-passenger Six, completes the line; 124-inch wheelbase, 45 h.p., 35x4½ tires, 4-speed transmission. The utmost in luxury and refinement. Price, $1550. Ask for Catalog. See and judge for yourself. They are at your nearest Velie dealer's now.

VOL. XLV. NO. 30. THURSDAY, JULY 27, 1916. WHOLE NO. 1800

CURRENT EVENTS

THE English, French and Russians continued to make serious inroads on the Teutonic forces, in some of the fiercest fighting of the European war, last week. Not only have the French succeeded in standing off the Germans at Verdun, which has been under attack for almost six months, but they won several miles of first and second line trenches elsewhere from the Germans and even pushed them back in places to their third line of defense. These victories were not won without great sacrifice of life, but they show that, for practically the first time since the war began, now two years ago, the allies have the men and the munitions to carry on a vigorous offensive campaign. While this is in progress in France, the Russian invasion of Hungary is on. Detachments of Russian cavalry were well over into Hungary last week, closely followed by the infantry. General Letchisky, whose successful drive cleared the Austrians out of Bukowina, is said to be threatening the Austrian rear. Capture of large numbers of Austrians is reported daily from this section of the front. The Russian forces ready to be poured into Hungary are said to number nearly 1,000,000 men, and are declared to be the pick of the Russian armies. Heavy Russian reinforcements are being sent to the northern part of the eastern front, and an attack in mass against Marshal von Hindenburg's forces is believed to be the next step. One dispatch states that the Germans are amazed at the strength of the English army, which they thought existed on paper only.

HAVING been frequently reported as seriously wounded and even as being dead, Villa has apparently returned to life and to his bandit career. He was reported as being on the raid again last week, attacking Mexican federal forces and even planning other raids on the United States. In order to take no chances of another Columbus affair—in which a score of American lives were taken by the Mexican bandits—the national guard of the various states is continuing to patrol the border. Minnesota and Iowa soldiers were sent to the South last week and joined hands with the others who had preceded them in order to hold the bandits back in their own country. A party of mounted Mexicans exchanged fire with Company L of the Ninth Massachusetts infantry near El Paso, Texas. According to reports, the guardsmen were doing outpost duty when the Mexicans rode up on the opposite bank of the Rio Grande and opened fire. The guardsmen suffered no casualties, but reported they believed they had killed one Mexican.

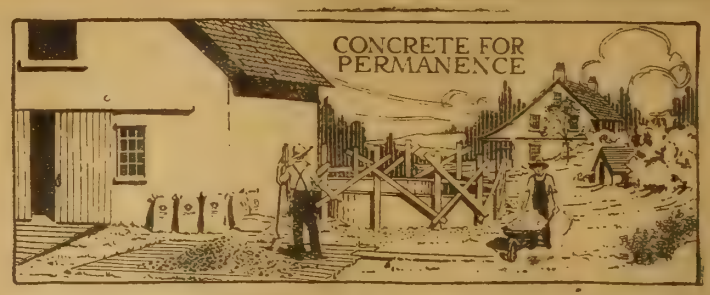
NOTWITHSTANDING the success of the German submarine freighter, Deutschland, in crossing the ocean and safely landing a million-dollar cargo at Baltimore, American naval experts declare that the value of the new ocean service, in the present international crisis, is but slight and this despite the fact that another submarine is promised in a few days and many more are being built. The navy department experts are said to have reached the following conclusions: One—A line of submersible freighters between the United States and Germany can have no appreciable benefits to Germany except sentimentally. Two—While technically they might be considered as rendering the alleged British blockade of Germany's North sea ports ineffective, they cannot possibly conduct operations on a scale sufficiently large to relieve Germany of the allies' suffocating policy. Three—The chief service the undersea liners can render will be to carry terror to British hearts and they will accomplish this in part. While it was not considered impossible for submarines to cross the Atlantic, it was considered impracticable and the feat has demonstrated to Great Britain the possibility of a submarine warfare not heretofore attempted by Germany. Four—Submarine merchant ships will never be used extensively in the ocean carrying trade. In extraordinary war times such as the present they pay for themselves and on a very small scale do valuable service, but it would be impossible for fleets of submarines to feed a country the size of Germany or to carry to Germany war supplies in quantities large enough to constitute a material aid. These expert findings do not lessen the importance of the Deutschland's exploit in the public mind, however, or minimize in the least the praise which is being heaped on the captain and crew who brought this first submarine freighter safely through all its many perils.

A STATEMENT and call to "the patriotic men and women of America" to hold a new national convention of the progressive party in Chicago August 5th and nominate candidates for president and vice president and continue the party's existence as a distinct political organization has been issued by John M. Parker, of Louisiana, vice presidential nominee of the progressive convention held in Chicago in June. He urges the progressives to eternally bury the bull moose, which he asserts led "his loyal followers into the wilderness" and to adopt in its place the American eagle as the emblem of the party. Mr. Parker does not mention Colonel Roosevelt or any other progressive leaders or any candidates by name. He declares, however, that the progressives ha ' as supposed leaders "red-blooded Americans, who promised with their 'lifeblood' to stay with the party to the finish," but that party had been deserted by a large part of its officers who could not stand the acid test. He charged the leaders, for "steam roller reasons, have elected to be steam rolled," and that the time has come when every party working for human welfare and the future of America, should unite against both dominant parties. In citing the republican party the statement indirectly refers to Charles E. Hughes, republican candidate for president, as "a splendid man," selected by the republicans "as the mask behind which they hope again to secure control of state and nation."

PLANS for the presidential campaign are now well under way. For the republicans, the campaign will open with the official notification of Mr. Hughes on July 31st. Soon after being notified the republican nominee will make a trip across the country to the Pacific coast, delivering a number of addresses, the first at Detroit and subsequent ones at St. Paul or Minneapolis and Chicago. No one doubts that Mr. Hughes will make a vigorous campaign which will cause plenty of talk and discussion. Men who have been to see him and talked to him recently have no doubt that he is eager to get on the stump and is prepared to make things hum. That he will get big crowds is expected. As for President Wilson, while he would prefer not to do a great deal of speechmaking, it is likely he will be drawn into plenty of it before November comes. All over the country the democratic political managers want him to appear. Maine, of course, is calling for him and it is expected he will go there before the election September 11th, provided the congress situation does not make it impracticable.

PRESIDENT WILSON made a personal visit to the capitol last week to emphasize his desire that a child labor law be put on the statute books at the present session of congress, which will come to an end about August 20th. To senate leaders, whom he summoned to a series of conferences in the president's room adjoining the senate chamber, he insisted that the child labor bill passed by the house should be made a part of the legislative plan to be put through the senate. Whether the president's visit accomplished anything more than to bring his own position in the matter emphatically to the front was not apparent tonight. So far as could be learned the democratic steering committee contemplated no change in the caucus program and no call has been issued for another caucus to consider Mr. Wilson's request.

China's new department of agriculture and forestry is being conducted by graduates of American colleges.



TIME TO BUILD THAT MEDUSA SILO

Once you get started it doesn't take long to build a concrete silo—and after it is finished you know it is there for good. Medusa silos last forever and are everlastingly good looking.

Medusa Waterproofing

mixed with the cement makes the concrete watertight. It prevents the juices—so necessary in keeping the fodder green—from leaking out. It keeps outside moisture from coming in. A Medusa Waterproofed silo practically pays for itself in savings in a year's time. It is the weather-proof, frost-proof silo that never wears out.

Medusa Waterproofed Portland Cement
(Gray or White)

has the Medusa Waterproofing already mixed with the cement. It not only makes concrete watertight but prevents cracks, discolorations, etc. The Medusa Waterproofed Cements are superior to a simple mixture of concrete and waterproofing, because they are ground together in the proper proportions to insure perfect results.

Use Medusa White for Facings of all Sorts

It is stainless, hard setting and strong.

SANDUSKY PORTLAND CEMENT COMPANY

according to Maeterlink's story and this is proved true by the delight of the woman who receives our **Blue Bird China Ware.**

Special July Offer

A set of six fruit or sauce dishes will be sent prepaid to any one who will send a club of only 5 one-year subscriptions to The People's Popular Monthly, at 25c each.

This is just the season of the year when fruit dishes are needed most and this beautiful Blue Bird pattern can be used on any occasion.

Remember All that is necessary for you to do is secure the subscriptions of only 5 friends for The People's Popular Monthly, at 25c each, and the six Blue Bird pattern fruit dishes will be sent you prepaid.

A subscription for two years at 50c counts the same as 2 one-year subscriptions at 25c each

This is a special offer for July only and you are urged to be prompt in sending your club list to secure these fruit dishes. Address all mail to

FAMILY CIRCLE TALKS
BY THE PUBLISHER

FARM CREDIT BILL SIGNED.

RURAL credit legislation is now an accomplished fact. Last week—in the presence of representatives of the National Grange, the Farmers' Education and Co-operation Union, the Farmers' National Congress and the National Council of Farmers' Co-operative Associations—President Wilson signed the compromise measure which had been agreed upon by both houses of congress a few days before. I recall hearing Senator Norris, of Nebraska, deliver a very exhaustive address on this subject at the last session of the Farmers' National Congress, which subsequently declared in favor of such legislation, so I can readily imagine with what pleasure the representatives of this particular organization watched the president sign the bill.

I agree with President Wilson that the occasion was a memorable one. Surrounded by the men who had engineered the measure through congress and by the representatives of the farm societies which had worked for it, the president took the occasion to express himself in this manner:

> I cannot go through the simple ceremony of signing this bill without expressing the feeling that I have in signing it. It is a feeling not only of profound satisfaction, but of real gratitude that we have completed this piece of legislation which I hope will be immensely beneficial to the farmers of the country.
>
> The farmers, it seems to me, have occupied hitherto a singular position of disadvantage. They have not had the same freedom to get credit on their real estate that others have had who were in manufacturing and commercial enterprises and while they have sustained our life they did not in the same degree with some others share in the benefits of that life.
>
> Therefore, this bill along with the very liberal provisions of the federal reserve act puts them upon an equality with all others who have genuine assets and makes the great credit of the country available to them.
>
> I look forward to the benefits of this bill not with extravagant expectations, but with confident expectation that it will be of very wide-reaching benefit and, incidentally, it will be of advantage to the investing community, for I can imagine no more satisfactory and solid investment than this system will afford those who have money to use.

I am not going to say that the bill, as finally passed, solves the entire financial problem of the farmer or is going to bring about the agricultural millennium. This much is sure, however. With the possible exceptions of the bills creating the postal savings bank and establishing the federal reserve, no bill has been passed by congress within the last half dozen years for which greater promise is made or higher hopes held out. Both of the big political parties seem imbued with a sincere desire to assist the farmer to take advantage of every possible opportunity. The new farm credit bill will not help the farmer who is undeserving of help under the present financial system, for the personal equation will always determine success, but it may be of great help in assisting the worthy to get a foothold and in enabling the deserving to enlarge their field of activities so that our agricultural production will be increased.

Let me explain the main details of the bill, as finally passed and signed. It creates a nonpartisan federal farm loan board, consisting of the secretary of the treasury and four members, to be appointed by the president. They will have charge of twelve federal farm land banks, which are to loan money to farmers at not more than 5 per cent interest. These land banks will take farm mortgages from actual farmers and issue bonds, bearing 4 per cent interest, with the mortgages as security for the bonds. The loans are to be for not more than 50 per cent of the value of the farms and are to run from a minimum of five years to a maximum of forty years. They are to be paid back on the amortization plan; that is, a part of the principal is to be paid with the interest at each interest-paying date, so that the debt is paid on the installment plan rather than on one stipulated date. On any interest date $25 or any multiple thereof may be added to the amount being paid on the principal, so as to reduce the debt.

These, in briefest outline, are the main details of the bill. How it will actually work out remains to be seen. I notice that Representative Shouse, of Kansas, declares that it will reduce the annual interest charge of Kansas farmers from $4,886,561—the amount they paid last year—to $2,241,281, a saving of $2,645,280. Other students of the bill caution against expecting too much from the relief measure until it has been in effect for some time. I agree with the president that the plan—and especially the soundness of the securities—should appeal to the investor. I hope that the promises of its sponsors will be more than fulfilled, but only time can positively tell. We should all unite in working to make the measure a splendid success, for if any man is entitled to a credit which will enable him to borrow under the most favorable conditions and to every possible aid in increasing his efficiency and in enhancing the results of his arduous toil, it is the farmer—the real basis of all our national wealth and advancement.

THE DEBT DUE FARM MACHINERY.

I WONDER how many of my readers ever stop to think of the great debt we owe the implement men of the country, the men who invent and the men who sell the machinery which reduces the time necessary to produce a bushel of wheat, of oats or of corn to one-tenth the time formerly required for the operation. Not a debt in dollars and cents, covered by a personal note, or anything as sordid and practical as that. What I mean is the debt we owe these men as factors in increasing agricultural production and advancing civilization.

I have often thought of this phase of the general subject, but seldom have I seen the matter more convincingly or strikingly set forth than in an article in one of our large grain-belt newspapers, anent the big wheat crop this year. The writer of that article quotes a man (motoring along a prairie road in Kansas last week and pointing toward a reaper at work in a wheat field) as saying: "That machine made possible the settlement of these plains. If the reaper had never been invented, all of western Kansas, Oklahoma, Nebraska and a large part of the other plains states might be today only vast cattle ranges, without towns, without cities, without farms, without wheat fields." Is there not truth in what that man said; is not the debt which we owe the reaper, the tractor, the gang plow and all the other farm machinery of today so vast and so far-reaching that it cannot be measured in dollars and cents?

I spent a very pleasant evening once reading a book called "The Romance of the Reaper." I have frequently quoted from it in this page of mine. The author was undoubtedly brimful of enthusiasm, but he was well within the facts when he asserted that the reaper "changed the face of the world. It moved the civilized nations out of the bread line. It made prosperity possible. It made bread so cheap that even the hobo at the back door scorns it unless it is spread with jam and sandwiched with meat; it is thrown in with a meal free of charge, like a pinch of salt or a glass of water." Think back on the old days and then consider the achievements of today. From waving grain nodding in the bright, western sun to light, delicious biscuits, fairly melting in the mouth, in the incredible short time of twenty-two minutes, a record achieved by western wheat growers and flour millers; has not a great, a transforming revolution been wrought when this is possible, thanks to marvelous machinery of almost human intelligence and more than human efficiency? Is it to be wondered at that the newspaper writer to whom I referred should write these enthusiastic words:

> The reaper vanquished famine, that ancient foe of mankind, and every harvester that cuts a swath through a golden wheat field means not only more bread, but more comforts, more luxuries, more progress, more civilization.
>
> The grain belt might have for its coat of arms a tractor, a gang plow, a reaper and a steam thresher grouped, with a farmer standing atop of them waving his hat, no longer "brother to the ox," no longer "bowed with the weight of centuries," but a free man, who has more luxuries and lives in greater comfort in his own farm home today than the king of England lived in his palace a few centuries ago.
>
> Now the farmer hitches his gang plow to a tractor, climbs aboard, pulls a lever, toots the whistle and plows more land in one day than the farmer of fifty years ago would plow in two weeks. The farmer's wife or daughter today sits in the springy seat of a reaper, as easy riding as a buggy or a motor car, or drives a "header," and reaps more grain in one day than the man with a sickle could in a whole season. A threshing machine will clean more wheat in one day than a man with a jointed flail could if he worked all winter.

Do we not do well to consider these things, along with the yield per acre and the price per bushel, as we contemplate our crops and cast up accounts for another year? Farm machinery has emancipated not only the farmer, but every member of his family. Gone are the days of "the man with the hoe."

> Bowed by the weight of centuries he leans
> Upon his hoe and gazes on the ground,
> The emptiness of ages in his face,
> And on his back the burden of the world.

In his place is the man with the reaper and the tractor, the man who lets machinery do the work which formerly aged him before his time, doing it in such a manner as to double his production, treble his profits and quadruple his enjoyments in life. That this use of machinery is destined to increase in the next few years is a foregone conclusion, for never were implement sales so heavy as this year; never was the farmer's interest so great. The inventive genius of man is devoting itself to perfecting machinery that increases production and minimizes human labor, a combination of results which promises to work a complete revolution in our farming methods as the years go by.

NO CAR SHORTAGE.

I AM in receipt of reassuring advices from men high in the railroad business. They are positive there will be no freight-car shortage at the height of the grain season this year, as there has been for so many years past. They claim to have the situation well in hand, and this despite the fact that our wheat crop this year promises to be a bumper one and possibly to set a new record.

According to the railroad men, the shortage in grain-carrying freight cars in former years was due, in a great measure, to the fact that so much equipment was loaded with wheat for export, carried to the seaboard and the gulf ports and there held for weeks and months on sidings. The export demand was so great there were not enough ocean-going vessels to handle the trade and not enough elevators along the coast for the storage of the grain. As a consequence, it was held in the cars, which were shunted back into sidings, sometimes fifty and even 100 miles from the ports. This resulted in many thousands of cars of the grain-belt roads being held out of service, preventing the later movement of grain to the domestic market. According to railroad authorities, the railroads have entered into a "gentlemen's agreement," which will obviate this. They have solemnly pledged themselves to see to it that no grain for export will be loaded into a car until the export agent furnishes a receipt showing that he has secured space on the vessel on which it is proposed to make the export shipment. This receipt must designate the port from which the shipment will be made, the name of the vessel and date of sailing. Until this data is furnished no order for a car will be accepted, nor will any bill of lading be issued. The results are forecasted by one of the railroad men in this manner:

> Under the new order of things, a car of grain can be loaded out of Omaha, for instance, for Atlantic or gulf ports, reach its designation and the empty car be back in the territory inside of four weeks, whereas, under the workings of the old rule, cars frequently did not get back into home territory inside of six months, and in many instances they have been away for more than a year.

All this is certainly reassuring news to us of the grain belt, where former car shortages have materially affected the movement of the crop and the profit naturally to be expected therefrom. If the railroads will live up to their agreement the situation will be much better than in former years, there will be less grain spoiled by being left exposed to the ravages of the elements and the farmers will reap a better profit for their season's work. That this year's wheat crop is going to be a splendid one and bring good prices is evident from a report which reached me this week from Pawnee county, Kansas. A friend sends me this word:

> It is the best wheat ever grown in this county. The stalk is short, but the berry is large, plump and solid, and in different parts of the county where it has been threshed it weighs as high as sixty-three pounds to the bushel. Fifty-nine is considered very high. So, the crop this year will bring an extra good price, say an average of $1 a bushel. With the crop as estimated now this means $3,250,000 coming in this year to a county with a population of only 9,000, which is a trifle over $361 for every man, woman and child in the county from wheat alone, not counting alfalfa, oats, cattle, sheep and other farm products.

If we can safely harvest a bumper crop of grain and get the cars in which to transport it to market when prices are the best, it looks to me as though we were in for another year of agricultural prosperity and would confront a winter of content and cheer and good times.

In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Wisconsin Farmer, the Live Stock Paper of Wisconsin.

THIS issue of The Wisconsin Farmer announces a guaranteed circulation of 90,000. This announcement is important to live stock interests of the state. The purpose of The Wisconsin Farmer management has been to give the breeders of Wisconsin a farm paper which would have a state-wide circulation and which would adequately cover this rich live stock field. While The Wisconsin Farmer has led the farm papers of this state in circulation for some time, the present announcement carries with it the thought of still more commanding leadership. The circulation of The Wisconsin Farmer in Wisconsin is several thousand greater than the circulation of the second farm paper in the state.

The publisher of The Wisconsin Farmer is much pleased to note the increased popularity of this paper as shown by the increased circulation and the increased advertising patronage. The Wisconsin Farmer publishes more Wisconsin live stock advertising than any Wisconsin paper. Inasmuch as this condition exists week in and week out, practically all the time throughout the year, we must be convinced that live stock advertising in The Wisconsin Farmer pays the breeders well. In this connection, we are pleased to quote from a letter received from Mr. A. M. Laird, proprietor Goldfield Stock Farm, Prairie du Chien, Wisconsin, under date of July 10, 1916. Mr. Laird writes:

Economical and satisfactory advertising is not always obtained by pure-bred stockmen. But The Wisconsin Farmer has put me in touch with a host of substantial farmers, who are interested in Hampshire swine, enabling me to make sales at a very moderate cost per animal.

Another thing. The interest your field men take in the breeder and his stock advertised helps a lot to establish confidence between buyer and seller. You have not only sold my Hampshires, but have also treated me fairly and generously, enabling me to establish my herd.

Business has been more than good so far this year. I want you to know that your most excellent service to me as an advertiser is appreciated. The increasing popularity of the Hampshire hog together with the advertising ability of The Wisconsin Farmer makes it easy to sell all the "belted beauties" that I can raise.

The Goldfield Stock Farm comprises 600 acres, devoted to corn, alfalfa, dairying and Hampshire swine. Mr. Laird is generally known throughout the state as an excellent breeder.

Breeders of the state who are striving earnestly and honestly to promote live stock business cannot afford to overlook such an excellent advertising medium as The Wisconsin Farmer.

Tractor Information For Wisconsin Farmers.

NO DEPARTMENT of The Wisconsin Farmer has rendered service to our readers which has called forth more letters of appreciation than the Farm Mechanics Department. This department, as those who read it will well understand, is written every week by an expert mechanic and engineer, who understands the engine and machinery problems which are presented to him, and has the happy faculty of presenting the replies in a practical and understandable way.

Problems concerning the operation and care of the tractor rightly come under this department, and our readers are invited to submit their inquiries along this line. Address editor Farm Mechanics Department, Wisconsin Farmer, Madison, Wisconsin. Watch the columns of the paper for the answer. It may occur that there are so many inquiries that it will not be possible to publish all the answers in the paper, and in this event a personal answer will be given. It is the policy of The Wisconsin Farmer, however, to publish the replies in the columns of the department, for the reason that there are doubtless other readers who will be interested in just the same problems.

Occasionally the editor finds that several questions of the same nature come in the same week, and in such cases we cannot afford space to give separate answers to each letter. In this event one of the letters will be answered, so each reader should read through the department each week. Our readers will find it profitable to read all the farm mechanics letters, as the editor of that department is taking special pains to get at the practical information which will be of greatest benefit to the farmer. Just as the man who raises cattle and hogs will be interested in all of the veterinary answers each week, so will the man who keeps farm machinery, who operates an automobile or a tractor, be interested in our Farm Mechanics Department. These questions and answers, published each week, bring out the knotty little problems which come up on the farm, and it is this sort of service which we believe makes a farm paper valuable.

Tractor owners should not fail to take advantage of our free service in the Farm Mechanics Department.

Co-operative Shipping of Live Stock

CO-OPERATIVE shipping of live stock, in order that farmers with a few animals may secure advantages of car lot freight rates and also dictate the time of shipping is working out successfully in many Wisconsin communities. Whatever movement tends to increase the farmers' profits, if successfully managed, is bound to grow, and the fact that there are now something more than 500 of these co-operative shipping associations among farmers in the United States bespeaks popularity. Elsewhere in this issue we are describing in detail the operations of the Co-operative Association at Muscoda, which has now been running long enough to have passed the experimental stage. Muscoda has furnished the inspiration and the ideal for quite a number of similar organizations in other communities, and every farmer who ships to market should read this article with care, and if not now enjoying the benefits of such an association as that at Muscoda, he should immediately take the matter under consideration.

The Muscoda Association grew out of a fight among local buyers, in which the farmers took the short end of the prices, but after two years of shipping the association is now in a strong position and members are well pleased with results. This movement started originally in Minnesota where there are more than 200 shipping associations. As conditions are very similar in Wisconsin, there will be many organized in this state in the future. Recently we had the pleasure to go through the new Farmers' Co-operative Packing Plant at Wausau, where the plant is regulating the shipment of stock for slaughter through the organization of some thirty odd local associations on the order of the Muscoda Association. Otherwise, the plant might have a heavy run today and nothing tomorrow, and the officials believe this will solve one of the big problems of the farmers' co-operative packing plants.

Naturally, to organize these associations, there must be a leader in a community and a reason, for unless the farmers can benefit therefrom, there is no cause for its existence. Often local buyers will forstall such organizations by temporary high prices. There is no doubt but that the farmer with a few steers or a few hogs or other stock to ship at a time can benefit from shipping in this manner. This is the situation in a state like Wisconsin, where few of our breeders have enough to ship at one time to make up a car. The U. S. Department of Agriculture, realizing the increasing interest in these organizations, recently issued Bulletin No. 718 on how to organize, the benefits, etc., which may be had on request. It points out that the main purpose of these associations is to enable their members to ship in carload lots to the central markets instead of being more or less at the mercy of local buyers in disposing of a few animals from time to time. The fact that no capital is required for the organization of such an association makes these associations possible in communities in which more complicated forms of co-operation would not succeed. The bulletin, however, points out that such associations are scracely practicable in regions where there is so much live stock that it is generally marketed in carload lots under any circumstances, or where there is so little that the association has practically nothing with which to work.

To organize such an association it is necessary only for the farmers of the community to meet together, adopt a simple constitution and by-laws, a sample of which is given in the bulletin already mentioned, to elect officers, and, in turn, for them to appoint a manager. It is recommended, although it is not absolutely necessary, that the organization incorporate. This can be done at a nominal cost—usually not more than $10. For this small expenditure of trouble and money, the association usually enables the farmer to market his stock when it is ready instead of compelling him to wait until the local shipper is ready to buy it. He obtains for himself the benefits of the cheaper carload transportation, and the shipments of the association realize for the owner the market price of his stock less the actual cost of marketing. In particular, it has been found that when thin stock, calves, or lambs are sold in small numbers, the local price is usually very low. It is on this class of stock that the associations have been able to save their members the most money.

In order to avoid misunderstanding, it is important that all stock be marked at the shipping point. This precaution prevents disputes in regard to shrinkage and dockage and assists in making adjustments in case of loss or damage in transit. There are three common methods of marking. Numbers or other characters may be clipped in some conspicuous part of the animal, paint may be employed, or numbered ear tags used. The last method is the least frequent, because it is somewhat difficult at the stockyards to get close enough to the animal to see the number on the tag. If the second method is adopted, ordinary paint is undesirable, especially for hogs, as it does not dry readily enough to prevent smearing. This difficulty may be overcome by using paint containing about one-fourth varnish. In the case of sheep, however, painting is objectionable because the marks will not scour out and wool manufacturers object to them, and branding fluid, therefore, is preferable. Whatever system of marking is adopted, the important features are that it should be uniform for all shipments and that the marks should be plain and conspicuous. In many cases hogs are not marked, but are graded by the manager at the shipping point. A record of those subject to dockage is kept in such cases. Marking is advised, however, as a precaution against mistakes.

Since no payments are made for stock shipped until returns from the central market are obtained, these co-operative associations may be formed without capital. All that is necessary is for the farmers to comply with their engagement to furnish the stock to the manager when, where, and in such quantities as they say they will. In some associations a fixed sum of money is expected from a shipper for failure to deliver stock to the manager as agreed. In every case the amount to be exacted should be reasonable and should fairly represent the actual loss which it is estimated the association will suffer as the result of non-delivery. The provision for liquidated damage is proper, because the manager must arrange for a certain amount of car space, and if all of it is not used, the expense to those who do ship is proportionately greater.

The Clover "Crank" Wins Out.

IN THE following communication an Illinois subscriber gives the result of observing conditions on two adjoining farms. On one of these the soil was sufficiently productive to produce seventy bushels of corn per acre, while on the other it was so impoverished that a thirty-five-bushel crop was the limit. His letter follows:

Last fall when I was away from home for a spell I was in a couple of cornfields. They were on adjoining farms. One man was gathering seventy bushels of corn from each acre in a ten-acre tract. To make sure that the figures were correct measurements of the field were made and the corn weighed as it was brought in from the field, so there was no guesswork about the matter.

The other farmer on adjoining land was also gathering corn and when asked how it was turning out he said he had just been figuring the matter himself and he thought a fair estimate would be thirty-five bushels to the acre, and he coupled this suggestion with the statement that it had been unusually dry in that section. I asked him when he planted his corn and he told, and then I asked him about his methods of preparing the ground and he told that also. He then volunteered the information that his ground had been overtaxed, as he had been raising nothing but corn and oats on it for a score or more of years. He had given the corn good cultivation, had a fairly good stand and seemed to have prepared his ground well before planting. But the soil simply lacked something.

The farmer who got the big yield is what the neighbors termed "a clover crank," whatever that may mean. He always had some clover growing on some part of his farm. If he did not get a good stand by sowing it in the spring with a nurse crop, he would resow it after harvest and trust to the late summer rains to bring it up. He always had clover, some way or other. He provided against winterkilling of his late crop by sowing oats with the clover. This came up and afforded much protection during the winter even though it did die down when the frost struck it. It prevented the wind from blowing the dirt away from the clover roots and it also prevented thawing and freezing from doing its deadly work. This farmer never had to raise but two crops of corn and one of oats or wheat on the same ground. By the time he got around he had clover sod ready for the next crop and thus by a system of rotation he kept his ground in excellent condition. It paid him big money. He worked no harder in raising seventy bushels than his neighbor did in raising half that much. The drouth that hit his neighbor hit him also, but he had fortified against it and his soil had something in it that enabled him to meet the drouth without great loss.

The story of these two men is but a sample of conserving the soil.

While this particular man used clover others may use other members of the legume family to equal advantage. Sweet clover, alfalfa, vetch, alsike clover, cowpeas and a long list of different peas and beans might be mentioned as doing the same work that red clover was doing for this man.

A little experience I have been having with one kind of peas might not be out of line here. For several years I have been raising quite an area of white peas, the kind you all like for dried peas in winter. They are a very rank grower, making lots of foliage. They grow well right in the corn rows, and to tell just what a five-acre field has been doing for five years straight along would sound like a fairy tale almost.

I have one five-acre plot that had been cropped in previous years badly. Commenced planting those peas and corn, and picking corn and peas and then working vines and stalks into the soil. Have increased the corn yield ten bushels to the acre every year (was very low, however, at first) and have sold

an average of $100 worth of peas each year, besides my hogs get a lot every fall after frost. The land is working very much better, and I believe I can bring it to the 100-bushel mark steadily.

It would not be difficult to find scores of instances in every township of the corn belt that would provide a match for this one. Those who emphasize the growing of clover are, without exception, successful corn growers, while the continuous grain croppers cannot fail to go down hill in the matter of production. Legume crops always benefit the soil, because their growth means that the surface and lower soil will be filled with rich roots and these, upon their decay, furnish plant-food materials for succeeding crops.

Wisconsin Boys and Girls at the State Fair.

INCREASED interest is being manifested in the Wisconsin State Fair, to be held at Milwaukee, September 11th-16th, on the part of boys and girls of this state. Some idea of the special attention which the Wisconsin fair will pay to farm young people may be had by glancing over the list of special premiums offered for 1916.

Here are the leading commercial awards which some ambitious and energetic Wisconsin young people will win before snow flies.

Three pure-bred Guernsey bull calves as first, second and third prizes in the state live stock judging contest, open to students in agricultural schools. These will be given by George Browne, Waukesha.

A Holstein bull calf valued at $125 goes to the school winning the state sweepstakes in all contests. This animal will be the gift of the Pabst Stock Farm, Oconomowoc.

One hundred dollars in gold will be presented to the state champion in the agricultural contests and likewise to the state champion in domestic science work. The money is offered by Fred Underwood, president of the Erie railroad, and owner of the Fewacres Farm, Wauwatosa. The donor stipulates that the recipients must use the funds for educational purposes or good business investments.

The winning club in the state contest will be presented with $100 in gold by the State Bankers' Association, the sum to be used in the purchase of pure-bred seed or pure-bred live stock.

The Merchants' and Manufacturers' Association of Milwaukee will offer six $50 agricultural short-course scholarships to contestants.

Valuable cash prizes have been offered in restricted classes by the Wisconsin Berkshire Breeders' Association, the American Poland China Record Association, the National Duroc Jersey Record Association, the American Berkshire Record Association, and the Chester White Swine Record Association.

A $4,000 club-house to the highest scoring boys' and girls' agricultural club in the United States.

All details for these contests have been placed in charge of a committee consisting of T. L. Bewick, College of Agriculture, Madison; H. N. Goddard, State Department of Education, Madison; J. M. Gahagan, superintendent of schools, Milton; W. W. Clark, Wood County Agricultural School, Grand Rapids; and J. M. Coyner, county representative of Portage county, Stevens Point.

Secret of Success of Hog Raising.

THERE is no denying the fact that the advice or counsel of men, who have been successful in any branch of production, carry more weight with those engaged along the same line than the fine-spun theories of individuals who lack practical experience. At this time our attention is called to an address delivered by Mr. A. J. Lovejoy, a well-known Berkshire breeder. Mr. Lovejoy has attained such a marked degree of success in the breeding of pure-bred hogs that it is quite worth while to sit at his feet and learn words of wisdom. In referring to some of the essentials to success in hog raising, Mr. Lovejoy said:

A man to make a success with hogs must like hogs and be willing to do any kind of work at any time of the day or night, and he must stick to it. As far as breeds are concerned, I have no preference. I never speak of my breed, and I do not intend to now. I say to the young man, select the breed that looks the best to you, whether it is white or black or spotted—it doesn't make any difference. Select a good one and stay with it. Then he must be a man of good character if he is going into the pure-bred business. It is easier to raise for the Kansas City or Chicago markets than it is for the breeder of pure breds. If I were raising hogs for the market it would be fun for me. I would raise alfalfa, and put their corn into the self-feeders, and have the water handy, and let them go to it. It has got so the hog knows more about balancing his rations than the man who feeds him—more than the professors in the colleges.

If you raise hogs for the market the proper thing is to raise good hogs and take good care of them while they are young. Provide them with alfalfa and and by the time they are three months old you can feed them through the full-feeder, and they are not much trouble to take care of. Sometimes one gets the cholera in his herd, but he had better lose them once in a while than to give up the business. I had a man say to me when I had lost 210 head, "Why don't you quit the business?" I said, "I would, but I don't know anything else. I would be a fool to give up the business after forty years of good trade all over America and in the foreign countries." I have never had the cholera since that time. We use a wagon load or two of slaked lime every few days—air-slaked lime. We disinfect every few days with a good disinfectant; we run the hogs through the dipping tank. We have a new thing that is good to keep vermin off of them; that is, to build a cement wallow. Dig out about fifteen feet square and about a foot and a half deep, sloping at the ends, so the hogs can walk in and out. Put posts up and put shelter over it that they may go in there and lie during the hot weather. A pig will not perspire. We let the porcines go into the water and we put in Kreso dip, and on top of that we put in a few gallons of crude oil, and they come out shining. The dipping tank is all right. The first time it is easy to get them in and the next time you have to shove every one of them in. One of the principal things in raising hogs is to be a good feeder. I would rather sell an ordinary pig to a good feeder than I would to sell a show pig to a poor feeder.

Now regarding the feeding of hogs, things are changing from what they used to be. It used to be a continual slop-pail business. I suppose that I have hauled out thousands of dollars' worth of middlings and bran, and we have now got to the place where we are feeding dry feed. We find that the hogs can balance their rations better than we can. When they want any water they go and get it. We have quit the slop-pail system. There are things the hog man will run up against—cholera and worms—and he must know how to handle matters of that kind. We cannot keep free from them.

While feeding hogs for the market use a variety of feed. I might have said, while talking about feeding, that the cheapest way to husk your corn is to hog it down in the field. Corn is par excellence to fatten the hog; it makes nothing but white meat; it doesn't make any of the red meat. If you want to feed hogs and grow them at the same time, use tankage or some other feed to balance the corn. The hog must have mineral matter also. If he does not have it he will root; if he has it he will not root. We try to keep a supply on hand all the time.

Exercise is another thing. I prefer that a hog should have to walk forty rods for water and feed than to have it right at hand. We want the hogs to have lots of exercise, and the pigs come strong and are up and fighting in a minute after they are born. If the brood sows are fat from an all-corn diet they will eat up the pigs when they are born, and you won't have any. I had a man ask me what was the matter with his sows. He said he had about sixty pigs and the sows ate them all up. I asked him if he gave them plenty of corn, and he said, "Yes, they have it before them all the time." I told him that the hogs were craving for something they did not get, and if he had put tankage into the feed they would not have eaten their pigs.

Another trouble is that of thumps. A sow has a litter of pigs, and the first thing a man does is to mix up a nice pail of milk feed for her, to start the flow of milk; the result is that the little pigs stunt and die. We never feed a sow under forty-eight hours. Give her a drink of water and let her alone. She will come out all right. If the milk flow is too great at first it will not be all taken and the result will be bad.

As to the mineral food, if you have wood ashes they are good; charcoal is all right, also. Sometimes we buy phosphate and limestone for them. Slaked coal is also good. I do not think there is much mineral in it, but there is sulphur, and they like it and will eat it. We have a charcoal pit and we burn charcoal for them.

These are matters that will bear a second reading, because they come from the lips of a man who knows what he is talking about. When Mr. Lovejoy advises the use of a disinfectant, he means just what he says, because fighting diseases is one of the most important problems that a swine breeder has to deal with. Do not fail to note that Mr. Lovejoy has found it practicable to dispense with the old-fashioned slop-pail method of feeding, thereby cutting out an enormous amount of labor and is attaining just as good results by the use of dry feed.

Making Gains on Beef Cattle With Cheap Foods.

THE SCOOP SHOVEL is being retired to the background and the ensilage fork coming to the front in feeding operations. That this is true is indicated by the results that are being attained by practical stockmen and by the investigations that are being carried on at our experiment stations. The day has passed when a steer can be fed half a bushel of corn a day with the expectation of getting full market price out of the corn, unless there is an enormous spread between the price paid for the steer as a feeder and the value of this same steer when he is marketed in finished form.

An interesting experiment conducted at the Iowa station, involved the feeding out of a bunch of steers weighing practically 1,000 pounds at the beginning of the feeding period. The purpose of this experiment was to test out the plan of feeding liberally on ensilage and lightly on corn, as compared with that of feeding heavily on corn and lightly on ensilage. One lot of steers was fed as much as seventeen pounds of corn daily along with thirty pounds of ensilage, and they made an average daily gain of 2.98 pounds. It should be said that they were fed in addition 1.7 pounds of alfalfa hay and two pounds of oil meal daily. The two feeds last mentioned were fed in this quantity to all steers in this experiment. Bear in mind that the first lot of steers were fed seventeen pounds of grain, which is a relatively expensive ration. Another lot was fed only twelve pounds of grain and these steers consumed an average of forty pounds of ensilage daily. Their average daily gain throughout the feeding period was 2.80 pounds. It will be noted that their gains were slightly less than were those made by steers in Lot 1, but in this case nine pounds of ensilage were substituted in the place of practically five pounds of corn.

Turning now to the third lot, we find that these steers were fed only 8.6 pounds of corn daily and 51.4 pounds of ensilage, and from this ration they made an average daily gain of 3.02 pounds. These are most surprising results and they indicate that it is possible to cut the grain ration squarely in two when a good quality of ensilage is liberally supplied. In this case the cost of making 100 pounds of gain was $7.67, whereas the gains on steers, fed seventeen pounds of corn daily, cost $9.49. There was a clear profit of $21.04 on each steer that consumed a ration composed of 8.6 pounds of corn, whereas the profit was only $15.25 per head where the steers consumed 17.1 pounds of corn.

There was another lot of steers in this experiment and these were fed an even lighter ration of corn, consuming, as they did, an average of 4.3 pounds daily, together with 53.8 pounds of ensilage. Let it be understood that each lot, as before stated, was fed 1.59 pounds of alfalfa and two pounds of oil meal per head daily. The steers fed the lightest ration of corn, namely 4.3 pounds, made an average daily gain of 2.56 pounds, and the cost of 100 pounds of grain in this case was $7.45. The profit per steer at the end of the feeding period was, in this case, $23.14. This is the largest net profit that was realized on any lot of these steers. These cattle sold for $9.45 per 100 pounds when marketed, whereas the steers fed seventeen pounds of corn daily, sold for $9.35 per 100 pounds. In other words, the steers carried through on a heavy ration of ensilage and a light ration of corn outsold the steers fed a heavy ration of corn and a light ration of ensilage.

This experiment lasted 120 days, so that it may be considered as fairly typical of those instances where a fairly good bunch of steers is brought to a reasonably high finish in a four months' period. So far as we understand the matter there was nothing special about the conditions surrounding this experiment, and there is no question but what any good feeder can obtain just as good results as these on steers of similar character. The main thing to be remembered is that exceedingly good gains, averaging more than two and a half pounds per head daily for a period of 120 days, were made from a daily ration composed of 4.3 pounds of grain, 53.8 pounds of ensilage, 1.59 pounds of alfalfa and two pounds of oil meal.

Speaks Well of Linseed Oil as a Cattle Remedy.

A VETERINARIAN writing in a foreign exchange pays a high compliment to a comparatively inexpensive medicinal product—a product that is available on practically every stock farm. Reference is made to linseed oil. As the writer in this case has had years of experience in actual practice, his advice unquestionably is well worth heeding. Referring specifically to the ailments for which linseed oil is a good remedy, he says:

In any acute form of indigestion, in stoppage, impaction of the rumen, choking, distressful breathing, or febrile attacks which the owner may not be able to diagnose, he can hardly by any possibility do wrong in giving a dose of linseed oil, but will, on the contrary, in 99 per cent of cases, prepare the way for the professional veterinarian. The observant stockman will often make a good guess as to the nature of an illness, where such prominent and unmistakable symptoms as hoven are not present.

The veterinary surgeon will be glad to hear all that he has to say as to the history and symptoms observed, without accepting his statements as a diagnosis. If a message, telegraphic or verbal, is to be sent—and one would like to say here that a written one is always preferable—it should contain the leading symptoms, as noted by the attendant or owner, and not a mere assertion as to what may be the matter.

The opposite error is the more frequent, however, and a message saying, "Cow very bad; come at once," is typical of the summonses one gets to attend at some hill farm miles away, where nothing is procurable that the practitioner does not carry with him. How often has the writer been burdened with a heavy kit for calving, and a battery with which to cope with milk fever, only to find them all useless in the presence of a case of garget, of red water, or perhaps a broken leg! Messengers arrive with no knowledge whatever of the case about which they are sent; the least intelligent person is selected as a messenger, because his time is of least value.

When an animal is observed to be ill, the owner should always have in his mind the possibility of infection, and, while waiting for professional guidance, remove it if practicable to a building or yard where isolation is possible, cleansing and disinfecting the manger and stall after removing the food. Such a precaution may arrest the spread of disease and disaster, while the time lost, if subsequently proved unnecessary, is the merest trifle.

A sick animal should not be worried by everyone about the place examining it in order to offer his "opinion" and advice, but kept quiet when the owner or responsible person has decided upon what course to pursue. There are certain things to be noted and mentioned, when sending for a veterinary surgeon, which may enable him to select from his armamentarium instruments or medicines likely to be required. The stock-keeper should know that the normal temperature of the ox only varies slightly between 99.5 and 102.5 Fahrenheit; being affected by digestion, pregnancy, parturition, and lactation, and occasionally registering another full degree without any departure from health.

Whatever the temperature proves to be should be stated in the message sent, as negative evidence is often valuable in diagnosis. Hurried, distressed, or irregular breathing should be mentioned.

When one considers the present value of cattle, even beef cattle, it will be conceded that it is quite worth while to have in mind certain precautions to be taken immediately in a case of sudden illness of individuals in the herd. The suggestion made here is unquestionably a valuable one, as no harm can be done by giving a dose of linseed oil, while on the other hand, it may be all the aid that an ailing animal will require.

Lice on melons, cucumbers, turnips, cabbage or on sweet peas, golden glow or other flowers may be killed readily by the use of tobacco extract. This is made by boiling tobacco stems up in soft water or by using "black leaf forty," which can be bought at the drug store. This applied with a blowgun will kill every louse. It must touch every one, however, because the louse sucks its food and does not eat any poison on the surface of the leaf. For plant lice, paris green and arsenate of lead are of no use whatever.

The census bureau has received reports from 1,279 slaughtering and meat-packing concerns, whose product in 1914 was valued at $1,652,000,000, 21.8 per cent more than in 1909. The increase is more in value than in quantity. The number of animals slaughtered in 1914 was 59,561,819, an increase of 4.8 per cent.

SHIPPING STOCK TO MARKET.

Muscoda, Wisconsin, Farmers Have Discovered That Through Co-operative Shipping They Have Received the Best Prices Obtainable and Have Not Had to "Cut" Rates.

FOR many years the majority of stockmen and farmers of southwestern Wisconsin have been shipping their stock through the local buyers. This is the great pork and beef-producing section of the state and from one county there is shipped annually to the Chicago market more hogs than from any other county in the United States. From this section much beef finds its way to market and grass-fed steers from southwestern Wisconsin counties have frequently topped the Chicago markets and consequently have a splendid reputation.

Shipping conditions in this pork and beef belt of the state are somewhat different than in the states devoted principally to swine and steers, as the farmers, as a general rule, are not able to ship in car lots at one time without the co-operation of neighbor stockmen. The result has been that the farmer with a few hogs and a few steers has had to depend upon the local buyer, whereas had he enough to make a carload he could ship direct to the market. Under this condition of affairs the Wisconsin pork and beef producer has had to take the local buyer's prices unless he could join with another in making up a car, and this was not at all times satisfactory or possible.

Every stockman who has shipped through local buyers knows that there are fair and unfair buyers. Some pay the best prices and prices which net the farmer more than he could receive by shipping direct, while others place the farmer at their mercy and "squeeze" him when the opportunity affords. Competition among these buyers is, as a rule, a good thing for the farmers, but this is not always possible in the smaller shipping centers and in these cases the farmers have to either take the buyer's quotations or make other arrangements. If unable to make up a car with some other farmer; if there is no co-operative shipping association and the stock is fitted for market other arrangements are often out of the question and the shipper must take the buyer's price and let him make the profit.

This was the situation that confronted the farmers and stockmen in Grant and Richland counties when they organized the Muscoda Farmers' Shipping Association two years ago last fall. These farmers made Muscoda their shipping point and were dissatisfied with local prices. Buyers at other points were paying better prices and stock was being driven and shipped right through the streets of Muscoda to other points. Business men soon realized that this condition existed to their loss; that other towns were getting the business that belonged to Muscoda. When they saw shipment after shipment of hogs driven down the main street of Muscoda and through to Blue River, the first station west, they became aroused and under the leadership of R. M. Orvhard, cashier of the Muscoda State Bank, started the ball rolling that resulted in forming the present co-operative shipping association at Muscoda. The business men and farmers got together, decided that the farmers could get more for their stock by shipping co-operatively than through the Muscoda buyer, and the association was organized. That was in November, 1913, so that the association has been shipping stock for more than two full years.

Pay to the order of John Kox $106 72

One Hundred Six + 72 /100 Dollars

Copy By R.M. Orchard Manager

This check, with the attached statement, shows at a glance what the shipper receives for his hogs; his shrinkage; Chicago expenses, etc.

During 1915 the association shipped for 155 farmers and stockmen a total of fifty-six carloads of stock compared with forty-three cars during 1914, the first year. One man last year shipped nine different times and the fact that the operations of the association are increasing each year indicates that the farmers are satisfied and that much of the old trouble has been eliminated. Last year's shipments totaled about $70,000 and twelve cars was the largest single shipment.

An editor of The Wisconsin Farmer had the pleasure recently to spend a half day with Mr. Orchard at Muscoda and learn the details of the operations of this association. Mr. Orchard was chosen manager at the organization meeting and has continued in that position ever since. Willis Briggs is president; John Hornish, vice president; Will Thied, C. B. Hackl, Tom Seifert, James M. Lewis, Frank Pospichal and Gottlieb Muller, directors. Officers are chosen each January, the manager serving also in the capacity of secretary.

Mr. Orchard said that it was the belief of every farmer in the association who shipped last year that he fared better than he would have fared by depending on local buyers. These farmers watch the local quotations carefully and Mr. Orchard estimates that during the year the association shippers averaged from 5 cents to 25 cents per hundred more than the local published quotations. He had been told by one shipper that one shipment netted him $25 above the price offered locally. On one particular shipment of calves the local quotation was $9.50 when the market was $10.75. The association shipped on this market and after deducting all expenses netted $9.75 for the shippers.

It is not necessary to be a member to ship with the association. Any non-member may ship, but he is charged an additional commission and last year about thirty farmers who were not members took advantage of this opportunity to get market prices. In addition to getting a market price for the members and shippers Mr. Orchard pointed out that the association aids non-members by keeping up the local prices. During the year one non-member was offered $6 for a shipment by a buyer who cut to $5.50 as the market fell. This farmer refused to ship and consulted Mr. Orchard. He advised holding until the association had a car ready, which he did. The result was this non-member held them a week and netted $6.10 on the shipment.

The success of the Muscoda association has brought about the organization of one along similar lines at Richland Center. Farmers at Mazomanie are considering such a step and for the benefit of communities considering such action The Wisconsin Farmer is outlining in detail the organization of the Muscoda association.

The association was organized with a president, vice president, manager and board of directors. The great amount of work falls on the manager as he must list the stock and be a close student of the market, as a 25 cent drop might mean a big loss.

When a member has some hogs or cattle to ship he telephones the manager, who lists the number, approximate weight, etc. As soon as enough is listed to fill a car the manager notifies the consigner to have his stock in Muscoda at a certain time. He has the car ready and as soon as the stock is weighed and marked it is shipped.

When the shipment reaches Chicago or whatever central market it goes to the cattle are sorted according to the owners. The painted mark put on them before leaving Muscoda identifies them. Hogs are sorted according to grade. It has been found possible also to sort hogs according to owners, but the shrinkage has been found too great that way and it is better to grade them.

This stock goes to the central yard where the commission firm makes up the record and returns it to the manager at Muscoda. This record shows what the shipment brought and also the expense for freight, yardage, commission, insurance and feed at the central yard. These expenses are deducted from the gross receipts and when the record is returned the manager makes up his statements, a facsimile of one being shown in connection with this article. This statement shows the name of the shipper, number of animals shipped, home weight, Chicago weight, the difference representing shrinkage, Chicago price, total brought in Chicago, freight and Chicago expenses, home expenses and the net to the shipper.

Some farmers inquire, "How do I know I get my share when I'm shipping in the same car with eight or ten others?" This is adjusted by the plan whereby each man's cattle are weighed separately and the hogs are all marked so that the commission firm from the markings know whose hogs top the shipment, etc. The man with one or two animals gets in on the same basis as the man with twenty or thirty or more. The record of the commission firm shows all expenses, shrinkage, etc., and it is an easy matter for the manager to make up a complete record for every shipper, which is given him with his check. It has been found that commission firms like this business and solicit it and the banks which handle the funds at the Chicago end are interested and keep an eye on the shipments.

When the stock is sold the commission firm, after deducting the expenses, deposits in the Chicago bank the amount due the association. Pay-

(Concluded on page 19.)

Dan Patch and His Owner.

Remarkable Career of World's Fastest Pacer and the Man Who Owned Him, Who Died Last Week.

THE Minneapolis millionaire, M. W. Savage, was in Hillcrest Hospital in the Minnesota city, recuperating after a minor operation. Out at his country home, at Savage, Minn., was his favorite and famous race horse, Dan Patch, the world's greatest pacer and the foundation of Savage's big fortune, says a writer in the Kansas City Star.

One day last week Mr. Savage was told that Dan Patch was dead. The horse had succumbed to enlargement of the heart the night before. A few hours later Mr. Savage was dead. The hospital physicians said heart disease was the cause. The horseman's friends, however, believe that the shock of learning of his favorite animal's end was too much for him. And since Mr. Savage's condition at no time had been regarded as even serious, and he not only had stood the minor operation remarkably well, but had gained in strength every day and soon would have been discharged as entirely well, this theory seems supported by the facts of the case.

There was an unusual sympathy between the horse and the man. Dan Patch, with the almost human intelligence which individual animals, notably dogs and horses, sometimes display, had understood his master's moods. He had seemed to understand, in the days when he was the sensation of every race meeting in which he appeared, that he paced for the financial gain and the renown of Mr. Savage. The owner, on the other hand, had as deep an affection for the wonderful horse as if he had been a human being. The two were chums. Mr. Savage never went into Dan Patch's paddock without receiving a whinny of joyous recognition from the horse, and Mr. Savage, on his part, never failed to respond with a friendly pat and a word of greeting. It was, "Old boy, how are you today?" and Dan Patch's eyes would fairly shine as he gently nosed the horseman in reply.

Doubtless Mr. Savage went back over the days when the winnings of Dan Patch afforded him the ready money for investments and for expanding his business, and traced the building of his fortune to the almost uncanny victories of the big pacing horse on the tracks of the country. Probably he remembered that the long friendship of man and dumb animal was one which had never been marred by quarrel or misunderstanding or conflict of interests, as might have been the case if Dan Patch had been a human being.

That it was genuine sorrow which the news of the horse's death brought to the master—sorrow as deep as the affection had been strong—cannot be questioned. None will know if the man shed tears, but it would have been no reflection upon him if he did. What is known is that he turned his face toward the wall in the hospital ward, and that Mrs. Savage, who had left him with the assurance that he soon would be home again as she started in her motor car for their country estate, found a message awaiting her on her arrival there that her husband was worse. She did not leave the car, but turned and sped back to Minneapolis as fast as her chauffeur could drive the machine. But it did not avail. Mr. Savage was dead when she reached the hospital.

In recent years Minneapolis and the country generally had known M. W. Savage as the head of big manufacturing interests with branch plants in Memphis, Tennessee, and Toronto, Ontario, as a real estate operator who achieved spectacular successes and as an electric traction magnate. The building of an interurban trolley road out of Minneapolis, called the "Dan Patch Line," opened a wide-trade territory to the city and resulted in the building up of an extensive suburban district.

But the older residents remembered when Mr. Savage obtained his modest start in life. Born in Marlborough, Ohio, March 26, 1859, he went to Iowa where, in the town of West Branch, he married Miss Marietta Bean, in 1881, and tried his hand at farming. He failed and went with his wife to Minneapolis, in 1886. There he began making a stock food. Good fortune attended the venture and in 1902 Mr. Savage bought Dan Patch for $60,000. It took about all the money he had made but he had faith in the horse, which even then showed remarkable speed and staying powers. The sporting world gasped a little at the amount Mr. Savage invested in the animal, but it proved the best advertisement possible. Dan Patch repaid his owner many times over, winning $60,000 in the first two years, so it was no wonder that later Mr. Savage calmly refused an offer of $180,000 for the animal. The remark so often made at the time of the purchase, that "another good church member has gone crazy over fast horses," was refuted.

Meanwhile, Mr. Savage's business interests prospered, he reared two sons, Harold and E. B. Savage, and he was a leader in all the commercial and social interests of Minneapolis. A member of Fowler Methodist Episcopal Church, he was a generous contributor to religious movements, and because of his varied activities became the most widely known citizen of his home city.

Dan Patch's career was as interesting as his owner's. Sired by Joe Patchen, a famous horse in his day, he was foaled in April, 1896, so he was twenty years old at his death. His dam was Zelica, by Wilkesberry. His owner was A. Messner, Jr., of Oxford, Indiana, who found that he showed promise as a three year old. He won his maiden race at Boswell, Indiana, as a four year old.

Dan Patch never lost a race in his long career on the turf and lowered world records no less than fourteen times. His record of one mile in 1:55 has never been equaled. For the last four years he had been in retirement on the "Dan Patch Farm," as Mr. Savage named it, and as the sire of many good horses added to his well-earned fame. He remained the central figure in the Savage stables, which included Minor Heir, Gano Boy, Hedgewood Boy, Lady C., Directum and other track stars. Cresceus was the only

An Announcement of Hudson Policy

35,000 More Hudson Super-Sixes

Detroit, Mich., July 1, 1916

We have today to announce—

That more than ten thousand Hudson Super-Sixes have now been delivered to owners.

That we have in four months, by tremendous exertion, quadrupled our daily output.

That we have parts and materials, on hand and in process, for 20,000 more of the present Super-Six. Constantly increasing demand has just forced us to place contracts on materials for an additional 15,000.

Thus it is settled that at least 35,000 more of the Hudson Super-Six will be built like the present model. Our production is now 3,500 monthly.

No Change in Sight

Our opinion is that a like announcement will be made in a year from now. The Super-Six invention in one bound, increased motor efficiency by 80 per cent. From a small light Six, which delivered 42 horsepower, it created a 76-horsepower motor. And simply by ending vibration.

Stock Super-Sixes, in a hundred tests, have out-rivaled all other stock-car performance. In speed, in hill-climbing, in quick acceleration and endurance, they have done what was never done before.

No man can doubt that the Super-Six holds the pinnacle place among motors. And there is no higher place in sight.

After eight months of experience, with 10,000 cars, not one important improvement in design suggests itself to our engineering corps.

So the Super-Six will remain as it is. And, because of our patents, it will maintain its supremacy.

Watch the 10,000

Watch the 10,000 Super-Sixes now running, and judge if you want a car like them.

Each owner feels himself master of the road. He knows that in every sort of performance his car has out-matched all rivals.

He knows that he has the smoothest-running motor ever built. The most powerful of its size.

He knows that in ordinary driving he never taxes half its capacity. That means long life and economy.

He knows that his motor has shown boundless endurance—such as never before was shown. And that he can look forward to many years of its perfect present service.

Watch some of those cars. Talk to the men who own them. Then ask yourself if there is any fine car equal to it.

Now 135 Per Day

Thousands of men in the past few months have been forced to take second choice. Most of them, we think, now regret it, and will always regret that they did not wait.

Those times are over. We are now sending out 135 Super-Sixes per day.

Go ask our local dealer.

HUDSON SUPER SIX

Hudson Motor Car Company

Detroit, Michigan

horse Mr. Savage owned which never made money for him.

The story of the winning of the race in which Dan Patch lowered the world's pacing record to its present notch, on the Minnesota State Fair Grounds track, September 8, 1906, was graphically told by the Chicago horseman as follows:

This will go down in history as a red letter day in the annals of racing, for Dan Patch, the peerless, the nonpareil of all harness horses, and the most marvelous one which ever lived, smashed his own world's record of 1:54¼, made last fall at Lexington, Ky., by pacing today in 1:55. The Hamline track was at its best, as was also the weather, but still Hamline is not Readville, Lexington or Memphis. However, the son of old Joe has been pacing so well and improving so fast that an air of expectancy pervaded the immense crowd which filled the spacious grand stand and thronged about the track, seeking in vain a place of vantage from which the assault upon the record could be viewed. Each time that champion appeared upon the course cheer upon cheer greeted him.

In the warming up miles the great pacer moved with precision. It was late in the afternoon when he appeared for the word. He was accompanied by two pacemakers, one in front and one by his side, while a third pacemaker was stationed at half to carry him home. Mr. Savage had given positive instructions to drive Dan the first half near his limit, as he was confident the brown horse could come home as fast as he went away, no matter how fast the clip. In accordance with his plan, when word was given by Dr. F. E. Stone, the champion stepped off at a terrific rate. Dan kept the front pacemaker out of his way and was over to the quarter in twenty-eight and one-half seconds.

On to the half he flew, reaching it in fifty-seven seconds, a 1:54 clip. Here the third pacemaker joined him and he began his journey on the third quarter, which is a little upgrade and where the wind retarded him most. As a consequence, this quarter was paced in somewhat slower time, twenty-nine seconds.

As he swept past the three-quarters Dan began to gather himself for the final effort. And right well did he respond, finishing strong and true amid the loud applause of the assembled multitude.

When the time was announced the crowd simply went mad. It was with difficulty that Dan could be taken off the track. His driver was carried to the judges' stand on the shoulders of enthusiastic admirers. The crowd continued to cheer as Mr. Savage was introduced. It was an occasion which will live long in the minds of those who were fortunate enough to witness it.

EAGLE Safety and Service

Buy an EAGLE Ensilage Cutter first because the perfect control and EAGLE Safety Knife Head make it safe. **No danger of long delays and serious accidents** at silo filling time when hours lost mean dollars lost.

Buy an EAGLE because its non-winding, powerful-gripping feed rolls give far greater feeding capacity. Its positive roller-chain-driven blower does not clog and the whole machine is built to stand the work. In a word

EAGLE means SERVICE

Long Feed Table, large feed opening, four knives, four edged cutting bar, safety cylinder head, safety reverse lever, powerful non-clogging blower and easy adjustment for different length cuts. No belt slippage.

You will find many other special features in these clean built, clean cutting, compact EAGLE Cutters.

EAGLE ENSILAGE CUTTERS

In and Around Wisconsin

Plans are being made to have an alfalfa demonstration at the Tomah, Wisconsin, Indian School some time later in the summer.

By producing 15,749 pounds of milk, 548.44 pounds of fat and 640 pounds of butter an Ohio Ayrshire has broken the three-year-old record of Elizabeth, of Juneau (Wisconsin).

Outagamie county, Wisconsin, is to have an alfalfa demonstration in August, the dates to be announced later. These will be carried on at the county farm under the general direction of John Flannagan, superintendent.

Wisconsin's corn crop was estimated July 10th at 10,000,000 bushels in excess of that of 1915. This would bring the total over 60,000,000 bushels. But the weather has not been very favorable since the early part of the month and it would not be surprising to see these figures revised upward.

A farmers' picnic has been announced to be held at the Wisconsin State Fair grounds, West Allis, August 26th and 27th. There will also be a cattle sale at the same time according to announcement made by A. A. Fuller, of North Lake. The promoters of the picnic are prominent members of the American Society of Equity and they are planning the organization eventually of a distributing company on a large scale. These matters will be discussed at the picnic.

The Richland County Holstein-Friesian Breeders' Association will hold its annual summer meeting and picnic at the C. B. Keys farm, south of Richland Center, August 9th. A suitable program has been arranged, including the address of C. H. Hampke, of Manitowoc. A milking contest for the ladies will be held and a judging contest for boys under twenty-one years. In addition, there will be foot races, baseball games, etc. The Keys farm is one of the show places of Richland county.

The Walworth county farmers' picnic will be held this year August 16th. This picnic will be under the auspices of the Linn, Bloomfield, Como and Lyons country clubs and the commercial club, of Lake Geneva.

Volume 88 of the American Shorthorn Breeders' Association is now ready for distribution and may be had by non-members for $2, charges paid. Address the offices of the association, 13 Dexter Park Ave., Chicago. This book contains 20,000 pedigrees, of which 8,000 are for bulls, numbered from 429,001 to 437,000, and 12,000 for cows, numbered from 205,001 to 217,000.

State dairy and food commissioner, George Weigle, estimates that muddy roads this season have cost the farmer-dairymen of the state $200,000. His figures cover the months of May and June alone. The loss was due to slow and infrequent deliveries of cream. A lower test in the quality of butter was found in these two months and Mr. Weigle attributes it to churning on the roads and infrequent deliveries of cream.

Farmers in the vicinity of Delavan indulged in a milk strike recently and increased the price paid for milk at the Delavan condensery to $1.60. It was the understanding of most of the patrons that they were to receive $1.70 per hundred after July 1st, and when that date arrived the company did not seem disposed to grant the advance. The farmers absolutely discontinued the sale of milk and pickets were established, according to reports, to see that none of those interested in the strike broke over the agreement. Business men of Delavan suffered considerably by the milk war and were in a fair way to sustain much greater losses. They were instrumental in getting the compromise which was finally agreed upon and which seems to satisfy all for the present at least.

A delegation of Louisiana farmers will visit Wisconsin about the last week of August to make farm observations. The delegation will leave Louisiana August 22d and stop off for a short time in Illinois. It has been arranged for the farmers from the South to spend two days in Waukesha county and probably a day or two at Madison.

J. W. Fitch, writing in Wisconsin Horticulturist, states that conditions are favorable for a big cranberry crop in Wisconsin this year. Cranberry sales oganizations have caught the spirit of the times and have decided to set aside 10 cents per barrel for advertising. This is expected to stimulate sales and keep the market good. Good crops are in prospect in the Jersey bogs and also in the Cape Cod district in Massachusetts.

There will be plenty of things just as interesting for the housewife as for the farmer at the Wisconsin tractor demonstration, to be held at Madison September 4th to 8th. Of course, there will be tractors galore, but in the big accessory tent small implements of all kinds and machinery that depend for operation upon some other source of power will be on exhibition. Then there will be an exhibit put on by the college of agriculture showing modern arrangements of the farm home, conveniences for the kitchen and milk house that will save the farm wife much time and hard work, model sewage disposal plants that make farm life less subject to disease, practical water systems that make provision for running water in the kitchen as well as in the barn and barnyard, heating systems that do away with the work and waste of wood and coal stoves, and lighting systems that put the farmhouse beyond the reach of the danger and dirt of lamps.

ONE OF THE TYPICAL SCENES IN THE BEAUTIFUL KICKAPOO VALLEY OF WISCONSIN.
(Barn of Mr. D. S. Simmons, near Viola.)

Don't Wear a Truss

BROOKS' APPLIANCE, the modern scientific invention, the wonderful new discovery that relieves rupture will be sent on trial. No obnoxious springs or pads. Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. **Sent on trial to prove it.** Protected by U. S. patents. Catalogue and measure blanks mailed free. Send name and address today.

C. E. BROOKS, 2985 State Street, Marshall, Mich.

WITH less aggravation by attaching an adjustable stubble cutter to your corn harvester. Cuts the "stubs" while you cut the corn. Easily attached to machines of the Acme, McCormick, and Milwaukee type. Interesting book, "Comfort in the Cornfield," free. Give make of corn harvester when writing. Address CORN HARVESTER ATTACHMENT CO., 524 S. Dickinson Street, Madison, Wisconsin.

PATENTABLE IDEAS WANTED. Manufacturers want Owen Patents. Send for 3 free books: inventions wanted, etc. I help you market your invention without charge. Address Richard B. Owen, 37 Owen Bldg., Washington, D.C

LET US TAN YOUR HIDE: COW, HORSE, or calf skins for coat or robe. Catalogue on request. The Crosby Frisian Fur Co., Rochester, N. Y.

The Helvetia Milk Condensing Co., of Monroe county, announces a raise in its milk prices for July, August and September. July prices have been raised from $1.35 to $1.40, August from $1.35 to $1.45 and September from $1.45 to $1.55. Test regulations are to remain the same as before.

LAW QUESTIONS.

Sale of Farm—Fixtures.

A Subscriber, Otter Tail Co., Minn.—A certain man owned a farm in Iowa, on which there were portable hog houses, feed bunks, hog troughs and a feed rack with runners under it. He sold the farm, but nothing was said in the contract of sale about the things above mentioned. Before he gave possession of the farm, he sold said things at public auction. Had he a lawful right to do so?

Answer.—The things mentioned were not fixtures, but personal property which the seller of the farm had a right to keep, or sell.

White Salmon, Wash.—A record cherry yield of 1,071 pounds of Royal Anns from one tree, which brought $48.19 at the local cannery, and 916 pounds of Governor Woods from another, bringing $27.50; a total of $75.69 from two trees, is reported by George Thomas, of this place.

Marketing Wood-Lot Timber.

Study the Amount Which May Be Offered For Sale and the Purpose to Which Your Timber Is Best Adapted at the Factory.

TO SECURE a fair price for his timber the owner of a woodlot should know how much material he has and for what purposes it is best adapted. The first thing for him to do, therefore, says an article in the yearbook of the department of agriculture, "Pointers on Marketing Woodlot Products," is to find out how much timber of each kind the woodlot contains, what products it will yield and what is its general condition and quality. If the woodlot is small it will be best to measure each tree separately. The diameter should be measured at about four and one-half feet above the ground with calipers made for the purpose. Heights should be carefully estimated, or measured with some sort of height instrument, to the first large limbs. When the entire woodlot has been gone over it will be possible to divide the trees into diameter classes; for example, eight to twelve inches, twelve to eighteen inches and eighteen inches and over. As a general rule, trees from eight to twelve inches in diameter will make ties; those from twelve to eighteen inches, poles or piling, and those eighteen inches and over, lumber or veneer. Knowing the diameter and height, the amount of timber in board feet in each tree can be found by the use of volume tables, which are included in Farmers' Bulletin 715, "Measuring and Marketing Woodlot Products." The quantity of cordwood a tract will yield can hardly be estimated by an inexperienced person. Sales of such material will usually have to be made on the basis of actual cut.

If the woodlot is large it will, of course, seldom be possible to measure each tree separately. In such cases every tree may be measured on parallel strips sixty-six feet wide running through the tract. Every 660 feet in length of such strips comprises an acre. Averaging all the acres comprised in the strips and multiplying by the total acreage of the tract gives the total stand. The strips should include at least 10 per cent of the woodlot. Proper allowance must also be made for defective timber. Dead trees, except those killed by fire or other outside agencies, are apt to be very defective and should be culled. When the tract is exceptionally large it may pay to employ a professional "cruiser" to estimate the timber.

Once a woodlot owner knows the kind, amount and quality of his timber the next step is to find someone who will buy what he has to sell. If the owner depends altogether upon local industries to buy his product he is likely to find his market extremely limited. Some products, such as crossties and fuel wood, have to be sold locally; it would not pay to transport them far. But other products, among them tan bark, can be shipped 150 miles, and still others, like walnut timber for gunstocks, can be shipped almost any distance.

Railroads are the largest purchasers of crossties. Any station agent will furnish information concerning specifications and the prices paid by his company. Electric railways in cities and towns also use ties, but unless the distance to town is short it will not pay to ship them. Electric interurban lines offer the same opportunity for disposing of ties as do the steam roads. Telegraph and telephone lines are always on the market for poles. Most of them have branch offices in towns and cities where prices and specifications can be obtained. Electric power and electric street railway companies also use poles. Pole specifications usually classify the materials in five-foot lengths, beginning at twenty feet and running up to sixty feet, with a diameter at the top end of seven inches in the smallest poles and correspondingly larger diameters for the longer ones. The market for piling is not very extensive, but railroads, large construction firms and docking companies purchase considerable quantities. Piling timbers, which must be straight and long, bring good prices. Lists of users can be obtained from the forest service. Mines are large users of timber and, if the woodlot is in a mining district, it would be well to look into this market. Sawmills, veneer mills and fruit and vegetable package factories offer a market for the particular kinds and qualities of the woods they handle. These industries buy all their material in log form and the woodlot owner does not have to engage in any manufacturing operation himself. All he need do is to cut and deliver his timber in the rough at the mill. Veneer logs must be of good quality and size, but selected stock brings a high price.

The forest service has prepared bulletins on the wood-using industries of a number of states which tell the uses to which various woods are put and the quantity used annually for each purpose. They also contain directories of wood-using firms arranged according to the products that they manufacture. A list of these bulletins and information as to how to procure them may be had upon application to the forest service.

The way in which woodlot products are sold may have a good deal to do with the profit an owner gets from his tract. There are four ways of selling: (1) by scale measurement of rough products; (2) by the piece, for such products as ties and poles; (3) by the boundary, for a lump sum; and (4) by lumber scale of sawed products.

Selling by the log or piece is the simplest method. Ties, poles, piling, etc., are always sold by the piece. The important things to know are the different grades of each product and their relative value. Fire wood, pulp wood and excelsior wood are sold either by the cord or rick. This, too, is a comparatively simple method of marketing. To be sure of selling profitably by boundary for a lump sum the owner must make a very careful estimate of the amount and value of his timber.

In the majority of cases the best time to cut timber is in the winter months. Winter-cut timber seasons slowly and evenly and by the time the warm weather comes is thoroughly air-dried. Products which must be peeled, however, such as ties, poles and tan bark, should be cut in spring when the bark peels most easily. Veneer logs which must be delivered at the mill in a green condition can be cut in any season of the year, provided they are delivered as soon as cut. This is true also of pulpwood and tannin-extract wood.

The really necessary steps, then, in the profitable marketing of woodlot products are to find out what the woodlot contains and then, through the medium of a list of wood-using industries within shipping distance, to find a purchaser for the various classes of timber on the tract, delivering the material in the forms called for. If the woodlot owner will devote the same thought and care to marketing his timber that he does to marketing other farm crops he will be more than likely to find that this necessary part of the farm, which now too often brings in no revenue at all, can be put upon a sound paying basis.

The national and state agricultural departments are at "outs" again on the Kansas wheat prospects. There is a difference of 20,000,000 bushels in the estimated yields of the two. The national government gives Kansas credit for a probable yield of 110,000,000 bushels from 7,440,000 acres, an average of sixteen bushels to the acre. The state board of agriculture's estimate is 90,000,000 bushels on 7,754,000 acres, an average of slightly less than twelve bushels to the acre. The acreage for Kansas is based by the state board of agriculture on the actual sowings reported by the assessors, who asked each farmer March 1st of this year the amount of wheat sown and the amount plowed up. The government figures are based on the estimates of farmers as to the amount of wheat sown, compared with other years and not on the actual sowings.

10,850 MILES

WITHOUT STOPPING THE MOTOR

KING EIGHT CYLINDER

A registered STOCK car (everything stock—gear ratio, ignition, tires, wheels, etc.) made this unparalleled record in a Car Owners' Service Test conducted under OFFICIAL A. A. A. sanction and supervision.

Sheepshead Bay Speedway and Long Island, New York roads were the scenes of this sensational trial which began at 12:14 P. M. June 15th and finished at 12:14 P. M. June 29th. Officials of the American Automobile Association maintained a daily 24 hour vigil during the entire two weeks. Many newspaper and motor journal representatives and parts manufacturers were in constant attendance.

The sturdy KING ran day and night through rain, fog and boiling sun without requiring a *single* replacement or adjustment.

10,850 miles equals about two years' travel in the hands of the average owner, yet in this entire mileage the car was stopped (with the motor running) for a total of but 15 hours, 25 min. 41 sec. On this basis the test demonstrated that a KING EIGHT, even with the motor running continuously for two years, requires only *nine minutes per week* of an owner's attention for *all* service—gasoline, water and oil fillings, tire changes, battery care, etc.

And most astounding of all, the KING made this 10,850 miles with a total *labor* expense of considerably *less* than *ten dollars*.

During the entire 10,850 miles a weight equal to five passengers was carried and the car maintained an average speed of 34 miles per hour, excluding stops.

An examination made after the test proved the car to be in perfect running condition and ready for another trial of the same or greater length.

This great KING achievement tops off the series of remarkable road tests recently conducted on the Pacific and Atlantic seaboards. Climbing tortuous Mt. Wilson in Southern California sealed in high gear; traveling 987 miles in high gear from Los Angeles to San Francisco and return, and driving 544 miles in high gear from Providence to Providence via Albany and New York City, are three remarkable accomplishments of the eight cylinder KING all within a fortnight.

The accuracy of every statement in this advertisement can be proved by impartial, official documents. These gruelling trials have raised still higher the proud estate of KING ownership, and to prospective car purchasers this *pioneer* eight cylinder car now offers a record which can mean nothing less than ABSOLUTE SATISFACTION IN PERFORMANCE, SERVICE and OPERATION ECONOMY.

Roadster, $1350. Sedan, $1900 Prices F. O. B. Detroit

KING MOTOR CAR COMPANY DETROIT

SUCCESS IN UPPER WISCONSIN.

Dairying Promises to Be as Important an Industry in Douglas County as in the Southern Counties of the State—An Idea of the Progress Which Is Being Made.

BARN AND SILO ON P. A. GLASS FARM AT BENNETT.

MODERN EQUIPPED BARNS WHICH HOUSE THE FINE HOLSTEIN HERD OF L. K. LUSE, SOUTH RANGE, DOUGLAS COUNTY.

WITH the passing of the lumber jacks from Douglas county, Wisconsin, has come the settlers who are adopting the most advanced ideas of farming, and within a few years this Upper Wisconsin county should prove as great an agricultural county as it has, in the past, proven a gold mine for the lumber kings. Although the fifth county in area in the state with a total of 1,337 square miles, less than a seventh of this area is in farms and under the plow.

The writer had the pleasure recently to spend a day with J. M. Walz, county agricultural representative, and learn at first hand what is being done along agricultural lines in this county. Hundreds of settlers are going into this country now to farm the fertile soil, much of which is still covered with stumps left by the lumber gangs, and second growth timber. Many come from the southern part of the state and many from Iowa and Illinois, bringing with them the experience of farming in other sections. Many farms that have sprung up in this once timbered county would do justice to older sections of the state. It has only been a few short years since lumbering on a large scale ceased, and there are still a few stretches of native timber, so our readers can calculate for themselves that what has been done has been done in a short time. Superior is the only large city in the county, and many of the towns are still inland and far from the railroads. This probably accounts for the good roads that are being built through the brush and past the settlers' farms, and despite the fact that less than 7 per cent of its available farming area is in farms, Douglas county is doing as much permanent road work as most of the counties in the state.

The county agricultural representative began his work in the fall of 1914, which time marked the beginning of a systematic endeavor to improve agricultural conditions. Like every county there were many problems to face, such as drainage of the heavy clays; the addition of humus to the soils; correction of the acidity on the lower lands, the need of more pure-bred live stock; better seed, etc. These problems the representative is helping the farmers to solve, and the work that has been done is the best evidence of success. Farming is still carried on on a small scale, as the farms or rather the amount of cleared lands in the farms is small. This is brought about by the fact that settlers have taken slashings and are clearing year by year, so that in the end they will have good-sized farms under the plow, paid for as they go. This makes it hard for the farmers to work together, the farms being widely separated, but all these conditions are gradually being overcome with the influx of more settlers the clearing of more land and the increasing size of the cleared area on farms already laid out.

VIEW OF THE HOME AND BARNS OF T. J. ANDERSON AT REDHAM.

Considerable emphasis has been placed on drainage and much has been done by surface ditches if not with tile; the soy bean has been introduced as an improver of the sandy lands; pure-bred seed has been distributed in order to encourage the growing of pedigreed grains as wheat, oats, barley and even corn do well in Douglas county as indicated by the heavy yields. Potatoes should be one of the most important cash crops, and particular attention is being given, with good results, to the growing of standard market varieties, and to further this work a contest was held among 100 school children last year to whom pure Green Mountain seed was furnished.

Dairying promises to be the big farming operation as it is in other sections of the state. The new creamery at South Superior which was completed recently affords an outlet for much of the milk and cream, but as yet the farmers are not well enough organized to buy and sell stock.

The importance of picking out one thing and sticking to it is being impressed upon the settlers, and with this has been spread the need of better dairy cattle and better sires. The Rotary club of Superior brought in about a year ago a hundred grades and sold them under the Ashland plan, which indicates the kind of operation the farmer receives from the business men. Many pure-bred sires are now being bought and the representative is encouraging communities to club together and buy pure-bred sires where none are available in the neighborhood. The result will be the breeding up of the native stock. Farmers' clubs have been organized in several villages so that the social as well as educational side has not been neglected and in one district, Poplar, nine silos were erected last year through the work of the farmers' club and the institute. During the year 1915 the number of silos in the county was doubled and many more will be built this year. Quite a number of farmers are raising sheep which are good for brushing down the land while several feeders are experimenting with shipping to western sheep and feeding them on the cut-over lands.

The substantial farm homes and farm buildings which are to be seen on every hand in the county testify to the prosperity of their owners and indicate what may be expected along farming lines in this county in the future. One of the best herds in the county is that on the farm of George C. Cooper, at South Range, where he has forty-five head of pure-bred Guernseys. This herd is supplying much stock as foundation stock for neighboring farmers. The same is true on the L. K. Luse farm at South Range, where about thirty-five head of Holsteins are kept, many pure breds, in addition to pure-bred Percherons. Mr. Luse uses a milking machine and finds it gives him splendid service.

D. M. Merrill and E. Stonge, of Ancona Falls, are having splendid success with fruit. Although lying along Lake Superior, this has been found a good, dependable fruit section, and the state horticultural society has an experimental orchard on the farm of P. A. Peterson at Poplar where the society is determining the right variety of apples for this section. The first of the nine new silos in this vi-

MANY DOUGLAS COUNTY FARMERS HAVE SUCCESS WITH HOGS. SCENE ON THE SHERIDAN FARM.

WHEAT AND CLOVER THRIVE SIDE BY SIDE, IN THIS COUNTY. FIELD OF WILLIAM HALLUM, ITASCO STATION.

cinity was built on the Peterson place. Edward Vaughn, at Poplar, is an Iowa settler, who has Guernseys and pure-bred Chester White hogs. He farms about eighty acres out of 500 which he owns, 420 not being cleared. He had the champion calf at the last fair and is developing some nice stock. Theodore Lawlor at Gordon has specialized in grains and was the first to show the use of the light, sandy soils. A. N. Young, of South Range, is going in for pure-bred Holsteins, and N. A. Thompson, of Noscot, is giving his attention to grains and horses.

Foxboro is the center of some very nice farms, among which is that of Signor Hadecher, who has forty-five grades and furnishes milk to Superior. His barn is all modern with running water and his herd is one of the largest in the county. John Finlayson and Otto Schmidt each have nice grade herds, and Schmidt has had splendid success with pure-bred seed grains. E. J. Roth, of South Superior, has a herd of fifty-five cows. He uses a pure-bred sire and is also having good luck with Poland China hogs. George Seldon is another who has found pure-bred seed grains profitable in addition to a herd of grade Holsteins. Christianson Bros. at Wentworth have a new barn and silo for their herd of sixty cows, and these improvements are all modern.

These are only a few instances of successful farming in this Upper Wisconsin county and serve to indicate what may be expected in the future.

GOOD HARVEST WEATHER.

Hay Makes Good Yield--Cutting Small Grain Has Started--Corn and Potatoes Doing Well--Some Sections Need Rain.

WISCONSIN.

Adams County.—Weather for the last three weeks has been hot and dry, which has hurt to some extent all crops in this region. Rye appears to be well filled, and harvesting will begin soon. Tame hay has been put up; the crop was light. Pastures are drying up on the upland. Early potatoes need rain; late potatoes have a good stand and look well. Corn has a good, healthy color, but is undersized. Oats are suffering from heat and drouth. Marsh hay will make a heavy crop.—W. B. Barnes.

Barron County.—We have had first-class haying weather for two weeks. Corn has made a good growth. Potatoes are looking well, but bugs are working overtime on them. The hot weather has held back the pea crop, but a rain on the 14th and 15th helped it. With favorable weather from now until harvest, oats and barley will make good crops.—J. K.

Burnette County.—Small grains are heading out satisfactorily, but rust is on the oats. Corn and potatoes have advanced considerably during the last two weeks of hot, dry weather. Potato bugs are plentiful and Paris green high priced. Pastures are drying up on high ground. Haying has started, but the stalks dry slowly, being somewhat immature on level land. Berries and fruits promise well. So far this season, prosperity seems assured.—E. H. Johnson.

Fond du Lac County.—Weather is extremely hot and dry. Corn, as well as pastures and gardens, is much in need of rain. Haying is well along, and the hay is of very good quality; conditions fur curing were favorable. Barley is nearly ripe and promises to be a good crop. Oats are doing well, but are not as promising as last year.—A. L. Williams.

Jackson County.—Because of extreme heat and two good rains during the last two weeks, the corn crop is in much better shape than at this time last year. Weather is very favorable for haying, and those who sowed timothy are cutting more hay than they expected. Grain harvest will be late. Small grains lodged considerably due to storms on the 15th and 16th. No complaint of rust has been made. Oats and barley will probably yield heavily.—P. W. Jones.

Juneau County.—Grains are coming on in fair condition. Some barley is cut and winter rye is almost ready to cut. Oats look well. Haying is well under way, and a fair crop of fine quality is expected. Weather has been good for curing hay. Corn, potatoes and pastures need rain. Some pieces of buckwheat are up and look well.—C. E. Haskins.

Lafayette County.—Weather is hot with no rain for three weeks. Everything is growing well and corn is much better than last year. Small grain is very heavy and a rain would lodge many fields. Hay is being harvested in the best possible condition and the yield is better than was expected. Pastures are suffering from dry weather, so are potatoes and garden truck. Some barley is ready to cut.—W. J. Martin.

Langlade County.—Oats are heading out and have fairly good size. Rye is good, barley fair. Peas are in bloom and look fine. Corn was backward, but has improved very much in the last two weeks. Potatoes are much better than last year at this time. Alfalfa is a light crop because much of it winterkilled and is now running to June grass. Clover is making about two and one-half tons per acre of good quality hay; timothy about two tons. Strawberries were a bumper crop. Apples promise fairly well and vegetables are growing fine. Weather is hot and dry.—Chas. Lade.

Lincoln County.—Small grains of all kinds are backward. The hay crop is very good and pastures are in fine condition. Potatoes and corn are coming on well, considering the cold, wet spring. Fruit is scarce.—G. A. Patterson.

Manitowoc County.—Haymaking is now in full swing, and the crop is almost up to average in spite of the unfavorable spring. Corn is three or four weeks late, but the warm weather is bringing it along fine. Peas and barley look poor because the weather was too wet and cold in May and June. Oats and rye are coming along in fine shape and will make good crops. Pastures are getting short on account of dry weather. A good rain is needed for all crops. Dairy cows have been giving an exceptional flow of milk, and cheese factories are doing a good business.—Edward E. Straka.

Marquette County.—No rain has fallen for a month and crops are suffering. Pastures are burning up. Young clover looks sick on account of drouth. Rust is in the rye. Corn has a fairly good stand. Potatoes look well. Meadows are good this year.—Emil Hein.

Racine County.—The hay crop is unusually good; timothy made one and one-half tons per acre on the average and the new seeding made about two tons. Corn is backward and the stand uneven. Oats look fine and promise a full crop. Barley shows large, well-filled heads and will yield well. Pastures are not growing because of need of rain. Early blight affected the potato some, but those not affected are unusually good.—J. Frand Bradley.

Sawyer County.—Crops are doing well. Hay is especially good, and clover is being cut which averages from two to three tons per acre. Early sown oats are doing well, but the later oats show signs of rust. The stand of potatoes is unusually good in the early-planted fields. The later planting is more uneven. Weather has been very warm and dry for the last two weeks except for a few local showers.—Jens Uhrenholdt.

St. Croix County.—The hay is exceptionally good and it has been harvested under very favorable conditions. Pastures are fine and cattle are in better shape than usual for this time of year. Rye is being harvested on light, sandy soils and the crop is turning out well. Barley never looked better and is now maturing rapidly. The oats crop is not as heavy as last year and the quality will not be as good. The wheat stand is normal, but many fear that rust and warm weather will injure the crop. Early potatoes are good, but the dry, hot weather has hastened their maturity and they will, therefore, not be large. Potato bugs are troublesome.—Stephen Everson.

Trempealeau County.—In general crops look fine, although they are a little behind normal. Most of the haying is finished. Farmers sow timothy and clover in their meadows, and since the clover winterkilled, the crop is either thin timothy or a mixture including self-sown red top. Early grains are growing nicely and turning some. The last few days have been too hot for the grain, which will suffer if the heat continues too long. All grain has a good strong growth of straw. Corn is uneven; the best is about four feet tall and looks well. Weather has been too dry for pastures, which are getting short. Potatoes and gardens are growing nicely.—John Lowe.

Wood County.—We had cold, rainy weather until the last week in June and now the weather is dry and hot. Pastures and meadows are in fine shape. Corn and potatoes promise well. Some of the corn is not very high yet, but the season in general has been late. Some damage to corn was done by cutworms. Hay harvest has just begun. Oats will make 80 per cent of a normal crop. Barley is very good. Dairy cows are doing well; other cattle and swine are in good condition and prices high.—P. B.

Colt Needs Grain and Grass.

To make an 1,800-pound horse at maturity, the colt should weigh from 600 to 700 pounds at weaning time and 1,000 pounds at one year. To make the usual standard of 60 per cent mature weight at twelve months, the growing colt needs more food than the milk given him by his mother.

Some oats, fed in a separate box so his mother cannot get it, is better for growth than corn because it is a more balanced feed, says Prof. M. G. Thornburg, of the department of animal husbandry at Iowa State College. A little bran and corn will do if the oats is not available. Even if the colt is on pasture he needs a little grain.

If the mare is working the colt should not follow her, wearing himself out in the hot sun. He should have a clean, well-ventilated box stall or lot to run in where he can get his feed while his mother is working. A little clover hay and water will keep him contented. The fences and sides of the stall need to be in good shape, else he is likely to get tangled up and hurt himself.

If he has the run of the lot he will get more exercise, which is essential in developing a strong colt. If the mother and colt are out on grass on idle days and nights the grass will increase the mother's milk flow and the colt will soon learn to nibble at the grass. If the colt eats grass and hay when he is weaned he will not notice the change and keep right on growing.

Sawdust Poor For Concrete.

Sawdust does not mix well with concrete to make a good cement floor. The engineering authorities at Iowa State College are looking for the man who says that it does. In some manner, the report has gone over the state that some department of the college had recommended such a mixture. Prof. M. F. P. Costelloe, head of the department of agricultural engineering, has issued an authoritative denial of this.

"There is no department of Iowa State College that would recommend cement floor made from a mixture of sawdust and concrete," he stated in a recent letter in answer to one of the numerous inquiries that have come to him. "We would thank you very much if you would tell us where you read these statements."

The wearing qualities of any concrete work would depend upon the hardness of the materials mixed with the cement. For this reason quartz sand is always considered the most desirable. Where a floor less firm than concrete is desired, paving blocks of some form of asphalt construction is sometimes used.

Two months after the cow-testing associations had been formed at Rowland and Independence, Iowa, reports from the official tester showed that thirty-three better records were made as the direct result of better feeding. Herds in these associations showed an increased profit of from $10 to $20 and individual cows increased their earnings to their owners from $3 to $6.50. The last report of Howard C. Barker, of Iowa State College, state agent for the cow-testing associations, shows that there are now twenty-three testing associations in the state, all of them prosperous.

Live stock and soil fertility go hand in hand. Rich soils and big crops make another loving couple.

Game Farming Pays

THE time is not far distant when the demand for game birds in this country will be far more universal than it is today. And today the demand is much greater than the supply. A short time ago we received a letter which said, "Had we them to sell we could have disposed of over 5,000 pheasant eggs last spring". This is only one of many similar instances that could be cited.

When you consider that pheasant eggs sell at from $20 to $25 a hundred you will realize that raising of game birds is by no means a mere labor of love. There is profit in it as well as pleasure.

A game farm run as an adjunct to your present poultry work, or independent of it and on a larger scale if you prefer, will pay you well in many ways.

In addition to the sale of birds and eggs for the market or breeding purposes it is possible to derive both profit and pleasure from the good hunting which the birds will afford. Furthermore, it has been proved that game birds destroy in large quantities insects such as tomato worms, squash bugs, cut worms, apple maggots, tent caterpillars, cherry lice, etc., that are harmful to the market garden or to fruit trees.

In our booklet, "Game Farming for Profit and Pleasure", you will find much interesting and valuable information on the entire subject of game breeding. It is sent free to those who ask for it. Write for your copy today. Please use the coupon below.

GET THIS—

No Man Needed To Feed This Machine

You know what that means. No man to pay, no risk of accident. This is accomplished by the "Safety-head" which adjusts itself to the amount of material fed. Three men working at top speed cannot choke the machine.

ANOTHER THING. Foreign substances do not damage. By means of special safety devices, the fly wheel and pulley run free when cutting head suddenly stops.

For other advantages and our dealer in your locality write,

The TORNADO SILO FILLER

If you want a silo filled with silage which will produce good, rich milk and plenty of it; also silage which will produce fat rapidly, fill it, or have it filled, with a **Tornado**, on account of the fact that the **Tornado** reduces it to a very fine condition.

By having it cut fine you get much more in the silo. It will settle closer, eliminating mould pockets, thus resulting in a much sweeter and better feed. Another reason why you should have it cut fine is that the cattle eat every particle, thus eliminating any waste.

By cutting it fine the cattle eat that part which contains the largest percentage of food qualities, which is the stalk.

The **Tornado** will be the means of bringing about these results.

Rules of National Swine Show.

Entries Will Close on September 20th, and Certificate of Registration Must Accompany Every Entry Application.

ACCORDING to regulations of the National Swine Show all exhibitors will be required to purchase an exhibitor's ticket at the price of $1. Helpers to care for the exhibit will be furnished free tickets by the general superintendent.

Charges for pens will be as follows: All pens 5x9, $1; pen 10x9, $2. All applications for pens and space must be made to E. Z. Russell, general superintendent, 103 Bee Building, Omaha, Neb. Fees for pens must be paid at the time application is made. Pens must be secured at any time upon application to the general superintendent.

Entries shall be made with the secretary and must be addressed to James J. Doty, secretary, Bee Building, Omaha, Neb.

Entries close Wednesday, September 20th. No entry accepted unless mailed on or before closing date.

An entry will not be accepted for any animal for which the exhibitor does not furnish a certificate of registry at the time of sending the entry. The certificate of registry for each animal must be sent with entries, so as to have the necessary information from which to print the official catalog of the show.

In case an animal entered dies or is injured so that it cannot be exhibited, another may be substituted by a proper showing.

No person will be allowed to see the entries or have access to the entry books until after the entries have closed. No entries are necessary for championships.

Competition open to the world except that no institution will be permitted to compete that is supported wholly or in part by state aid or taxation.

All animals shown must have been the property of the exhibitor thirty days prior to the opening of the show. Firms or co-partnerships entering animals for exhibition must have been in existence at least thirty days prior to the opening of the show, and in all cases must be bona fide as shown by the certificates of registration. If it be ascertained that any exhibitor has made or caused to be made any false statement in regard to any animal exhibited or the ownership of the same, or if any exhibitor shall attempt to interfere with the judge in the performance of his duty in any manner or shall refuse to accept the awards made, he shall be disqualified from further competition and shall forfeit any premiums already awarded.

Animals on exhibition must remain in the space assigned them on the grounds until the close of the show, except by permission of the president of the association upon the recommendation of the general superintendent.

All possible diligence and care will be used to prevent the loss or injury to animals on exhibition, but it is hereby expressly stipulated that the National Swine Growers' Association or anyone of the management of the show, will in no wise be responsible for a loss or injury of any kind to any animal.

All hogs for exhibition must be in place by 10 a. m. Monday, October 2, 1916, ready to be driven into the show ring at 1:30 p. m. Monday, if called.

An exhibitor will be permitted to show three animals in each class, but cannot be awarded more than two prizes in any class.

Sows two years old or over to be eligible to show must have produced living pigs within twelve months preceding September 1, 1916, and all boars of like age must have sired pigs farrowed within the same time.

All swine exhibited at the national swine show must be accompanied by the certificate of a qualified veterinarian, stating that they have been immunized or the sworn statement of the owner may be sent instead of the veterinarian's certificate, saying the animals have been immunized by either the double or single method. If by the double method it must have been done more than twenty-one days prior to date of shipment; if the single method was used, it must have been less than twenty-one days prior to date of shipment.

In case of dispute as to the age of an animal, its certificate of registry will be evidence of the age and the owner will be required to file with the general superintendent an affidavit that it is the identical animal therein described.

Protests designed to affect the awards must be made by an interested party. This protest must be in the form of a written statement, verified by affidavit, setting forth the reasons for protesting, and must be filed with the secretary of the National Swine Growers' Association on the day the awarding is made, with a forfeit deposit of $10 in case the protest is not maintained, provided that protest will be entered any time before Friday, October 6th, at six p. m., if the protesting party will state under oath that the facts upon which the protest is made were not in his possession at the time the award was made. The show committee of the National Swine Growers' Association shall determine all protests.

Awards of premiums will be made by one expert judge, who may have a consulting judge, the decision of the regular judge, however, must be final.

Pigs farrowed the property of the exhibitor may be shown as bred by exhibitor.

The general superintendent shall have authority to require each attendant showing animals to dress neatly and in a manner that shall meet with his approval. The general superintendent shall have authority to prevent any attendant who does not comply with his orders from exhibiting an animal.

Exhibitors may have the mail addressed in care of the secretary of the National Swine Growers' Association, Omaha, Neb.

Moneys paid for pens will be refunded by the general superintendent if application is made for such refund by September 1, 1916.

Carload shipments for exhibitors should be consigned to the owner at the National Swine Show, Union Stockyards, South Omaha, Neb.

Animals for exhibition sent by express must have express prepaid and consigned to care National Swine Show, New Horse Barns, Union Stockyards, South Omaha, Neb.

The right is reserved by the National Swine Show committee appointed by the National Swine Growers' Association to revise, correct, add to or interpret these rules as the interests of the National Swine Show may require, and all entries are to be understood as being made or exhibited only upon this basis.

100 ton Silo filled in 2 days

At Shell Lake, Wis., A. J. Hanson's Blizzard filled a 100-ton silo with a 6 H. P. engine in 2 days using 16 gallons of gasoline. Mr. Hanson says, "It's easiest running and will do the most work of any machine of its size I ever used." The

BLIZZARD
Ensilage Cutter

will give YOU genuine satisfaction in the filling of *your* silo, whether it's 100 feet high or twenty, whether your engine is 10 H. P. or 4, whether you have one team or three men, or two teams and twenty men, whether you want an inch cut or a quarter inch. In the words of Mr. Jas. S. Glasgow, of Portland, Ind., "The Blizzard has great capacity, requires only moderate power, cuts the corn nicely, is safe and convenient to feed, well made throughout."

Dynamite For Clearing Land.

A. H. Anderson, of Walworth county, Wisconsin, has had considerable experience clearing land with the use of dynamite, according to the Independent, which recites the case as follows:

He broke up six and one-half acres of timber land this spring, on which he had used seventy pounds of dynamite in getting the stumps out. The job of cleaning cost him about $100.

The wood lot contained quite a number of trees and a lot of old stumps which, though rather old were solid in the ground. The trees were grubbed out in the fall by digging down and cutting off all the spread roots, then pulling them over with a team and block and tackle.

There were fifty-four of the stumps that had to be blown out, and some of them were in so solid that it required two pounds of dynamite to get them out. Seventy pounds of dynamite were used on the fifty-four stumps. Besides blowing out the stumps, the explosion of the dynamite loosened up the soil, though soil on Heart Prairie never packs as it does in some other localities, due to the excellent drainage.

Besides the cost of the dynamite, there was the expense of burning the brush, clearing off the stumps after they were blown out, and clearing off the wood. Two men spent two days clearing up the brush and burning it. It took two and one-half days for one man to blow out the stumps, and two men spent a day and a half clearing up the stumps after they were out. Then there was the cost of the team work which, added to the cost of clearing the lot, though this work was done during the winter when the team would otherwise be idle. Considering all the expense, time, labor and all, Mr. Anderson figures that it cost him just about $100 to clear the six and one-half acres or about $16 per acre, which amount will easily be paid back by a few good crops from this new land.

On just what kind of nest egg does Her Highness, Mrs. Hen, prefer to sit while depositing her egg? We'll know pretty soon, according to G. M. Turpin, head of the poultry husbandry department at Iowa State College, who is conducting experiments along that line. Indications are that a hen prefers a real to a china egg as a nest adornment. In one four-test experiment in which a real and a china egg were placed in different nests each day, of sixty-five eggs laid, one-half were deposited in the nest holding the real egg, one-fourth in the china egg nest and the remainder in the other two nests. "We will make no definite statements until further tests are made," says Mr. Turpin.

If none of the above combinations suit you, you can make your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World, and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wisconsin.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Size of Pulley.

I have a feed grinder run by horse power; also a six-horse-power gasoline engine, rated at 340 R. P. M. and equipped with a fourteen-inch belt pulley. The jack shaft of the horse power makes twenty-two revolutions to one round of the team. Can I put a pulley on the jack shaft to run it from the engine; if so, what size pulley?

Answer.—Assuming that your horses make ten rounds per minute, which is probably their approximate rate, you could use a twenty-inch or twenty-two-inch pulley on the jackshaft.

Setting Auto Engine Valves.

Enclosed please find a diagram that I received from the factory for timing a 1913 Model R Velie auto engine. Please tell me how to set the valves by the marks on the flywheel. There is no pointer to point to the marks on the flywheel. Please explain all about setting the valves. How can I tell when the valves are not set right?

Answer.—The diagram, which we do not publish, shows the intake open 5 degrees before center and the exhaust close 13 degrees after center. In timing a motor it is customary to set the cams so that the intake valve opens and the exhaust valve closes correctly, disregarding the intake closing and exhaust opening points. The above timing varies from the usual practice in that the intake is generally set to open slightly after center rather than before.

To find what 1 degree on the flywheel measures, find the circumference of the flywheel by passing a tape line around it and divide the circumference by 360. For instance, if it is sixty inches around the rim of a flywheel, 1 degree on the rim will measure sixty inches divided by 360, which is one-sixth of an inch. Twelve degrees would be twelve times one-sixth inches, or two inches.

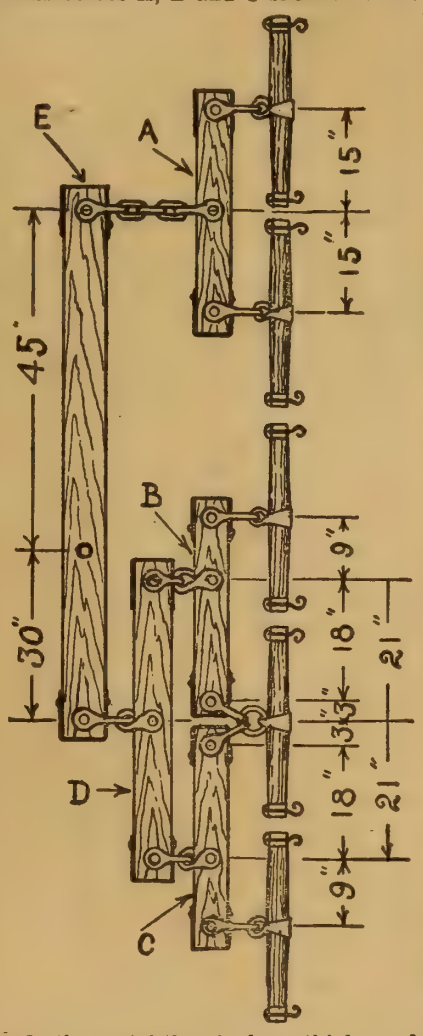
To time a motor it is necessary to know when the piston is on head dead center—"top" center, as it is usually called. For practical purposes this point may usually be found by removing a valve cover and watching the head of the piston as the motor is slowly cranked. Sometimes a rod may be inserted through a priming cup hole, the travel of the piston up and down being shown by the movement of the rod. The first step in timing a motor is to place the motor so that the piston in number one cylinder is at top dead center. If number one cylinder is timed correctly the other cylinders will also be correct. If, as in the above case, the top center and opening and closing points are marked, but there is no pointer, set the motor on top dead center by observing the piston movement and then make a tin pointer and bolt it to the engine so that it points to the top center line on the flywheel. If the flywheel is not marked make a tin pointer and bolt it on the rear cylinder studs. Place the piston on top center and scratch a line on the flywheel at the end of the pointer, marking it "T C." Rotate the flywheel about 5 degrees in the direction it runs and mark it "IN OP"—intake open. Rotate it 7 degrees more and mark it "EX CL"—exhaust close. Manufacturers each have their timing diagram, but the above timing should give good results with any automobile motor.

Adjust the push rods so that a piece of newspaper slips freely between the push rods and the end of the valve stems when the valves are closed. Then rotate the flywheel in the direction it is to run until the push rod raises enough to tighten on the newspaper under the exhaust valve stem. Keep on turning the motor until the intake push rod tightens on the paper. The pointer should then point to "IN OP" on the flywheel. Then, if the motor has two cam shafts, turn the flywheel a few inches further until the [illegible] is released under the exhaust [illegible]. The points should then [illegible] to "EX CL." If the motor has only one cam shaft it will not be necessary to time the exhaust. If the [illegible] does not come right slip the cam shaft timing gear out of mesh with the crankshaft gear and rotate the cam shaft enough to bring the timing right.

A Five-Horse Evener.

Please advise me how to make a five horse evener for a gang plow. Please give the measurements for the doubletrees and all the strap irons.

Answer.—We are publishing a sketch showing one way of making a five-horse evener. The principal length dimensions are shown, the figures being inches. The singletrees should be twenty-eight inches long. They should be two and three-eighths inches in diameter at the middle and tapered to one and three-fourths inches at the ends. Hickory is the best material for a homemade evener. Doubletrees A, B and C should be one



and three-eighths inches thick and three and three-fourths inches wide. D should be the same thickness and four and one-half inches wide. E should be about five and one-half inches wide and one and three-fourths inches thick. The singletree hooks should be made of steel rods three-eighths of an inch in diameter. The drawing shows ordinary clevises used for the connections, the small clevises being one-half inch round, the middle ones five-eighths of an inch round and the large one three-fourths inch round stock.

Another Evener.

Please publish a sketch of a five horse evener that will work without side draft on a "J. I. C." gang plow; the five horses being abreast and only one horse in the furrow.

Answer.—We doubt that such an evener would work without some side draft. You might make a chain evener, similar to the four-horse evener, the diagram of which we recently published.

Power of Falling Water.

How much power could be obtained from water falling straight down fifty feet through a two inch pipe from a supply tank above? How much if the tank were one hundred feet high?

Answer.—Two horse power should be developed from the tank fifty feet high and twice as much from the tank 100 feet high.

Pumping Water From Distant Well.

I would like to know if I can pump water out of my well, which is twenty-five feet deep, and have my engine in my shop, which is 600 feet from the well. The shop is twenty feet higher than the top of the well. I wish to use a two-inch pipe, and force the water into a tank fifteen feet high at the shop. Would I need any check valves in the line? What kind of a pump should I use? Would a four horse power engine be too small?

Answer.—The distance from the well would not prevent the pump from working, but some more power would be required than would be if the tank were over the well. The four-horse-power engine is large enough, however. The pipe should be laid about three feet under ground and the cylinder placed as low as possible, though the pump would probably work with the pipe on top of the ground. There must be no leaks in the suction pipe. A check valve just above the sucker would be advisable, but not absolutely necessary. Use a "force pump."

A Practical Car for the Practical Farmer

Think over the car question—just what do you require? Don't you find most important—

POWER, ROOM, STRENGTH
MODERN CONSTRUCTION

These four points are the ones most desirable for most farmers and they show up strong in the specifications of the Allen 37. You will find the Allen up-to-date, powerful, roomy, well-built and complete.

There is no greater motor car value under $1000—there is no car so well fitted for country use.

All we ask is comparison. Note these specifications.

37 H. P. 3¼"x5" 4 cyl. motor.
112-inch wheelbase.
55-inch underslung rear springs.
Full floating rear axle.
Two-unit electric starting and lighting system.
Weight 2300 pounds.
Gives 20 miles on a gallon of gasoline.

Model 37 has proven so satisfactory for the past year that it will be continued for this our fifth successful season.

Write for the Allen Autolog. See the Allen next time you go to town.

The Allen Motor Company

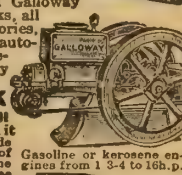
GALLOWAY

SECOND EDITION NOW READY

Ask for your copy today. A postal gets it. The first edition of this big, 250-page book of Galloway bargains was exhausted. Second edition just off the press. It describes the famous Galloway line of Sanitary Cream Separators, the Galloway gasoline and kerosene Engines, the new, modern Galloway Manure Spreaders, our new 12-20 h. p. Farmobile; Galloway Farm Trucks, all kinds of farm machinery, hay tools, ensilage cutters, power house accessories, grinders, buggies, wagons, harness, fencing, roofing, saddles, Galloway automobiles, stock tanks, corn tools, automobile accessories, sewing machines, household goods, carpets and rugs, furniture, and a complete line of clothing for every member of the family.

I WANT YOU TO HAVE YOUR COPY OF THIS BOOK

You can get it for a postal. If it guides your summer and fall buying it will save you from $200 to $500. It tells the the truth about cream separators, it gives engine secrets and facts, it tells how and why the Galloway manure spreaders made Galloway famous, fully describes my new 12-20 h. p. Farmobile or tractor. A copy of this book should be in your hands even if you are not now in the market for a single one of our bargains. Printed in four colors, handsomely illustrated. Ask for your free copy today. Address



Four low prices and four good sizes of Galloway Separators

Gasoline or kerosene engines from 1 3-4 to 16h.p.

WM. GALLOWAY COMPANY, Mfg. Specialists
37 Galloway Sta. Waterloo, Iowa

Galloway's new 12-20 Farmobile. Low price.

Seven Styles: Farm trucks from 750 lbs. to 3 ton capacity

Equal to 9 men and 3 teams

These Manure Spreaders made Galloway famous. Big, free book gives details of size and style.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Removing the Spurs From Yearling Cocks.

At one experiment station fifty-eight roosters were deprived of their spurs on the day that is recognized as "Swat the Rooster." These birds are to be kept for next season's pens, and as it was necessary to remove them from the yards after the breeding season was over, their spurs were removed. From all this number only one bird was lost. Whether from the removal of the spurs or through handling we did not learn.

Just as cows use their horns, so do cocks use their spurs. Primarily for protection, and since they have become domesticated and do not need them for this, they use them anyhow through pure aggressiveness, and many times a valuable male is lost. Twice we have had valuable fowls lost by a diminutive bantam flying over their heads, striking deep in the vital part, killing them instantly.

Instances could be recounted where the spurs of males have been responsible for the loss of hens. The bruises and raw sores we often find are the result of the spurs of their mates. At certain seasons of the year cocks fight, and on the range it is not always the choice one of the lot that heads too many of the flock after the others have become so badly cowed as to leave with perhaps only a remnant of their rightful number of mates. At the close of the breeding season, when it is desirable to place the males in a yard, it is not safe, unless their spurs are removed.

The spur of a cock is not unlike the horn of a cow. There is the same hard, horny substance around a more porous, bony structure, and consequently, the manner of despurring cocks is somewhat like that of dehorning cows. It is safer to cut close to the shank than to leave a stub. The spurs may be removed with a fine saw, a pruning knife or a pair of pruning shears; preferably the saw.

We once heard a man say that he wished he could remove the spurs from old roosters and sell them for young fowls. Such an ignoble wish prejudiced us about the whole affair, but it is being done now for a better purpose, and so we pass it on.

Much Fatality Amongst Late Hatched Chicks.

In the case of incubator hatched chicks, the losses are always heavy late in the season, after the weather becomes warm. One lot, perhaps, will look all right, while the next clutch, with exactly the same feed and care, after a few days begin to mope and die. What to do, or what not to do, to avoid a repetition is the question.

If we look about us with enough persistence, sooner or later the trouble can be located. Few times there are, especially through the warm weather, that the machine does not become too hot. It is a strenuous problem at the close of a hatch when the animal heat becomes so much in evidence, to keep the temperature from running ruinously high. Many times we have had to extinguish the blaze for a time, and that is no joke either. To permit the temperature to become too low causes weak chickens.

Unless the temperature ran high for a long time, the chicks are pretty sure to hatch. The chick is not killed outright, but the yolk which is absorbed just before they emerge into the outer world, is hardened and cannot become assimilated. Then it is that the little fellows soon die, and, discouraged, we wonder—and wonder.

Late hatched chicks, whether with machine or hen, have no place on a farm, only as the hen steals her nest, takes her brood to the fields and comes up in the fall with a lot of fine fries. One woman not long since had read where a man had hatched late chickens, and was so enthusiastic about it that the late chicks were given the credit of being the money-makers.

The woman, who had only just begun to raise poultry on limited space, asked if she could hatch yet more chickens, or turn all her attention to caring for the 200 she already had. She was emphatically warned against hatching another bunch of small chicks to be trampled by the large ones. Then, too, all her feed must be purchased, and if large lots of late summer chicks do not pan out on the farm, where there is feed to be gleaned in the fields, then would a town dweller have a hard row.

Do Not Crowd the Chicks.

To the Editor:—If the brood coops of the early hatches are not of sufficient size to allow perfect growth and development the growing chicks should now be removed to more roomy quarters. Plenty of pure air and a roomy roosting place make comfortable and contented chicks—then they will mature much earlier than if allowed to remain in close, crowded coops.

I find that by scattering their food along at intervals between their old and new roosting places at night that the brood follows quickly, picking up the food until the new coops are reached, then by throwing some of the food inside, the entire bunch usually enters without further trouble. Once in a great while there will be one or two that cannot be persuaded to go in. I fasten those up that are in and allow these to go to their old roosting place and transfer them to their new home after dark. I then remove the old coop to a different place. Then if any of the chicks return to their old roosting place the next night they will find it gone and usually go quickly to their new home.

I make the roosts about three feet high, of plank six inches wide, which enables them to sit comfortably. I allow a sufficient distance between the perches so that the chicks will not be crowded. I place a wide plank, one end resting upon the floor and the other end on the first roost near the door, which makes a convenient way for them to walk up to their new roosts. I always close the door of the new home for the first night or two after the chicks are persuaded in and then leave it open on hot nights. The pullets from these early hatches are the ones which make the winter layers and should be made to mature as rapidly as possible, and this they cannot do if crowded in their roosting quarters. A Subscriber.

A Mite Remedy.

To the Editor:—One hears so much complaint during the months of July and August about the loss of hens from mites and lice and I would like to give my experience for the benefit of others.

Scalding with water is a waste of time and labor, for scald today and tomorrow you have legions, as I know from experience. I have found that a good remedy is kerosene and lard, about one pint of lard (or any kind of grease) to one gallon of kerosene. Paint it on the roosts and nest boxes and all crevices where the mites hide. After a few applications you can say goodby to the mites. I know this remedy to be effective, for I rid my chick house of mites when I thought they would carry it away. That was fifteen years ago and you cannot find a mite today in either of my houses. After you are once rid of them an occasional clean-up will keep the houses so. This will keep the lice off your hens and cure their scaly legs.

Ida Seerley.

By means of a new apparatus the stumps of trees left after logging operations in long leaf pine timber land have been converted from a source of expense into an asset. The device is in the shape of a hood that sets over the stump and distills as much as seventeen gallons of heavy pine oil from it. The process converts the stump itself into a fine grade of charcoal and destroys it far enough underground to permit plowing.

AILING ANIMALS.

Cocked Ankles.

I have a brown saddle mare, four years old, that is starting to get cock ankled on her two hind feet. Please give me a treatment for her.

You should have a veterinarian examine the cock-ankled horse before treatment is advised.

Suspected Tuberculosis.

We have a three-year-old Jersey cow that has a bad cough. She coughed some six or eight months ago but lately her cough has become worse. We have her on good pasture.

We would advise you to have this cow tested for tuberculosis, as it would be unsafe to have her in your herd if she is affected.

Bone Spavin.

I have a bay gelding, two years old, that has a bone spavin starting and he limps a little. Please give me a treatment.

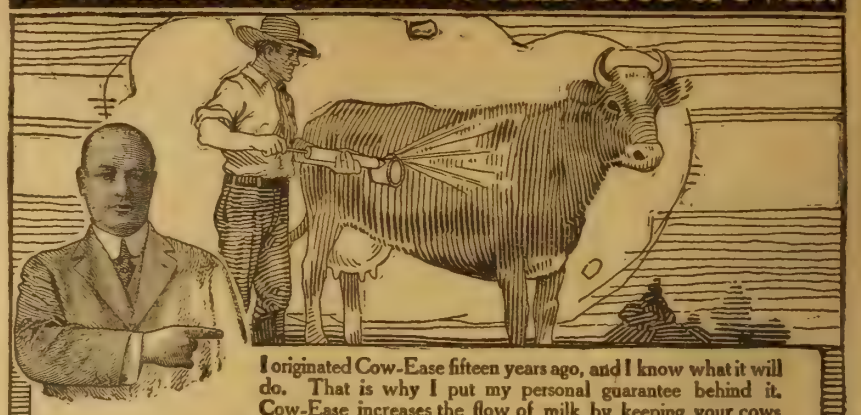
Give the spavin a good blistering with some good veterinary blistering ointment which can be obtained at your local drug store. Grease the blistered parts in thirty-six to forty-eight hours. Give the animal complete rest during treatment. Blister again if necessary.

Clover Bloat.

We have had trouble this spring with clover bloat. Have lost three head of cattle. I would like to hear through your paper how long this danger of bloat would last and if after the clover has dried up it would still be unsafe to turn cattle into this pasture.

Cattle should not be put on clover when it is wet with dew or rain, as it is very liable to bloat them. There is not much danger of bloating if the clover is dry. When a cow becomes bloated she should be given half-ounce doses of carbonate of ammonia dissolved in a pint of water. This should be repeated every half hour until relieved. If the bloating is very bad tapping the rumen should be resorted to.

COW-EASE Guaranteed to Make Good or I Will!



I originated Cow-Ease fifteen years ago, and I know what it will do. That is why I put my personal guarantee behind it. Cow-Ease increases the flow of milk by keeping your cows quiet and contented.

COW-EASE Keeps Flies off Cattle and Horses

It is a liquid applied with a sprayer which we furnish. Flies cannot come near it. It is harmless, does not gum the hair or blister the skin. Flies not only irritate your cows, reducing their yield of milk, but they are deadly germ-carriers, and dangerous to health. Get rid of them! Spray your cows with Cow-Ease before each milking—they will stand quietly—and feed in peace throughout the day. One gallon is enough to spray a cow 200 times. Remember that I personally guarantee to return your money if you are not satisfied. Thousands of dairymen and farmers are using it. Do you? Sold by Reliable Dealers Everwhere.

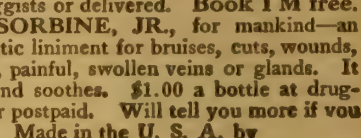
M. Elton Vose Assistant Treasurer.

CARPENTER-MORTON CO., 87 Sudbury St., Boston, Mass.
Manufacturers of Cow-Ease. Established 1840.

TRIAL OFFER
If your dealer cannot supply you, send me his name and $1.25, and I will deliver prepaid to your address a half-gallon can of COW-EASE and SPRAYER for applying. For west of Missouri River and for Canada, above Trial Offer, $1.50.

BALE YOUR HAY With the Lightning Line

MAKE BIG PROFITS Simplicity, strength, durability, make the Lightning Press the most economical to buy; big capacity, quick work, no trouble, lasts for years, best farm money-maker.



We make a complete line of both heavy and light presses, horse, engine and tractor power. We will make good terms to right customers.
Send name today for complete catalog, showing all styles and prices.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.
Reduces Bursal Enlargements, Thickened, Swollen Tissues, Curbs, Filled Tendons, Soreness from Bruises or Strains; stops Spavin Lameness, allays pain. Does not blister, remove the hair or lay up the horse. $2.00 a bottle at druggists or delivered. Book 1 M free.
ABSORBINE, JR., for mankind—an antiseptic liniment for bruises, cuts, wounds, strains, painful, swollen veins or glands. It heals and soothes. $1.00 a bottle at druggists or postpaid. Will tell you more if you write. Made in the U. S. A. by
W. F. YOUNG, P.D.F., 101 Temple St., Springfield, Mass.

Shoo-Fly THE ANIMALS' FRIEND

For keeping flies and many other insects off of animals—in barn or pasture—longer than any imitation. Used and endorsed since 1885 by leading dairymen.
$1 WORTH SAVES $20.00 in milk and flesh on each cow in a single season. Excellent for galls. Allays itching. Aids in keeping animals from irritating sores by rubbing or stamping. Excellent for lice and mites in poultry houses.
$1.25 ($1.50 west of Mississippi River) will bring you enough Shoo-Fly to protect 10 cows 2 weeks, also our 8-tube gravity sprayer. EXPRESS PREPAID. Money back if not satisfactory. Name Express Office. Booklet FREE. Special terms to agents.
Shoo-Fly Mfg. Co., Dept. 21, 1310 N. 10th St., Phila.
Editor knows from experience Shoo-Fly is O. K.

Geo. E. Thull, Official Tester.

Geneva Co-operative Cow-Testing Association.

Twenty-four less cows qualified in the Geneva Co-operative Testing Association during the month of June than in the month of May. The most interesting thing noticed is the rise in the average test. The average test for the 113 cows tested in May was 3.964 per cent, while in June the eighty-nine cows that qualified tested on an average 4.045 per cent. The highest was made by Ora Taylor's Jersey, a three year old, who produced 585 pounds of milk, testing 7.2 per cent, making 42.1 pounds of butter fat. Tests varied from this figure down to 2.8 per cent. The list is falling off, due largely to many of the cows drying up, as they will freshen early this fall. The records are not quite as high as usual.

The following table gives the names and records of the cows in the association which have produced forty-five pounds of butter fat or more during the period of thirty days ending June 30, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

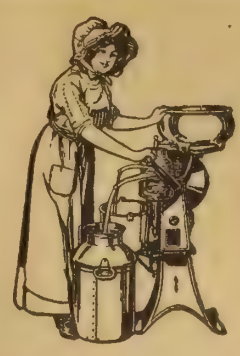
Farnk Drake, Tester.
Chas. L. Turner, Secretary.

A horse can trot for all he's old, and some men never get tired of the race track nor cease to play important roles. F. C. Garner, who rode a runner to victory at Trenton (Missouri) last week, rode a winner there at the Grundy County Fair thirty-nine years ago. For good measure the Trenton Times adds that there are few older fairs in Missouri than the one in Grundy county, which was organized in 1859.



"DOG DAYS" the best time to buy a DE LAVAL SEPARATOR

THERE WAS NEVER BEFORE as good a time to buy a De Laval Cream Separator as **right now.**

THE "DOG DAYS" ARE AT hand when dairying is most difficult without a separator and when the increase in quantity and improvement in quality of cream and butter are greatest through the use of a good separator.

THEN THERE IS THE GREAT saving of time and labor, which counts for more in summer than at any other season and often alone saves the cost of the separator, aside from all its other advantages.

THIS IS LIKEWISE THE SEASON when De Laval superiority counts for most over other separators,—in closer skimming, larger capacity, easier running, easier handling, easier cleaning and absolute sanitariness.

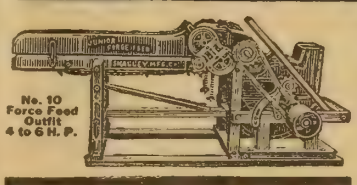
A DE LAVAL CREAM SEPARATOR bought now will easily save its cost before the end of the year, and it may be bought for cash or on such liberal terms as to actually pay for itself.

Look up the nearest De Laval agent AT ONCE, or drop us a line and we will have him look you up.

The De Laval Separator Co., 165 Broadway, New York, 29 E. Madison St., Chicago

50,000 BRANCHES AND LOCAL AGENCIES THE WORLD OVER

Here's A Silo Filler That Makes Alfalfa Chop

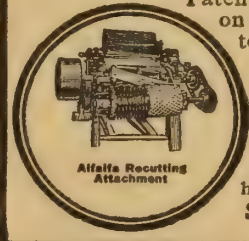


Thousands of farmers fatten cattle, sheep, hogs and poultry with wonderful alfalfa meal made by patented recutting attachment on the Smalley. Handles leaves, stems and all without waste or injuring color of hay. Enables you to sell No. 1 hay and mill off-grades for feeding. Makes combination feed from clover, rice straw, bean straw, pea vines, oats, rye and dried cornstalks. Capacities 1200 to 2700 lbs. meal per hour. Junior Mill makes 500 to 800 pounds of meal per hour with 5 to 8 H. P. engine. Grip Hook Table feeds cutter automatically, saving wages and board of at least two men on big outfits. Paddle roller grips a bundle of corn in record time.

Powerful Smalley Silo Filler

Chain Drive—Grip Hook Force Feeding

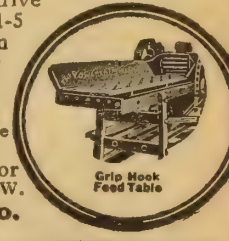
Blower built independent of cutter. Fan speed can be increased or decreased without changing speed of knife shaft.



Patented low speed one pulley chain drive on blower cuts down power cost 1-5 to 1-4 and saves needless wear on belt. Extension Table on hopper prevents accumulation of litter.

Steel in castings makes machine one-fourth heavier and far more durable than any other.

Save piles of money by sending for handsome, illustrated FREE Book NOW.



Smalley Manufacturing Co.

Bale Your Hay The SANDWICH Way

More Bales Bigger Profits

Bale your own hay, bale your neighbors' hay. There's money in it—**big money** when you use the fast-working Sandwich hay press (motor power).

SANDWICH HAY PRESS

Solid steel construction. Sandwich Gas and Oil Engine, with magneto, mounted on same truck furnishes power. All designed and built in our own plant, superior to assembled machines. Heavy steel chain transmission (no belt to slip). Simple self feeder and block dropper. Turns out a continuous stream of solid salable bales. Starts or stops instantly. Best press for alfalfa. Horse and belt power presses also.

"Tons Toll." Our Book Sent Free. Your guide to big profits. Pictures and describes these great presses. Write

SANDWICH MFG. CO., 510 Center St., Sandwich, Ill.

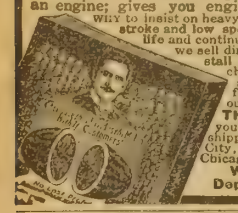
WANTED

Ten men or more in every township and county to get my **big new book about engines.** My new model is a **mechanical masterpiece,** built by master engine builders after the leading engine designers. It develops **away above** rated horsepower; bearings adjustable, special economy carburetor, **worth $15 more** on any engine, but costs **nothing extra** on a Galloway, cuts down fuel bills; uses any fuel, perfect vaporizer; valves in the head like all the modern automobile engines; large fly wheels, **a big bore, long stroke, heavy weight,** your choice of ignition systems, an easy starter, no cranking.

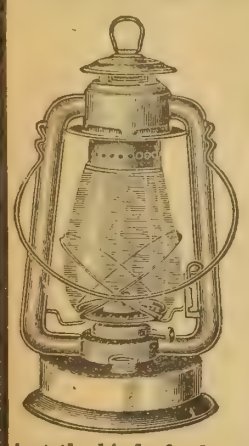
GALLOWAY'S ENGINES

Get a genuine Galloway, **then you won't be disappointed** as thousands of its users have testified. My new 250-page book tells **how** to pick out, size up and judge an engine; gives you engine secrets and facts, WHY to insist on heavy weight, large bore, long stroke and low speed, which mean long engine life and continuous user's satisfaction; WHY we sell direct at wholesale; HOW to install an engine and hook up machinery; HOW Galloway engines are built in our own factories in Waterloo; WHY our engine prices are so low. **THIS FREE BOOK** will save you from $50 to $250. Engines shipped from Waterloo, Kansas City, Council Bluffs, St. Paul or Chicago.



WM. GALLOWAY CO.
Dept. 35 Waterloo, Iowa

SAFETY
STORM BLAST
LANTERN FREE



This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

SYNOPSIS OF PRECEDING CHAPTERS

The scene is laid in the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold. A neighbor, named Hardy, comes to his camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. He becomes well acquainted with his employer's sister, Rachel Hardy, who takes a great interest in him and is much in his company. Genesee Jack overhears a conversation between Miss Hardy and her aunt, from which she learns that he is not "fit company for a lady"—this is the aunt's view—and the relations between Rachel and the guide become strained. Disobeying his strict orders to stay with the party, Rachel Hardy rides ahead, her horse throwing her as it scares at a bear cub. She is severely hurt, but Genesee Jack finally finds her, only to think she has died from her exertion and suffering.

CHAPTER VII.

Under the Chinook Moon.

Ikt polaklie konaway moxt.

OVER the crowns of the far hills the moon wheeled slowly up into the sky, giving the shadows a cloak of blue mist, and vying with the forgotten torch in lighting up the group in the gulch. The night winds rustled through the leaves and sighed through the cedars; and the girl's voice, scarcely louder than the whispers of the wood, said: "Genesee! Tillie!"

"Yes, Miss," the man answered, as he lowered her head from his shoulder to the sward, making a pillow for her of his hat. With returning life and consciousness she again slipped out of his reach or possession, and himself and his emotions were put aside, to be hidden from her eyes.

Through the blessing of death, infinite possession comes to so many souls that life leaves beggared; and in those hurried moments of uncertainty, she belonged to him more fully than he could hope for while she lived.

"Is it you, Genesee?" she said, after looking at him drowsily for a little. "I—I thought Tillie was here, crying, and kissing me."

"No, Miss, you fainted, I reckon, and just dreamed that part of it," he answered, but avoiding the eyes that, though drowsy, looked so directly at him.

"I suppose so," she agreed. "I tried to reach you when I felt myself going; but you wouldn't look around. Did you catch me?"

"Yes; and I don't think you were quite square with me back there; you told me you were all right; but you must have got hurt more than you owned up to. Why didn't you tell me?"

"But I am not—indeed I am not!" she persisted. "I was not at all injured except for the jar of the fall; it leaves me dizzy and sick when I sit upright in the saddle—that is all."

"And it is enough," he returned decidedly; "do you 'spose, if you'd told me just how you felt, I should have set you there to ride through these hills and hollows?"

"What else could you do?" she asked; "you couldn't bring a carriage for me."

"May be not, but I could have ridden Mowitza myself and carried you."

"That would be funny," she smiled. "Poor Mowitza! could she carry double?"

"Yes," he answered curtly; perhaps the situation did not strike him in a humorous light. "Yes, she can, and that's what she will have to do. Let me know when you feel able to start."

"I think I do now," she said, raising herself from the ground; "I am a little shaky, but if I do not have to sit upright I can keep my wits about me?" I believe. Will you help me, please?"

He lifted her into the saddle without a word, and then mounting himself, he took her in front of him, circling her with one arm and guiding Mowitza with the other, with as much unconcern as if he had carried damsels in like cavalier fashion all his life.

They rode on in silence for a little through the shadows of the valley, where the moon's light only fell in patches. His eyes were straight ahead, on the alert for gullies and pitfalls along the blind trail. He seemed to have no glances for the girl whose head was on his shoulder, but whom he held most carefully. Once he asked how she felt, and if she was comfortable; and she said, "Yes, thank you," very demurely, with that mocking smile about her lips. She felt like laughing at the whole situation—all the more so because he looked so solemn, almost grim. She always had an insane desire to laugh when in circumstances where any conventional woman would be gathering up her dignity. It had got her into scrapes often, and she felt as if it was likely to do so now. The movement of the horse no longer made her ill, since she did not have to sit upright; she was only a little dizzy at times, as if from the rocking of a swing, and lazily comfortable with that strong arm and shoulder for support.

"I am afraid I am getting heavy," she remarked after a while; "if I could get my arm around back of you and hold either the saddle or reach up to your shoulder, I might not be such a dead weight on your arm."

"Just as you like," was the brief reply that again aroused her desire to laugh. It did seem ridiculous to be forced into a man's arms like that, and the humorous part of it was heightened, in her eyes, by his apparent sulkiness over the turn affairs had taken.

She slipped her arm across his back, however, and up to his shoulder, thus lightening her weight on the arm that circled her, an attempt to which he appeared indifferent. And so they rode on out of the valley into the level land at the foot of the hills, and then into the old trail where the route was more familiar and not so much care needed.

The girl raised her head drowsily as she noted some old landmarks in the misty light.

"Poor Mowitza!" she said; "she did not have such a load when she came over this road before; it was the day after you joined us, do you remember?"

"Yes."

Remember! It had been the gateway through which he had gained a glimpse into a new world—those days that were tinged with the delightful suggestions of dawn. He smiled rather grimly at the question, but she could not see his face very well, under the shadow of his wide hat.

"Has Mowitza ever before had to carry double?"

There was a little wait after her question—perhaps he was trying to remember; then he said:

"Yes."

She wanted to ask who, and under what circumstances, but some way was deterred by his lock-and-key manner, as she called it. She rather commended herself for her good humor under its influence, and wondered that she only felt like laughing at his gruffness. With any other person she would have felt like retaliating, and she lay there looking up into the shadowy face with a mocking self-query as to why he was made an exception of.

"Genesee!" she began, after one of those long spells of silence; and then the utterance of the name suggested a new train of thought—"by the way, is your name Genesee?"

He did not answer at once—was he trying to remember that also?

"I wish you would tell me," she continued, more gently than was usual with her. "I am going away soon; I should like to know by what real name I am to remember you when I am back in Kentucky. Is your name Jack Genesee?"

"No," he said at last; "Genesee is a name that stuck to me from some mines where I worked south of this. If I went back to them I would be called Kootenai Jack, perhaps, because I came from here. Plenty of men are known by names out here that would not be recognized at home, if they have a home."

"But your name is Jack," she persisted.

"Yes, my name is Jack."

But he did not seem inclined to give any further information on the subject that just then was of interest to her, and she did not like to question further, but contented herself with observing:

"I shan't call you Genesee any more."

"Just as you like, Miss."

Again came that crazy desire of hers to laugh, and although she kept silent, it was a convulsive silence—one of heaving bosom and quivering shoulders. To hide it, she moved restlessly, changing her position somewhat, and glancing about her.

"Not much farther to go," she remarked; "won't they be surprised to find you carrying me into camp like this? I wonder if Betty came this way, or if they found her—the little vixen! There is only one more hill to cross until we reach camp—is there not?"

"Only one more."

"And both Mowitza and yourself will need a good rest when we get there," she remarked. "Your arm must feel paralyzed. Do you know I was just thinking if you had found me dead in that gulch, you would have had to carry me back over this trail, just like this. Ugh! What a dismal ride, carrying a dead woman!"

His arm closed around her quickly, and he drew a deep breath as he looked at her.

"I don't know," he said in a terse way, as if through shut teeth; "perhaps it wouldn't have been so dismal, for I might never have come back. I might have stayed there—with you."

She could see his eyes plainly enough when he looked at her like that; even the shadows could not cover their warmth; they left little to be expressed in words, and neither attempted any. Her face turned away from him a little, but her hand slipped into the clasp of his fingers, and so they rode on in silence.

The brow of the last hill was reached. Down below them could be seen the faint light from the campfire, and for an instant Mowitza was halted for a breathing spell ere she began the descent. The girl glanced down toward the fire-light, and then up to his face.

"You can rest now," she said, with the old quizzical smile about her lips, even while her fingers closed on his own. "There is the camp; alta nika wake tsolo" (now you no longer wander in the dark).

But there was no answering smile on his face—not even at the pleasure of the language that at times had seemed a tacit bond between them. He only looked at her in the curious way she had grown accustomed to in him, and said:

"The light down there is for you; I don't belong to it. Just try and remember that after—after you are safe with your folks."

"I shall remember a great deal," returned the girl in her independent tone; "among other things, the man who brought me back to them. Now, why don't you say, 'Just as you like, Miss?' You ought to—to be natural."

(To be continued.)

Concrete foundations extending two and a half feet below the ground and two feet above will make buildings rat proof.

"Try-a-bag" of fertilizer. Our brands are soluble and active, and not only increase yield, but improve quality and hasten maturity. Agents wanted. Address American Agricultural Chemical Co., Cleveland, Cincinnati, Detroit of Baltimore.—Adv.

Stains.

Call after call has come to the Home Department for advice on the removal of various kinds of stains. All the little folks in the country seem to have upset their cocoa or spilled the ink or ruined their best frocks on the grass; the men folks have been careless with the machine oil or the wagon grease; even mother herself has had trouble with fruit juice or iron rust or stove polish. The editor has decided to make a list of all the various kinds of stain troubles and come to the rescue.

It should be remembered that stains should always be removed before the clothing is washed, because the action of soap and water may set them and then your task will be that much harder. The secret of removing a stain is to find some substance in which it is soluble. If acid is used, stretch the stained portion over a bowl of boiling water and with a medicine dropper or old tooth brush apply the acid (diluted), occasionally dipping the stain into the boiling water. It is well to add a little ammonia to the water in the bowl, as ammonia overcomes the bad effects which the acid might have on the fabric. If boiling water is prescribed, pour through the stain, pouring from some height so as to strike the stain with force. If alkali is recommended for removing the stain, dilute ammonia is preferable and the method of procedure is the same as where acid is used.

Here is the list of stains with methods of removal, prepared in convenient form to be clipped out and pasted in the back of your kitchen scrap book for future use.

Blood.—Wash with cold water until stain turns brown, then rub with naphtha soap and soak in warm water.

Chocolate.—(1) Wash with soap and tepid water. (2) Sprinkle with borax and soak in cold water.

Coffee and Indigo.—(1) Spread the stained article over a bowl and pour boiling water through it until the stain disappears. (2) Soak for a short time in Javelle water or in a weak solution of oxalic acid. Rinse thoroughly with boiling water containing a little dilute ammonia water. Repeat if necessary.

Cocoa.—Wash in cold water first, then rinse and pour boiling water through the stain. If the stain still persists try a bleaching agent.

Grass Stain.—(1) Wash with naphtha soap and warm water. (2) For colored fabrics apply molasses or a paste of soap and cooking soda. Let stand over night and wash in tepid water.

Grease Spots.—(1) Wash with soap and water. Turpentine, oil or lard are often used to soften old spots before washing. (2) Grease is soluble in benzine, chloroform, ether and benzol. In order to keep diluted grease from spreading, spread stain over a piece of blotting paper and rub toward center with a piece of clean cheesecloth. For delicate material chloroform and ether are the best solvents. (3) Apply powdered French chalk made into a paste with turpentine and water. Let stand several days and then brush off.

Ink.—(1) Ink stain is often difficult to remove, as ink varies greatly in composition. Neither cold water nor milk will set a stain, so these are always safe to use to remove a greater part of the ink. If the ink is spilled on an article that can be put in a basin of water, do this at once, then rinse until no more ink will wash out. If the ink is spilled on the floor or carpet, cover the spot with some absorbent, remove, continuing until no more ink can be taken up. Then apply the cut end of a lemon, trimming off the end as it becomes soiled. Rinse with cold water. (2) Wet stain with cold water and then apply a 10 per cent solution of oxalic acid. Let stand a few minutes and rinse in water to which a little ammonia has been added. Repeat until the stain has disappeared. (3) Wet the stain with a paste made of lemon juice, salt, starch and soap, then expose to the sunlight.

Iron Rust.—(1) Wet the stain with borax and water or ammonia and spread over a bowl of boiling water. Apply a 10 per cent solution of hydrochloric acid a drop at a time until the stain begins to brighten. Then dip at once into water. Repeat if necessary. After the stain is removed, rinse at once very thoroughly, using either borax or ammonia in the rinse water. (2) Proceed as above, using a 10 per cent solution of oxalic acid instead of hydrochloric acid. Oxalic acid is not so detrimental to fabrics as hydrochloric acid, but it is poisonous. (3) Try method No. 3 under ink.

All these methods destroy color and unless care is taken will greatly weaken the fabric.

Iodine.—Soak in chloroform, or ether.

Lampblack or Tar.—Saturate spot with kerosene. Wash with naphtha soap and water. If lampblack is on carpet, rub spot with starch, cornmeal, flour or salt.

Machine Oil.—(1) Wash with cold water and soap, rubbing from the outside toward the center of the spot, using care not to allow the spot to spread. (2) Wet spot with turpentine or benzine and let it stand a few minutes. Wet again and sponge with a clean cloth. Continue until stain disappears.

Milk or Cream.—Wash in cold water, then with soap and water.

Mildew.—(1) Light and recent stains may often be removed by wetting them, rubbing with soap, then covering spot with wet starch and spread in sun. Renew application frequently. (2) Put on lemon juice and expose to direct sunlight. (3) Chloride of lime and Javelle water are both effective agents in removing mildew stains from white fabrics. Soak until stain disappears and rinse well.

Mucus.—Soak in ammonia water or in salt and water, then wash with cold water and soap.

Paint and Varnish.—(1) Same as method 2 for machine oil. (2) Soak fabrics with delicate colors in chloroform. (3) If paint is old it may take some time to soften, but equal parts of ammonia and turpentine will soften old paint stains, after which they may be removed by method 1 or 2.

Perspiration.—(1) Wash in soap suds and place in sunshine. (2) Soak in Javelle water a few minutes, then wash. Repeat until stain disappears. (3) Use oxalic acid as for iron rust.

Tea.—(1) Spread the stained article over a bowl and pour boiling water through it until stain disappears. (2) Sprinkle with borax and soak in cold water. (3) Soak spot in glycerine, then wash.

Wine and Fruit Stains.—(1) Use method 1 under tea. (2) Soak stain in equal parts of Javelle water and boiling water. Rinse well in boiling water to which a little ammonia has been added.

Wagon Grease.—Soften in cold water, then wash with soap and water.

Vaseline—Wash a fresh stain with turpentine. Boiling sets the stain.

Stove Polish.—(1) If fresh, a stove polish stain is easily removed by washing with naphtha soap and cold water. (2) If the stain is an old one use method for lampblack and tar.

Scorch.—(1) Wet the scorched area and expose to action of sun. Repeat several times. (2) Wet and rub with soap. Cover the spot with thin mixture of starch and water, and spread in sun.

Rice a Nutritous Cereal.

The experts of the office of home economics of the United States Department of Agriculture have been studying the uses of rice, a food which can be served in many palatable ways all the year, but which seems particularly appetizing in summer.

Boiled rice prepared in southern fashion, so that all of the grains are kept separate, is sufficiently attractive in appearance to justify its slight wastefulness, except, of course, where strictest economy is necessary. Slowly add a cupful of boiling water, which contains two level teaspoonfuls of salt. If carefully done, the boiling (which should continue all of the time the rice is cooking) will not be stopped. Stirring is not permitted, as this will break the rice grains. About twenty minutes is sufficient to cook the rice, which can be tried from time to time by taking one or two grains between the fingers. Pour off all the water from the cooked rice, cover with a cloth and place in a warm part of the stove, so that the grains will swell. To remove the starchy material from the outside of the grains, cooks sometimes turn the cooked rice into a strainer and pour one quart of hot water over it before covering with a cloth and allowing to steam and swell. A cupful of raw rice cooked in this way will give over four cupfuls of very white and light, boiled rice. The water drained off from the rice can be used in soup making to save the starch and mineral matter which it contains.

If one wishes to use a fireless cooker add a cupful of well-washed rice to three cupfuls of boiling water, in which two level teaspoonfuls of salt are dissolved. Cook for five minutes and then put in a fireless cooker. In two hours the rice should be done. If any water remains unabsorbed it can be drained off. Rice varies somewhat in the amount of water it absorbs and the housekeeper accordingly should vary the amount of water used.

Rice cooked as described above is excellent when served as a vegetable with meats, as in the well-known "chicken and rice." Such uses of rice are particularly welcome in the period when "old potatoes" are not very palatable and "new potatoes" have not yet appeared in the locality or are high in price in market.

Another dish which has almost as good an appearance may be prepared by cooking rice in a double boiler, without stirring, and using about three cupfuls of water and a level teaspoonful of salt to each cupful of rice. If a more savory dish is desired, skim milk, whole milk, meat broth, strained tomato juice or vegetable broth may be used in place of water. Rice may also be combined with protein-rich foods, such as milk, cheese and eggs for use in place of meat, or with small amounts of vegetables to make the latter "go further." Of course, such a dish does not contain as much tissue-building protein as if it were made entirely of meat, but when the meat provided ordinarily is generous and the aim is to reduce the cost without lessening the attractiveness of the food, such combinations are well worth trying.

The following recipe for an economical dish made with rice and left-over mutton may prove useful:

Four cups cooked rice, two cups cooked mutton cut into small pieces, one teaspoonful salt, few drops onion juice, one tablespoonful chopped parsley, one-fourth cup bread crumbs, one egg and one-fourth teaspoonful pepper. Stock or water as needed. Grease a mold or a bowl of about one and one-half quarts' capacity and line with cooked rice. Heat the meat with the other ingredients, using enough stock to make a mixture that is moist, but will hold its shape. Pack the meat in the center of the mold and cover with the remaining rice, grease the cover of the mold (if a bowl is used, a plate will serve for a cover), steam or cook in water enough partly to cover the mold until the contents are thoroughly heated through. Turn on a hot platter and serve with tomato sauce.

The above recipe, it will be noted, suggests the use of bread crumbs instead of flour for thickening, which is often a way of saving bread which might otherwise be wasted, and which is also one way of securing variety, as a different texture results from that when flour is used.

If one finds it convenient, cold lamb, veal or chicken may be used in place of mutton in preparing this dish.

As the basis of a sweet dessert, rice is always useful, especially so for invalids and little children. If combined with milk and eggs it makes a very nutritious dish as well as one easily digested. Plain boiled rice, cooked either in water or in milk, and served with a little stewed fruit, maple sirup, honey or other simple flavor, makes a more wholesome dessert for children than rich puddings or pies because it is less likely to upset the digestion or to destroy the appetite for simple foods.

Cold rice, particularly that which is cooked so that the grains are separate, is a good addition to vegetable salads, combining well with celery, string beans, and tart apple. If one wishes, some chicken cut in small pieces also can be added.

It is well to remember that when rice is used abundantly in the diet it is particularly desirable to include generous amounts of green vegetables and fruits also, in order that a supply of mineral substance adequate in kind and quantity may be provided.

Something For the Women at Tractor Show.

There will be plenty of things just as interesting for the housewife as for the farmer at the Wisconsin tractor demonstration, to be held at Madison, September 4th to 8th.

Of course, there will be tractors galore, but in the big accessory tent small implements of all kinds and machinery that depend for operation upon some other source of power will be on exhibition.

Then there will be an exhibit put on by the college of agriculture showing modern arrangements of the farm home, conveniences for the kitchen and milk house that will save the farm wife much time and hard work, model sewage disposal plants that make farm life less subject to disease, practical water systems that make provision for running water in the kitchen as well as in the barn and barnyard, heating systems that do away with the work and waste of wood and coal stoves, and lighting systems that put the farmhouse beyond the reach of the danger and dirt of lamps.

Sends Directions For Making Rug.

To the Editor:—In answer to Miss E. E. A.'s inquiry for a rug pattern I thought I would tell her how I make mine and perhaps it will interest others.

One rug I have is made of patchwork on a foundation of canvas covered with red calico. The patches are rounds of cloth from old trousers cut the size of a teacup. Sewed on this with a cross-stitch is a round or cloth of a different color and a half inch smaller in diameter. Then a third small circle of bright colored flannelette or any other material one wants to use is sewed on top, also with a cross-stitch. Use a silk finished spool cotton for the cross-stitch.

One can make the rugs most any shape. Mine had three oval pieces in the center arranged with four patches. Around this oval piece were three rows of patches. Or the rug could be made in the shape of a hexagon. My rugs have been admired by all who have seen them.

I love to read the Home page and I hope my letter will be of some benefit to Miss E. E. A. and others.

Sweet Corn and Tomatoes Together.

To the Editor:—I have been reading the Home page for a long time and I have found many interesting and helpful things in it. I would like to ask if any of the readers have ever canned peas and what success they had, also sweet corn and tomatoes together. I never canned any that way, but I have heard of others canning them.

Mrs. M. D. E.

Recipes

Peach Marmalade.—Pare the peaches and remove the stones. Place in a kettle, adding just enough water to prevent burning. Cook slowly and stir frequently until the peaches are reduced to a pulp. Measure, and to each pint of fruit add one-half pint of sugar. Boil for twenty minutes, stirring constantly. Pour into jars and seal.

Peach Butter.—Prepare the peaches as for marmalade, but add to each pint of pulp one-fourth pint of sugar and one-fourth teaspoonful of ground cinnamon. Cook slowly, stirring constantly, until the mixture becomes very thick and glossy. Pour into jars and seal.

Peach Ice Cream.—Peel and stone as many ripe, soft peaches as will fill a half gallon measure, rub through a colander, add a pint of sugar, and set in a cool place, on ice if possible. Beat two eggs with a cup of sugar until

very light, add one teaspoon vanilla and one pint sour cream, into which has been whipped one scant teaspoon soda. Stir into peach pulp and add enough milk to make a gallon of cream when frozen.

Peach Dumplings.—Sift an even quart of flour twice with one and a half teaspoonfuls of baking powder and half a teaspoonful of salt. Chop into this a tablespoonful shortening (butter and lard mixed). Mix into a soft dough. Roll the pastry lightly and cut into squares. Take the stones from nice ripe peaches which have been pared, fill the cavity with sugar and wrap each peach neatly in a square piece of the dough. Bake in a moderate oven a nice brown. Eat while fresh, with cream or clear sauce.

Peach Imperial.—Soak a tablespoonful of granulated gelatine in a quarter cupful of cold water for a quarter of an hour and dissolve in a third cupful of scalded milk. Add a teaspoonful of vanilla or almond extract and a third cupful of powdered sugar. Allow it to set over cold water, stirring constantly until it begins to jelly slightly; then cut and fold lightly into three cupfuls of cream, well whipped. Serve in long stemmed glasses with quarters of freshpared peaches arranged point upward around the glass and filled with a dab of stiffly beaten whipped cream and a yellow or deep crimson nasturtium.

Baked Peaches.—Wash the peaches and cut the skin away from the stem end. Put a small lump of butter on top of each peach and sprinkle generously with sugar. Pour a little water in the pan and bake as you do apples, until they are tender. The sugar and the juice from the peaches will make a thick sirup.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Croquet Great Fun.

Dear Young Folks:—We are two sisters who enjoy reading the Young Folks' page very much. We live in the country and have good times together. We go to school in town. We take music lessons and like to play very much. We also do fancywork, but the thing we seem to stick to the longest is playing croquet. We think it great sport to see who can win the most games.

We enjoyed Ruby's letter very much. We think her pet hen must resemble our pet dog in manners, as he scratches on the door when he wishes to enter. He also jumps upon a chair with his front feet on the back and barks for his food as if he says, "Please." Then when he gets it he will shake hands with us in a way that seems to mean thanks.

We also have a Buff Orpington hen with fourteen little white chicks. They look so cute running about the yard.

—The Two Sisters.

What Is This Bird?

Dear Young Folks:—I would like to know the name of a bird that built its nest in a hollow stump in our yard. It has a red spot on top of its head. Its back and breast are barred. At the base of its tail there is a little white spot. There is a semicircle of black on its breast. Its head and bill are shaped like a sniper's. Its tail is gray. It is about the size of a blackbird and it lays eggs a little larger than a sparrow's egg. The eggs are white. Can some of the Young Folks tell me what this bird is?

—Willie.

Sparrow Steals Jenny Wren's Home.

Dear Young Folks:—I have been reading almost all of your letters and now I think it is my turn.

I am twelve years old. We live on a forty-acre farm. We milk two cows and sometimes I help do the milking.

I have five little kittens and I think a great deal of them.

This spring we put up a tin box for some Jenny wrens to build in, but the hole was too big and some sparrows came along and built in it before the wrens had a chance. One day when I was out doors I saw a little wren trying to tear down the sparrow's nest. Then soon it brought a lot of sticks and put them in the doorway so no other bird could get it and then built its nest. Now it has some little baby wrens.

Now I will give you folks a riddle. What is there on a wagon that is of no use?

My two brothers and I have a berry patch. We pick the berries and sell them. I have made $3.50 this spring from the berries. —Blanche.

A Lonely Little Girl.

Dear Young Folks:—I have been reading your letters and like to read them just fine, but the story I have to tell is not at all cheerful. I am eight years old and I live on a farm and try to enjoy myself, but it is hard because my father was killed in the shaft of a mine. I suppose most of the writers

WOODROW WILSON LOWREY AND HIS PETS.

are enjoying the presence of their fathers, but my dear papa is not here. I have a kind mother and a little sister and brother, but they do not fill the place of my father. Always love your father and do not think that you wouldn't miss him if he were gone.

—Gladys.

Answer to Hilda's Riddle.

Dear Young Folks:—I enjoy your letters so much I want to write, too. My father owns two farms, one of 160 acres, where we live, and another of 100 acres. We have thirty-one head of cattle and seven horses. I like to live on the farm. I can do lots of housework and cooking and also help with the out-of-doors work.

I think the answer to Hilda's riddle —what big cat do you keep in the library—is catalog. I will ask a riddle, too. What is the strongest key?

—Ella.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF SPRING AND SUMMER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large spring and summer catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

9532—A simple, but attractive negligee, or house sack, with long or shorter sleeve. The pattern is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 3½ yards of 36-inch material for a 38-inch size.

1057—A new suit for the "little man." The pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 2⅞ yards of 44-inch material for a 4-year size.

9821—Ladies' one-piece corset cover, in round, square, or "V" neck edge. The pattern is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 1⅜ yards of 36-inch material for a medium size.

1310—Ladies' dressing or lounging robe. The pattern is cut in 3 sizes: Small, medium and large, and requires 6⅜ yards of 24-inch material for a medium size.

1758—A comfortable, serviceable ladies' apron. The pattern is cut in 3 sizes: Small, medium and large. It requires 6¼ yards of 36-inch material for a medium size.

1296—A charming summer gown, with or without bolero for misses and small women, with sleeve in either of two lengths. The pattern is cut in 4 sizes: 14, 16, 17 and 18 years. It requires 7 yards of 36-inch material for a 14-year size.

1762—A practical comfortable garment. One could wear this model as a morning dress. The pattern is cut in 3 sizes: Small, medium and large. It requires 6¾ yards of 36-inch material for a medium size.

1783—Girls' dress with jacket blouse, and skirt attached to an underwaist. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 4½ yards of 36-inch material for a 10-year size. For separate jacket blouse it will require 2 yards of 36-inch material.

1774—A smart but simple gown. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7¼ yards of 36-inch material for a 36-inch size.

1312—A simple one-piece dress, with sleeve in either of two lengths. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3½ yards of 36-inch material for an 8-year size.

1778—A simple, popular model. This is a pretty style, easy to develop and nice for all kinds of wash materials. The patfern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4¾ yards of 44-inch material for a 12-year size.

Waist 1771-Skirt 1755—A good style for afternoon or sport wear. Ladies' waist pattern 1771 and ladies' skirt pattern 1755 comprise this attractive dress. The waist pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It will require 3 yards of 36-inch material for a 36-inch size. The skirt pattern is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure, and requires 4⅛ yards of 44-inch material. Two separate patterns, 10 cents for each pattern.

International Sunday School Lesson.

Lesson for July 30, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

"The Word of the Cross."

LESSON TEXT—I Cor. 1:1; 2:5

GOLDEN TEXT—Far be it from me to glory, save in the cross of our Lord Jesus Christ.—Gal. 6:14.

Paul's letter to the church at Corinth was written from the city of Ephesus some four or five years after Paul had left Corinth. We have seen some of the difficulties which surrounded this church. It was a small body of believers in a great city of 400,000. It was surrounded by all kinds of licentiousness and excess so that to maintain a Christian moral ideal was difficult in the extreme. That is why this first epistle has so much to do with church government and such questions as the marriage relation, the conduct of public assemblies, spiritual gifts, the resurrection from the dead, different factions, the love feasts of the rich and the poor, eating meat offered to idols, lawsuits conducted before the heathen, the Lord's supper and church discipline are discussed. Paul did not himself write the letter. Sosthenes acted as his amanuensis. In this letter is the wonderful and immortal love chapter (Ch. 13), and the magnificent resurrection chapter (Ch. 15).

The only unity desirable or possible is that which Christ prayed for (John 17:21). This is not a unity of opinion or of organization, but a unity of purpose and power, the working together of believers in harmony to attain the great purposes of Christianity.

I. The Power and Wisdom of God. (vv. 18-25). To a sin-blinded mind the preaching of the cross is foolishness. Even some professed Christians reject the doctrine of substitution which is found everywhere in the Bible. (Isa. 53:6; Gal. 3:13; I Cor. 5:21). If the doctrine of the cross is foolishness to anyone it is to "them that perish." The Jews require a sign (v. 22), but the cross puts them to shame (v. 27). God is made unto us wisdom, not the wisdom of men, but the wisdom of the Spirit. It is such preaching as this that is "the power of God." It has proven itself the power of God in our lives. It will "destroy the wisdom of the wise" and "bring to nothing the understanding of the prudent" (Isa. 29:14 cf. Jer. 8:9). God is constantly making foolish the power and wisdom of this world. Philosophic research after the unknowable "tries to make a God of its own pattern, but does not satisfy the longings of the human heart," and God through the foolishness of the thing preached is pleased to "save them which believe." The performing of a miracle (Math. 12:38), and the Greeks seeking after wisdom, or philosophical reasoning, is no match for the Christ crucified whom Paul preached.

II. The Preaching and Power of Paul (vv. 26 to Ch. 2:2). Taking the Bible as a whole, we see in it God's plan and purpose with regard to the goal of mankind. The problem was by what means this purpose could be performed. The whole of the Old Testament is a story of God working to this end. Then at the best time in all history came Jesus, the son of God, into the world, and, by his death on the cross and his resurrection, we are all bound together in one, summed up in the cross as the power and the wisdom of God for salvation. The symbol of the cross is a common sight, yet the great truth which it symbolizes is often obscured by scholars, and fails to be lived by disciples. God chooses those whom the world rejects, "the foolish," and "the weak." These are the ones that were called even in Paul's day. The purpose of this call is to confound (or to put to shame) the wisdom of men. The most powerful motive in existence is the motive of the cross. (1) The cross is the highest proof and the strongest expression of the love of God for man. (2) The cross was the agent whereby atonement was made for sin. (3) The cross shows us the terrible evils of sin and the demand of such a sacrifice as God's son in order to save us from it. (4) It shows us that God wants us to come to him and to be saved, and that there is joy in heaven over every repentant sinner. (5) It shows the supreme value of right and duty in that Christ went to the cross at the terrible cost of his life. (6) It shows the value of the human soul. (7) From the cross, through the resurrection and the ever-living Saviour, God has given us the fullness of the Spirit to inspire and transform.

We are nothing in ourselves, and God has made Christ unto us "wisdom and righteousness," that is, God's righteousness is provided for us in Christ (I Cor. 5:21; Rom. 5:1; Phil. 3:9 R. V.); also sanctification and redemption, that is, we are separated from the world unto God and in him we are redeemed from sin and its consequences.

There is left no room for glorying in ourselves.

This was the preaching upon which Paul depended, not upon rhetoric nor philosophy nor argument with which to convict and convert men.

Shipping Stock to Market

(Continued from page 6.)

ment is seldom delayed longer than four days and where a shipper needs cash he can borrow without interest from his local banks, as they know the stock has been shipped and that the note will be taken up in four or five days. This cements the friendship between bankers and business men and takes care of those farmers who wish some money when they deliver the stock to Muscoda.

The expense of handling is nominal. The total expense averages about 40 cents per hundred for cattle and 50 cents for hogs, so that the shipper gets the Chicago price less this expense. Bedding and corn is furnished by the association and the home expenses are covered by charging each member 3 cents per hundred on cattle and hogs and 15 cents per head on calves. Non-members are charged 5 cents per hundred and 25 cents for calves. This revenue pays the manager, yard man, etc., and creates a fund to cover losses due to deaths of animals en route to the central market or the lessened value due to animals being crippled en route. These losses, after two years, have been found to be exceedingly small and the manner of paying the loss is so distributed among all shippers that it is not a burden for anyone. The markings denote whose animal is killed or crippled, so that the owner can be repaid. The charges for feed are based on the number of head in a car and the amount of corn put in the car. On hogs this expense is usually from 5 to 8 cents per hog. The only other expense is the annual dues of $1, which helps pay for printing, etc., and the association ended the year 1915 with a balance of $118 in the treasury. There are now 125 members and the yard man is paid $1 per car and the manager $1.50 per car for their labors. This is paid from the 3 cents per hundred charge on stock shipped.

When the manager gets the statement from the commission firm of the sale he pro rates the freight expense, by taking the carload rate per hundred and multiplying by the total local weights of each shipper. The shrinkage is pro rated likewise, but as all members are urged to feed only dry feed the two days before shipment this shrinkage is greatly reduced. One car of hogs actually gained 320 pounds between Muscoda and Chicago. Of course, this was to the benefit of the farmers who shipped in that car.

After pro rating the freight expense and shrinkage, deducting the Chicago and home expenses, the manager knows what each shipper is to receive and then draws a check to the farmer's credit for the amount. This is a special check and contains thereon all the facts relative to the shipment so that every farmer knows what it cost him to sell his stock in this way.

Another advantage is that the farmer has no capital invested and can wait until carloads are arranged which enables him to take advantage of a rising market or avoid a declining market. Much of the success of such an organization depends on the officers, the manager and the members and failure is very likely if there is not the right kind of sentiment behind such an association.

The first consignment of Italian queens has been sent out from the apiaries of the Wisconsin College of Agriculture to beekeepers in the state who had ordered them. If the weather conditions are favorable it is expected that from half a dozen to twenty-five queens a day will be shipped throughout the summer. The work has been made possible through the co-operation of the state beekeepers' association.

Alfalfa flour is now mixed with wheat flour and made into bread. It costs less and has greater food value than ordinary wheat flour. Most people don't like it, but perhaps we can get used to it just as we force our stock to eat sweet clover.

Drainage improves alkali soils.

Coal $2.90 per ton!

Read this sensational price offer on Tip-Top, A-No. 1, **GUARANTEED** coal.

GENUINE Pocahontas Lump, $2.90 per ton
The genuine—from the genuine Pocahontas veins, Pocahontas district, W. Va.—see sworn statement)

Bumper Grain Crops
Good Markets — High Prices
Prizes Awarded to Western Canada for Wheat, Oats, Barley, Alfalfa and Grasses

The winnings of Western Canada at the Soil Products Exposition at Denver were easily made. The list comprised Wheat, Oats, Barley and Grasses, the most important being the prizes for Wheat and Oats and sweep stake on Alfalfa.

No less important than the splendid quality of Western Canada's wheat and other grains, is the excellence of the cattle fed and fattened on the grasses of that country. A recent shipment of cattle to Chicago topped the market in that city for quality and price.

Western Canada produced in 1915 one-third as much wheat as all of the United States, or over 300,000,000 bushels.

Canada in proportion to population has a greater exportable surplus of wheat this year than any country in the world, and at present prices you can figure out the revenue for the producer. In Western Canada you will find good markets, splendid schools, exceptional social conditions, perfect climate, and other great attractions. **There is no war tax on land and no conscription.**

Send for illustrated pamphlet and ask for reduced railway rates, information as to best locations, etc. Address

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

FOR fine farm lands at low prices and easy terms in Wisconsin's greatest dairy district, send for our free list, map and photographs of choice dairy, stock and grain farm bargains. Write Graham's Land Office, Marshfield, Wisconsin.

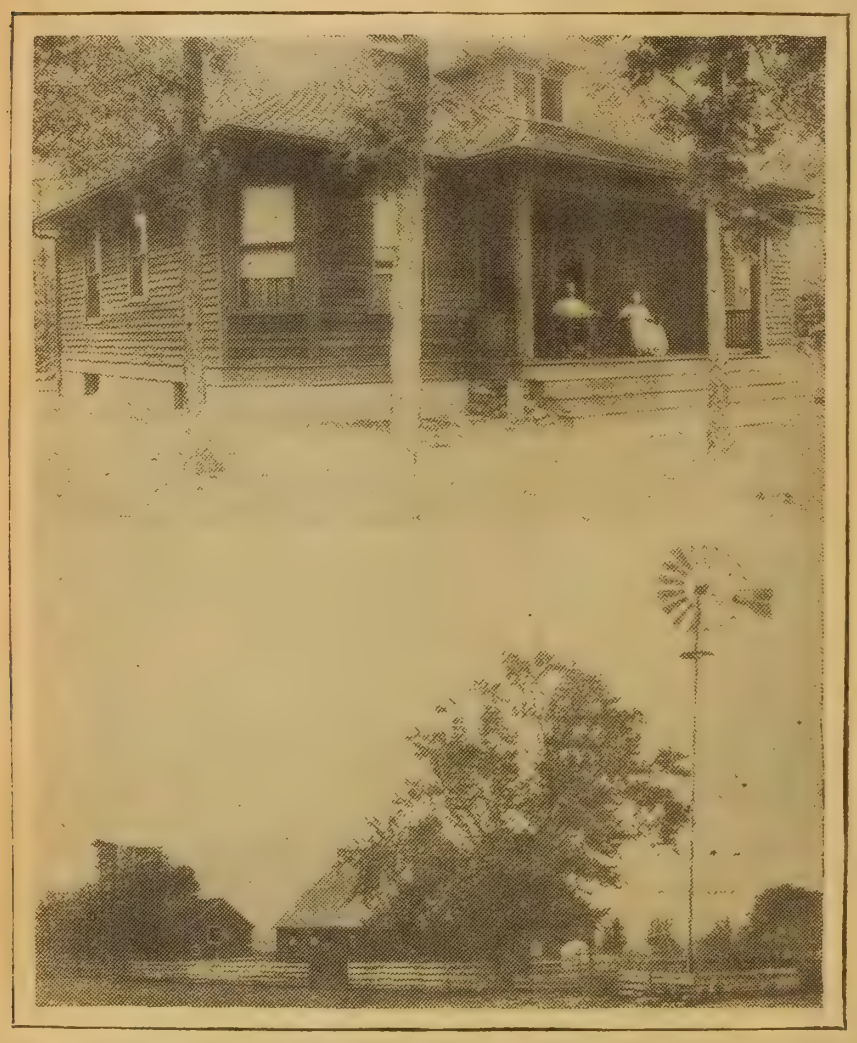
FARMS for sale. Wonderful bargains in five states with crops and stock. Send for catalog. D. B. Cornell Co., Gt. Barrington, Mass.

FOR Minnesota improved farms and land bargains, write or call on H. A. Hanson, 242 Temple Court, Minneapolis, Minnesota.

Enter Now the Country Plumber.

Rural Field Offers Best Opening For the Plumber Nowadays, in the Remodeling of Farmhouses, According to Experts at State Convention.

A NEW occupation has come into existence, that of "country plumber." So wide is his field of operations, so limitless his possibilities, that nothing else was considered half so important at the annual convention of the Iowa Master Plumbers' Association.



THE WINDMILL WHICH FURNISHES THE POWER FOR THE "WATER-UNDER-PRESSURE" SYSTEM OF THE HOUSE SHOWN ABOVE.

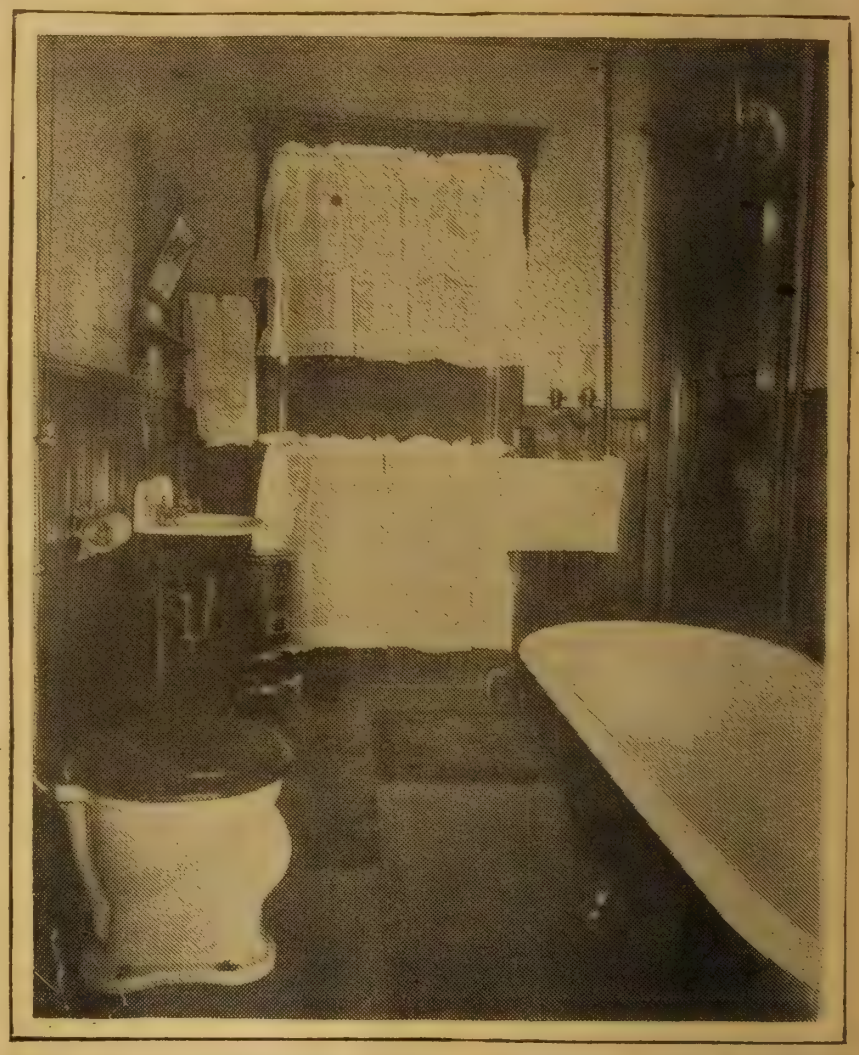
The term applies to the plumber who makes as his specialty the installation and care of sanitary fixtures in the farm homes. In the belief of a majority of the delegates attending the last Iowa convention of plumbers the greatest field which will be opened up for this trade during the coming years will be that of caring for country plumbing work.

"The farmers are the people who are making the large percentage of the money in the middle West today," said one of the representatives. "We plumbers realize this as well as anyone. As the rural districts become more prosperous they naturally demand more luxuries and along with this demand comes a request for plumbers who can install modern sanitary fixtures in the farm homes. This will be the paying line before another year."

There are ample incidents and statistics to verify the confident prediction. The farmers of America spent $2,768,812,032 for new buildings in the ten years between 1900 and 1910, an average of $27,688,120 a year for the nation, or $576,836 for each of the forty-eight states. The showing in the grain belt, where the farming body predominates, was still better. In the ten states of the grain belt, in which is to be found one-half of all the improved acreage of the United States, the value of farm buildings increased at the rate of $118,690,634 a year for each of the ten years between 1900 and 1910, an average of $11,869,063 a year for each of the ten states. It is safe to say that one-half of this immense increase was for remodeled farm homes and altogether new buildings, with all modern conveniences, supplanting the old structures.

The experience of a Missouri community with the country plumber is typical. The community is adjacent to Houstonia, in Pettis county. A prosperous farmer, buying a 710-acre farm, soon came to the conclusion that the ten-room farmhouse, without any of the modern or urban conveniences, was not in keeping with the productivity of the fertile soil or the housing of his blooded stock. Accordingly, he consulted a plumber in the country town and the two set to work to modernize the old farm home.

A large windmill was erected to pump water in the basement of the home and air pressure was used to force the water into all the rooms and to give fire protection. Then a furnace was installed and to this furnace and to the range in the kitchen hot water appliances were attached to furnish hot water to all the bedrooms and the bathroom. Sewers were constructed and the home piped for gas. An acetylene gas system was installed to complete the family lighting system. The farmer learned by experience that all this work could be done at a cost ranging from $500 to $1,000, according to the moderate or extravagant ideas of the home owner.



MANY AN OLD FARMHOUSE IS BEING REMODELED WITH BATHROOM CONVENIENCES SUCH AS ARE SHOWN HERE.

The example set by this man was quickly followed, until today there are more than thirty farm homes within

(Concluded on page 22.)

A FINE NEW MODERN FARMHOUSE SUPPLANTS THE OLD, TO THE RIGHT REAR—A FURNACE HEATS THE HOUSE AND DRIES OUT THE SEED CORN.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Germs the Source of Most Stock Diseases.

IT IS now well known that most of the diseases which affect stock and poultry are of germ or parasitic origin. Drains, troughs, cesspools, sinks, closets, hog wallows, stables and many other similar farm accessories are natural breeding centers for germs and parasites. As the sources cannot be removed, the only thing to do is to render them harmless by using an effective germicide and disinfectant and for the animals already infected, a powerful, non-irritating antiseptic dip. Dr. Hess dip and disinfectant seems to be very popular, one of the arguments in its favor being that it is always and absolutely uniform in quality and strength—an important feature when one considers how often it is necessary for animals to be treated locally. There is no question but that if there were a more general use of this excellent dip and disinfectant by live stock owners, contagious diseases among animals would be much less prevalent. Dr. Hess, the compounder, is a widely known veterinarian of practical experience, and his dip and disinfectant is the result of his scientific study of the the many requirements such a preparation must fulfill. Like all Dr. Hess preparations it is guaranteed to do all that is claimed for it, or the dealers will refund your money. An excellent feature of the work Dr. Gilbert Hess is rendering stock owners is the free veterinary advice. If you have a sick animal, you have but to write him personally at Ashland, Ohio, giving particulars, and he will send you a prescription free.—Adv.

E. W. Hendricks to Have Good Boar Offering.

WHEN you attend the sale of Poland China boars to be made by E. W. Hendricks, Hazel Green, Wisconsin, September 28th, you will find an offering that will please you. We recently visited this herd to see what the owner had picked for this sale and we will say that he has thirty-five spring boars that are going to look great by sale time. E. W. is bringing them along in nice shape, they are not fat but they are growing nicely and by September 28th they will be rounded out in nice shape and will have great size. In Black Jumbo, Mr. Hendricks has one of the good breeding boars of the state. We haven't seen a hog with more length and the important feature is that he transmits this quality in his offspring. Fatted, Black Jumbo could be made to weigh right at 1,100 pounds. Don't forget this coming sale, it will be one of importance. See page 23.—Adv.

A Car for the Needs of the Farmer.

THE automobile that has power, room, strength and modern construction has about all the essential features that the farmer demands in a car. The Allen at $795 is such a car and is, therefore, being offered to the farmer as meeting his needs. The specifications of this car are found in the advertisement on page 13. It will be noted that the Allen is a light car and will travel twenty miles on a gallon of gasoline. This is an important consideration in these days of high-prices for gasoline and every farmer wants his machine to run as economically as possible. The Allen autolog contains complete information regarding this car and may be had free by writing to the Allen Motor Company, Allen Building, Fostoria, Ohio. If you are interested in a new car, send for this catalog and also visit the Allen dealer the next time you have an opportunity.—Adv.

McClurg Bros.' Offering.

DO you want some good spring pigs, if so, you can buy them of McClurg Brothers, Viroqua, Wisconsin. You will remember that this is the home of that good two-year-old Duroc Jersey boar, Prince Defender, and they are now offering spring pigs sired by him—gilts or boars. They have some good ones and they are being priced worth the money. They also have a litter by Lee's Defender that is nominated in the Duroc futurity, but they don't think they will make the fairs this fall consequently this litter is also for sale. Now there are some good boar pigs on this farm and we will stand back of this herd for we know the McClurg brothers will give you a square deal. Write them and tell them about what you want and they will try hard to fill the bill. Please mention this paper when writing. See page 23.—Adv.

Do You Need an Angus Bull?

HARRY YOUNG, Bridgeport, Wisconsin, has bulls of this breed that will suit the most critical and as he needs the room he is pricing them where they should sell very readily. They are big, being well grown, are in nice condition and some of them are suitable to head a pure-bred herd of Angus cows. Don't hesitate if you want a bull for there are some good buys in this lot. See page 23.—Adv.

Aberdeen Angus Bulls and Cows for Sale.

IF you want to start right with a few Angus cows or heifers write F. C. Lewis, Bridgeport, Wisconsin, for prices on his Angus cattle. He has several females, a few with calves at foot and a couple of bulls and he will sell one or all. If these are not sold within a short time they will be taken off the market. Get busy at once. See page 23.—Adv.

Build a Concrete Silo.

IT doesn't take long to build a concrete silo when once started and the cost is not excessive—then, after it is finished you know that it is there to stay and the danger of an immature corn crop and feed shortage has no terrors. With a substantial silo the problem of stock feeding is much simplified and there is less need of selling off the cattle because of a lack of feed. Good ensilage demands a waterproof, air-tight silo in order that the nutritious silage juices cannot escape and bacteria and molds cannot cause decay. Medusa waterproofed Portland cement is an ideal material for silo construction. It consists of Medusa cement mixed with the proper proportions of Medusa Waterproofing (which may also be purchased separately) and will resist weather, storms and frost. Every farmer is advised to send for the booklets of the Sandusky Portland Cement Company, Engineers' Building, Cleveland, Ohio, which tell the advantage to the farmer of using Medusa products. See advertisement on page 2 and write for them today.—Adv.

J. C. Hendricks Making Good Sales.

J. C. HENDRICKS, Hazel Green, Wisconsin, has been doing a rushing business the past six weeks. He advised the writer that he has never had so many inquiries for spring boars and the way he has been shipping his Polands he is not going to be able to fill all orders. The interesting part is the fact that the demand is better than ever for he better boars, this shows that the pure-bred hog business is on the incline and shows that there is more interest being manifested for better breeding stock. J. C. has around twenty good boars left and don't think that all of these are tailenders, for the tailenders go to the feed lot, if you order you will get a good pig or none at all. See page 23.—Adv.

A Live Auctioneer.

MANY of The Wisconsin Farmer readers will be holding live stock and farm sales during the coming fall and winter and are interested in securing the services of a capable and pleasing auctioneer. The writer recently had the pleasure of hearing Col. R. B. Hellen, Jefferson, Wis., in the Waukesha Holstein sale and was impressed with the good work he did. We were so favorably impressed that we do not hesitate to recommend him to the readers of The Wisconsin Farmer. Colonel Hellen has had twenty years of experience in the auctioneering field, and has developed a knowledge of human nature that is the most valuable asset an auctioneer can possess. He has a clear, distinct voice that carries well and is understood by all. His manner is pleasing and he keeps up the interest from start to finish. As he said "I don't care whether I see the animal in the ring or not if I can only see the faces in the crowd." He is a live, vigorous worker, full of "punch" yet no coarse work. We feel positive that he will prove a valuable man to employ at your farm sale or live stock sale. See page 23.—Adv.

Short-horns That Will Please.

WE are glad to refer you to the Williams Brothers, Bangor, Wisconsin, if you are interested in Short-horns. The young bulls and heifers that they are offering will please you, in fact if the calves are not good prospects they go for veal, only the best ones are kept for breeders. The dams are good milkers and the sire is an excellent bull. If interested write at once and mention this publication. See page 23.—Adv.

King Eight-Cylinder Makes New Record.

A REMARKABLE endurance record was made on the Sheepshead Bay and Long Island, New York, roads last month by the King eight-cylinder motor car, which traveled 10,350 miles without stopping. The test was made with a registered stock car under the official A. A. A. supervision, and a constant watch was kept over the performance both day and night. The entire distance was covered at an average rate of thirty-four miles an hour, and, while the car was stopped for necessary supplies, tire changes, etc., the motor was not stopped once. An examination of the car after the test showed it to be in perfect running condition, ready for another test. Several other remarkable tests have been carried out with the King car and in every case it has made good. Among them are the climbing of Mt. Wilson in Southern California sealed in high gear, 987 miles in high gear from Los Angeles to San Francisco and return and driving in high gear from Providence to Providence via Albany and New York City. From these accomplishments motoristts have learned the great reliability of the King and prospective purchasers may have no fear in choosing this car. See the King at your dealers and write for further information to the King Motor Car Company, Detroit, Mich., who are advertising on page 9 of this issue. —Adv.

Galloway Cows for Sale.

IF any of our readers want to purchase some good Galloway cows they should write or go and see C. S. Hechtner, Chariton, Iowa, who offers to sell fifty head of registered cows and heifers on page 23. Some of these are imported cows, while the most of them are sired by imported bulls and are out of imported cows. He is offering some rare bargains in these cows and heifers. He also has fourteen good young Galloway bulls that he is offering for sale. When you write him kindly mention this paper.—Adv.

Self-Filling Ensilage Cutter.

THE Meili-Blumberg Co., 200 Main St., New Holstein, Wis., are advertising on page 12 an ensilage cuttter which feeds automatically and saves the labor of one man. This is accomplished by a safety head which adjusts itself to the amount of material fed. With this machine there is no danger of foreign substances getting into the machine and causing damage. As soon as the cutting head stops, the flywheel and pulley run free. There are other advantages to this machine which you should know about. For full information write to the company named above and mention The Wisconsin Farmer.—Adv.

Game Farming Pays.

THE demand for game birds in this country is daily growing much greater than the supply. This means that good prices will rule for them in the future, and those who have the ability and equipment for raising these birds can make good profits. Pheasants are not difficult to raise on the farm and their eggs sell at from $20 to $25 a hundred. Game farming can be conducted as a side line to poultrying, and a handsome profit realized thereby. An interesting discussion on the subject is found in the booklet, "Game Breeding for Profit and Pleasure," which is issued by the Game Breeding Dept., of the Hercules Powder Co., Wilmington, Del. This booklet will be sent free on request to the address just given, and will prove to be worth anyone's reading. See page 11.—Adv.

SELLS $4,000 WORTH OF STOCK

J. H. TRAVIS, manager of the Upland Farm, Walworth, Wis., comes back for another advertisement in The Wisconsin Farmer. He knows it pays because he tried it last spring with most satisfactory results. Read his letter:

Upland Farm, Walworth, Wis., July 6, 1916. The Wisconsin Farmer:—Enclosed please find copy for our advertisement of Holstein cattle and Duroc Jersey swine to run for one year. We had excellent results from the advertisement we ran last spring. During the three months the advertisement ran we sold over $4,000 worth at an average price of about $250 per head, including young male calves.

Yours truly,

J. H. Travis.

The Wisconsin Farmer is disposing of stock at profitable prices for many Wisconsin live stock men. It can do so for many others.

If you have stock to sell write

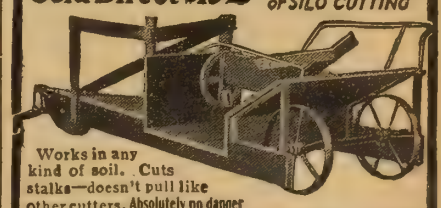
Federalsburg, Maryland.—Twiford Williams, a farmer living near here, had a thrilling experience with an infuriated bull. Williams ran his motor car into a field to look over the bull, which he was contemplating buying. The bull became frightened at the machine and made a dash for it. Williams quickly turned on all the power the car contained and the machine shot away at a fifty-mile-an-hour clip, but when it reached the gate leading out of the field Williams could not make the turn at such high speed. The bull chased him around the field repeatedly, and made desperate attempts to head off the car, but Williams, by carefully manipulating the steering wheel, managed to elude the beast, which finally became tired and gave the frightened man a chance to escape through the gate.

The biggest word in the live stock business is cleanliness. Most animal diseases are filth diseases.

The PERFECT CORN HARVESTER

Sold Direct $19.50 JUST the THING for SHOCK or SILO CUTTING



Works in any kind of soil. Cuts stalks—doesn't pull like other cutters. Absolutely no danger

Cuts Four to Seven Acres a Day

with one man and one horse. Here is what one farmer says: West Burlington, Ia., Feb. 1, '15 Love Mfg. Co.: Dear Sirs: We have used your corn harvester with good success. It worked perfectly every way just as you described. One man can cut from 100 to 125 shocks a day. Henry J. Luecking

Enter Now the Country Plumber.

(Continued from page 20.)

a short radius of this town which are completely modern in every respect. In every instance these houses contain hot-air furnaces. Complete water systems are in every home, a tank in the basement supplying the water, which, in most cases, is pumped by a windmill, gasoline engines being used in one or two houses. There are boilers attached to the kitchen range, which furnish an abundance of hot water, both for the kitchen sink and the bathroom. The bathrooms are fitted up as well as any city house, containing porcelain lavatory and toilet. Each farmer has his own sewer, which is drained to some distant point on the farm. A convenient feature of several of the homes is a room opening off the kitchen and back porch, containing a lavatory, and here the men come on their return from the fields. It contains hooks for coats and places for overshoes and takes out of the other part of the house much of the mud-tracking in bad weather. The basements of all the houses are of concrete. Nearly all contain three large, airy rooms, in one of which is the furnace, the plant for the acetylene gas is in the second, the boiler for the water is in the third. In some cases this last room is fitted with tubs for laundry purposes.

So popular has the movement become that the agricultural extension departments of most of the state colleges of agriculture are issuing practical bulletins on the subject. In many instances these bulletins tell how the plumbing work can be done by the farmer himself, at low cost. But even this information does not discourage the country plumber, for he is learning that the farmer finds himself plenty busy planting, cultivating and harvesting, without taking to plumbing as a side line. Moreover, with his farm earnings passing ten and one-half billion dollars last year, for the first time in history, the farmer feels able to stand the expense and to have the work done right, by an expert. Hence the high hopes of the country plumber.

Storing Butter For Future Use.

To the Editor:—Butter can be packed away in salt and kept fresh and sweet, just the same as meat, pickles, kraut, etc. This may seem impossible to some that are prejudiced against "old butter," but it can be done with perfectly satisfactory results, provided the butter is of first-class quality to start with.

A great many farmers have their cows freshen in the spring, having a surplus of nice butter during the summer months, but when the cows begin to drop off in the latter part of winter and early spring their butter supply runs short.

Packing the butter away should begin at once, if there is a suitable place for storage. Of course, a cellar is best for storage, but not at all a necessity.

To start with, the butter should be churned from cream that has been properly handled, and the butter should be handled by a good buttermaker. Clean, sweet jars are best to use in packing. One large jar can be used, or several smaller ones, which is usually more satisfactory, as all the butter will not have to be opened at once. See that the jars are perfectly clean before beginning. Scald well with hot water; then rinse with cold water, and be sure it is odorless.

Pack the butter away as soon after churning as possible. It can be made into molds, or packed down in the jar, using a layer of salt and a layer of butter. However, it is much handier to have the butter already molded. Each mold should be wrapped in parchment paper, and a small space left between the molds and this space filled with fine salt. A layer of salt should have been put in the bottom of jar before the butter was placed in. Then about one-half inch layer of salt is put on top of the first layer, and a second layer added. As much of the water should be gotten out of the butter as possible before it is packed away. Only a small amount of salt will be needed when working the butter, as it will be packed away in salt. If there is only one pound a day, or a few pounds a week to pack away, it will be a great help when the cows are dry.

When the jar is full, or the last layer of butter has been added, about two inches of fine salt should be placed on top, and the jar covered with a cloth to exclude dust. Subscriber.

Drainage, the application of straw and manure, and deep plowing will cure those alkali spots.

Last year 6,000,000 frogs were placed on the markets of St. Paul and Minneapolis.

SPRUCE LAWN STOCK FARM

OFFERS two registered Holstein bull calves, one from 19.60 pound 2-year-old dam. Price $100. The other from 18.56 pound dam. Price $65. Also several grade yearlings for sale. Write you wants. Address **G. W. Ubbelohde & Sons, Sheboygan Falls, Wis.**

FOR SALE

THREE grandaughters of Sir Johanna De Kol. One grandaughter of Sir Veeman Hengerveld. Bred to Cedar Lawn Sir Johanna De Kol. Also four of his sons.
John H. Liezen - Oosterburg, Wis.

Holstein Calves For Sale

KING Segis Pontiac Beauty 112516, at head of herd, three years old, ten A. R. O. sisters. All bulls one year old sold. A few bull calves for sale, two heifers, one one-year-old, one three months, dark in color. Address Henry Walsh, Sheboygan, Falls, Wisconsin.

FOR SALE

TWO Holstein calves born January 14th and 24th respectively. Sired by Calumet Jonanna Abbekerk Champion 105829, whose dam gave 623.70 pounds of milk and made 28.71 pounds of butter in seven days, and whose sire is a son of the $10,000 bull, The Milk and Butter King. These calves are very good individuals. Address
A. G. PINGEL **CHILTON, WISCONSIN**

Registered Holstein Heifers

HEIFER calves and young cows for sale. Ten daughters of the 24.12-pound bull, Sir Korndyke Zoldusky De Kol, that has 10 A.R.O. daughters. He is a grandson of Hengerveld De Kol, that has 116 A.R.O. daughters. These heifers are bred to the 40-pound bull, Johanna King Segis, a son of the 40-pound cow, Johanna De Kol Van Beers. Yearling bulls and younger from A. R. O. dams with records from 14 to 30 pounds. High-grade springers and young cows. Write us your wants.
H. F. McNutt **Oxford, Wisconsin**

"EDGEWATER"

HOLSTEINS and GUERNSEYS now being offered for immediate sale

450 COWS, HEIFERS AND SERVICE BULLS 450

15-16 pure Holstein calves crated for shipment $18 each. We are offering first-class stock only; some of Southern Wisconsin's best. Write for particulars. Address
Edgewater Stock Farm, Fort Atkinson, Wis.

21.25-POUND HOLSTEIN BULL

FOR sale—Johanna Colantha Korndyke—Born Oct. 17, 1913, well marked. He comes of 40-pound breeding on both sides, his sire being out of a daughter of Johanna McKinley Segis, and his dam a sister of Johanna De Kol Van Beers. Price $150. We also have a 21-lb. and a 19-lb. yearling for sale. Send for extended pedigrees.
Wm. Braatz & Sons **Brandon, Wis.**

THE WISCONSIN FARMER

VOL. XLV. NO. 31. THURSDAY, AUGUST 3, 1916. WHOLE NO. 1801

Duke of Sussex 6th—159088

Probably America's highest priced boar of his breed.

He has been protected with Mulford Refined Hog Cholera Serum.

Safety in Cholera Prevention

A Refined, Sterile Serum that is potent and safe for protecting all classes of hogs, from the most valuable pure-breds to the cheapest grades

MULFORD FOR THE CONSERVATION OF LIFE LABORATORIES

AMONG breeders of prize winners there can be no question between Mulford Refined Hog Cholera Serum and an **unrefined** serum. The best of **unrefined** serums contain germs and useless solid matter that may cause disease, abscesses or cysts. The veterinarian or hog-raiser who uses any other than a refined, **sterile** serum, is taking a **needless risk.** If harm comes to the hogs he has only himself to blame.

Mulford Refined Hog Cholera Serum

Potent—Sterile—Filtered—Unlike Other Serums

Mulford Refined Hog Cholera Serum costs no more than the better makes of unrefined serum.

Price, 2 cents per c.c.

Send for Free Booklet No. 9.

MULFORD Refined Hog Cholera Serum is sterile (germ-free) and absolutely free from all solid matter. Therefore, when properly administered, it cannot cause disease or abscesses; cysts cannot result, and the **full dose is immediately absorbed** by the animal.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

"JIM" RILEY'S GONE.

I DO not think any American poet ever got nearer to the heart of childhood, or more feelingly depicted the beauties of country life, than James Whitcomb Riley, who died last week. Who among us has not enjoyed going with him out to old Aunt Mary's, or rollicking through the clover knee deep in June, or feasting on the luscious heart of the "wortermelon," or diving down deep into the old swimmin' hole? Riley had a knack of writing things so that everybody could understand what he meant. And he was cheery and philosophically optimistic all the time. Witness his "Thoughts fer the Discouraged Farmer:"

Does the medder-lark complane, as he swims high and dry
Through the waves of the wind and the blue of the sky?
Does the quail set up and whissel in a disappinted way,
Er hang his head in silunce, and sorrow all the day?
Is the chipmuck's health a-failin'?—Does he walk er does he run?
Don't the buzzards ooze around up thare jest like they've allus done?
Is they anything the matter with the rooster's lungs er voice?
Ort a mortul be complanin' when dumb animals rejoice?

Then let us, one and all, be contented with our lot;
The June is here this morning, and the sun is shining hot.
Oh! let us fill our harts up with the glory of the day,
And banish ev'ry doubt and care and sorrow fur away!
Whatever be our station, with Providence fer guide,
Sich fine circumstances ort to make us satisfied;
Fer the world is full of roses, and the roses full of dew,
And the dew is full of heavenly love that drips fer me and you.

Could any man—be he farmer or city dweller—remain discouraged and disgruntled long, in the face of such cheery optimism and wholesome philosophy? And then, to make matters still better, Riley would go ahead singing some song about the most common things of farm and country life, until time stood still and we were all young again, back on the old home place; some such thing, for instance, as "Wortermelon Time," with Riley frankly acknowledging

Old wortermelon time is a-comin' round ag'in,
And they aint no man a'livin' any tickleder'n me,
For the way I hanker after wortermelons is a sin.

and then making the whole world kin by such a homely illustration as this:

I joy in my hart to hear that rippin' sound
When you split one down the back and jolt the halves in two,
And the friends you love the best is gethered all around—
And you says unto your sweetheart "Oh, here's the core fer you."

Boys take to it natchurl, and I like to see 'em eat—
A slice of wortermelon's like a frenchharp in theyr hands,
And when they "saw" it through theyr mouth sich music can't be beat—
'Cause its music both the sperit and the stummick understands.

It is a far cry from "wortermelons" to poetry, but surely Riley's poetry was the kind that was music to the spirit, the brain and the heart.

Among all of the splendid, youth-renewing poems that Riley wrote it would be difficult, if not impossible, for me to pick out my favorites, but surely all of us enjoy "The Old Swimmin' Hole" and "Out to Old Aunt Mary's." No matter what our age or condition in life today, does it not renew our youth and turn time back to our boyhood, to read:

Oh! the old swimmin'-hole! whare the crick so still and deep
Looked like a baby river that was layin' half asleep,
And the gurgle of the worter round the drift jest below
Sounded like the laugh of something we onc't ust to know,
Before we could remember anything but the eyes
Of the angels lookin' out as we left Paradise;
But the merry days of youth is beyond our control,
And it's hard to part forever with the old swimmin' hole.

Oh! the old swimmin'-hole! When I last saw the place,
The scenes was all changed, like the change in my face;
The bridge of the railroad now crosses the spot
Where the divin'-log lays sunk and fergot.
And I stray down the banks whare the trees ust to be—
But never again will theyr shade shelter me!
And I wish in my sorrow I could strip to the soul,
And dive off in my grave like the old swimmin'-hole.

The sorrowful mood did not last long with Riley and I turn to another page of my well-thumbed copy and I read of how he and his brother used to go out to old Aunt Mary's:

Wasn't it pleasant, O brother mine,
In those old days of the lost sunshine
Of youth—when the Saturday's chores were through
And the "Sunday wood" in the kitchen, too,
And we went visiting, "me and you,"
Out to Old Aunt Mary's?

It all comes back so clear today
Though I am as bald as you are gray—
Out by the barn lot, and down the lane
We patter along in the dust again,
As light as the tips of the drops of rain,
Out to Old Aunt Mary's!

I must not take up too much space setting forth these snatches of Riley's verses, but I cannot quit without printing a few lines from one of those splendidly uplifting poems for which he was famous. It is entitled "Wet Weather Talk:"

It hain't no use to grumble and complane;
It's jest as cheap and easy to rejoice,—
When God sorts out the weather and sends rain,
W'y, rains my choice.

In this existunce, dry and wet
Will overtake the best of men—
Some little skift o' clouds'll shet
The sun off now and then,—
And mayby, whilse you're wunderin' who
You've fool-like lent your umbrell' to,
And want it—out'll pop the sun,
And you'll be glad you hain't got none!

Surely we will all miss blithesome, joysome, carefree "Jim" Riley, he who could see further into the heart of a boy and farther along a country lane than any poet who ever sang the joys of country life.

SHALL SHE GO TO TOWN SCHOOL?

I AM in receipt of a letter from a Wisconsin farm mother which interests me greatly. Her problem is shared by many another farm mother and I am going to print her letter in full:

I have seen so much good advice from you in your paper that I venture to come to you with a problem of my own. I have lived all my life on a farm, but am sorry to say not in a rich farming country, and do as best we know how we are only able to "get along," which doesn't mean many luxuries and not always the solid comforts of life. But the problem is this: Our sixteen-year-old daughter finished the country school a year ago. She is only a fair student, but a splendid farm girl, interested in everything on the farm. She is five years older than the other children and to send her to high school will mean a great sacrifice, not only to meet the expenses, but to give up her help and the comfort of having her with us. I wonder if it pays? So many parents seem to see so little of their children after they once start to the town school. I hoped you might tell me of some reading course or good correspondence school that would keep her in touch with school work for a year or two, until she might be able to go to the county training school or a normal. Am I asking too much of you?

This problem must be looked at from three viewpoints: The best interests of the daughter, the best interests of the mother, the best interests of society in general. If the girl alone were to be considered, she is certainly entitled to the best schooling possible. If the mother alone were to be considered, she is entitled to the companionship and aid of her daughter until she is of age, at least. Now, along comes society, a third party, but not a disinterested one, and sides with the daughter rather than with the mother, for upon education and well-rounded lives depend our future advancement and welfare. An individual mother, here and there, may be obliged to suffer, but society (and by this I mean whole states and nations) demands that we advance steadily and never be satisfied with what we have already achieved. There is no factor greater than education in making a people have higher ideals, lead better lives and do better, more useful work. Therefore, everyone should have the best possible education, no matter at what personal cost or sacrifice.

But I am not going to arbitrarily decide that this particular farm girl should be sent away to town school, compelling the family to do without some of the solid comforts of life. Her mother assures me that she is "a splendid farm girl, interested in everything on the farm." If she is the sort of a girl I gather from this description she is, she will be content to stay on the farm, for a time at least, helping her parents, saving the pennies one by one, keeping her mind occupied in the meantime, until perhaps in another year or two she will be able to gratify her desire to go to the town school. She will be none too old when she is seventeen or eighteen, and waiting and saving will develop her character. In the meantime there is much that she can do and will do, if she is the right sort. She can obtain the best books published through the medium of her state library commission, the circulating libraries of which are a wonderful boon to rural communities. She can follow her natural bent through the courses offered by some good correspondence school (I shall give her the names of two, in a personal letter) and the extension department of her state agricultural college. If she will send me a list of the papers or periodicals in which she is particularly interested, or which best cover the field of her favorite study, I will get her cut rates on them, so she will save money and gratify her desire to obtain the best possible reading matter.

Thus, by working with the town school in sight as a reward, filling in the spare moments with good reading and receiving directions either from the authorities at the state agricultural college or of the correspondence school, she should be able to put in the next year or two profitably and even pleasantly. Two years from now may find better times on the farm where she lives and eighteen is none too old for a bright country girl to go away to town school. Loving education as she does, she will prove a ready and an apt pupil and will never regret having given her mother the companionship which she craves and which will undoubtedly do her so much good.

RACING FOR HOMESTEADS.

I CANNOT vouch for the truth of this story, but it is so interesting and so apt in showing our progress of recent years that I propose to print it anyway. I found it in the columns of one of our large grain-belt newspapers.

A race of seventy-five miles by motor car, the stake a government irrigated farm worth $16,000, was run across Nebraska prairies recently by Ray Crume and Darwin E. Taylor. Taylor won, with the aid of a freight train which stood across the motor road a few miles outside the city of Alliance, Neb.

The irrigated farms of western Nebraska are worth not less than $100 an acre. This particular farm was open to entry recently. Water filings were to be made at Mitchell and the land filing afterwards at Alliance. From Mitchell to Alliance is seventy-five miles.

Taylor and Crume were waiting at Mitchell when the water office opened. Each had a motor car ready. Their water filings were made at the same time and the man who first reached Alliance would get the prize.

Nip and tuck they raced, keeping practically together. Five miles from Alliance a freight train was stalled across the road. Both machines stopped.

On the opposite side of the freight was another motor car waiting for the road to be cleared. Taylor crawled under the freight, made a dicker with the driver of the other machine and got the start of Crume several minutes, Crume being forced to wait until the freight cleared the road. Taylor got to the land office in Alliance two minutes ahead of his rival, won the race and got the farm.

Winning a farm by motor car race is certainly a new chapter in the romantic story of our western homesteads. It was not so very many years ago that we, who stood back and looked on, were thrilled by the stories of the lucky adventurers, who went down into Indian Territory and our other new lands and secured homesteads by winning races on foot and on horseback as they tore for the lands and the entry offices. There is one story which appeals to me in particular. It goes on to narrate how an enterprising young Kentucky girl—she must have been pretty, too—cajoled a locomotive engineer into allowing her to ride on the cowcatcher of the engine pulling the train of men and women who were racing to file on a particularly attractive parcel of land which the Indians, in what is now Oklahoma, had formerly owned. At a prearranged signal from the girl on the cowcatcher, the engineer slowed down and she leaped from the engine, scrambled over the right of way and fastening her white petticoat to a stick preempted the finest farm in the region, beating every man competitor by her shrewd plan and daring. Perhaps this story is on a par, so far as veracity is concerned, with the one I found in the grain-belt newspaper this week. True or not, they thrill us with their daring and rouse us out of the rut in which we are a little too prone to allow ourselves to get every little while.

The public lands of the country are rapidly disappearing; it will not be so many more years that we can have these races for homes in the new lands. Let us make the most of them while they are fresh in our minds, for the deeds of the venturesome have always inspired even the stay-at-homes and made us all take a fresh grip on life and work.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you have before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Guaranteed Circulation of Wisconsin Farmer Increased to 90,000.

THE guaranteed circulation of The Wisconsin Farmer is now increased from 80,000 to 90,000, at which figure it will stand until further notice. Of this aggregate, the circulation in Wisconsin alone is over 70,000, which is over 10,000 more than the Wisconsin circulation of the second farm paper in the state.

We announce this increase in our guaranteed circulation with the greatest pleasure, for it testifies, more eloquently and convincingly than any words possibly could, to the steadily growing popularity of The Wisconsin Farmer, easily the first farm paper in the state. This wonderful circulation supremacy has been brought about by a consistent policy of practical usefulness to the farmers of Wisconsin and Minnesota, no Wisconsin farm paper approaching The Wisconsin Farmer in the number and the variety of its departments and special articles, or in the practical efficiency and thoroughness with which these departments are edited and these articles prepared.

An accurate comparison of The Wisconsin Farmer with the second farm paper in the state discloses the reason for our marked supremacy. In the first twenty-six issues of this year The Wisconsin Farmer aggregated 872 pages, or 3,488 columns, while the second farm paper aggregated but 748 pages, or 3,152 columns. The Wisconsin Farmer treated 264 subjects editorially, while the second farm paper treated but 151. The Wisconsin Farmer printed 735 illustrations (farm scenes, pictures of prize-winning or notable animals and photographs of farm leaders), while the second farm paper printed but 367, exactly one-half. The Wisconsin Farmer printed 2,874 live stock display advertisements, totaling 52,787 agate lines, while the second farm paper printed but 2,289 such advertisements, totaling only 39,510 agate lines.

This supremacy in all departments has been maintained in subsequent issues. Thus the week of July 13th found The Wisconsin Farmer covering ten live farm subjects editorially, while the second farm paper covered but five; The Wisconsin Farmer with sixteen important and well-edited departments, the second farm paper with only thirteen; The Wisconsin Farmer with twenty-one illustrations, the second farm paper with only fourteen; The Wisconsin Farmer with 129 live stock display advertisements, totaling nine and three-fourths columns, the second farm paper with only fifty-nine such advertisements, totaling only four columns, or less than one-half.

It is this continued supremacy, this constant leadership in all practical farm matters, which has resulted in the wonderful popularity of The Wisconsin Farmer with the prosperous and progressive farmers of Wisconsin and Minnesota and has made possible the present increased circulation. We propose to maintain and to increase this supremacy. Editorial representatives of The Wisconsin Farmer attend every important live stock and general farm meeting held in Wisconsin and report them accurately and in detail, enlivening their reports with a wealth of illustrations. Every live and timely editorial subject is treated by experts, with an eye single to the best interests of our subscribers. With an editorial staff unsurpassed by any other agricultural publication in the country and devoting itself to the Wisconsin field most assiduously, The Wisconsin Farmer has succeeded in so far distancing all would-be competitors as to be in a class by itself. The proof of this is found in our increased guaranteed circulation.

Practically Free From Hog Cholera.

WISCONSIN and Minnesota continue to be comparatively free of hog cholera, as shown by reports to the state departments. In Minnesota the number of outbreaks thus far reported is only a small percentage of the number reported in 1915. This is the statement of Dr. H. Preston Hoskins, assistant veterinary at the University farm, St. Paul. A similar condition exists in Wisconsin. Neither Wisconsin nor Minnesota had the losses from hog cholera that have been incident to hog raising in some other states. Encouraging to the raisers is the fact that there has been little tendency for the disease to spread even where outbreaks have been reported. Prompt diagnosis and treatment with careful application of sanitary measures have prevented the infection of herds even on adjoining farms.

Dr. Hoskins advises that sickness among hogs should not be permitted to go unnoticed on the assumption that it is "probably not hog cholera." The longer treatment is delayed the smaller the percentage of hogs which may be saved by the administration of serum. Dr. Hoskins says this has been amply demonstrated in the past few years. He makes this further statement:

The prompt quarantining of a farm where cholera is only suspected will frequently prevent unnecessary spread of the disease. If the trouble turns out to be something besides hog cholera, no particular harm has been done. A far greater loss might result from allowing a farm to go unquarantined, because the presence of the disease had not been proved. In many cases some obscure disease has turned out to be hog cholera not discovered until infection near by has become general.

This section of the country has been particularly fortunate in escaping the damages of hog cholera. If our breeders could see the losses in some other territories, they would better appreciate the fortunate conditions here.

Showing That Alfalfa Pays.

A MINNESOTA experiment station writer has the following to say relative to the value of alfalfa as a crop, which information will be of interest in this section:

It costs about $12 to cultivate it.
At least 60 per cent of the fertilizer value is returned to the soil when the crop is fed.
A yield of three tons will return $41.30 if fed to pigs as pasture when the pigs sell for 7 cents a pound.
A similar yield if fed to steers at 6 cents a pound will bring $42.60.
The same yield fed to cows giving 210 pounds of butter fat at 30 cents a pound will bring $44.

This seems to bear out our repeated statement that a large majority of the farms in this section of the country should have some alfalfa.

When Wisconsin Pastures Are Short.

ROY T. HARRIS, supervisor of Wisconsin Dairy Tests, is author of a Wisconsin farm bulletin. His subject is, "When Pastures Are Short." From this bulletin we quote the following:

Pasturage is a farm crop just as much as corn, oats, hay or potatoes. Of course, it is not always a profitable crop, but neither would these be if neglected in the way many pastures are.

It is true that much land is given over to pasturage because it is not fit for much of anything else, but that is no reason why it should be neglected instead of yielding the best possible return. On an efficient farm, each field must do its share according to its ability and the efficient farmer will see to it that pastures do not become short if this can be prevented.

To be durable, pastures must be large enough to provide for the number of animals to be kept and still allow a margin for safety. Overstocking is a frequent cause of shortage and also makes pastures short-lived. Turning on too early in the spring is another bad practice which brings similar results. We often see herds out on "grass" almost before the grass has started. Animals must then do an extra amount of walking in order to get enough to eat and this tramping of the soft ground puts it in poor condition to withstand dry weather, besides injuring the grass and reducing the yield.

It works well to divide pastures and turn the herd in on alternate days, or other periods, giving the grass a fresh start. This system can also be made to furnish more variety to the herd. Pastures should not be allowed to become stale or unproductive, but should be broken up and reseeded as often as necessary. Rotation applies to pasturage as well as to other crops.

Pastures will stand fertilizing and permanent pastures, especially, require regular top-dressing, and liming if the soil becomes acid. Brush, weeds and stones occupy space which more profitably could produce grass. Briars and thistles are especially objectionable since they interfere with the use of grass which surrounds them.

All grasses sown should be perennial or such as will certainly renew themselves and as far as possible should form a succession so as to have pasturage throughout the season. June grass alone will not make a good pasture, for it becomes tough too early.

However, after all has been said and done, pastures will sometimes be short. There may not be enough land which can be given over to this purpose for the number of animals which must be carried on the place. There are also limitations as to soil and climate, and, especially, long and severe drouth may get the better of even the best pasture land. Preventive measures are helpful and may answer in most years, though in states like Wisconsin, August is a month which tries pastures to the limit.

If we knew that at certain times our property would be especially liable to damage by fire or tornado, we would think it only the part of wisdom to carry insurance against such loss. This would not prevent the damage, mind you, but would only distribute the loss, so it would not bear so heavily on one individual. Against pasture troubles we have a better form of insurance, for by its use we both escape loss at the time and if it is not needed can use it profitably later on or even another season.

A silo is a good insurance policy for any time of the year, but its value for summer feeding has not been fully appreciated. Silage is better than soiling crops (crops like corn cut green and fed to stock) for several reasons: (1) It provides cheaper succulent feed. Comparisons show that soiling is more costly in labor even when fairly satisfactory in other respects. (2) It is more convenient to use. Bad weather does not interfere with feeding of silage as is the case with soilage. (3) If the anticipated emergency does not come to pass, the silage will not be wasted, as it is ready for use later, while soilage cannot always be preserved for future use without considerable loss and extra labor.

Summer silos should be well made of good material. Some thought may well be given to the location as regards convenience in feeding and protection from extreme heat of summer. The diameter should be less than that of a winter silo of similar capacity, as the exposed surface will deteriorate more rapidly in warm weather and to a greater depth. Particular care should be taken in filling and the litter, straw or other material used for covering left undisturbed until silage is needed.

If plenty of good silage is available with hay, and grain fed according to production, we can be quite independent of pasture.

Evidences of Wisconsin Prosperity.

WISCONSIN is evidently participating to a large degree in her share of the prosperity that prevails today throughout the nation. This statement is borne out by the fact that the resources of Wisconsin state banks are increasing by leaps and bounds over a year ago, and at the same time the residents of this state are buying automobiles at a rate never before known in Wisconsin.

On June 30th the total resources of the 720 state banks, according to the report of Commissioner Kuolt, reached the magnificent sum of $276,000,000. This amount, it must be borne in mind, does not include the resources of the national banks. The most significant part of Mr. Kuolt's report, however, is that compared with June 30th, a year ago; the resources are now $32,000,000 greater, as on that date they totaled only $244,000,000. This increase of $32,000,000 in the last year in total resources is eight times as great as the increase during the preceding year—between June 30, 1914, and June 30, 1915—when it was $4,000,000. Individual deposits, subject to check on June 30th this year, totaled $73,500,000; time certificates of deposit, $80,600,000; savings deposits, $56,100,000; and demand certificates of deposit, $19,700,000.

The ability to buy and own an automobile has long been regarded as an evidence of prosperity. Coupled with the announcement of the banking department of the great increase in resources comes that of the Wisconsin Good Roads Association, that today Wisconsin has approximately $80,000,000 invested in automobiles. On July 20th the association reports there were 103,560 automobiles in the state with the possibility of 115,000 before January 1st, as compared with about 80,000 last January 1st. New cars are now being licensed at the rate of about 300 daily, and the association predicts that about $58,000,000 will be spent for new cars and upkeep in 1916 in Wisconsin.

The tremendous growth of the automobile industry during the last decade is astonishing. Secretary Cooley, of the Minnesota Highway Commission, in a recent report, showed that there were 48,000 motor cars in the United States in 1905 and 2,445,664 in 1915. This is an increase of 5,000 per cent. In Wisconsin, according to the report of the good-road association, the increase in the number of Wisconsin cars has been more than 1,300 per cent in five years, which is in keeping with the national average. In Wisconsin there is a car now to every twenty persons, and the per capita investment in automobiles is about $30 in this state.

These statistics on automobiles and bank resources in Wisconsin can indicate only one thing and that is that our people have the money to pay for any agency which will serve them. As a large percentage of Wisconsin automobiles are farm owned, it indicates prosperity on the farm, for the automobile has been a great boon to country life. It has made the farm less lonely for the woman. It has made it more attractive to the boys and girls. It has become a necessity as well as a luxury, and it is no wonder that Wisconsin farmers are buying their share of them.

Wisconsin County Fairs Should Recognize Farmers' Clubs.

THE county fair is one of the best places to emphasize the importance of rural centers and farmers' clubs, and organizations which bring the country folks together for a day or evening of pleasure and enlightenment. Public recognition of the work of these clubs or societies is an idea that is growing rapidly in Wisconsin, and we should like to see every county fair in Wisconsin recognize these social-center organizations as the Walworth county fair at Elkhorn will recognize them next month. An exhibition and rally day for the thirteen clubs in that county, all strictly rural organizations, and social in nature, has been arranged for by the fair association, and it is needless to say that it will mean a boost for the fair as well as a stimulus to club work.

There are something like 300 of these social farmers' clubs in Wisconsin, as outlined elsewhere in this issue. This is a splendid time of year to begin talking of the winter festivities and an excellent time to start the formation of new clubs. That is one reason why the county fair should give them recognition. It would aid those already in existence and send hundreds of farmers and their wives home in the mood to organize. The organization of such a club must be preceded by what we might call the "talking stage"—that time when neighbors are just getting into the humor and are beginning to realize that such a club would do much to encourage co-operation in the neighborhood. Unless there is a real demand, a

club will soon die, if organized, so it is that during this "talking-stage" sentiment is sounded out and an opportunity is presented to actually determine the need for a club. If the sentiment is favorable the organization may be proceeded with along the lines set forth elsewhere in this issue. So it is important to the clubs to gain recognition at the fairs, and important to the country-life work that they be so recognized. Realizing this, the country life workers in the extension department of the University of Wisconsin have worked out suggestions for exhibits, etc., by these clubs at the fairs, a few of which follow:

Hold farmers' club parades, with decorated floats prepared by the various organizations. A country trophy or some useful gift for the club gathering place might be offered by the fair officials or local merchants, to the club making the best appearance in the parade, to the club registering the largest number of active members, or to the club making the best exhibit.

Provide an exhibit space in a tent or booth large enough to serve as an auditorium for programs, or a resting place for tired people.

Include a program of addresses, songs, instrumental music, dialogues, recitations or even home talent plays, all intended to typify the usual social gatherings of the clubs.

One day might be set aside for field events of an athletic nature, each club having representatives in the contests.

The standing exhibit of the various clubs might include school work, providing there is no special county school exhibit on the grounds to detract from it.

Give space in the exhibits for samples of special crops raised by club members, with brief description of the methods by which they attained their results. An amateur kodak gallery of well-planned farm buildings, home conveniences, good roads, pure-bred live stock, and the club house or other meeting place of the respective societies, might well be included in the list of possibilities.

Lastly, arrange models of farmsteads, maps of community surveys with numerous pointed placards giving country clubs in relation to membership, number of silos, amount of pure-bred live stock, and the extent to which improved farm machinery, automobiles, and home conveniences are in use.

The Wisconsin Farmer writes to emphasize its suggestion to county fair managers and boards that recognition should be given club work.

What Is Meant by "Character" in Cattle.

MEN HAVE struggled, and sometimes hopelessly, to convey to the minds of others the real significance of the term "character" in its application to live stock. It is described by Marshall as "the appearance of strong individualism contributed to by three things, namely, style, high development of the appearances associated with sex, and that robustness and vigor of expression that can only be present where perfect health and spirits are co-existent."

A writer in the London Live Stock Journal undertakes the task of describing what is meant by character with special reference to its application to Short-horn cattle. On this subject he says:

Skillful breeders know full well the value of "character" and what the word means, but it is perhaps somewhat difficult to define to the uninitiated. The word "character" as applied to pure-bred animals in reality means "individuality," and thus when we speak of an animal as having "true Short-horn character," for example, it is meant that the animal possesses in a marked degree those characteristics or traits peculiar to the Short-horn breed.

The word is equally applicable to all pure breeds of live stock, and this "individuality" or "true character" is a trait that should be made a point of the highest importance in the breeding of pedigree stock. The true Short-horn, for example, has a high-bred appearance. The head, the prominent round eye, the fine, stately carriage, all proclaim noble ancestry and many years of good breeding, and it is this high-bred appearance, coupled with other characteristics, which have made the Short-horn famous throughout the world, that is generally summed up in the word "character."

The old Short-horn tribes of the Bates, Booth, and Mason blood were all more or less full of "character." They had their faults, which in some cases were many and bad, but there was no denying their high-bred appearance, and no one could ever dream of them as being other than pure-bred Short-horns of high lineage.

Then the Scotch cross came in, and although the remark does not apply so much today, at any rate as regards the best Scotch herds, the Scotch Short-horns of twenty years ago were sadly lacking in "character." They had the thick, even flesh, short legs, and symmetrical form, but they had withal a "common" look about them. They had no carriage, their heads bespoke no pride of birth, and their stock inherited to a great extent this lack of "character."

It is nothing but breed character which raises a pedigree animal above the level of its common-bred neighbor, and unless a pedigree animal possesses this trait what is the value of his pedigree? Very little; for if a pure-bred animal when mated with common-bred stock is to work improvement on that stock in the offspring he must have "character" or "individuality" to transmit to that offspring to raise them a degree above the common herd. Nowadays it is too often possible to visit pure-bred herds sadly lacking in "character," having nothing to distinguish them from just ordinary commercial cattle, cows, perhaps, with good pedigrees looking as common as any animal usually seen in any local fair or market. What is the reason for this? Simply that the breeder has not paid sufficient attention to the value of "character," or that he has not the eye for a highly bred appearance.

The writer maintains that unless a pure-bred animal can be picked out from amongst a lot of ordinary-bred cattle simply by its appearance then there has been something wrong in its breeding, and, whatever the cause may be, at any rate the animal's breeding cannot be of any value. Unless pedigree animals are bred so that they can easily be spotted among others there is little value in their pedigree, for, after all, the chief aim in the breeding of pedigree animals is to improve and raise the standard of the ordinary cattle of the country, and unless a pedigree animal is superior in every respect to a common-bred one he is not likely to do much good.

It is therefore of great importance to study "character" and to breed only from animals that are possessed of true breed character. As mentioned above, every pure breed has its peculiar traits or characteristics, which should be closely studied. Thus we often hear of true Short-horn character, true Hereford character, and so forth, and the man who has the breeder's eye can detect at a glance a well-bred animal by its look, carriage, and general appearance.

So much for breed character, but the word has a similar meaning when we speak of the individuality of the sexes. For instance, we like to see a bull with strong "masculine character," or a cow with true "feminine character." Both these descriptions have a deep and very important meaning, and no breeder ever disregards them. What, then, does masculine character mean? It means that the animal should have a virile male appearance, with no trace of femininity about him. The head should not be of the negative order, as seen in steers, for weak heads and countenances never indicate prepotency.

A sire must possess "breed character" and "masculine character" if he is to stamp his progeny with his own individuality. Then, again, the cow should possess "feminine" character in contradistinction to the male. She should be distinctly feminine in her appearance, more particularly about the head and neck, with a look of refinement about her. Some cows have "steery" heads lacking in character and breediness, just as some bulls do, and, needless to say, they are never good breeders. There is no doubt the old-time breeders paid more attention to "character" and attached more importance to it than is done in these days.

It has been said that Bates saw the head of Belvedere looking over a door, and that was enough for him. He determined to obtain him, and no doubt what strongly impressed him was the bull's "character." Some of the old prints and paintings of bygone Short-horns are very probably greatly exaggerated, but the animals depicted bear a look of refinement, high breeding, and "character" that it would be well for modern breeders to try to emulate. The dull eye, neutral head, and unrefined appearance that characterize far too many of our modern Short-horns have brought them down to the level of ordinary-bred cattle so far as outward appearance goes. We want to be able to detect a pure-bred animal at a glance, not have to wait for it to be pointed out to us. "Character" and pedigree combined will go far, but pedigree without "character" leaves us where we are.

To those who have some insight into the nature of pure-bred animals and some knowledge of their dominant characteristics the above characterization will tend to clear up certain matters that are more or less murky when an attempt is made to give expression to those qualities or essentials in animal life that go to make up what we call character. While in this case the Short-horn is used as an example, it requires but little transposition of thought to make it apply to all breeds of cattle. While each individual breeder will read into it his own interpretation, the result cannot fail to be a better understanding of what is meant by this illustrative term so frequently referred to in describing animal form.

Investigation Results Favorably to Live Stock Farming.

DURING the year 1914-15 the United States Department of Agriculture investigated the records of 596 stock farms located in Indiana, Illinois, Minnesota, Iowa, Missouri, South Dakota, Nebraska and Kansas. The cattle on these 596 farms were made up of 14,634 cows, 621 bulls, and 12,591 calves were produced from this foundation stock.

On some of these farms beef raising was carried on as a specialized type of live stock production, there being no sale of milk and butter. In other instances the farms were devoted to the production of baby beef, these being sold at from twelve to eighteen months of age. Dual-purpose cattle were handled in other cases—the cows being milked and the calves weaned at birth and raised on skim milk. In some cases the best cows were milked, their calves being weaned at birth, while calves from other cows were allowed to run with their dams, this being a combination of beef and dual-purpose stock raising.

As a result of the investigation made on all these farms, it has been concluded that while the direct profit from stock raising may not seem to be large, yet, there are advantages connected with the system that do not appear at first sight. Live stock provides a home market and a means of utilizing farm roughage, some of which would be wasted if not fed. Furthermore, the use of pastures could not be profitably employed in any other way than by the keeping of live stock. Certain crops would have to be hauled a considerable distance to market at a large labor cost if live stock were not kept to consume it. Furthermore, it is pointed out by those who made this investigation that the presence of live stock on the farm gives productive employment throughout the year through labor which at certain seasons might otherwise be idle. Then, there is the fertilizing value of manure, which is an important factor in crop production. Certain forms of farm equipment are necessary in any event, but where live stock is kept this equipment can be used more or less at all seasons of the year, thus making the buildings not only pay for themselves, but also return good dividends on the investment. All things considered, it was concluded that the farm income is greater where cattle are kept to consume all the roughage and a greater part of the grain raised than in those cases where straight grain farming is practiced.

In an investigation of this kind, one important factor is not taken into account, namely, the natural ability of the individual as a stockman. To be sure, live stock knowledge can be acquired by men who will presevere, but those who are not by instinct stockmen are not urged to take up this branch of farming, simply because the expert realizes a greater profit from it than could be obtained from a system of grain farming.

Those who will investigate this matter for themselves will find that in almost every instance the good stock farms of a given community are the most productive. It will be found that while direct profits, as before stated, may not seem to be large, yet, on the other hand, these will increase year by year as the land becomes more productive. It is not uncommon to find instances where stock farmers are able to raise seventy-five and even as high as ninety bushels of corn per acre, whereas a grain farmer is doing well when even in a good year he averages a fifty-bushel yield. It is from his big yields that the stockman reaps his reward, and even though he receives no more per bushel for the grain he feeds to his live stock than his neighbor who sells direct, it is the twenty or thirty bushels per acre extra grain that swells the gross income of the individual who pins his faith to the right kind of live stock.

Essentials of an Ideal Hog House.

THERE is a very clearly-defined difference of opinion among swine breeders regarding the merit of the different kinds of housing. In some instances we find exceedingly successful results reported by those who have used the so-called individual hog house, while in other cases men show an equal degree of enthusiasm regarding the central hog house. Experiment stations have given considerable attention to both types, and numerous bulletins have been published, giving plans and specifications for many kinds of houses and cots, the latest being one from the Iowa station, dealing with the so-called community hog house. According to the authors of this bulletin, a successful and satisfactory hog house should in a general way fill the following requirements:

Warmth.—Reasonably warm shelter, in season, with smallest ranges of temperature, is demanded by swine, if best returns in health and profits are to be counted upon.

Dryness.—A dry, well-drained floor and dry, tight roof and walls are quite essential. Masonry construction which provides for hollow air space commends itself.

Abundance of Light and Direct Sunlight.—Direct sunlight should sometime strike every part of the interior of the house daily, especially the floors of the pens in the special farrowing months of February, March and April.

Shade.—Shade is most essential in the hot and dry days of midsummer, although highly desirable and effective at other times.

Ventilation.—An abundance of fresh, pure air of satisfactory humidity, provided without draft, is demanded.

Sanitation.—The cleaning and disinfecting of the hog house is imperative; clean, dustless floors encourage healthfulness, especially inasmuch as the hog always breathes, eats and drinks close to the ground.

Safety and Comfort.—Provide low door sills; even, smooth, but not slippery, floors; wide and relatively high doorways; life-saving pig fenders; closed drains; comfortable, roomy pens; and suitable doors, to avoid unfavorable consequences.

Convenience.—The lessening of time and labor should be secured by convenient arrangement of alleyways, doors and windows; abundant water supply and storage bins; adjustable ventilators and shade devices; handy litter carriers; feeding troughs; successful floor and tile drainage; accessible feeding floors; general supply room, and other details of construction and minor equipment.

Serviceability.—To be useful every day in the year; to be suitable for sheltering other animals than swine, such as sheep, cattle, horses, chickens and others; and to provide space for a successful sales pavilion when necessary, all help to extend the general utility of the hog house.

Sufficient Size to Shelter Advantageously.—The capacity should be consistent with the demands for housing space.

Durability.—In general, that building giving the longest continuous service is the most valuable.

Reasonably Low First Cost.—Consistent with the service rendered, the initial cost per pen should be kept low.

Minimum Cost of Maintenance.—A maximum of satisfactory service for the lowest possible upkeep charges is the ideal.

Pleasing Appearance.—To harmonize with the general agricultural surroundings; to be neat in architectural design; and to be sensible in construction—are the three leading considerations in planning for the attractiveness of the community or other hog houses.

These essentials are supposed to be embodied in the community house designed by the Agricultural Engineering Department of the Iowa Station, and Bulletin No. 166 gives detailed instruction in regard to this type of hog house. A distinctive feature of this house is that it provides ample lighting facilities, because as much as one-third of the roof may be of glass. Furthermore the windows extend in a continuous row from one end of the house to the other, making it possible for absolutely all of the floor, not merely a portion of it, to come under the influence of direct sunlight sometime during the day.

Every stockman knows that disease germs cannot exist in the presence of the direct rays of the sun, and in designing this house special emphasis has been placed upon this factor. It is a form of construction designed specifically to prevent disease.

The recent spell of dry weather that has prevailed over a considerable part of Wisconsin has shown up in a favorable light the wisdom of men who believe in not grazing their pastures bare. When grass is picked down to the very ground there is nothing to go on if the dry, hot weather begins, but, on the other hand, there is a valuable supply of nutrients even in dry grass. It is hoped that the experience of this year will be a lesson to many individuals so that they will not make the mistake of overstocking their pastures in the future.

In and Around Wisconsin

The officers of the Tomah, Monroe county, fair, which will be held August 22d-25th, will this year, for the first time, attempt a night and day fair and every indication points to this being the best fair ever held.

The calf-feeding contest which has been running for some months in Rock county closes this week and the results which will soon be announced will be awaited with much interest. Thirty-six boys and girls have been feeding in this contest.

Fifty farmers in the neighborhood of Glenwood City, St. Croix county, met recently and organized a new creamery company with a capital stock of $1,000 or $25 a share. The company has been named the Glenwood Dairy Union of Glenwood City and Julius Kamm, Charles Jacobson, Sam Tiegen, John Knops and John Ryan were chosen directors.

Cheese shipments from Green county have been very heavy during the past month and the one station of Brodhead averaged about two carloads a day during the fore part of July. There is a great demand for the domestic Swiss made in that county, owing to the cutting off of importations from abroad, and several heavy shipments have already been made.

Wisconsin is remarkably free of live stock epidemics at the present time, according to Dr. W. R. Claussen, of the veterinary department of the state board of agriculture. Aside from slight outbreaks of hog cholera at Rhinelander and Beloit and the occasional appearance of a case of tuberculosis among the dairy herds of the state, there is nothing in the way of disease among horses, cattle, sheep and swine.

The Portage county institute and potato show will be held this fall on November 2d and 3d and indications are it will be the biggest show in the history of the county. Appropriate prizes will be offered and it is hoped to get together a fine selection to be sent to the state show later at Eau Claire. Rural New Yorkers, Green Mountains, Early Ohios, Gold Mines, Early Triumphs and probably the Peerless will be recognized as the chief varieties.

August 16th has been chosen as the date for the general round-up and picnic of the farmers' clubs of Walworth county, in which county these rural organizations have assumed an important role. The gathering will be under the direction of the clubs of the towns of Linn, Como, Bloomfield and Lyons and the commercial club of Lake Geneva. Paul Gavin is chairman of the refreshment committee and F. M. Higgins will secure the amusements and a great day is anticipated. Music, baseball and other sports, together with talks on agricultural subjects will make up the day's festivities.

From now on Wisconsin farmers working in fields near crossroads will be surprised to see autos unhesitatingly steer down either fork, where formerly he would have to leave his work every five minutes in response to questions as to which was the right road. The reason for this pleasant change for the farmer will be in the hundred thousand new road maps which the state highway commission has had made and which are now ready for distribution at a nominal cost of 5 cents apiece. The map is twenty-one by twenty-eight inches and folds into a durable cover. Heavy red lines indicate the best roads, while lighter ones show the secondary ones.

The beet sugar crop in Wisconsin is looking well. There is every prospect for a good yield. With sugar prices firm and prospects of small imports from Europe, this will probably be a good year for the Wisconsin sugar companies. The statement is made that the plant at Chippewa Falls expects to wipe out its indebtedness this year. The conditions of the sugar beet crop in the West are not so good as in Wisconsin. Even in the irrigated districts the yield will probably not be heavy. This is due to the fact that there was not sufficient rain to give the plants a start. Water from the irrigated district is not turned on until the plants are well rooted.

At least 500 bankers and 200 women guests are expected to attend the state bankers' meeting in Madison on August 8th and 9th. In addition to talking finances the bankers will visit the university farms and see a demonstration of tubercular dairy cattle in the stock pavilion on the afternoon of August 8th.

Construction work is being rushed on the new plant of the Farmers' Co-operative Packing Company at Madison and it is expected to have it in operation this fall as planned. Contracts will soon be let for the equipment and an ice plant will also be built. The plant, completed, will represent a cost of about $250,000.

An effort to reclaim a large area of land through drainage that now lies useless under the shallow waters of Big Muskego lake in Waukesha county has been met by a petition signed by 2,000 persons protesting that such action will cause all game to leave that vicinity. The state rate commission will decide the matter this month.

Plans are being made for a combination sale of Short-horn cattle to be held at Madison, November 3d, at the live stock pavilion of the college of agriculture. The officers of the Wisconsin Short-horn Breeders' Association are: E. E. Jones, Rockman, president; Geo. Carpenter, Baraboo, vice president; John L. Tormey, Madison, secretary.

Five farmers, Harry E. Biddick, Homer Rundell, R. A. Wilkins, F. B. Rundell and O. S. Laughton, all in the vicinity of Livingston, Grant county, are having tests made of their soils to determine if it is acid, if deficient in any of the plant elements, etc. The work is being done by the soils department of the college of agriculture and any farmer can avail himself of this service by paying the small testing fee.

Cow testing is a part of the summer work of the Livingston, Grant county, high school and C. R. Wiseman makes the following report for the first week in July with production for the past month:

Cows tested	100
Cows with 30 lbs. B. F. or above	61
Cows with 40 lbs. B. F. or above	25
Cows with 50 lbs. B. F. or above	9
Cows with 60 lbs. B. F. or above	5
Cows with 70 lbs. B. F. or above	0

Highest producing cow, 66.15 pounds butter fat. Owned by L. Bushnell. Average of ten highest cows, 58.03 pounds butter fat. Average of ten lowest cows, 18.17 pounds butter fat.

Insurance companies writing policies protecting tobacco growers against losses by hail are limiting the amount of tobacco hail insurance in Wisconsin to a risk of $25,000 in any one township. This policy follows an unusual number of small losses this year to date and this means that protection for not to exceed 500 acres can be secured in any one township. The result is that in many townships, where two and three times that acreage is grown, many growers will not be able to secure insurance and should govern themselves accordingly as the first orders will be first filled.

Wisconsin farmers will be interested in a campaign begun by the game protective associations and organizations of hunters for the preservation of the partridge in this state. These organizations are pledging their members not to shoot or kill any partridges this year. It is believed that such steps will save the partridges in this state and the need of such action is emphasized in the resolutions being sent out which recite that the wet and cold spring of 1915 practically prevented the hatching of any chicks; that the past winter was equally hard on the birds; that the spring of 1916 was a repetition of the unfavorable weather a year ago, and that the partridge is in imminent danger of extermination.

The following is a list and dates of crop demonstrations, live stock and home economic conferences to be held at the county farms in Wisconsin during August and September:

Wyocena, Columbus County Farm, **August 10th.**
Waukesha, State Industrial School, August 16th.
West Bend, Washington County Farm, August 17th.
Sheboygan, Sheboygan County Farm, August 19th.
Shawano, Shawano County Farm, August 22d.
Appleton, Outagamie County Farm, August 23d.
Weyauwega, Waupaca County Farm, August 24th.
Richland Center, Richland County Farm, August 30th.
Reedsburg, Sauk County Farm, September 4th.
Tomah, Federal Indian School, September 6th.
Chippewa Falls, Chippewa County Farm, September 8th.
New Richmond, St. Croix County Farm, September 9th.

How to Get Rid of Ants.

As long as household conditions are such as to attract ants, measures for getting rid of the insects will be of little value. The first step in freeing a house from these pests is to clean up all food that may be scattered about and to keep food supplies, which may attract ants, in ant-proof metal containers, or in ice boxes. Cake, bread, sugar, meat and similar substances, especially, are likely to attract the insects.

The use of baits is not recommended because of the danger that these merely will serve to draw more insects into the house and thus actually to increase the nuisance. Where it can be safely used, however, a sirup, poisoned with arsenate of soda, has been found effective.

The formula for this sirup is one pound of sugar, dissolved in a quart of water, to which should be added 125 grains of arsenate of soda. This mixture is boiled and strained, and on cooling is used to moisten sponges, which are placed where they can be reached easily by the ants. The insects collect the sirup and convey it to their nests, so that the whole colony ultimately is poisoned. Although this method has been found effective, it should be remembered that the arsenate of soda is poisonous to human beings and to animals, and that its use must be safeguarded.

When the ants can be traced to their nests, and these are in accessible places, it is possible to destroy the colonies by injecting with an oil can or small syringe a little bisulphide of carbon, kerosene or gasoline into the nests. All these substances are inflammable and precautions must be taken against the danger of fire.

Though the common garden or lawn ants, which build their little crater nests around houses, are distinct species from the true house ants, they may find their way into the house. Their colonies may be destroyed by drenching the nests with boiling water, or injecting a small quantity of kerosene or coal oil into them. Where larger areas are affected it is sometimes advisable to spray the lawns with kerosene emulsion, or with a very strong soap wash, prepared by dissolving any common laundry soap in water at the rate of one-half pound to one pound of soap to a gallon of water.

Another method is to inject bisulphide of carbon into the nests, the quantity of the chemical depending upon the size of the nest. After the bisulphide of carbon has been injected, the entrance to the nest should be closed by the foot, in order to retain the chemical, which then will penetrate slowly through the underground channel and kill the ants. Although its fumes are disagreeable, they are not poisonous to man and the higher animals.—[Department of Agriculture.

FRUIT IS LARGELY WATER.

Proportion in Strawberries is 90 Per Cent, With 5 Per Cent Sugar.

For those who, in the summer fruit season, like to know what they are eating, it may be of interest to learn that you "eat" very little, for fruit is practically nothing but a lot of water and a little sugar.

Strawberries, for example, are 90 per cent water and between 5 and 6 per cent sugar. The small balance is accounted for by a little protein and acid. But strawberries are antiseptic—a valuable quality—and are deservedly favorites.

Grapes have twice the quantity of sugar compared with strawberries, and not so much water.

In currants we get a change—a fourth of the sugar and four times as much acid as strawberries.

Oranges have five times as much sugar as lemons and the same sort of acid, but only a sixth of the quantity.

Prunes (dried) have twenty-six parts of water, sixty-six of sugar, no acid and some protein. Their excellence is apparent. But for value as food the apple easily comes first.

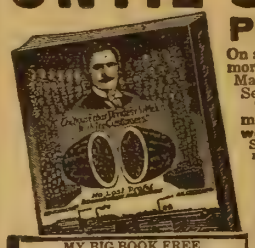
Now, when you eat fruit, you know that water, sugar and acid are what you are really eating.

More than 1,000 quarts of vegetables and fruits have been canned during the summer by fifty students at the summer session of the Kansas State Manual Training Normal under Prof. B. W. Scheib at Pittsburg. Most of the fruit has been canned in classes, but some of the students have practiced at home or at the homes of neighbors. The process indorsed by the federal government has been used by Professor Scheib and his students. The heating outfit by means of which the fruit and vegetables, after being blanched, are put through a heat bath, consists of a lard can with a false bottom made of wood. The outfit cost 15 cents.

Deep plowing increases the supply of water that the soil can carry without injuring the crop.

A hog-tight fence around your dooryard is the first step toward beautifying the farm home.

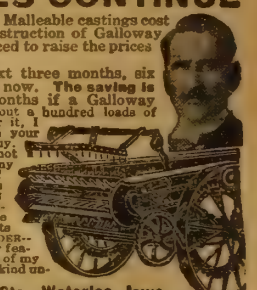
NOW IS THE TIME!!—
UNTIL SEPTEMBER FIRST
PRESENT LOW PRICES CONTINUE



MY BIG BOOK FREE
Ask for it today. A postal gets it. Your copy is ready. 260 pages illustrating and describing the great Galloway line of manure spreaders, cream separators, gasoline engines, farm tractors, vehicles, farm and household necessities. Just drop me a postal.

On and after that date spreader prices **must advance.** Malleable castings cost more, steel costs more, all materials entering into construction of Galloway Manure Spreaders have advanced and we are forced to raise the prices September 1st when new material contracts begin.

That's why I say if you need a spreader in the next three months, six months, twelve months or longer, you should buy now. **The saving is worth making!** Remember at the end of twelve months if a Galloway Spreader has not paid for itself, provided you have hauled out a hundred loads of manure or more, and has not proven everything I say for it, I AGREE TO TAKE IT BACK, pay freight both ways and return your money, no matter on which of my six selling plans you buy. Could I make this offer if the Galloway Spreader did not back up everything I said for it—if I were not sure that my spreader would please—would pay for itself on your farm? My new steel beater and wide spreading V-rake pulverizes and tears the manure to shreads—WORTH $15 EXTRA ON ANY SPREADER—costs you nothing on the Galloway. My invincible patented roller feed—an exclusive feature on the Galloway—makes it superior to all others, the secret of its light draft—A FEATURE WORTH $25 ALONE ON ANY SPREADER—costs you nothing extra on the Galloway. These and other features fully explained and illustrated in the second edition of my big free catalog. DON'T BUY A SPREADER of any make or kind until you have tried a Genuine Galloway AT OUR RISK.



THE WM. GALLOWAY CO., 39 Galloway Sta., Waterloo, Iowa

Free Catalog in colors explains how you can save money on Farm Truck or Road Wagons, also steel or wood wheels to fit any running gear. Send for it today.

Electric Wheel Co.
65 Elm St., Quincy, Ill.

A Home in the Dairy Belt!
SEND for circulars describing our Company's Cut over lands, direct to you, on the easiest terms. A little money does the work when you deal with us. Send for illustrated literature describing this favored section. Flambeau River Lumber Company, Station D, Ladysmith, Wis.

IF YOU WANT 40 acres or more rich, clay loam clover lands in our co-operative settlements near Crandon, county seat of Forest county, Wisconsin, write us and state **what terms you must have.** We will send you booklet written under supervision State Authorities. Agents wanted. Per-Ola Land Co., 21 Main, Crandon, Wis.

To Exchange Equity of $4,000
in Des Moines, Iowa, residence property for improved or unimproved, cleared or partially cleared level land free from stones in central or southern Wisconsin. Address H. E. Jones, Box 77, R.F.D. 2, Des Moines, Iowa.

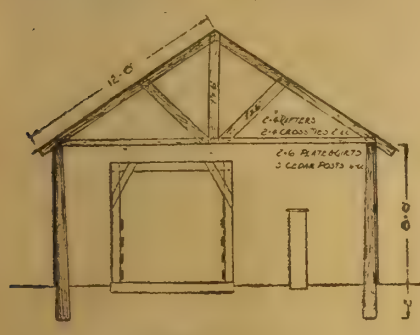
A GOOD SCALE HOUSE.

An Exposed Scale Never Gives the Satisfaction That Will Be Obtained From One That Is Covered.

A PAIR of live stock scales are considered as a standard equipment for the live stock farm. But it pays to cover them with some sort of a shed. It means less depreciation and better satisfaction all around. A scale house is shown here. It is built on a cedar pole frame, and is well placed to withstand the hard knocks that all steer-feeding equipment is subject to during the season. The shed is size sixteen by eighteen feet. That covers the common eight by fourteen foot scales used for weighing live stock on the farm. Use ten-foot cedar poles and set them in the ground two feet. The location of the poles are shown in the plan. Ten are required in all, if spaced six feet apart. Line the posts and set the nailing girts into the posts far enough so as to make the wall siding perpendicular. The plate that carries the rafters and the girts to which the siding is nailed are two by six inches and separating our readers from their money, but reasonable expense, designed to preserve and protect valuable property, is a permanent investment and is worth while. Garages are built because an automobile is too expensive a machine to leave out in the weather. On the same principle we need coverings for scale houses and machine sheds. Following is a statement of the lumber required for the scale house herewith recommended.

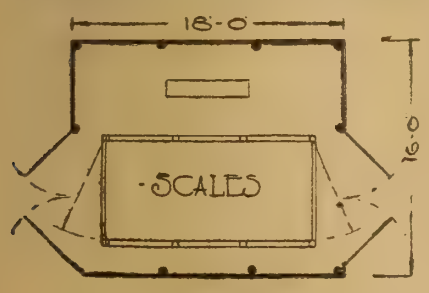
SCALE HOUSE.

10 cedar posts ten feet long
8 pcs. 2x6 18 ft. } plates and nailing
4 pcs. 2x6 16 ft. } girths
4 pcs. 2x6 7 ft. }
20 pcs. 2x4 12 ft. roof rafters
10 pcs. 2x4 16 ft. cross ties
14 pcs. 1x6 6 ft. braces for rafters
90 pcs 1x12 8 ft. siding boards
450 ft. roof sheathing lumber
4,500 cedar shingles



FRAME WORK.

are well spiked to the posts. Nail all the siding on first before starting the roof work. The rafters are of twelve-foot lumber and if spaced two feet apart will carry the roof in good shape. But the rafters must be trussed as shown in order to prevent the roof from sagging. Tie the building together from plate to plate at every rafter and use one by six-inch boards for the roof braces. These will brace only every other set of rafters. When the sheathing lumber is applied to the rafters a 1½-inch space can be left between each board when shingles are used. Oftentimes old scraps of lumber are used for sheathing, which is permissible in cases where the lumber is sound and free from old nails. Lay the cedar shingles so that four and a half inches of the butt will



FLOOR PLAN.

be exposed to the weather and that all will lap at least 1½ inches. Always use galvanized shingle nails if a long-lived roof is wanted.

Hang the doors on heavy iron hinges and build the stock rack for the scales out of two-inch lumber well bolted together so as to hold the stock. The 1,700 feet of lumber required and the 4,500 shingles together with the ten posts will cost about $65 to $75 in Wisconsin.

This estimate of cost was made up several months ago and we cannot vouch for its absolute accuracy at this time and under the present prices. However, the differences will not be great and certainly the expenditure is well worth while. The Wisconsin Farmer does not advise extraordinary expenditures just for the purpose of

State Cow-Testing Records.

That cows under test in most of the co-operative testing associations in Wisconsin are making good records is shown by the monthly reports sent to N. A. Negley, in charge of cow-test association work carried on jointly in the state by the Wisconsin Dairymen's Association, the college of agriculture and the dairy division of the United States Department of Agriculture, Washington, D. C.

Data for the month of June was obtained from twenty-two out of the total of fifty-one active cow-testing associations now doing business in the state. From these reports and others received each month, the state headquarters for dairy testing information, in charge of Mr. Negley at Madison and H. C. Searles at Fond du Lac, will be enabled to render distinct service in dairying in three important ways.

Buyers in the market for high-producing dairy cattle will be furnished direct information on where to find the animals they seek, based on the lists of live stock for sale contained in the regular reports of the testers.

An interchange of ideas among the associations and valuable "tips" on feeds and feeding problems will be made possible through these reports, providing they are carefully and accurately kept and forwarded at stated intervals.

Notices regarding the progress of the various associations will be published from time to time in local papers and in papers of state-wide circulation.

Summer picnics have been held by a few of the associations and others which are planning similar meetings during August are the Royalton and Welcome, Eastern Fond du Lac and the Shawano county associations. Leaders in dairy cattle breeding, cow-testing work and dairy sanitation will give short talks at these meetings.

The following is a list of association members whose cows took first place for June in their respective organizations, together with the amount of butter fat made by each of these leading producers. The figures indicate pounds of butter fat made in thirty days:

J. E. Schmitz, Lone Rock, 88.4; George Weisenberg, Stanley, 85.3; John Chapman, River Falls, 82; J. Keitel, Cedarburg, 81.5; August Tesch, Kewaunee, 79.5; Christenson Bros., Royalton, 72.7; Louis McGrath, Chilton, 69.6; James Lawrie, Marshfield, 69.1; H. A. Keep Milk Sweet.

To the Editor:—The approaching warm weather will make it necessary for dairymen and housewives to take extra precautions to prevent loss through souring of milk and cream. As milk is an ideal food for both babies and bacteria it frequently happens that in warm weather the bacteria are the first to enjoy this delicate food. Though the acid developed in the milk during souring is not harmful to the health of adults, it is injurious to infants and distasteful to many older people and will surely cause dairymen to lose money.

A successful dairyman near the Missouri College of Agriculture has solved this problem by removing the causes. Since dirt is loaded with bacteria he first keeps both dirt and bacteria out of his milk by using a small-top milk pail, by keeping his pails, cans, strainers and other milk utensils clean and by keeping his cows free from dirt and filth. This can be cheaply and efficiently done by thoroughly washing the utensils with hot water as soon after using as possible and setting them in a clean, protected place to drain until used, by brushing the cows daily and preventing them from becoming dirty, by using plenty of bedding and by keeping the barnyard clean.

Since bacteria will not sour milk unless they grow in it, he prevents their growth by cooling his milk as soon as produced and keeping it cool until delivered. The best of dairymen cannot furnish milk so free from bacteria that it will not sour if left for hours in a warm place. Both dairymen and housewives will do well to remember that cleanliness and low temperature (50 degrees Fahrenheit) will prevent this loss. P. Warner.

Neither the scrub nor the poorly fed animal can pay a profit on high-priced land.

Oliver Method for fighting the Hessian Fly

Agricultural experts tell us the best way of checking the Hessian fly evil is by deep plowing. Mr. McColloch of the Kansas Experimental Station believes the Oliver rolling coulter and jointer plays an important part in fighting the fly.

July 8, 1916.

OLIVER CHILLED PLOW WORKS,
Kansas City, Mo.

Dear Sir:

I have just seen the Oliver combined rolling coulter and jointer in operation on wheat stubble, and wish to say that I am certainly well pleased with it. The way it turns the stubble and trash under is a big advance in the thorough preparation of wheat land.

I was especially interested in this implement as a means of turning stubble and volunteer wheat under to destroy the Hessian fly. One of our recommendations for the control of this insect is that the ground should be plowed to a depth of at least six inches and all stubble and volunteer wheat buried under at least three inches of soil. The ground should then be worked into a good seed bed.

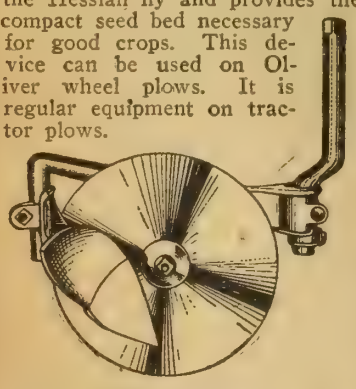
It is a difficult matter to thoroughly bury all the stubble and volunteer wheat with the ordinary plow and the subsequent working of the ground with a harrow pulls much of it out again. For this reason the farmer often becomes discouraged and gives up trying to control the fly.

The thoroughness with which the coulter and jointer buries the stubble on the bottom of the furrow overcomes this trouble and in my opinion solves one of the most serious difficulties in the control of the Hessian fly. The thorough preparation of the seed bed, together with the other methods advocated in the inclosed circular, will serve to control the fly in any community. If the coulter and jointer did nothing more than aid in the control of the fly it would be a valuable implement on any farm. Very truly yours,

J. W. MCCOLLOCH.

Ask us to send you a copy of the circular Mr. McColloch refers to. We also have a special circular on the Hessian fly.

The Oliver combined rolling coulter and jointer covers weeds, turns under green manure, checks the Hessian fly and provides the compact seed bed necessary for good crops. This device can be used on Oliver wheel plows. It is regular equipment on tractor plows.



The Oliver combined rolling coulter and jointer—the device for checking the Hessian fly.

CURRENT EVENTS

JAMES WHITCOMB RILEY, America's sweetest singer of the present generation, died suddenly last week at his home in Indianapolis, in his sixty-third year. On the order of the governor of Indiana, his remains were removed to the state house, where they were publicly viewed for several hours, Indiana recognizing that he was her most notable son. Death was due to paralysis, from which the gifted poet had been suffering for several years past. It would be difficult to name the most popular and best known of Riley's poems, but undoubtedly "An Old Sweetheart of Mine," "The Raggedy Man," "Knee Deep in June" and "Out to Old Aunt Mary's" are among the most popular. Riley was particularly the poet of childhood and of rural America. He was born in 1853, but was always reticent as to his exact age. An unique celebration in the country was held in his honor October 7, 1915, when "Riley Day" was observed by a banquet in Indianapolis and in schools, attended by more than 1,000,000 children. Men prominent in business and politics assembled to do the poet homage at the celebration, and many congratulatory messages were received from abroad on that occasion. The day in the public schools was observed by reading his poems. Riley never married, his sister in New York being his nearest relative.

THE naval appropriation bill, with a three-year building program, including the immediate construction of four dreadnaughts, four great battle cruisers and fifty-eight other craft, passed the senate last week by a vote of 71 to 8. It carries $315,826,843, or $45,857,588 more than the total voted by the lower house of congress. Thus the democratic senate goes on record favoring the most elaborate program of naval preparedness ever known in the history of the nation. Many proposals to curtail the enormous building increases written into the measure by the senate naval committee were defeated overwhelmingly, and as soon as final passage was announced the senate voted to insist on its amendments and send the bill at once to conference. The house is expected to insist on its building program and a long struggle is in prospect before an agreement is reached. Construction of 157 vessels, including sixteen capital fighting ships, within three years, at an estimated cost of $588,180,576, is contemplated in the senate program, the largest ever proposed in congress. Of the total appropriations in the bill, $110,726,160 is for the first year's building expenditures. Congress is planning to adjourn about August 20th, by which time it is hoped to have the differences between the two houses on this naval bill amicably settled, so that the building can go ahead without any undue delay.

A BOMB left in an innocent-looking suitcase on the sidewalk exploded while the preparedness parade was passing along the streets of San Francisco, with the result that seven persons were killed and nearly fifty injured. The bomb, concealed in a suitcase packed with cartridges, bullets, gaspipe, glass and scrapiron, blew a gap through the crowd, striking down men, women and children. The flying missiles sprayed the crowd with a rain of death more infernal than the shrapnel of a European battlefield. The holiday throng was cheering the First California Infantry, a Spanish-American war regiment, which was passing. The place became a shambles, the sidewalk strewn with dead and wounded and frightened men and women leaping in panic for safety. Injured and uninjured piled in a heap in the street and many were crushed. The police have arrested a number of suspects, but the real motive of the crime remains unknown. It is thought that some person whose mind had become inflamed by reading so much for and against preparedness committed the awful deed while suffering from an insane fit. It is difficult to explain such wholesale and awful murder on any other theory.

THE United States Steel Corporation reported the largest earnings in its history last week, due to the manufacture and sale of war munitions. An extra dividend was declared on the $58,000,000 worth of outstanding common stock. The net earnings of the corporation for the last three months were $81,126,048, exceeding by $20,'12,424 the highest previous record, made in the first quarter of the current year. The balance carried to surplus for the quarter was $47,964,535 as against $32,854,172 in the previous quarter and $8,267,645 in the corresponding three months of the previous year. On the basis of returns for the last quarter and with the orders already in hand Wall street estimates that the steel corporation's earnings for 1916 will go to unprecedented figures. A large part of the contracts filled heretofore were at the low scale of prices. Now the corporation will be able to reap the benefit of the present record prices.

THE battle of the Somme, as the fierce fighting of the present in northern France has come to be called, continued last week, with frightful carnage. General Haig, commander of the British forces, reported that 1,500,000 men were engaged, the main battle front being only a little more than twenty-five miles in length. The Germans are said to be rushing re-enforcements from Verdun and the eastern front in order to strengthen and hold their third line, the allies having pierced the first and second lines in a number of places. The allies are pushing the Teutons back slowly but surely, although only a small portion of the captured territory has been won back so far and that at awful cost in human lives.

Puffer-Hubbard Company Wins Suit.

For some time the Puffer-Hubbard Mfg. Company, of Minneapolis, makers of silos, have been having trouble with other companies who have been attempting to infringe upon their patents to copy their good points. The Puffer-Hubbard Mfg. Company brought suit in the United States District Court of Minnesota, fourth division. The company was sustained by the court in its efforts to keep other companies from copying points about its silo and one company, in particular, which was shown to have copied the Puffer-Hubbard silo in some particulars, was enjoined by the court from further infringement. Judge Wilbur F. Booth signed the decree June 6, 1916. Mr. Hubbard, according to proceedings in court, was shown to be the original, first and sole inventor of improvements on the Puffer-Hubbard silos set forth in Letters Patent. The contentions of the Puffer-Hubbard Company were fully sustained by the court, thus preserving for this company the extensive use of designs and construction covered by their patents.

The rapid decline of the horse from the streets of New York is shown by official records just issued. The report shows that nearly seven-tenths of all vehicular traffic, not including street cars and motorcycles, is self-propelled. Engineers of the department of public works take frequent counts of all kinds of traffic preparatory to widening and repaving the city streets. These records show that on Fifth avenue, at Forty-second, 91½ per cent of the traffic last month was motor vehicles and 8½ per cent horse drawn. In four years the average number of horse-drawn vehicles passing at three points in Fifth avenue during the busy hours in one day decreased from 2,577 to 1,670, or 35 per cent, while the average number of motor vehicles increased from 7,202 to 12,893, or 79 per cent.

Bigger Potato Profits

A modern Elevator Digger will add substantially to the value of your potato crop. More potatoes and in better marketable condition with less labor and power means many extra dollars in the grower's pocket at the end of the season.

The 1916 Farquhar Elevator Digger is built in three sizes, which can be equipped with various attachments suitable for different kinds of soil. This enables you to get the right digger for your particular conditions.

Our diggers are the result of many years' field experience, combining efficiency and durability. Illustrated catalogue describing the Farquhar Elevator, as well as our Success Junior and Gilt Edge Walking Diggers, free to growers. Send today for your copy.

Cutting Big Hay Crop.

Upper Wisconsin farmers are finishing up the hay harvest now and reports indicate a heavy yield with ideal conditions for getting it into the barns. The weather has been hot and dry and generally reports of small grain are encouraging with oats heading out well, but not so strong a growth of straw as last year. The clover and timothy crops in the Lake Superior counties has been very heavy and where clover was grown alone the crop was so thick that walking through a field was difficult. Douglas county farmers report a shortage in haying machinery this year, being unable to get enough to meet the demands and yields of two and one-half to four tons per acre are reported.

Douglas County Fair.

The support which the Douglas county board has given the county fair should serve as an incentive to older communities and nothing is being left undone to make the Douglas County Fair rank with the best, although it is only a few years old. The board recently set aside $3,000 for improvements on the grounds at Superior and when the fair opens this fall a new grand stand, agricultural hall and cattle building will be completed and ready for occupancy.

Growth of Dairying.

The success which the new farmers' co-operative packing plant at South Superior has had during the past few months indicates the growth of dairying in Douglas county. The creamery is now making more than a ton of butter daily and when it was first begun last fall it was hardly thought there would be enough cream to keep the creamery running. Several farmers this summer have averaged $10 per month per cow and one farmer who started shipping cream from four cows now has seven, paid for with creamery checks. This creamery should prove a great boost for the dairy interests in that county and the increasing output indicates it is succeeding along this line.

Record of Settler.

The Sawyer County Record of July 13th contains the following interesting experience of a settler in Upper Wisconsin which points out the possibilities that await the newcomer:

Mr. Wm. Gross who came here from Milwaukee on May 5th, onto an entirely new piece of land has at the present day new potatoes that he has raised this year. His peas have been bearing for several days. Cabbage on his farm measures fourteen inches across. Since Mr. Gross came here he has had to build his house and barn and clear the land before he could commence to plant. This shows what a new settler who is willing to work can do on the new land in this section of the country.

Fight Potato Beetle.

The general complaint from Upper Wisconsin counties where potatoes are a large crop is that the potato bugs are proving a great pest this year, due to the continued warm weather which has caused the potato beetle to hatch readily. Many growers, according to J. G. Milward, secretary of the state association, have been busy in the midst of haying and the bugs on many fields have gotten a good start because of failure to spray. Better methods are being used in Wisconsin this year. Many growers, however, who have waited too long are now using about five pounds of Paris green to fifty gallons of water and applying carelessly. The result is that the vines are not only chewed badly but they are badly injured by Paris green burning.

Several growers this year for the first time applied the poison in connection with Bordeaux mixture made at half strength. This mixture sticks well to the vines and prevents burning. When Paris green is used it is added at the rate of three pounds to fifty gallons. Dry arsenate of lead has been used at the rate of four pounds per fifty gallons of spray.

It has been noticed that several of the better class of machines have been purchased this year and satisfaction is invariably reported. It is desirable to have a machine which can be used both for the control of bugs and spraying at high pressure against blight.

Big Cream Check.

The Barron County News relates the experience of Hylekma Bros., of the county, who milked twenty-two cows during June and received a check at the creamery for $305.79 and adds that it is probably the largest cream check ever issued in Barron county to a single farm. These cows are Holsteins, pure bred and grades.

Dairy Maids' Contest.

To the Editor:—An old-fashioned dairy maids' milking contest will be one of the most interesting events at the Marinette County (Wisconsin) New Settlers' Picnic, which will take place this year at Wausaukee on August 17th.

From sixty to seventy daughters of Marinette county farmers and new settlers will be entered in this contest, and it is said that fully that many unmarried new settlers, who are engaged in dairy farming, will be on hand to get accurate information concerning the milking capabilities of the various contestants.

Prof. A. M. Olson, superintendent of the Marinette County Training and Agricultural School, will be in charge of the contest and will also act as chairman of the day.

Last year the new settlers' picnic was attended by 4,000 people, and arrangements are being made to accommodate 5,000 this year. There will be three special trains to the grounds.

Another big event will be demonstrations by three different sizes of tractors, including the demonstration of the utility of a 12-25 tractor in clearing and breaking new land. People from all parts of Upper Wisconsin who have land which they wish cleared will be present to witness this demonstration as guests of Marinette county settlers.

The first annual Marinette County Dairy Cattle Congress and sale will be held in connection with the picnic this year and prizes aggregating $400 will be awarded in this event.

Howard I. Wood.

Mr. Kellogg in Northern Iowa.

To the Editor:—I am in Iowa where they grow $80 worth of corn to the acre. No wonder they ignore fruit of all kinds. The soil is somewhat "gumbo" in places and hard to work unless taken at the right time. Experts who have analyzed this soil say it is the best in the United States. It certainly has produced wonderful crops for twenty-five years without manure or rotation of crops. I was on one field of forty acres that for twenty years has grown nothing but oats and the present crop in shock promises forty-five bushels to the acre.

Except along the bluffs of the rivers the soil is not the best for tree fruits. I have been in orchards where Pewaukee apple has done fairly well for twenty years, but on the open prairie there are few orchards and the trees were sent a rod apart. Never pruned, never sprayed and no wonder the fruit was no good. Yesterday I was out six miles to pick Cuthbert raspberries that were planted twenty-three years ago. There was no sign of rows. Just a tangled mass of brush and the soil so good that there were plenty of canes six to eight feet high, but the condition was such there was but little fruit. Still I could recognize the variety by some choice specimens. Nearly every farm has a grove of timber about twenty years planted, a very few a little orchard to grow up wild.

While this whole county and much of northern Iowa is wonderful in its production, it all goes to corn, oats, barley, hay and stock. Very few silos, poor dairy interests, no fruit worth naming. Farmers can raise $80 worth of corn on an acre and say they can buy their fruit, but the facts are their families usually go without.

Most of the landowners have retired to the cities and the renters don't care to plant or cultivate fruits. Some farms have not a tree or shrub. The owners want it all to grow corn and hogs. Crops are splendid; the hot weather since the 1st of July, 70 to 97 degrees, has boomed the corn, and grain is being harvested rapidly. Wages from $30 and $40 a month, $2 to $4 a day, and scarce at that. Farms are large. Every farm is tiled or needs it. Millions have been spent tiling and millions more will be spent. Tiling costs from $20 to $50 an acre and then the land is worth $150 to $200 an acre. Some say these farms will go up to $300 an acre. No fruit, no care, no cultivation, no help and no wonder this is neglected. Cornstalks all go to waste. No dairy breeds are visible, plenty of hogs, horses and cattle, occasionally a Hereford herd; old straw stacks in every field rotting down. All you need to say is northern Iowa.

Geo. J. Kellogg.
Rock Co., Wisconsin.

British scientists are experimenting with banana stalks as material for paper and as a possible source of potash.

If none of the above combinations suit you, you can make your own club of papers in the following way: First select The Wisconsin Farmer and figure it at $1.00 per year. Then select any of the papers or magazines listed above and figure them at half their regular subscription price as indicated above, choosing whatever papers or magazines that appeal to you. As an example, suppose you should want The Wisconsin Farmer, Kansas City Weekly Star, Woman's World and People's Home Journal. You would figure The Wisconsin Farmer in the combination at $1.00; then you would add up the regular subscription price of the other three papers, which amounts to $1.10. Half of that amount equals 55 cents. Add this to the regular price of The Wisconsin Farmer, which is $1.00, and you would have a total of $1.55, which would be the rate for The Wisconsin Farmer, Kansas City Weekly Star, Woman's World, and People's Home Journal.

If you wish to subscribe for any papers or magazines not listed in any of the above offers, write to us for special rates. Send all orders to Club Dept., The Wisconsin Farmer, Madison, Wisconsin.

FARMERS' CLUBS IN WISCONSIN.

Nothing Adds More Stimulus to Run-Down Communities Than Well-Organized Rural Societies Which Bring the Families Together in a Social and Business Way—Successful Wisconsin Clubs.

FOR run-down rural communities nothing seems to supply more stimulus than a well-organized, properly conducted farmers' or community club. Such an organization, backed by enthusiasm, seems to provide just the thing that such a community requires and the success the farmers' clubs in Wisconsin are attaining along these lines has brought about more interest than ever before in this phase of rural life and rural development.

Something like 200 farmers' clubs, strictly rural in every sense, are working in Wisconsin to improve rural life, to better farming conditions and make life more enjoyable and more pleasant. These clubs, properly conducted after successful organization, become important factors in a community, as they cement in a closer friendship the farmers and neighbors and make farm life not only more attractive to the boys and girls, but more enjoyable for the fathers and mothers. These clubs are conducted largely along social lines entirely, although considerable work is done by most of them in an educational and agricultural way. Counting the granges and the equity societies which combine the social advantages with business, Wisconsin probably has close to 1,000 rural organizations that are working for better rural conditions. C. J. Galpin, of Madison, who is devoting much time now to farmers' club work in connection with his country life work, believes that these organizations are doing an inestimable good in Wisconsin and that the number of strictly farmers' clubs will increase very fast in the next few years.

PECK'S STATION FARMERS' CLUB.

Sauk county still leads other counties in the number of farmers' clubs which are formed independently of any other organizations by the farmers in particular localities. Walworth county is rapidly forging ahead in this work and during the last year the clubs in that county have undertaken and carried to completion some projects which would do credit to much larger organizations. The Worthwhile Farmers' Club at the spring election induced the voters in the town of Geneva to vote $2,800 for a community or town hall which will be used as the meeting place for the club. The Bloomfield Farmers' Club only recently occupied their community house which was built by money voted at the town election. The Lakeview Farmers' Club at Linn, the oldest in the county, meets at the town community house which was built last year at a cost of $6,000. This money was voted at the town election after the club had taken the initiative. The club at Honey Creek also have their own community house.

TOWN HALL BUILT THROUGH THE EFFORTS OF THE BLOOMFIELD FARMERS' CLUB, WALWORTH COUNTY.

HOME OF LAKE VIEW FARMERS' CLUB IN THE TOWN OF ZENDA, WALWORTH COUNTY.

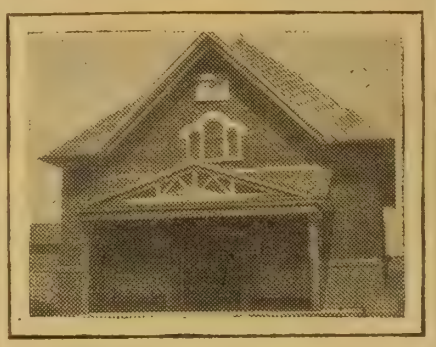
What the Sauk county and Walworth county clubs and those in other communities have done towards providing themselves with permanent club rooms is an accomplishment to which every smaller club can work. Such projects are not the work of new clubs, but the work of those already organized and successful and for a new club to undertake at the outset to build a community house might mean its failure. The important thing is to become successfully organized and succeed in the smaller things before undertaking so large a project as erecting a clubhouse or even asking the town to erect it. These things will all come after the club is well organized and the accomplishments of the Walworth county clubs is cited here as an illustration of what is being accomplished by the clubs. These clubs, it must be borne in mind, are strictly social and have no connection with the grange or the equity and this article, so far as suggestions for organization are concerned, applies entirely to the farmers' club which has been formed locally for social or educational purposes. Business projects which they might assume later are merely a part of the natural desires of the clubs to build up their communities.

The desire to form these farmers' clubs in so many parts of the state has brought many inquiries to The Wisconsin Farmer relative to organization. Hardly a week passes but that someone inquires how to start such a club, which shows the interest being taken by the farmers in rural development.

Nothing is more important or necessary to the success of a farmers' or community club than the organization. If it is not properly organized it is bound to die. If there is no demand for it; if only a few wish it, the chances are it cannot succeed. So that the important thing in organizing is to get everybody interested; get them to the meeting and arouse their enthusiasm. With this kind of spirit the club is likely to succeed. Every club must have a leader, it is true, but no club can succeed with the best leader in the community if he is not backed by those who should be members.

The "talking stage," as Mr. Galpin expresses it, is of great importance. This is the time when the farmers and their neighbors are beginning to talk about forming a club. Spring and summer are a good time to talk of such a club so that it can be organized in the fall ready for a winter's pleasure and work. Talking in advance of organization will tend to interest everyone who is later to become a member and when the time is ripe someone should call a meeting. To this meeting invite every person. Be careful not to slight anyone, as such an oversight might make an enemy that would in the end wreck the club. These clubs must be neighborhood affairs and everyone should take part and consider themselves personally responsible for the success of the club.

To this first meeting a good speaker who is familiar with farmers' club work should be invited. Someone from a successful club in the neighborhood would be preferable to an outsider and the cost would not be large. Many men would be only too glad to attend and help organize without pay. The schoolhouse would be a good place for such a gathering and the school directors should be interested during the "talking stage" in order that they would donate the use of the school. At this first meeting there should be music and singing by some of the organizers or those who would be expected to become members. The important factor is to make it informal and the more informal the better, for everyone should get acquainted and feel perfectly at home in order that there would be none of that reserve and holding back so often encountered in community gatherings. This meeting should serve to break the ice and at the second meeting permanent officers and committees could be selected and a constitution and by-laws adopted. Then the club could proceed with its business, but at every meeting there should be music and speeches and care should be taken that no one is overlooked. It might be well to have an outside speaker at the second meeting and someone known in the neighborhood or from a near-by club that has succeeded would instill more confidence and put the members at ease better than a stranger. This much of the organization work well done, the program committee could arrange for future gatherings.

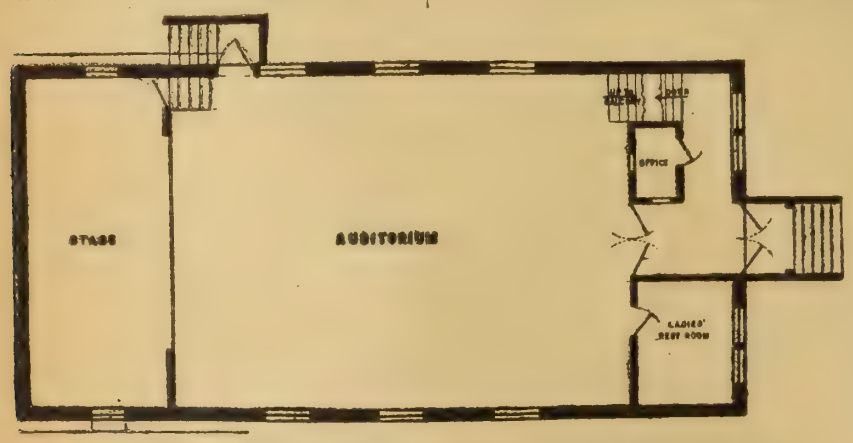


COMMUNITY HOUSE AT HONEY CREEK.

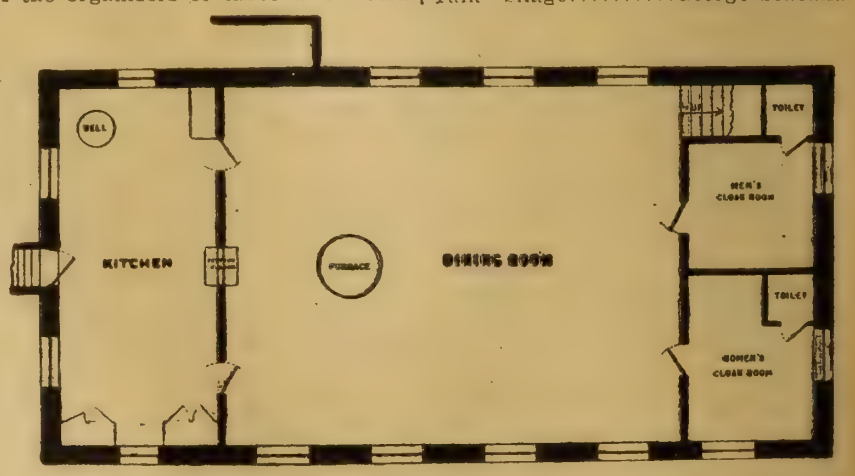
The matter of dues is one for each club to decide. They should be as small as possible and still raise enough revenue to conduct the club properly. Box socials, etc., can be arranged afterwards to raise funds when needed. After the organization is under way the success depends entirely upon the enthusiasm of the members and the activity of the officers. The program committee must have the co-operation of every member, as it is impossible to arrange programs when members decline to serve. After the work has gotten well started the club can take up such enterprises as holding club fairs, agricultural tours of their farms, corn and grain contests, etc. Many of the older clubs are doing splendid work along these lines, but the fact that these clubs are primarily social must not be lost sight of, as pleasure and business must be combined for the best results.

The following program at a recent meeting of the Narrows Prairie Hustlers in Sauk county shows the prominent part music and readings play at their meetings:

Meeting called to order by our president .....Mr. Rusch
Song—Juanita .....The Club
Minutes of the last meeting read by the secretary.
Talk—Corn .....Mr. Tibbits
Song—I Love My Herd of Holstein Cows.....School District No. 2
Progress of European War..Elsie Behn
Reading .....Mrs. King
Talk—Silage.....George Schenkat
Recitation—The Courtship of Larry O'Dean.....Mr. Thorne
Club News .....Mary Schenkat
Song—Keep on the Sunny Side..... .....School District No. 11
Dialog—A Lesson in Geography.... .....School District No. 2
Song—Jingle Bells.....The Club
Adjourned.
Lunch



MAIN FLOOR OF THE BLOOMFIELD TOWNSHIP HALL.



BASEMENT FLOOR OF THE BLOOMFIELD HALL.

The constitution and by-laws need not be complicated, but the simpler the better. The following constitution of the Better Farming Club, Columbia county, is a good sample:

Article 1. The name of the organization shall be Better Farming Club, of Caledonia.

Article 2. The object of this society

is to promote the agricultural interests, improve social conditions and better the general welfare of the community.

Article 3. The officers shall consist of a president, vice president, secretary and treasurer.

Article 4. This being a community meeting, membership is extended to anyone who will sign the membership list.

Article 5. The meetings shall be held monthly during April, May and June, discontinued during July and August, and semi-monthly during the balance of the year.

Article 6. The election of officers shall be held annually beginning the first meeting held in September.

Article 7. The president shall preside at all meetings or in his absence the vice president shall preside, or a temporary president shall be elected by a majority of the members present.

The president shall appoint a program committee composed of three members whose duties it shall be to arrange a program, and shall be appointed quarterly.

Article 8. The secretary shall record the minutes of each meeting and keep a record of the same.

Article 9. The treasurer shall have charge of all funds belonging to the society and shall be prepared at all times to give an accurate account of the same.

Article 10. The constitution may at any time be enlarged or amended by a two-thirds vote of all members present.

Persons interested in forming such clubs can secure copies of constitutions and by-laws as well as programs of other clubs by writing Mr. Galpin at Madison or to the editor of The Wisconsin Farmer.

The Tractor For Small Farms

To meet the demand for a reliable tractor for small farms, we are building our famous EAGLE two-cylinder engine in tractor form. You get a perfectly-balanced, compact and *dependable* tractor that hits the hard places and goes through with power to spare—and still works smoothly. And when you put it at threshing, cutting silage or other belt work,

You Get Power—And to Spare

You want a tractor that will give you perfect service for *both* your belt and traction work—one that is built as much for the one purpose as for the other. Safety, convenience, steadiness, simplicity, quick action, perfect control and surplus power make the EAGLE the ideal tractor for the small farm. The EAGLE Valve-in-Head Motor, which gives cleaner combustion and more power than the ordinary type of engine, is one of the secrets of the success of EAGLE GAS TRACTORS.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Valve-in-Head Motor.

Please tell me whether a valve-in-head motor will produce any more power than an L head motor, the conditions being the same in both cases. What are "reversible headlights?"

Answer.—Under the same conditions the valve-in-head motor will produce the more power. Reversible headlights have their support so placed that either light may be placed on the right or left side of the car.

Winding an Armature.

How is an armature wound and how is the size and amount of wire figured? Please give the rule.

Answer.—The rule is very complicated and to understand it requires a technical knowledge of electricity. The following things enter into the calculation: Quality of iron used in armature and field cores; cross section of field core; number of ampere turns in field winding; number of poles; area of pole faces; air gap between pole faces and armature core; length and diameter of armature core; number and size of slots; speed of armature; type of winding. There are enough different types of windings to fill a good-sized book with diagrams. The International Correspondence Schools, of Scranton, Pa., publish a handbook on electricity that gives considerable information on armature winding, but some technical knowledge of electricity is necessary to understand it. The book sells at 50 cents.

Crossing a Power Line With a Telephone Line.

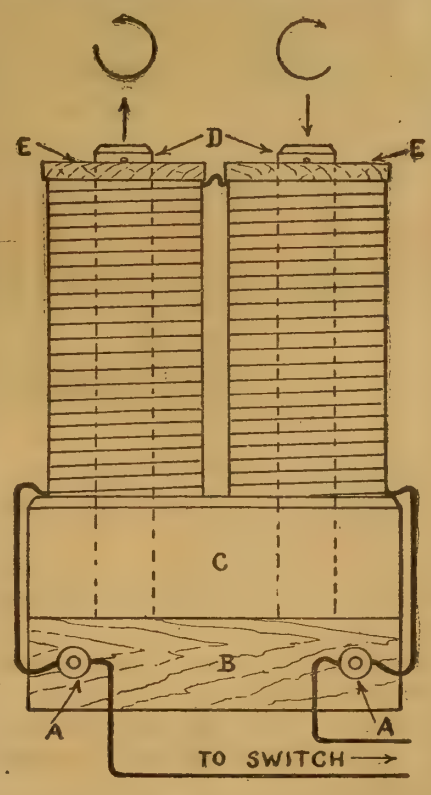
In a former issue you said that there had been many fatal accidents due to a short circuit between a high-voltage power line and a telephone line. Of course, in such cases the electric power line breaks and falls on the telephone line. Using 2,300 volts, how great would be the danger if the power line were insulated? To bring my power wires from town I would have to cross the phone wires overhead, but I can clear them eight or ten feet. I could place my power wires eight or twelve feet away from the telephone wires when running parallel to the wires. Would that be so close as to put the phones out of business? If I did use insulated wire, would it not be best to use number ten wire so that if it were covered with sleet it would not break? And in case some farmer wished to run a light wire to town I could let him hitch on at my house. How long is insulation supposed to last on electric wires? What size transformer must I have? What would be the best tool to use in taking hold of an insulated wire charged with 2,300 volts?

Answer.—A voltage of 2,300 is very dangerous to handle, as the slightest contact with a live wire carrying this voltage may result fatally. If it were absolutely necessary to handle a wire of this kind, even though insulated, one should wear dry rubber gloves and rubber boots. Insulation is not to be depended upon for such a high voltage. "Weather-proof" insulation should last a long time, fifteen to twenty years. You could run ten sixteen-candle-power carbon lights or twenty-five sixteen-candle-power tungsten lights from a one-half kilowatt step down transformer, 2,300 to 110 volts. Where your power line crosses the telephone lines enclose the telephone lines in a wooden box so that the power line cannot fall on them. Your power line will probably not carry enough current to affect the telephone lines. Insulated wire is always used for power lines. In your case number ten wire would be better than smaller wire.

Making a Magnet Charger.

How can I make a magnet charger to recharge telephone magnets, using dry cell batteries? Please give diagram.

Answer.—The figure shows how such a charger may be made. B is a wooden base to which the two binding posts, AA, are fastened. C is a soft iron block, the larger the better. It should be at least two inches thick, three inches wide and long enough to support the coils. DD are two soft iron rods, turned and pressed into two holes in C. The distance between these rods should be the same as the distance between the magnet poles. The size of the rod should be as large as possible and leave room enough for



the wire. About one and one-fourth inch is a good diameter for these rods. The rods should extend eight or ten inches above the iron base. Wind about three pounds of No. 32 single cotton-covered copper wire or enameled copper wire on each rod. The windings should be so that the current will flow left handed around one coil and right handed around the other as shown by the arrows. The vertical arrows show the diection of the magnetic flux. The drawing shows insulating tape wrapped around the coils and a wooden disk, E, at the end of each coil to hold it in place. A small hole is drilled through each rod, through which a wire is inserted to keep the wooden disks from slipping off.

To charge a magnet, set it so that the poles rest on top of the rods. Turn on the current. The magnet becomes charged immediately. Place a soft iron "keeper" across the poles of the magnet. Turn off the current and remove the magnet, leaving the keeper in place until the magnet is on the generator. If the keeper is removed for an instant the magnet will lose some of its charge.

Setting a Woolf Valve-Gear.

Please tell me how to set the eccentric 90 degrees ahead of the crank pin; and how to set the eccentric rod the right length on a Woolf reverse valve-gear. Can I get equal lead and equal cut off on both forward and backward motion?

Answer.—Place the crank on head end dead center and set the eccentric as nearly as possible at 90 degrees. That is, the eccentric throw will be straight up or down, depending upon the direction the engine runs. Move the reverse lever from one end of the quadrant to the other and note the "slip," that is, the amount the valve moves backward and forward due to the movement of the reverse lever. Then put the engine on crank end dead center and move the reverse lever backward and forward from one end of the quadrant to the other, and note the "slip" of the valve. When the eccentric is correctly set the "slip" will be the same at either dead center. The slip should be in the same direction that the lever is moved.

Adjust the eccentric rod so that for the threshing motion when the engine is on crank end dead center the valve has a lead of about three-thirty-seconds of an inch. The leads will not be equal at each end, but the cut offs should be nearly so. It is impossible to set a valve for both equal lead and equal cut off.

Noisy Gears.

Can you tell me what makes the transmission in my Ford car make a humming, grinding noise when it is in low gear? We have had the motor out, but could not find anything wrong except that the triple gears are a little loose on the bearing. What makes a cylinder miss at times?

Answer.—The noise is probably due to the gears being loose. Gears are often noisy without any apparent cause. The noise does not always indicate serious trouble. Be sure that there are no broken gear teeth and that the teeth are not bent out of shape.

A fouled spark plug is the most common cause of a cylinder missing, though burned or poorly adjusted contact points of the coil, or poor compression may cause the trouble. Another source of trouble with Ford cars is the "commutator," or timer. If the oil becomes gummy or if the roller or contacts become worn, misfiring will result.

The best way to clean a fouled spark plug is to remove the porcelain, soak it a few minutes in kerosene and wipe or scrape the carbon off, taking care not to injure the glaze of the porcelain. When replacing the porcelain do not screw the packing nut too tight. If too tight, the porcelain will crack when the motor becomes warm. After replacing the porcelain adjust the spark gap to the thickness of a smooth dime.

LAW QUESTIONS.

Trespassing Stock.

A Subscriber, Elk Point, S. Dak.—One of my neighbors lets his stock run at large on the public road. I own land on both sides of said road, and it is very inconvenient for me to shut my gates every time I go forth and back. Am I required to do so in order to keep his stock off my premises?

Answer.—It is probably best for you to keep your gates closed. However, you can recover damages from your neighbor by law when his stock trespass upon your premises.

Stallion Service Charges.

A Subscriber, Gleason, Wis.—A bred a mare to B's stallion, the service charge to be paid provided the mare became with foal,—in other words, B insured the mare to become with foal. About one month before foaling time A's mare died. Has B a right to collect the stallion service charges?

Answer.—If the mare became with foal from the service of the stallion B is entitled to the charges. The fact that the mare died before foaling the colt does not relieve A from payment.

Land Open to Road—Trespass.

A Subscriber, Marshfield, Wis.—I own a farm in Wisconsin. A public road runs along one side of my farm, and I have no fence along said road, and my land next to the road is a meadow. My neighbor drives fifteen cows along this road, morning and evening, and they get into my meadow nearly every time they are driven past. I have notified the owner of the cows to keep them off my land, and he says I ought to have a fence. Can I recover damages for the injury his cows cause to my meadow?

Answer.—You should fence your land from the public road. You cannot recover damages from your neighbor unless you can clearly prove that the cattle go upon your meadow because of his negligence or carelessness in driving them on the public road.

Fraud in Sale of Colt.

A Subscriber, Havana, N. Dak.—A man advertised for sale an outstanding yearling German coach stallion, from an imported mare that had taken several prizes, and I wrote to the man, asking the price, and asking if the colt was straight and all right. He answered that the colt was all right, and stated the price, and I bought the colt and sent him the money. When the colt arrived at my place, I found that it had only one testicle and that was small, also one of its hips was knocked down, and there was a hitch in the other hip. Must I keep the colt, or can I send it back to the seller, and recover from him the price I paid?

Answer.—You have a legal right to send the colt back and demand the price you paid and could recover judgment against the seller for the amount, but probably the seller lives in another state and you would have to sue him there and this would be expensive and at the end you might have neither colt nor price. Your only other remedy is to keep the colt and sue him for damages and such suit would have to be where he lives and a long distance suit is always expensive and sometimes impracticable.

What 1000 Cars

These two latest Overland developments again emphasize the enormous economy of enormous production.

No one has ever before made 1000 a day of cars of this size and class—nor half that many.

1,000 cars a day enable us to use materials of a much higher quality and not only permit but actually enforce an accuracy of workmanship which smaller productions of cars in the same price range *neither permit nor require.*

1,000 cars a day make possible better, larger, much more comfortable cars than have ever before been possible at anywhere near the price.

* * *

This newest Overland is the largest Four ever offered for so low a price.

In the first place, note the longer wheel base—112 inches.

The enbloc 35 horsepower motor which has made the Overland famous is continued.

True—it is perfected even more and now it is a fitting climax of the experience obtained from a quarter of a million of these Overland motors in daily use.

Shock absorbing cantilever rear springs are a big improvem

Handling Cream For Market.

The first essentials in handling cream for market is absolute cleanliness. This must begin with the milking. The milker must be clean as well as the receptacles which are to receive the milk. It is quite a task for the men on the farm to come in from their day's labor in the fields and change their clothing before milking. An excellent plan, and one that is easily followed, is to provide the milkers with large, clean aprons that almost cover up their dirty clothes. These aprons will be little trouble to keep spotlessly clean and will last a long time for milking purposes. When the hands are washed and well dried and the aprons donned they indeed look clean enough to milk. Plenty of clean towels should be at hand in the dairy room.

The cow's udder should be washed down with warm water and dried off with a clean towel or cloth before the milking is begun. These cloths should be perfectly clean. This only takes a very little time and we feel that we will produce a better grade of market cream by so doing.

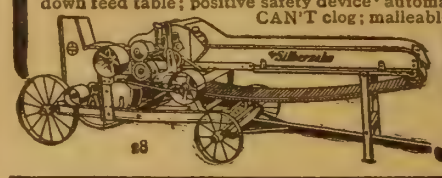
After the milk is drawn it is separated as soon as possible. We like to have the separator as near perfectly clean as we can get it. Many dairymen only wash their separators once a day, but we think it needs to be washed after each using to produce a sanitary grade of cream and milk. It is much easier to clean it immediately after using than it is to wait eight or ten hours.

The separated cream should be put into a clean, empty vessel. It is a poor practice to pour warm cream in with a batch of cold cream. The new cream should be thoroughly cooled before it is put with the old.

The quicker the separator and milk utensils are washed the more effectual it can be done. We wash the utensils first in moderately warm water, with a little washing powder or soda added. Then they are thoroughly scalded with boiling water, being sure that the boiling water comes in contact with all seams and crevices. This boiling water will remove all traces of the wash water and will kill all germs. The separator parts and milk vessels are dried in the sunshine, which is the best germicide known. If these directions are followed with every washing the separator and utensils will always be sanitary and the cream handled in this way will bring the highest market price. If the cream is churned, instead of sold, it is just as important that the utensils have the same care.

Light Running Silberzahn Ensilage Cutters

The Silberzahn is known as "the King of Ensilage Cutters" because of its simplicity, safety, convenience, clean cutting and great capacity. The new 1916 models are better than ever—the result of 25 years' experience in building ensilage cutters exclusively. All-steel frame; low-down feed table; positive safety device; automatic feeding device; six fan blower that simply CAN'T clog; malleable knife heads; best knife adjustment.



Write for Catalog showing 10 sizes. Gives full details and explains HOW and WHY the Silberzahn is BETTER. Get this catalog BEFORE you buy a cutter. Write today—a postal will do.

GEHL BROS. MFG. CO.

Handling the Separator.

To get the greatest returns from the use of the separator a great deal of attention must be given to every little detail of the separating operation.

The machine must be properly located, the different parts rightly adjusted and kept in repair. The machine should be carried out to the letter. Nothing should be added or left off. It is very important that the separator be thoroughly cleaned after each operation, as any particles of milk or dirt left in some of the important parts may clog the cream or milk outlets, resulting in a loss of much butter fat. The separator is more easily cleaned immediately after using than at any other time. It is just as important to thoroughly clean the machine after each operation as it is to clean it after the second. The common practice of merely running hot water through the machine at nights is a poor practice indeed. The speed of the machine must be regulated and keep a steady supply of milk running into the machine. The milk should be run through the separator as quickly as possible after being drawn. With an ordinary herd of cows a separator will pay for itself in a year if it is rightly managed. A neighbor of mine was milking three cows and churning the cream. She had always considered the separator a needless extravagance. But one of her near neighbors owned a separator, so she decided she would give it a fair test. Four milkings were carefully handled and skimmed by hand. Four milkings were also separated and both batches of cream handled in exactly the same manner. She churned them separately and made a little more than twice the amount of butter from the separated cream. This convinced her. She made out an order for a separator in less than a week from that time.

Enthusiastic About Mechanical Milker.

To the Editor:—Last October following the state fair we installed a three unit milker. At that time, as at present, we were milking thirty cows. From the first time and until the present writing this milker has proven entirely satisfactory. It is reliable, efficient and gets all the milk.

On two occasions, when our engine was out of commission, we had to milk by hand, and each time we were short three to four gallons in our milk. We attribute this shortage to the fact that the milker is always uniform while the hand milkers differ in their application as well as in force, as their hands and arms get tired.

Before we bought our milker we were continually changing help, as they all balked at the drudgery of milking. Now the men who attend to the milking are always glad when it comes time to knock off from farm labor and go to the dairy barn because it means relaxation.

We have one cow, a good milker, that we named "Dynamite" because she was so vicious when being milked by hand. Since using the machine she is as docile and gentle as a lamb.

During the ten months that we have been using the milker we have spent $3.20 for repairs. We have planned to build an addition to our dairy barn to accommodate forty more cows. When this increase is made we will buy three or four more units. Breaking in the heifer is a thing of the past, as they all take to the gentle milker like a duck to water.

At this time we have the same hired men that we had when we put in the milker. They all say that they would quit if it were not for our machine, and I don't blame them.

If it was not for our dairy cows we would quit farming because it would be unprofitable, and if it was not for our milking outfit we would sell our cows. In fact, some of our folks are so enthusiastic about our milker that they say if they had to continue in the dairy business without a milker they would commit suicide.

BEAVER DAM, WISCONSIN

A GOOD HARVEST.

Hay Has Made Satisfactory Yields--Small Grains Averaging Well Per Acre--Corn Continues to Push Forward.

WISCONSIN.

Bayfield County.—Hot, dry weather has been fine for the hay crop, which went into the barns in excellent condition. Oats are all headed out and look fine; the growth of straw is not as heavy as last year. Potatoes look well, but need rain. Corn is growing rapidly and if warm weather continues, will soon be up to normal. Some fine fields of peas are just blossoming. Apples are falling off and will not make a good crop. Strawberries were cut short by the hot weather. Flies have been troublesome in the last few weeks and have caused a decrease in the milk flow. —E. F. Stevens.

Burnett County.—Small grain is ripening too rapidly on account of the hot weather. But corn has made a wonderful growth and promises to be a fairly good crop. Potatoes are not doing very well because of the wet spring and present hot weather. The hay crop is good and the weather ideal for haying. Pastures are holding out well, and cattle are doing fine.—Fred Larson.

Clark County.—Corn has made rapid strides during the last few weeks of warm weather. Haying is well under way and the crop is good. Oats and barley have been damaged some by the heavy rains which followed the first week of hot weather. Potatoes are looking exceptionally well, the early planted fields showing little signs of blight. Some farmers have new potatoes ready for use. Pastures are holding out well. The cattle trade is active, many cows and heifers being shipped from the county each week.—Louis Buddenhagen.

Chippewa County.—The hay crop is good and the weather has been favorable for hay making. Grains are good, but need rain. Potatoes are growing well and will make a good crop if the bugs do not get them. Some fields have already been damaged by bugs. The corn is farther along than at this time last year. The fruit crop will not be as heavy as was expected. Vegetables are growing well.—Gustave E. Rheingans.

Dane County.—Corn seemed to be suffering some from drouth as it is topping out with rather short stalks. Barley is very good and promises a big yield. Wheat also will yield well. Oats will be a little light, but the yield per acre will be good. Both early and late potatoes have suffered from drouth and a good crop cannot be expected unless it rains soon. Pastures are short because of the drouth. Clover is very good and, in some places, yielded four loads per acre.—Erwin Roisum.

Douglas County.—Small grains are looking well. Clover is being cut and the crop is turning out well. Gardens look fine. Wild fruit is plentiful; strawberries did not turn out well. Live stock are not bothered with flies and, in general, are doing fine.—J. N. Ottum.

Grant County.—The weather is now hot and dry. This locality has not had a rain for thirty days. Pastures, corn and potatoes are suffering badly. South of this locality there have been several good rains.—P. R. Stoffel.

Iowa County.—Corn looks fine, although it is a little uneven. Several fields are tasseling out, and if there are no early frosts, the crop should be good. Rye, barley and fall wheat are being harvested. The rye and barley are good, but the wheat is thin. Dry weather is hastening the maturity of oats, which are apt to be a little light. Most of the hay is in and the yield averages well, even though clover winterkilled in some places. Vegetables and fruits are backward on account of dry weather.—Will Dowling.

Kewaunee County.—Weather conditions have favored hay making, which is now half finished. Along Lake Michigan the rains have been plentiful for corn and potatoes. The western and central parts of the country are quite dry; the barley, therefore, has ripened here while it is still green along the lake. Oats are doing fine. Pastures are very short, and the cows have been turned into the new meadows wherever the hay crop has been harvested. The hay crop is better than was expected a month ago. Cows are in good condition, but the milk flow has decreased because of short pastures. The weather has been very warm for the last two weeks.—W. C. Katel.

La Crosse County.—Pastures are getting short. Hay has been put up in good condition. Barley and early oats harvests are nearly finished; late oats are not quite ripe. The grain crops are light on account of hot, dry weather. Early potatoes are not turning out well because the soil is too dry. Corn will make a good crop if the frosts hold off long enough. In July, wool brought 34 cents.—R. R. French.

Marinette County.—The recent showers in this county have been local. Hot weather has prevailed, the temperature running from 90 to 98 degrees in the shade. This makes fine haying weather and the hay crop is good. Corn is growing nicely, but it is a little late. Pastures are falling off. Potatoes are doing well, but the bugs are numerous. Oats are well headed out, but the straw is short in many fields. Some new silos are going up.—W. B. Sanderson.

Monroe County.—Corn has grown rapidly during the last two weeks. Haying is nearly finished and the crop is good in both quantity and quality. Some oats are being cut and the yield promises to be good. Potatoes are doing well. Pastures are drying up and the cows must be fed to keep up the milk flow. It pays to do this since butter fat is worth 34 cents at the Sparta Co-operative Creamery.—D. F. Jones.

Mower County.—Since the beginning of warm weather, corn has done remarkably well. This weather is good for hay making. The new seeding of hay is good, but the old seeding is light. Early potatoes are good and there are no bugs to bother them. Some fields of early oats are being harvested. Pastures are good. The dairy business is developing rapidly.—Walter H. Martin.

Oconto County.—The yield of hay is good and about half of it has been cut. Oats look well at present. Some fields of corn are good. Potatoes are below average. Pastures are good. Small fruits have yielded well. Cattle are doing well. The weather is very hot at present.—W. J. Hinker.

Oneida County.—Crops have been growing rapidly for the last two weeks. Light rains have greatly benefited the small grains and corn. About 75 per cent of the haying has been done. Potatoes are looking fairly good. Barley will be ready to cut soon. Oats and wheat are well headed out. Pastures are getting short on account of lack of moisture.—C. Blumenstein.

Outagamie County.—Haying is well under way and the crop in general is good. The new seeding which was protected by stubble and not pastured too close is best. Crops on low, undrained lands have been affected by heavy rains. Corn, oats and barley have grown rapidly. The weather has been too hot for oats to fill well. Early planted corn on high ground is fine, but some late corn will scarcely make more than silage. Early potatoes rotted in the ground in many places, but the loss was not great, as this is no potato region. The fruit crops have been disappointing; cherries failed and only the Duchess and similar varieties of apples will amount to anything. Pastures are good and, therefore the main industry, will be sustained.—Pet " Tubbs.

Ozaukee County.—The hay crop has been put up in good shape. The yield was much better than was expected earlier in the season. Barley is ripe and will yield well, but the acreage is small. Oats will soon be ripe; the stand is good. Warm weather has improved the corn wonderfully. With frequent showers it will make a very fair crop. Potatoes do not look well. Too much wet weather early in June and hot, dry weather in July has made this crop uncertain. Potato bugs also have been a hindrance. Pastures are short and need rain. Clover is coming up slowly and the second crop of alfalfa is not up to normal.—C. F. Dineen.

Pierce County.—A fine crop of hay has been harvested. The second crop of alfalfa is ready to cut and will be a good crop. Hot, dry, weather has brought the barley harvest on with a rush; prospects are for a good crop. Oats are beginning to turn; the yield will be about an average. Rye is a poor crop and the yield is not apt to be more than eight or ten bushels per acre. Corn is doing fine; some fields are knee high, other in the silk. Potatoes need rain. Bugs injured the crop to some extent. Apples are falling off rapidly, as no spraying has been done in this section.—T. B. Eaton.

Racine County.—Haying is nearly finished. Conditions were very favorable for this harvest. The barley is good, having large, well-matured heads. Harvesting of this crop is now in progress. Late oats will be light on account of the hot, dry weather. Corn and cabbage are in good condition, but need rain. Pastures are getting short. Raspberries are doing well, but other fruits are poor.—Chas. Jeffery.

Sauk County.—Most of the rye is in the shock and the yield is very good. Oats are ripening rapidly, but show signs of injury from drouth. Favorable conditions have pushed corn along rapidly. Potatoes are growing well. Pastures are dried up considerably.—A. H. B.

Taylor County.—Warm weather for the last two weeks has brought crops forward in good shape. The new seedings of timothy and clover are making good crops. Old hay meadows are poor. Hay making is now in progress. Oats on high and rolling land are good, but poor on low land because of too much rain early in the season. The same is true of potatoes. Strawberries made about three-fourths of a normal crop. Garden truck is good. Corn is backward and has a poor stand. The apple crop is good. Pastures are fine and live stock are in good condition.—E. H. Dehne.

Walworth County.—Dry, warm weather for the last three weeks has been very good for hay making, but has shortened the grain yields on light soils. A good rain fell on July 19th. Corn is doing fine. Barley is almost ready to cut.—Arthur Ewing.

Washburn County.—July with its many clear days and warm nights has been an ideal month for corn. It was a little too dry for oats and pastures. The hay crop is heavy and most of it has been harvested. Potato bugs are unusually numerous. The blueberry crop is an average. Many new automobiles and silos have come into this country this summer. The local creamery is paying twenty-eight cents for butter fat.—John W. McCulloch.

The New Agriculture.

"The present high cost of living would indicate that the production of food products is not keeping pace with consumption. Today there is but little new agricultural territory to be developed in the United States and the increase in farm products for the future must come, in a large measure, from land already under cultivation," said Prof. G. I. Christie, superintendent of agricultural extension work at Purdue University, before the National Fertilizer Association. "The New Agriculture" was the subject of his address.

"Agriculture is the great business and industry of the state and country, and the farms must be brought to a high state of productivity to meet the demands of the rapidly increasing population. It is a problem of industrial efficiency as well as that of social co-operation," continued Professor Christie. "Comfortable homes, the best of schools, community churches, community centers, good roads and a more permanent and satisfying social life must be provided for. This can only be done when the landowners and their families are willing to remain on the farm and expend their energy and money in the building up and maintaining of rural institutions.

"The large and rapidly increasing

PROF. G. I. CHRISTIE, OF PURDUE UNIVERSITY.

population makes an unprecedented demand upon the farmers for foodstuffs. A study of statistics shows that the population of the United States has practically doubled every twenty-five years. A few years ago new states and territories were being occupied and an increased supply of farm products placed upon the market. This acquiring and developing of new lands did much to keep production ahead of consumption and meet the needs of an increasing population," continued the speaker.

"The average yield of wheat in the United States for the past ten years was 14.8 bushels per acre. A few years ago the yield of wheat in New England and Germany was really lower than that found in the United States. Through fertilization and a better crop system these countries have been able to gradually increase the average yield of the wheat crop until at this time it ranges about thirty-six bushels per acre. On the farm of Purdue University, where conditions are similar to those of a large area of wheat lands, through a good rotation of crops and proper fertilization the average yield of wheat for the past thirty years has reached twenty-eight bushels per acre. These, with other examples, clearly demonstrate that it is possible to materially increase the yield of wheat throughout the country."

Professor Christie then told how 238 farmers in Indiana grew five acres of corn each last year, from which an average yield of 72.4 bushels per acre was obtained, or just about double the average yield of the state. The average cost of producing an acre of corn in Indiana is $19.16 or 37.1 cents a bushel. The 238 farmers who raised 72.4 bushels per acre did so at an average cost of $13.52 per acre or 18.6 cents per bushel, showing clearly that the high yields are not only profitable because of the total value, but because there is a greater net profit on each bushel produced. Professor Christie explained the importance and development of the county agent movement throughout the country at considerable length and pointed out how the county agent works in connection with other agencies to bring about better schools, better churches, better roads and recognition of the country's greatest business and industry—agriculture.

The Fourteen-Cow Dairy Farm.

One of our farm dairy women, seeing an article about the dairyman who is realizing $8 per day from fourteen cows, sends this inquiry:

Enclosed please find clipping about "Eight dollars per day from fourteen cows." We would appreciate the particulars. We do not live in Missouri, but we do live near the line and need to be "shown." How is it done? Feed? Care? We milk 126 cows and get about three and one-half gallons of cream per day. It brings 85 to 90 cents per gallon, and we thought we were doing pretty well. You see nine gallons from fourteen cows, as your dairyman is getting, would be better than one and one-half gallons per day from each cow.

You only got your figures twisted a trifle—nine gallons from fourteen cows would not be one and one-half gallons per cow, but a trifle over one-half gallon. The bulk is rather large, but this is probably controlled largely by the thumb screw of the separator. You see, this cream is being sold by the gallon, not by the daily test, which in a measure accounts for part of the gain. This however, is good, but nothing phenomenal. A couple of Jerseys furnished a five-gallon can of cream each week all of last winter, besides butter and cream for the table. This would be about three quarts each day from the two, or three pints from one. If fed and cared for, as the other farm dairyman cared for his Guernseys, these two small bossies would probably have won out over them. Generally speaking, Guernseys give more pounds of milk, but the test is not quite so high as the Jerseys. There would be practically little difference in the amount of cream, other things being equal.

The feed and care of the herd in question is undeniably good, but nothing that could not be given to any herd in the grain belt, or any other "belt," for that matter, where a reasonable amount of feed could be grown.

The cheapness of the ration is due to two things, viz., silage and alfalfa. No need to dwell on this, just one instance of what the silo and alfalfa is doing for another farmer in the same community as the dairy farmer in question.

This man is not a dairyman, but sells fatted cattle on the market. Without going into details the lots that were not fed silage realized 75 cents per bushel for the corn they ate. The lots fed silage brought their owner $1.07 per bushel for his corn. As one man aptly puts it, "The profits have been increased every year where silage has been used and in off years, when a loss has been sustained, the loss in silage-fed lots has been less than in the lots having only dry roughage." This latter including alfalfa.

The silo and the dairy cow are even a better combination. The few, comparatively speaking, can come out whole in fitting cattle for market. Anyone with ordinary intelligence can make good at the dairy in connection with the farm if he will, but not by pasturing on $200-an-acre land. By way of the silo a cow can and has been kept a year on an acre of land. At a test at the University of Illinois twenty cows were kept on twenty acres.

It takes as much fertility and moisture to raise weeds as for corn, and sometimes the corn is thus robbed of both.

Hogs on pasture need grain. "Cheap feeds for pork" is necessary, but quick growth is also important.

TOLD IN THE HILLS

SYNOPSIS OF PRECEDING CHAPTERS

The scene is laid in the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold. A neighbor, named Hardy, comes to his camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. He becomes well acquainted with his employer's sister, Rachel Hardy, who takes a great interest in him and is much in his company. Genesee Jack overhears a conversation between Miss Hardy and her aunt, from which she learns that he is not "fit company for a lady"—this is the aunt's view—and the relations between Rachel and the guide become strained. Disobeying his strict orders to stay with the party, Rachel Hardy rides ahead, her horse throwing her as it scares at a bear cub. She is severely hurt, but Genesee Jack finally finds her, and succeeds in getting her safely back to camp.

CHAPTER VII—Continued.

BUT her raillery brought no more words from him. His face had again its sombre, serious look, and in silence he guided Mowitza's feet down toward the glow-light. Once a puff of wind sent the girl's hair blowing across her face, and he smoothed it back carefully that he might see her eyes in the moonlight; but the half-caress in the movement was as if given to a child. All the quick warmth was gone from his eyes and speech after that one comprehensive outbreak, and the girl was puzzled at the change that had come in its stead. He was so gentle, but so guarded—the touch even of his fingers on her shoulder was tremulous, as if with the weight of resistance forced into them. She did not feel like laughing any longer, after they began the descent of the hill. His manner had impressed her too strongly with the feeling of some change to come with the end of that ride and the eventful moonlight night, but no words came to her; but her hand remained in his of its own accord, not because it was held there, and she lay very quiet, wondering if he would not speak—would say nothing more to her ere they joined the others, to whom they were moving nearer at every step.

He did not. Once his fingers closed convulsively over her own. His eyes straight ahead caused her to glance in that direction, and she saw Tillie and Hardy clearly, in the moonlight, walking together hand in hand down toward the glow of the campfire. On a ledge of rock that jutted out clear from the shadowy brush, they lingered for an instant. The soft blue light and the silence made them look a little ghostly—a tryst of spirits—as the tall shoulders drooped forward with circling arms into which Tillie crept reaching upward until their faces met. The eyes of those two on horseback turned involuntarily toward each other at the sight of those married lovers, but there was no echo of a caress in their own movements, unless it was the caress of a glance; and in a few moments more they were within speaking distance of the camp.

"We are here," he said slowly, as Hardy and his wife, hearing the steps of the horse, hurried toward them.

"Yes, I know," she whispered.

It was their good-bye to the night.

A neigh from the renegade Betty was answered by Mowitza, and in an instant all the group about the camp was alive to the fact of the return. But the eager questions received few answers, for Genesee handed Rachel into the arms of Hardy, and said to Tillie:

"Don't let them pester her with questions tonight, Mrs. Hardy. She has no injuries, I guess, only she's used up and needs rest badly. I found her ready to faint in a gulch back from the trail about three miles. She'll be all right tomorrow, I reckon; only see that she gets a good rest and isn't bothered tonight."

No need to tell them that. Their gladness at her safe return made them all consideration.

Genesee and Mowitza also came in for a share of their solicitude, and the former for a quantity of thanks that met with rather brusque response.

"That's nothing to thank a man for," he said a little impatiently, as the Houghtons were contributing their share. "I reckon you don't know much about the duties of a scout or guide in this country, or you would know it was my business to go for the lady—just as it would be to hunt up lost stock, if any had strayed off. There wasn't much of a trick in finding her—Betty left too clear a trail; and I reckon it's time we all turned in to sleep instead of talking about it."

In the morning Rachel awoke refreshed and expectant in a vague way. The incidents of the night before came crowding to her memory, sending the blood tingling through her veins as she thought of their meeting; of the ride; of those few significant words of his, and his face as he had spoken. She wondered at herself accepting it all so dreamily—as if in a lethargy. She was far from a stupor at the thought of it in the light of the early day, as she watched the blue mists rising up, up, from the valleys. Was he watching them, too? Was he thinking as she was of that ride and its revelations? Would he meet her again with that queer, distant manner of his? Would he—

Her ruminations were cut short by Tillie, who thought to awaken her with the proffer of a cup of hot coffee, and who was surprised to find her awake.

"Yes, I am awake, and hungry, too," she said briskly; "you did not give me nearly enough to eat last night. Is breakfast all ready? I wonder how poor Mowitza is this morning after her heavy load. Say, Tillie, did we look altogether ridiculous?"

"No, you did not," said Tillie stoutly. "It was wonderfully kind of him to bring you so carefully. I always said he had a great deal of heart in him; but he is gone, already."

"Gone!—where?" And the cup of coffee was set on the grass as if the hunger and thirst were forgotten. "Where?"

"We don't know," said Tillie helplessly. "Clara says back to his tribe; but she always has something like that to say of him. It's the queerest thing; even Hen is puzzled. He was wakened this morning about dawn by Genesee, who told him his time was up with the party; that we could follow the trail alone well enough now; and that he had to join some Indian hunters away north of this tonight, so had to make an early start. I guess he forgot to speak of it last night, or else was too tired. He left a good-bye for Hen to deliver for him to the rest of us, and a klahowya to you."

"Did he?" asked the girl with a queer little laugh. "That was thoughtful of him. May his hunting be prosperous and his findings be great."

"Dear me!" said Tillie weakly, "you are just as careless about it as Clara, and I did think you would be sorry to lose him. I am, and so is Hen; but evidently persuasions were of no avail. He said he could not even wait for breakfast; that he should have gone last night. And the queerest thing about it is that he utterly refused any money from Hen, on the plea that the whole affair had been a pleasure ride, not work at all; and so—he is gone."

"And so—he is gone," said the girl, mimicking her tone; "what a tragical manner over a very prosaic circumstance! Tillie, my child, don't be so impressible, or I shall have to tell Hen that our guide has taken your affections in lieu of greenbacks."

"Rachel!"

"Matilda!" said the other mildly, looking teasingly over the rim of the coffee cup she was slowly emptying. "Don't startle me with that tone before breakfast, and don't grieve over the exodus of Mr. Genesee Jack. I shall take on my own shoulders the duties of guide in his stead, so you need not worry about getting home safely; and in the meantime I am woefully hungry."

She was still a little dizzy as she rose to her feet, and very stiff and sore from her ride; but, joking over her rheumatic joints, she limped over to where the breakfast was spread on a flat rock.

"There is one way in which I may not be able to take Mr. Genesee Jack's place, in your estimation," she said lowly to Tillie as they were about to join the others. "I shall not be able to tell you stories of Indian conjurors or sing you Indian love songs. I can't do anything but whistle."

"Hen, she wasn't the least bit interested about him leaving like that!" said Tillie confidentially to her husband a few hours later. "She never does seem to have much feeling for anything; but after he brought her back so carefully, and after the chumminess there was between them for a while, one would naturally think—"

"Of course one would," agreed her husband laughingly, "especially if one was an affectionate, match-making little person like yourself, and altogether a woman. But Rache—" and his glance wandered ahead to where the slim figure of the girl was seen stubbornly upright on Betty— "well, Rache never was like the rest of the girls at home, and I fancy she will never understand much of the sentimental side of life. She is too level-headed and practical."

CHAPTER VIII.

The Storm—and After.

Olapitski yahka ships.

TWO weeks later storm clouds were flying low over the Kootenai hills and chasing shadows over the faces of two equestrians who looked at each other in comic dismay.

"Jim, we are lost!" stated the one briefly.

"I allow we are, Miss Hardy," answered the other, a boy of about fifteen, who gazed rather dubiously back over the way they had come and ahead where a half-blind trail led up along the mountain.

"Suppose we pitch pennies to see what direction to take," suggested the girl; but the boy only laughed.

"Haven't much time for that, Miss," he answered. "Look how them clouds is crowdin' us; we've got to hunt cover or get soaked. This trail goes somewhere; may be to an Injun village. I allow we'd better freeze to it."

"All right. We'll allow that we had," agreed Miss Hardy. "Betty, get around here, and get up this hill! I know every step is taking us farther from the ranch, but this seems the only direction in which a trail leads. Jim, how far do you suppose we are from home?"

"'Bout fifteen miles, I guess," said the boy, looking blue.

"And we haven't found the lost sheep?"

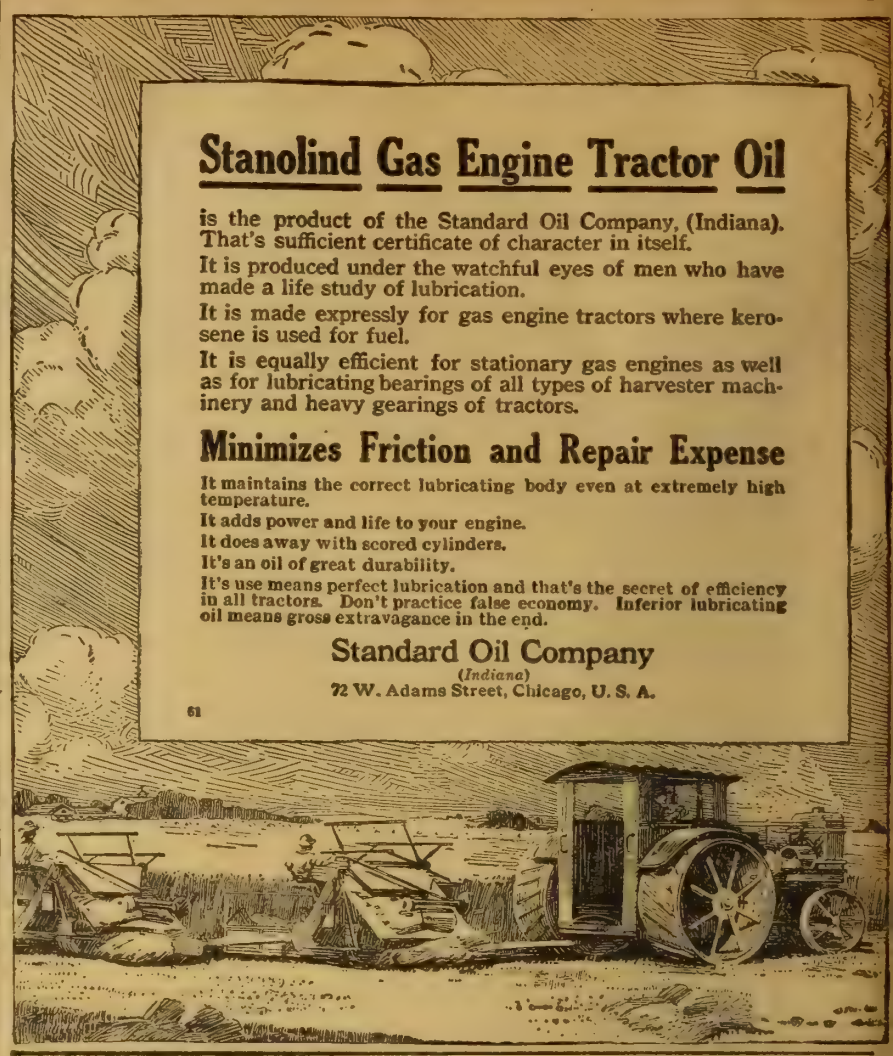
"No, we haven't."

"And we have got lost?"

"Yes."

"Jim, I don't believe we are a howling success as sheep farmers."

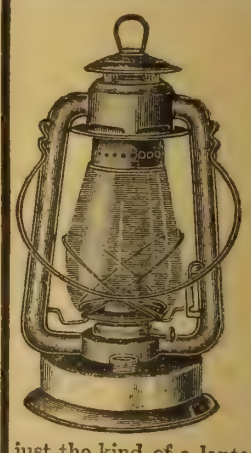
"I don't care about the sheep



SAFETY

STORM BLAST

LANTERN FREE



This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

just now," declared Jim. "What I want to know is where we are to sleep tonight."

"Oh, you want too much," she answered briskly; "I am content to sit up all night, if I only can find a dry place to stay in—do you hear that?" as the thunder that had grumbled in the distance now sounded its threats close above them.

"Yes, I hear it, and it means business, too. I wish we were at the end of this trail," he said, urging his horse up through the scrubby growth of laurel.

The darkness was falling so quickly that it was not an easy matter to keep the trail; and the wind hissing through the trees made an open space a thing to wish for. Jim, who was ahead, gave a shout as he reached the summit of the hill where the trail crossed it.

"We're right!" he yelled that she might hear his voice above the thunder and the wind; "there's some sort of a shanty across there by a big pond; it's half a mile away, an' the rain's a-comin'—come on!"

And on they went in a wild run to keep ahead of the rain cloud that was pelting its load at them with the force of hail. The girl had caught a glimpse of the white sheen of a lake or pond ahead of them; the shanty she did not wait to pick out from the gloom, but followed blindly after Jim, at a break-neck gait, until they both brought up short, in the shadow of a cabin in the edge of the timber above the lake.

"Jump off quick and in with you!" called Jim; and without the ceremony of knocking she pushed open the door and dived into the interior.

It was almost as dark as night. She stumbled around until she found a sort of bed in one corner, and sat down on it, breathless and wet. The rain was coming down in torrents, and directly Jim, with the saddles in his arms, came plunging in, shaking himself like a water spaniel.

"Great guns! But it's comin' down solid," he gasped; "where are you?"

"Here—I've found a bed, so somebody lives here. Have you any matches?"

"I allow I have," answered Jim, "if they only ain't wet—no, by George, they're all right."

The brief blaze of the match showed him the fireplace and a pile of wood beside it, and a great osier basket of broken bark. "Say, Miss Hardy, we've struck great luck," he announced while on his knees, quickly starting a fire and fanning it into a blaze with his hat; "I wonder who lives here and where they are. Stickin' to that old trail was a pay streak—hey?"

In the blaze of the fire the room assumed quite a respectable appearance. It was not a shanty, as Jim had at first supposed, but a substantial log cabin, furnished in a way to show constant and recent occupation.

A table made like a wide shelf jutted from the wall under the one square window; a bed and two chairs that bespoke home manufacture were covered by bear skins; on the floor beside the bed was a buffalo robe; and a large locked chest stood against the wall. Beside the fireplace was a cupboard with cooking and table utensils, and around the walls hung trophies of the hunt. A bow and quiver of arrows and a knotted silken sash hung on one wooden peg, and added to a pair of moccasins in the corner, gave an Indian suggestion to the occupancy of the cabin, but the furnishing in general was decidedly that of a white person; to the rafters were fastened some beaver paws and bear claws, and the skins of three rattlesnakes were pendent against the wall.

"Well, this is a queer go! ain't it?" remarked Jim as he walked around taking a survey of the room. "I'd like to know who it all belongs to. Did you ever hear folks about here speak of old Davy MacDougall?"

"Yes, I have," answered the girl, sitting down on the buffalo robe before the fire, to dry her shoulders at the blaze.

"Well, I believe this is his cabin, and we are about ten mile from home," decided the boy. "I didn't think we'd strayed as far north as Scot's Mountain, but I allow this is it."

"Well, I wish he would come home and get supper," said the girl, easily adapting herself to any groove into which she happened to fall; "but perhaps we should have sent him word of our visit. What did you do with the horses, Jim?"

"Put 'em in a shed at the end o' the house—a bang-up place, right on the other side o' this fireplace. Whoever lives here keeps either a horse or a cow."

"I hope it's a cow, and that there's some milk to be had. Jimmy, I wonder if there is anything to eat in that cupboard."

"I've been thinkin' o' that myself," said Jim in answer to that insinuating speech.

"Suppose you do something besides think—suppose you look," suggested the more unscrupulous of the foragers; "I'm hungry."

"So am I," acknowledged her confederate; "you an' me is most alike about our eatin', ain't we? Mrs. Houghton said yesterday I had a terrible appetite."

The boy at once began making an examination of the larder, wondering, as he did so, what the girl was laughing at.

The rain was coming down in torrents through the blackness of the night; now and then the lightning would vie with the fire in lighting up the room, while the thunder seemed at home in that valley of the mountain, for its volleys of sound and their echoes never ceased.

Small wonder that anyone's house would seem a home to the two, or that they would have no compunction in taking possession of it.

"There's coffee here somewhere. I can smell it," announced Jim; "an' here's rice an' crackers, an' cornmeal, an' dried raspberries, an' potatoes, an' —yes, here's the coffee! Say, Miss Hardy, we'll have a regular feast!"

"I should say so!" remarked that lady, eyeing Jim's "find" approvingly; "I think there is a bed of coals here at this side of the fireplace that will just fit about six of those potatoes—can you eat three, Jim?"

"Three will do if they're big enough," said Jim, looking dubiously at the potatoes; "but these ain't as good sized as some I've seen."

"Then give me two more; that makes five for you and three for me."

"Hadn't you better shove in a couple more?" asked Jim with a dash of liberality. "You know MacDougall may come back hungry, an' then we can spare him two—that makes ten to roast."

"Ten it is!" said the girl, burying two more in the ashes as the share of their host. "Jim, see if there is any water in here to make coffee with."

"Yes, a big jar full," reported the steward; "an' here is a little crock half full of eggs—prairie chicken, I guess—say, can you make a pone?"

"I think I can;" and the cook at once rolled up the sleeves of her riding dress, and Jimmy brought out the eggs and some bits of salt meat—evidently bear meat—that was hung from the ceiling of the cupboard; at once there began a great beating of eggs and stirring up of a corn pone; some berries were set on the coals to stew in a tincup, the water put to boil for the coffee, and an iron skillet with a lid utilized as an oven; and the fragrance of the preparing eatables filled the little room and prompted the hungry lifting of lids many times ere the fire had time to do its work.

"That pone's a 'dandy!'" said Jim, taking a peep at it; "it's getting' as brown as—as your hair; an' them berries is done, an' ain't it time to put in the coffee?"

Acting on this hint, the coffee, beaten into a froth with an egg, had the boiling water poured over it, and set bubbling and aromatic on the red coals.

"You mayn't be much use to find strayed-off stock," said Jim deliberately, with his head on one side, as he watched the apparent ease with which the girl managed her primitive cooking apparatus; "but I tell you—you ain't no slouch when it comes to gettin' grub ready, and gettin' it quick."

"Better keep your compliments until you have tried to eat some of the cooking," suggested Miss Hardy, on her knees before the fire. "I believe the pone is done."

"Then we'll dish-up in double-quick," said Jim, handing her two tin pans for the pone and potatoes. "We'll have to set the berries on in the tin —by George! what's that?"

"That" was the neigh of Betty in the shed by the chimney, and an answering one from somewhere out in the darkness. Through the thunder and the rain they had heard no steps, but Jim's eyes were big with suspense as he listened.

"My horse has broke loose from the shed," he said angrily, reaching for his hat; "and how the dickens I'm to find him in this storm I don't know."

"Don't be so quick to give yourself a shower bath," suggested the girl on the floor; "he won't stray far off, and may be glad to come back to the shed; and then again," she added, laughing, "it may be MacDougall."

Jim looked rather blankly at the supper on the hearth and the girl who seemed so much at home on the buffalo robe.

"By George! it might be," he said slowly; and for the first time the responsibility of their confiscations loomed up before him. "Say," he added uneasily, "have you any money?"

"Money?" she repeated inquiringly; and then seeing the drift of his thoughts, "Oh, no, I haven't a cent."

"They say MacDougall is an old crank," he insinuated, looking at her out of the corner of his eye, to see what effect the statement would have on her. But she only smiled in an indifferent way. "An'—an' ef he wants the money cash down for this lay-out" —and he glanced comprehensively over the hearth—"well, I don't know what to say."

"That's easily managed," said the girl coolly; "you can leave your horse in pawn."

"An' foot it home ten miles?—not if I know it!" burst out Jim; "an' besides it's Hardy's horse."

"Well, then, leave the saddle, and ride home bareback."

"I guess not!" protested Jim, with the same aggressive tone; "that's my own saddle."

After this unanswerable reason, there was an expectant silence in the room for a little while, that was finally broken by Jim saying ruefully:

"If that is MacDougall, he'll have to have them two potatoes."

Rachel's risible tendencies were not proof against this final fear of Jim's, and her laughter drowned his grumblings, and also footsteps without, of which neither heard a sound until the door was flung open and a man walked into the room.

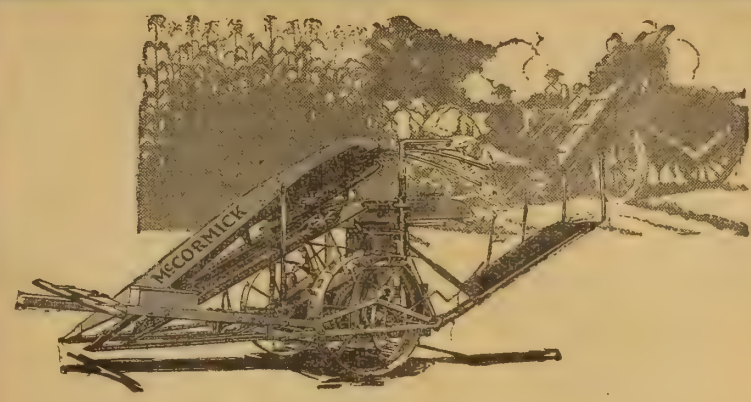
Jim looked at him with surprised eyes, and managed to stammer, "How are you?" for the man was so far from his idea of old Davy MacDougall that he was staggered.

But Miss Hardy only looked up, laughing, from her position by the fire, and drew the coffee pot from the coals with one hand, while she reached the other to the newcomer.

"Klahowya! Mr. Jack," she said easily; "got wet, didn't you? You are just in time for supper."

"You!" was all he said, and Jim thought they were both crazy, from the way the man crossed the room to her and took her one hand in both his as if he never intended letting it go or saying another word, content only to hold her hand and look at her. And Miss Rachel Hardy's eyes were not idle either.

(To be continued.)



Cut Your Corn With Horses or Tractor

OF all cornfield work, harvesting is the hardest. Your horses, or your tractor, prepare the seed bed. The cultivating is horse work. Let the horses or tractor finish the job. Let them draw an International Harvester corn binder through your cornfields, cutting clean and binding neatly the long rows that fall so slowly when you tackle them with a corn knife.

A Deering, McCormick, Milwaukee or **Osborne** corn binder, besides saving an enormous amount of hard work, makes possible an extra profit of from $12 to $15 an acre from your corn. It cuts 5 to 8 acres a day. It saves the wages of 4 or 5 extra men. It gets the crop in when the feeding value of the stalks is at its best. It does away with a lot of waste. It saves handling, whether the corn is delivered to ensilage cutter or husker and shredder. A corn binder pays.

Local dealers near you will show you anything you want to know about these machines, or, you can get full information by writing for corn binder catalogues to the address below.

Watch the Baby Closely.

At all times, and particularly through the hot summer months, a mother should learn to recognize any change from the normal in her baby, and, recognizing the change, she should find out what is the matter and the cause of the trouble. For instance, variation in temperature may tell a great deal to an observing mother. A thermometer, such as is used by physicians, should be a part of every baby's outfit and a mother should learn to rightly interpret its reading.

Slight digestive or respirative disturbances are sufficient to send a child's temperature up from 1 to 3 degrees, but this condition may be only temporary and the mother need not be greatly alarmed to find her baby cross and fretful and with a temperature of 103 degrees. She may worry, however, if three or four hours later the temperature is still high; and if the high temperature continues during the day for several days the doctor should be sent for.

To take a child's temperature shake down the mercury in the thermometer to about 90 degrees, by a short, sharp jerk of the wrist. Cover the bulb well with vaseline or cold cream. Lay the child across the knees or on a table face downward and insert the thermometer bulb gently into the rectum. Leave it there at least two minutes.

The rectal temperature is always ½ to 1 degree higher than the normal temperature for the mouth, which is ordinarily 98.6 degrees Fahrenheit. So this must be allowed for in calculating the degrees above the normal or the fever.

Even without a thermometer a mother can readily learn whether or not the baby is in proper condition, for the babies themselves have ways of telling us they are not comfortable and proper observance of many little points will lead to the truth of the baby's condition.

A normal, healthy child gains regularly in weight, has a warm, moist skin, breathes quietly, eats heartily, sleeps peacefully, has one or two regular bowel movements daily, and cries only when hungry, ill or in a fit of temper.

When a well child sleeps, he is quiet with limbs relaxed and no tossing about. The facial expression should be calm and peaceful. An occasional contraction of the features and clinching of the fists indicates that the baby is in pain.

The healthy baby breathes regularly, the breath being drawn easily and quietly through the nose and the mouth closed. Mouth breathing or habitually holding the mouth open usually indicates enlarged tonsils or some other obstruction to the breathing which needs the attention of a physician.

The skin of a well baby should be soft and smooth, the underlying muscles firm. Flabby muscles or eruptions on the skin indicate something wrong with the feeding.

Babies need a certain amount of crying to develop their lungs. When children cry for everything they want it is the result of faulty training. If baby is cross or fretful and cries a great deal of the time, there is something wrong with him. Learn what he is trying to tell you by crying.

A hunger cry is a low, whimpering cry, sometimes accompanied by sucking the fingers or the lips. It may change to a lusty scream if the meal is not forthcoming. Babies are as likely to cry from indigestion caused by overfeeding as from hunger.

A sleepy or uncomfortable baby cries fretfully. He may be too warm or tired of being laid in one position. A tepid sponge bath and gentle rub and a change of clothing, or taking him out of doors will prove very restful and comforting. If the crying continues consult your doctor. The child may be ill or ailing.

The cry of colic or abdominal pain is a lusty cry, sometimes mounting to a shriek with tears in the eyes. The knees are drawn up and the hands are clenched tightly. As said before, a tight clenching of the fist indicates pain. If the crying is severe or persistent apply warm cloths to the abdomen and lay the child on his stomach. Inject one-half ounce of warm olive oil or mild soapsuds into the rectum. This will usually cause the bowels to move and expel the gas. Look well to the diet and remove the cause for colic.

The very sick baby does not cry hard. There is a low moaning or a wail, with sometimes turning the head from side to side.

Unusual flushing or pallor of the face, sleeplessness, lack of energy, loss of appetite, profuse sweating, especially of the head, peevishness, frequent vomiting or diarrhea give warning something is wrong. A wise mother will give prompt heed to these warnings.

School Credit For Farm Tasks.

The idea that certain practical work done by boys and girls on the farm should count as credits in the agricultural courses of the rural elementary and high schools is growing rapidly

FOUR GENERATIONS.

The great grandmother is Mrs. N. A. Williams, the grandmother Mrs. Tom Brandt, the father Porter J. Barns and the granddaughter and great granddaughter little Grace Barns.

in popularity among educators. The basis for this idea is the belief that the farm may and should become the logical laboratory for testing out and putting into practice much that is taught in the schools, and that the schools by giving credit for home work can and should encourage boys and girls to make profits for themselves or to become more directly helpful to their families. Educators, however, find some difficulty in defining just what work that the boy does on the farm should receive an educational credit and how many credits should be allotted for the different kinds of work which really help the boy to master progressive methods.

To assist the superintendents of schools and teachers, the specialists in agricultural education in the states relations service have recently published United States Department of Agriculture Bulletin 385, School Credit for Home Practice in Agriculture. This bulletin, which may be had free by educators as long as the department's supply lasts, devotes a number of pages to tables and examples showing the nature of school credit projects and the amount of credit to be granted. It is recognized, however, that real co-operation on the part of the parent is essential and the author thus defines the part the parent must play in any plan for making school and farm work closer together in the interests of agricultural education.

The parent should agree: (1) To permit the pupil to use specified land, animals and equipment, either as a temporary owner or as a tenant so far as the needs of the project are concerned; (2) to grant the pupil the time needed for the work and to verify and vouch for the time record; (3) to instruct the pupil in the necessary manipulation so far as practicable; (4) to allow the pupil the profits derived from his own labor and management. The last point is not always feasible, particularly where the pupil takes up one phase of the main business of the farm, such as the weighing and testing of milk for a dairy herd.

The parent must at least give an unbiased voucher of the time and expense record and a statement that the project work was all done by the pupil. In the absence of an advisory committee or an inspector, the parent is the judge as to when the pupil has accomplished a task successfully.

Where the pupil's time is much needed by the parent in regular home duties it may be well to advise that the pupil take over some part of that home work as a project. This will insure the co-operation of the parents, although the "managerial" income may not come to the pupil.

The school should not only give credit for work for which the pupil receives pay, but should consider the relative income or profit as one important factor in determining the school rank given on the project.

To insure success, it will be very desirable to have a memorandum of agreement signed by all parties before the project begins; a report in full from the pupil, and a voucher from the parent at the end.

To Keep Pickles Solid.

To the Editor:—One of our Home page readers was complaining because her pickles got soft and wilted. If she will try this way I do not think she will have any more trouble.

If the pickles have been in brine a few days, or all winter, pour off the brine and cover the pickles with boiling water. Let this stand until it is cold, drain and add more hot water, until it is free from salt. Next cover the pickles with a weak solution of vinegar and water and let stand until cold. Then place them in clean jars, cover with equal parts of vinegar and sugar that has been heated boiling hot, use spice to suit taste and seal at once. Mrs. C. D.

Makes Threshing Time Easier.

To the Editor:—As I have found lots of help on this page I will try to be of some help to others. One lady asks for help in arranging her work when cooking for threshers, and, as I do this myself easily, I will try to tell her and others how I manage.

To begin with I do everything I possibly can the day before the threshers are to come. I bake bread, churn if necessary, bake cake and cookies that I am sure will keep nicely. If I expect to serve lemon or cream pies I also bake the crusts. If I expect the threshers for dinner and supper the same day I always serve the vegetables that are the hardest to prepare for dinner, then for supper, when one is tired, the easier vegetables may be cooked. You will find that all those little things help.

I also sort the potatoes and try to have them as near one size as possible so they will cook evenly. Jelly, jam and pickles may be brought from the cellar the day before, too.

Look over the dishes and see that they are all in the proper place and ready to use.

I believe men like plain food and I will tell you what I serve. For dinner I have hot roast beef, gravy, potatoes, two other vegetables, one kind of pie (large pieces), cookies, apple sauce, jam and pickles, with all the good bread, butter, ice tea and coffee they care for.

For supper I use some kind of cold meat, potatoes, gravy left from noon, two vegetables, cake, fruit, pickles and jelly, and bread and butter with ice tea and coffee.

I have often been complimented on my meals and I don't think it is the fancy cooking that always pleases. It is not how much, but how good.

Mrs P.

Ripe Tomato Catsup.

To the Editor:—I have received a great deal of help from the Home page and would like to send a recipe for ripe tomato catsup, which was asked for by one of the readers.

Slice one peck of ripe tomatoes and three large onions. Boil one hour. Strain through colander and add one and one-half cupfuls of cider vinegar, one cupful of sugar, three tablespoonfuls of salt and one tablespoonful each of mustard seed, whole cloves and black pepper and two sticks of cinnamon. Put the spices in a cloth and remove when the catsup is done. Boil three hours, then add one-third teaspoonful of cayenne pepper. Boil up and bottle. Mrs. C. L.

Dill Pickles.

To the Editor:—In a late issue of the paper I read of someone who wanted to know how to put up cucumbers like you buy at the store. I have a very good recipe which has never failed me and I would like to pass it on to this reader.

I wash the cucumbers thoroughly and fill a two-quart can full of them. Then I put in six tablespoonfuls of sugar and two of salt and a handful of dill. Then I cover with white wine vinegar (cold) and seal tight. If you think this is too strong you can add a little water. I am sure anyone who tries this recipe will find it a good one. Mrs. A. E. P.

Cooking of Fish.

Fish contains protein and so should not be cooked at an extremely high temperature. Because of the structure of fish it must be cooked quickly. The muscle fibers are held together with a sort of gelatinous connective tissue which softens and breaks away with prolonged cooking. Fish does not seem to be as hearty a food as meat. Its food value may be increased by the addition of butter or rich sauces when preparing for the table.

Mold on Canned Goods.

Mold may develop on canned goods—

(1) If the seal is defective.

(2) If, after sterilizing, tops are removed from jars to replace rubber ring. Jars should be returned to the canner for at least five minutes when this is done.

(3) If jars are kept in a damp place where the rubbers may decompose, mold may enter through these decomposed rubbers.

The women of the farms are economically important. They feed the men who till the farms; and until men can go to work without breakfast and to bed without supper, the women who feed them must be given credit for their share in the growing crops. The food they preserve is no small item in the national wealth.—[Saturday Evening Post.

Recipes.

Baked Corn.—One quart of sweet corn, one cupful of sweet milk, one tablespoonful of butter and one of sugar, one egg, salt and pepper to taste. Mix all together and bake until brown.

Fried Green Tomatoes.—Slice tomatoes and sprinkle with salt. Let stand a few minutes, then roll in flour, season with pepper and fry in hot butter. Brown on both sides.

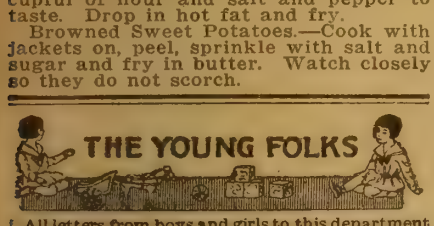
Escalloped Potatoes.—Pare the potatoes, slice thin, wash and drain. Put in a baking dish alternate layers of potatoes and cracker crumbs, seasoned with butter, salt and pepper. Put a few slices of onion on top, also a good-sized piece of butter, cover with milk and bake until tender.

Fried Cucumbers.—Large cucumbers too old to pickle are best. Slice, let stand in salt a few moments, roll in flour and fry a nice brown.

Baked Onions.—One-half dozen good-sized onions, sliced. Put in a baking dish a layer of onions, then a layer of bread crumbs, salt, pepper and butter until dish is full. The last layer should be bread crumbs. Cover with milk and bake.

Green Corn Fritters.—With a sharp knife clip off the grains of six large ears of corn, then scrape. Add one egg, one-half cupful of milk, one-half cupful of flour and salt and pepper to taste. Drop in hot fat and fry.

Browned Sweet Potatoes.—Cook with jackets on, peel, sprinkle with salt and sugar and fry in butter. Watch closely so they do not scorch.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Our Loved Riley Has Left Us.

A short while ago a little child wrote to James Whitcomb Riley, the children's poet, and said, "I tell you what, Mr. Riley, I was glad to learn that you were living, because I thought all poets were dead." And a few days ago Mr. Riley, too, laid down the pen that has written so many verses for the little folks and went to join those other poets who have gone before, and there is sorrow in the heart of many a little admirer who knew Mr. Riley through the pleasure he gave them with "The Raggedy Man," "Little Orphant Annie," "The Old Swimmin' Hole," and other verses that spoke the thoughts of childhood.

Mr. Riley's death was unexpected and there was no one at his side but his nurse. Perhaps some of you little folks did not know that for six years Mr. Riley had been paralyzed on the right side so that he could not use that hand at all. He had learned in that time to write with his left hand and some of the verses you like so well were so written.

Mr. Riley's father was a lawyer and wanted his boy to follow the same profession, but the law was not to his liking and he followed his natural desires in the fields of poetry and music, and the lives of all of us have been made the richer thereby.

Though some of his most delightful poems were for and of the children, there were no little folks in Mr. Riley's household, for he was a bachelor. The spirit of childhood must forever have lived in his heart and made him one of us.

Busy Bee Club Girl.

Dear Young Folks:—I have been reading your letters for a long time and enjoy them very much.

I am twelve years old and in the seventh grade. I live on a farm of 120 acres. We have seven goslings and about 150 little chickens. I have a cow and a calf of my own.

The girls of my school started a club that we call the Busy Bee Club. We keep busy with tatting and crocheting all the time. We meet every other Wednesday afternoon at two o'clock and keep busy until four. We have one new member.

I have a sister and a brother, both older than I. My sister and I both take music lessons on the piano. We have each taken four lessons this summer.

This is the first time I have ever written to the Young Folks and I hope you will like to read my letter.

I am going to ask you a riddle, too. Round as the moon, teeth like a cat; quess all your life and you can't guess that. —Lydia.

Won First Prize on Bread.

Dear Young Folks:—My father has taken the paper ever since I can remember, so I think it is time for me to write. Don't you?

I live on a 300-acre farm. I am twelve years old and I can crochet, tat and cook. Three years ago I took a loaf of bread to the farmers' institute and got first prize on it. The next year I took another loaf and got first prize again. Then last year I took a loaf and got second prize on it. I think I will take a loaf again this year. I went to school all last year without being absent or tardy and I was the only one in our school who was not. —Gladys.

Has a Fine Garden.

Dear Young Folks:—I am a Young Folks reader and think your letters are very interesting.

I am eleven years old and live on a farm of 160 acres. I help on the farm wherever I can. I can disk, harrow, cultivate, help in the harvest and do other little things that have to be done on the farm.

I have two brothers and one sister. We have eight cats and one dog. My brother and I made gardens this spring and they just look fine. We planted gourds, onions, beans, beets, red peppers, pop corn and other things. —Hubert.

Another Little Cook Sends Recipe.

Dear Young Folks:—I am twelve years old and in the eighth grade. I love to go to school. I live on a 200-acre farm. We have eight horses, twenty-five cows, ten hogs, 300 chickens, eighty geese and forty ducks. I enjoy farm life very much. I milk two cows every evening.

I have a few pets, a pony, a little goat, a dog and a cat. The pony's name is Bob. He is a trick pony and can do twenty-one different tricks. One is to kneel when he wants anything to eat and another is to shake his head when he doesn't want any more. I drive him to school every day. I call my goat Nanny. Whenever I come with anything to eat he will come to me and bleat. I love my pets and am very kind to them.

I am sending a recipe for the girls in the Young Folks department. It is for peanut cookies. Cream two tablespoonfuls of butter. Add one-quarter cupful of sugar and one egg, well beaten. Mix and sift one-half cupful of flour, one teaspoonful of baking powder and one-quarter teaspoonful of salt. Add to the first mixture, with two tablespoonfuls of milk, one cupful of finely chopped peanuts and one teaspoonful of vanilla. Drop from the spoon on buttered tin. Bake from ten to fifteen minutes in a slow oven. —Ruby.

International Sunday School Lesson.

Lesson for August 6, 1913.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Greatest Thing in the World.

(Temperance Lesson.)

True ministry is in the exercise of spiritual gifts (Eph. 4:7-15). Every believer is a member of the body of Christ, and, therefore, has a definite ministry. Though the gifts are diverse, all are equally honorable because they are bestowed, administered and energized by the Holy Spirit. Love alone gives value to the ministry of any gift.

I. Fill the Gift With Love (vv. 1-3). Just as the body is dead unless a living soul abides in and inspires it, so is the gift unless filled with the spirit of love. This is the "more excellent way" to which Paul makes reference at the conclusion of Chapter 12. In praising love Paul does not fall into the error of criticizing others, not even his followers, and suggests that even he may be wanting in this trait. The Corinthians were eager to attain excellence and to be prominent in wisdom and philosophy; to understand the world in which they lived; to be scholars and teachers and improve and correct society. Paul, therefore, shows how vain are such things unless filled with the motive of love. (1) The gift of tongues. The saints in the church of Corinth seem to have been particularly gifted in this direction, and to have been proud of it, (Ch. 14: 2-23) and eager to outstrip the others. Paul tells them that such boasting amounts to little. The grace of love is a far more excellent way. (2) The gift of prophecy. The New Testament prophet was a forth-teller, not a teller of the future. To be a forth-teller was a thing to be coveted and admired, but not unless accompanied by love. (3) Miracle working. A man can have this in the most wonderful form conceivable, and yet if he has not love, he is nothing.

II. Love Is Known by Its Manifestations (vv. 4-7). Having shown the absolute necessity of love Paul shows how we may recognize it. The behavior of love can be seen and known Paul set for us fifteen manifestations. (1) Love suffereth long. Love is no passing emotion, but a fixed thought. (2) It is kind. Kindness in action, love at work. (3) Love envieth not. It does not grow out of selfishness, for selfishness is the very opposite of love. (4) Love vaunteth not itself, does not climb to the housetops to proclaim its glory. (5) Is not puffed up. There is no inflation, like a soap bubble, to dazzle the eye. (6) Does not behave itself unseemly, that is without delicacy of feeling. Unseemly conduct grows from pride and selfishness, whereas love is the foundation of true courtesy. (7) Seeketh not her own. Is not looking out for self first of all. (8) Is not easily provoked; good tempered, not irritable. To lose one's temper is a dangerous evil. The evil is not so much in the temper, but in our failure to control it. (9) Thinketh no evil. Puts the best construction upon the acts of others, making all possible allowances. (10) Rejoiceth not in iniquity. (11) Rejoiceth in the truth, that is, is in sympathy with all that is true. (12) Beareth all things; endureth hardships and trials for the working out of the kingdom. (13) Believeth all things; not credulous, but putting the best construction upon the words of others, and having faith in the final outcome of every good cause. (14) Hopeth all things; is not discouraged in the dark and shadowy days. (15) Endureth all things; it goes on believing and hoping to the end; no obstacle can stop it. Surely such a catalog of the marks of love is enough to make us all pause and meditate.

III. The Permanence of Life (vv. 8-13). The word "faileth" here denotes failing in the sense of cessation, and love is contrasted with three typical but passing forms of Christian expression. (1) "Prophecies;" not the things prophesied, but the gift or act of prophesying (v. 3) which at best can only partially express God's word. Prophecy will pass away in the fuller vision and wider knowledge of God "Who is love." (2) "Tongues." The time will come when they will not be needed as a sign nor to enable us to express our varied emotions. The divinely inspired prophecies tell but a part of what is yet to be. (3) "Knowledge." It shall be done away in the fuller knowledge of the eternal world as the light of the stars vanish before the rising sun. When that which is perfect is come these lights will be seen to be only like the separate stones of a quarry which can only be fully understood when the whole building stands before us in its completion. Paul gives an illustration of this truth from the familiar case of the growing child (vv. 11, 12). In conclusion (v. 13) faith, hope, love abideth, three graces, imperishable and immortal. "Hope is a fountain; faith draws the water and drinks; love distributes the water to others," Dr. J. H. Jowett. But the greatest of these is love. (a) Love is greater in its nature. It brings us closer to God, making us partakers of his nature. It is the one thing without which faith and hope are of little avail. (b) It is powerful as an influence for good and the strongest motive for the upbuilding of character.

WITH less aggravation by attaching an adjustable stubble cutter to your corn harvester. Cuts the "stubs" while you cut the corn. Easily attached to machines of the Acme, McCormick, and Milwaukee type. Interesting book, "Comfort In the Cornfield," free. Give make of corn harvester when writing. Address CORN HARVESTER ATTACHMENT CO., 524 S. Dickinson Street, Madison, Wisconsin.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF FALL AND WINTER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1195—Boys' blouse suit with straight trousers and with or without shield and collar facing. The pattern is cut in 4 sizes; 3, 4, 5 and 6 years. It requires 3⅛ yards of 44-inch material for a 4-year size.

1491—A simple shirt waist in attractive tailored style. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3 yards of 36-inch material for a 36-inch size.

1285—A simple practical and attractive dress in over blouse style. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 1¾ yards of 27-inch material for the guimpe, and 3⅜ yards for the dress for a 6-year size.

1791—Ladies' house dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5½ yards of 44-inch material for a 36-inch size.

1690—A dainty summer frock. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 8½ yards of 44-inch material for a 36-inch size.

1790—Ladies' one piece house gown. The pattern is cut in 3 sizes: Small, medium and large. It requires 7 yards of 36-inch material for a medium size.

1798—A comfortable and convenient garment. The model may also serve as an envelope chemise, and without the envelope extension it becomes a chemise in regulation style. The pattern is cut in 3 sizes: Small, medium and large. It requires 3½ yards of 36-inch material for a medium size.

1785—A smart dress in middy style. The skirt has five gores. The sleeve may be finished in wrist or elbow length. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 6 yards of 36-inch material for a 12-year size.

1794—A smart style for the growing girl. The skirt is a five-gore model, with plaits at the front panel. The pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 5⅛ yards of 44-inch material for a 14-year size.

1483—Costume for misses and small women, with body lining and chemisette. The pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 6½ yards of 44-inch material for an 18-year size.

1201—Child's set of dress, petticoat and drawers. The pattern for this excellent trio of garments is cut in 4 sizes: 1, 2, 3 and 4 years. It requires 2¾ yards of 27-inch material for the dress, 2⅜ yards for the petticoat and ¾ yard for the drawers for a 3-year size.

Waist 1810—Skirt 1811—Up-to-date and becoming costume. The waist pattern 1810 is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt pattern 1811 is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It will require 7 yards of 44-inch material for the entire dress for a medium size. Two separate patterns, 10 cents for each pattern.

Use the schoolhouse yard for the Saturday night social and get dividends on the community investment for the entire year.

Experiments have shown that the greatest gains in fattening are made by young stock when two to four months old.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Egg Substitutes Must Be Carefully Labeled.

"Powdered egg" is admissible, but "egg powder" must have a care to not masquerade as the real thing. So says our Uncle Sammy and it is another score in favor of the poultry industry.

All egg powders must contain powdered eggs or they are placed under the ban of misrepresenting their composition. And, again, no product shall be labeled "egg substitute" unless it possesses the properties of eggs. This of itself, if enforced, will serve the purpose of preventing spurious articles being sold for eggs in any form.

Several years ago there was quite an excitement about egg substitutes. When analyzed the compound was found to be composed mostly of corn starch, such as we can buy at 10 to 15 cents per pound. Like most things of the kind, the "manufacturers" soon went out of business.

Today manufacturers of any kind of egg substitutes must be their own judges in the matter of whether their label will conform to the food and drug act. No one has the authority to analyze and vouch for each manufacturer and he must take his chances on putting anything of a questionable nature on the public.

Learning to Crate, Feed and Dress Fowls.

It lightens the load wonderfully, the assurance that our boys and girls are learning to do real work at college right along with the cultural side of it. As compared with the old hazard method of "getting an education," for what we knew not, it is safe and sane.

The students at the Missouri College of Agriculture have actual practice by caring for twenty chickens each. One squad of the class does this every Saturday morning until all have learned.

The chickens are crate fattened before they are killed. The crates are built by the students. Each member of the class builds his own crate, starves his twenty chickens a day, and then places them into the crate and feeds them this ration: Seven parts corn meal, three parts middlings, and one part bran with buttermilk to mix it about as thin as pancake batter.

From ten days to two weeks is the right length of time to feed. A longer period would get them off their feed—and possibly feet—while a short time only tends to shrink them. During this time they make a gain of 15 to 25 per cent, and are much improved in flavor.

The Mite Foe of the Hen.

The poultry mite is no common enemy. It attacks young and old, weak and strong. It pursues with unrelenting vigor, spares none, shows no mercy. It surpasses the vampire in its thirst for blood. It attacks at night. When daylight comes, it retreats to its trenches, satiated with the blood of its prey, to await the return of another night to repeat its attack on the defenseless hen.

Mites will come. They soon appear, even in new poultry houses unless one uses the "ounce of prevention." They may multiply at the rate of a million a month. Then to rout them requires courage, determination and action.

Be prepared by making all furnishings of poultry houses movable, so that they may be taken out for a semiannual disinfection and cleansing. Then when the mite army arrives, take weapons and ammunition and get into action.

An old broom, a hoe, a shovel and an efficient sprayer will do the work; the broom for sweeping and whitewashing without limit, the hoe and shovel for cleaning dropping boards and floor and the sprayer for semimonthly use "in the good old summer time. Your ammunition should be:

Kerosene.

Kerosene and soapsuds (kerosene emulsion).

Kerosene and Creso (coal tar), 3 to 1.

Kerosene and crude carbolic acid, 16 to 1.

Air-slaked lime.

Wood or coal ashes.

Put the flock out early in the morning, or "any old time," and "get busy."

Hoe and shovel, sweep and spray—high and low, roosts, dropping boards, doors, partitions, nests and everything unmentioned. Repeat semimonthly through the hot weather.

The result will be peace in the hen house and profit and prosperity in your house.—[N. E. Chapman, University Farm, St. Paul.

CLEANS WITHOUT SCOURING

Makes soap without boiling. Turns well water into rain water. Makes cheapest, most efficient washing fluid — to be used without powders, chips, etc. Supreme as disinfector and vermin exterminator. Ask for booklet of other uses.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Lameness.

We have a horse which became lame the other day when we drove to town. We took him to the blacksmith's but he could not find anything wrong. That was two days ago; now he is swollen on both hind legs from the knee down. Can you tell what the disease is and give us a remedy?

Since there are so many conditions, any one of which might cause this lameness and swelling of the limbs, it would be hard for us to say just what the trouble is without an examination. You should have a veterinarian examine this animal and he will prescribe according to his findings.

Injured Knee.

In the spring I had an eight-year-old mare that got her knee cut in the disk. It got along fairly well and I was told to work her, so I put h r in the field. One day she got her leg in the bridge and broke the sore open. Then her knee swelled and has swollen ever since. It seems to pain her, as she does not stand on it much. Now the sore has healed up until it is about as large as a dollar and it seems hard. The hair does not grow on it. Please tell me what to do for this mare.

You should have your horse examined by a veterinarian and have him determine just what is causing the swelling and lameness. It may be the joint is affected, causing stiffness.

Thumps in Pigs.

We have a nice bunch of spring pigs that have some kind of ailment similar to thumps in small pigs. They are three months old. We have lost two and there are two or three more that are thumping around. We have been feeding ground oats, shorts and tankage and a small portion of soaked corn. What, in your opinion, is wrong with these pigs?

Thumps may be brought on through being troubled with indigestion. In fact, we think the majority of cases in young pigs is brought on from indigestion. However, there are other causes. Heat may be a factor. We would advise a little lighter feeding as well as a slight change of feed.

Overheat in Horse.

I have a four-year-old gelding that is short winded. He has been this way for the past four days. He weighs 1,400 pounds. He has been worked all spring and nothing like this has happened before. I had him on a road grader a few days but it was not hot then. In the corn field the last two days he has puffed but did not sweat much. He gets oats and corn to eat and he eats well but pants some in the barn.

Your horse has probably been slightly overheated. Give him rest and give a teaspoonful of tincture of arnica in a half pint of water three times daily for two or three days. Be sure to tell your druggist that you want to use the arnica internally.

Lumpy or Stringy Milk.

I have a cow which at times gives lumpy milk from one teat and, when affected in this way, the udder is swollen and feverish. It will continue in this condition for two or three milkings and then I will see no more sign of it for two or three weeks, then it comes lumpy again. Sometimes the milk comes in lumps and strings. Please tell me the cause and give me a remedy.

This may be caused by fungi developing in the liquid. Sometimes the contamination is due to water supply, but may be from other causes. Look well to the feed and water supply and give the cow two drams of bisulphite of soda daily.

A Vicious Habit.

I have a horse which is about four years old, gentle, and her only fault is that she is deadly afraid of automobiles. We have had several bad runaways so far and have tried everything we can think of to cure her. Can you suggest any plan by which we can break her of the habit? She is a very nervous and high spirited animal and will be very valuable if she is rid of this habit.

Your animal is troubled with rather a vicious habit, that of running when scared. Some animals never become accustomed to the sight of automobiles. A man needs to be an expert at training horses to overcome this trouble, as mechanical devices are only a nuisance. It would be hard to advise any means of handling that would prove beneficial.

Sequella of Distemper.

I wish you would please tell me what ails my colt. When it was nine days old it had distemper—that is, I suppose it had for the other colts had it and it acted just the same. It is now three months old and it still has a cough and a discharge running from the nose. Everything it eats comes back through its nose. It seems to feel real well and wants to eat salt all the time, which we let it do. It eats a little oats and runs with the mare in the pasture. It has grown very little since it was first sick.

Your colt is probably the victim of chronic pharyngitis following distemper. There may also be other complications present. Apply a light blister in the region of the pharynx and then get from your druggist some tablets of calcidine (human-sized tablets) and give ten grains dissolved in water three times daily. Give this for from five to seven days.

Spring Calf Unthrifty.

I have a spring calf that does not seem to do well. When it was running with its mother it did fine. I let it run with her for over a week, then took it away from her and it gradually grew poor until it is nothing but skin and bone. It would hardly drink milk at first, but does a little better now. When it eats grass there is a green juice all around its mouth and on the ground.

The calf probably has catarrh of the stomach and bowels, this having been brought about from indigestion. It probably is of chronic nature now and will be hard, if not impossible, to overcome. If the calf is constipated give one-half pound of Epsom salts or four ounces of castor oil to loosen bowels. See that the feed is of the very best and entirely of green food. See that the milk is warm and sweet and, above all, clean and do not overfeed. These rules, if followed out, will probably do as much good as medication.

The high meat prices that prevail throughout the world will continue indefinitely, according to the department of agriculture in Washington. The increased cost of production, the diminished purchasing power of the money unit and the failure of production to keep pace with the increase in population are assigned as the reasons. Disease and exposure cause enormous losses in live stock, the report says. Almost three and one-fourth million head of cattle have died of disease and exposure in the past sixteen years. In 1914 seven million hogs died of cholera. The United States is both the greatest meat-eating and meat-producing nation. In 1914 and 1915 it imported more beef than it exported.

A census of French farm animals up to July 1st, made by the agricultural department, shows that cattle generally have increased as compared with a year ago, while the number of sheep and hogs have diminished appreciably. A comparison of stock in 1916 and 1915 follows: Cattle, 12,724,000, against 12,287,000; sheep, 12,079,200, against 13,483,000; hogs, 4,448,000, against 5,491,000; horses, 2,317,000, against 2,227,000; mules, 479,500, against 484,500.

See that the entrance to the farm is neat and clean. Appearances may be improved by a group of shrubs at either side.

Farm Sanitation

Will Increase Your Profits by Keeping Live Stock and Poultry Healthy.

Kreso Dip No. 1

Easy to Use. Efficient. Economical. Kills Sheep Ticks, Lice, Mites and Fleas. Helps Heal Cuts, Scratches and Skin Diseases.

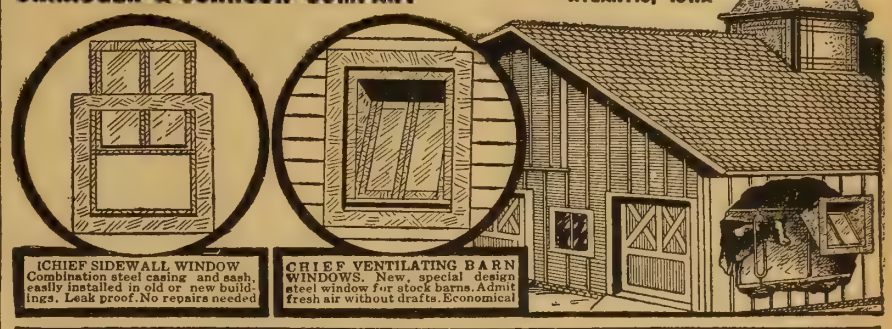
SHRAUGER & JOHNSON COMPANY 300 WALNUT ST., ATLANTIC, IOWA



CHIEF SIDEWALL WINDOW Combination steel casing and sash, easily installed in old or new buildings. Leak proof. No repairs needed

CHIEF VENTILATING BARN WINDOWS. New, special design steel window for stock barns. Admit fresh air without drafts. Economical

SAL-VET

Costs You Nothing

Hundreds of thousands of farmers and stockmen figure that it really don't cost them a cent to feed SAL-VET. They have found from actual experience that this great worm destroyer and live stock conditioner adds much more to their profits than it takes from their pocket books. For example: it costs only 1/12 of a cent a day for enough SAL-VET to rid any sheep or hog of worms and only 1/4 of a cent a day for each horse or head of cattle. How else can you invest so little and receive so much in faster gains, fewer losses, feed saved and bigger stock profits? Read this—

"I enclose check for the SAL-VET you recently sent to me. Four times this sum would not begin to pay for the benefit I derived from feeding SAL-VET." — W. H. Wallace, Franktown, Va.

Remember, I don't ask you to risk a penny in advance. Just tell me how many head of stock you have; I'll see that you are supplied with enough SAL-VET to last them 60 days. You pay the freight when it arrives; feed it as directed, and if it fails to do what I claim and you make a specific report in 60 days, I'll cancel the charge. You won't owe me anything.

SIDNEY R. FEIL, President, THE FEIL MFG. CO., Chemists
Dept. 137 CLEVELAND, OHIO (258)

PRICES:

Each 40 lb. package	$2.25
Each 100 lb. package	5.00
Each 200 lb. package	9.00
Each 300 lb. package	13.00
500 lbs.	21.12

Extra discount in larger quantities.
No order filled for less than 40 lbs.
Thousands of dealers sell SAL-VET at above prices.

In the far West and South the prices are a little higher on account of the extra freight charges. On this 60-day trial offer supply for a 60 days' trial is based on 1 lb. of SAL-VET for each sheep or hog and 4 lbs. for each horse or head of cattle. Beware of imitations known as *Sal-This*, *Sal-That* and *Sal-Something-Else*. This genuine, reliable, guaranteed preparation is SAL-VET.

THE NEWTON REMEDY CO., Toledo, Ohio

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

A Fine Holstein Herd.

THE Fox River Valley of Wisconsin is the home of many fine herds of Holstein and Guernsey cattle. Although not so widely known perhaps as some of the more settled sections of the state as a dairy center one needs but to drive through this section to realize that it is rapidly becoming a formidable rival for first place as a dairy cattle breeding center. One of the largest and most choicely bred Holstein herds in this section is that of B. F. Winckler & Sons, Medina, Wis. The herd consists of some seventy head of registered Holsteins of high quality. Official testing has been carried on for several years and many creditable records have been made. One of their foundation cows, Calumet Johanna Abbekerk, made 28.71 pounds of butter in seven days. Calumet Queen Johanna, at twenty-four months of age made 22.24 pounds of butter. These men have been very careful in their selection of breeding stock and have spared no expense in securing richly bred sires and females. They are now offering for sale two young bulls sired by Sir Johanna De Colantha De Kol, a 27.56-pound son of the great bull, Sir Fayne Concordia. The dam of Sir Johannah De Colantha De Kol has a record of 27.56 pounds of butter in seven days. She also has five A. R. O. daughters all of which have records ranging from twenty-one to 30.50 pounds butter in seven days. His sire, Sir Fayne Concordia, has twenty-one A. R. O. daughters, thirteen with records from twenty to 30.50 pounds. He is also a full brother to the former world's record cow, Grace Fayne's 2d's Homestead, that made 35.55 pounds butter. Sir Johanna De Colantha De Kol is himself a full brother to the 30.50-pound cow Johanna De Colantha 5th. Not only are the bulls offered for sale, well bred on their sire's side, but are equally well bred on their dam's side. They are both from A. R. O. daughters of Oakhurst Milk and Butter King, which has ten A. R. O. daughters, one a 22.24-pound two year old. He is a son of the $10,000 bull, The Milk and Butter King, whose daughters have recently been making some very high records. For further information in regard to these animals write to the above address. See page 23.—Adv.

Live Stock Breeders Should Show at Janesville.

JANESVILLE, Rock county, Wis., has one of the most up-to-date fair grounds the writer has ever seen, with exception, of course, to some of the state fairs and we can name several state fairs that would feel proud if they had the facilities for housing live stock that they have at Janesville. The buildings are new and modern in every respect. The cattle barn is 280 feet long with a sixteen-foot alleyway and has room to stall 288 head of cattle. The barn is light and cool and an excellent place to show cattle. Those that show hogs are in love with the pens they have at this fair—they are large, very cool, excellent wash stands, very light and roomy and a real place for show and sale hogs. There is room for 250 hogs. We hear many kind remarks about the fair officials, from the breeders that have shown there, so evidently the treatment accorded the showmen is faultless. This is one of the best fairs held in the state—the premiums paid are liberal and in making up your fair circuit don't overlook this fair. The date is August 8th to 11th and one of the best places to make a start. Prof. J. L. Tormey judges beef cattle, Van Pelt, of Iowa, is to pass on the dairy cattle, Mr. Hutton, of Madison, will tie the ribbons on the horses and "Uncle" Ed Baxter, of Illinois, will sort the hogs. These men are very competent judges and we can assure you that they will give satisfaction. If you can't come with stock attend the fair any way, for, as we say this is one of the "live" fairs of the state.—Adv.

Refined Cholera Serum Eliminates Risks.

BREEDERS of high-priced, prize-winning hogs use Mulford refined hog cholera serum because they do not wish to take chances with the dread cholera disease, nor do they want to run the risk of losing their hogs from other diseases, abscesses or cysts which an unrefined serum is apt to cause. The refined serum is just as potent in protecting from cholera as the unrefined, but it contains no germs or solid particles which may cause trouble in the hog's blood. Veterinarians recommend Mulford refined serum without hesitation. It costs no more than the better makes of unrefined serum—2 cents per cubic centimeter—even though it has been through the process of refining. The free booklet, No. 9, issued by H. K. Mulford Co., Philadelphia, Pa., takes up the subject of hog cholera serum in a way that will interest all hog raisers. Write for a copy today. See page 2.—Adv.

Galloways For Sale.

FIFTY head of good registered Galloway cows and heifers are advertised for sale by C. S. Hechtner, Charlton, Ia., on page 24. He also offers fourteen young bulls for sale. If you want anything in the Galloway line Mr. Hechtner has it. In fact, his is one of the most noted Galloway herds in the United States. Write him at once about these cows and heifers or young bulls and kindly mention this paper.—Adv.

We Like to Hear From Our Advertisers.

TOO many of the live stock advertisers expect a great deal from a live stock paper without giving any assistance. The agricultural papers want to make good for their advertisers and they are willing to do anything within reason for them, but the paper and field men cannot do it all, there must be co-operation. You must realize that a field man has a large territory to cover and that there are thousands of breeders that he is expected to call on, consequently it is impossible for him to visit each breeder individually as often as he would like. Now unless we are kept posted from time to time it is impossible for us to give you the service that we want to. Perhaps some special bull is being advertised and, after a few issues, he is sold, but if we are not notified that same "ad" will appear and be misleading to any prospective buyer. We like to keep the ads "alive", for "stale" ads gets tiresome, but unless we get information we might change the ads at the wrong time and make a misleading statement. Many of our advertisers co-operate with the field men and they are getting good results, while we never hear a word from others. We realize that you men are busy and some of you feel that you haven't the time to sit down and write a letter, but if you are in the pure-bred game, the publicity end of it deserves as much attention as any part of it. Write the office or the field men a letter as often as you can, keep them posted and we will all be pleased with the results.—Adv.

Greatly Pleased With Results From Wisconsin Farmer Advertisement.

THAT's the good word that comes from J. W. Hutchinson of the Bonnie Meade Stock Co., of Randolph, Wisconsin, who have been advertising Holstein cattle in The Wisconsin Farmer. He writes:

"We are greatly pleased with the results we have been getting from our advertisement in The Wisconsin Farmer and for the assistance you have given us.
"We have been having a great many inquiries and are now just getting bulls of serviceable age to supply the demand."

Wisconsin Farmer advertisements are result getters. Many breeders write enthusiastically of sales made through Wisconsin Farmer advertisements. This letter is just one example. The Wisconsin Farmer carried 500 more insertions of Wisconsin advertisements during the first six months of 1916 than any other farm paper in the state. The farmers know its value.

The Wisconsin Farmer, Madison, Wis.

GUARANTEED WEEKLY CIRCULATION 90,000

Laird's Famous Hampshires.

IN a recent letter from Mr. A. M. Laird, Prairie du Chien, Wisconsin, he says that he continues to have a big demand for his Hampshires. He was sold out last year and though he has raised over 100 spring pigs he advises that he will not have enough to supply the trade. This is certainly evidence that the Hampshire is gaining in the northwest as it has in the other states. Mr. Laird writes that he has sold three herds to Dane county men this year, the last one consisting of six gilts and a boar, went to Jos. C. Dunn, Riley, Wisconsin. He also advises that he has had many inquiries from northern and eastern Iowa and Minnesota, and that he has started many new breeders in those states. Mr. Laird has a good herd and if you place your order with him he will fill it to your satisfaction. His advertisement appears on page 24 Write him for particulars and please mention this journal.—Adv.

W. C. Jenkins, Bangor, Wisconsin.

THE above breeder of Duroc Jerseys attended several of the best sales in the country a couple of years ago and bought some of the best sows that were offered in the various sales. Some of them made good and others didn't, but that is the experience of all hog men. There is some good stuff on the place now and, as far as breeding goes, they are "bred in the purple." The herd boar is Rego Col., a son of the great champion and sire of champions, High Model. There are some fine pigs on the farm by this boar and an especially good litter of nine out of a Tattletale sow. On October 17th, Mr. Jenkins will hold his fall sale at which time he will sell boars and some sows. We feel sure that he will put up a good offering and they will be in nice condition. Keep this date in mind.—Adv.

McClurg Bros. Make Good Buy.

SOME time ago we mentioned the fact that the McClurg Brothers, of Viroqua, Wisconsin, expected to buy some of the best sows they could find to cross on their two-year-old boar, Prince Defender. They have just purchased a daughter of the Iowa champion, Big Wonder, the boar that cost John Swenson and E. J. Wilson $1,000. This gilt is an outstanding individual in every respect and we are certainly glad to know that these young breeders are headed in the right direction. Prince Defender is good enough to head any herd and, when they get a few of such sows as they have just purchased, this Duroc herd will be heard from. It would be a good idea to get a boar sired by Prince Defender, a few are being offered for sale. Write them and please mention The Wisconsin Farmer. See page 24.—Adv

A Generous Offer to Stock Raisers.

THOUSANDS of farmers find that the profits from feeding Sal Vet, the popular stock remedy, are many times greater than the cost. This worm killer and live stock conditioner costs only one-twelfth of a cent a day for enough to rid any sheep or hog of worms and only one-fourth of a cent a day to keep a horse or cow in good condition. It saves feed, makes the stock gain faster and causes larger profits. Any farmer can try Sal Vet without any expense except freight on shipment; all that is necessary is to send for it, stating the number of stock to be fed. If Sal Vet does not do what the company claims for it, no charge will be made. Those interested should write Sidney R. Feil, president, the Feil Manufacturing Co., Cleveland, Ohio. See page 21.—Adv.

Williams Brothers' Short-horns.

WHEN you get acquainted with the Williams Brothers, of Bangor, Wisconsin, they make you feel that they are on the square and if you buy anything of them you can rest assured that it is right. They have a good herd of Short-horn cattle bred along the milk lines, at the same time the good beef qualities. They have used good bulls for years and their herd has made a wonderful advancement in the past few years. They will sell a few heifers and some young bulls and it will pay you to investigate. See page 24.—Adv.

Poland China Pigs and Boars for Sale.

ANYONE wanting a good Poland China boar or some young stock should write or call on F. E. Purdy, Orfordville, Wisconsin. Mr. Purdy has several good boars, one of which is a yearling, and a lot of spring pigs of both sexes. This stock was sired by Oakland Giant, by Oakland Equal; Warrior, by Big Bone; and several other noted boars of Nebraska breeding. Those interested should write immediately concerning this stock, mentioning The Wisconsin Farmer in their letters. See page 24.—Adv.

The B. W. Little Herd.

MR. B. W. LITTLE, Janesville, Wisconsin, had some of the best spring pigs we had seen when we were there, the latter part of May. We have been advised that they have done well and are now in fine condition to ship. Mr. Little has a good sow herd and two good boars head the herd. His prices on boars or gilts is reasonable and your letters will be promptly answered. It is needless to say that he is a breeder of Bates Short-horns, this fact is well known throughout the state. Keep it in mind however and when in need of anything in his line, write him and mention The Wisconsin Farmer.—Adv.

A Coming Holstein Herd.

THE way that Stewart Reid has developed the herd of Holsteins of J. J. Reid & Son, Oconomowoc, Wis., during the past year, is proof of the assertion that the writer has made many times that it is some herd. Mr. J. J. Reid has been building up a herd for the past fifteen years, buying the best of breeding stock and developing the offspring into large, typey individuals. When his son, Stewart, finished the four years' course at the college of agriculture a year ago, he took active management of the herd, and has made a marked success. Official testing was started last winter and eighteen animals put into the advance registry, every animal entered qualified by a large margin. Among the records made were Ashburn Segis Dean Lass, 27.10; Ashburn Segis Pauline, 26.50, as a junior three year old; Ashburn Segis Linda, 23.70, as a two year old; Ashburn Segis Ruby Lass, 20.2; Ashburn Segis Hengerveld Grace, 19.3, as a two year old. These are all daughters of Butter Boy Segis, a son of the great bull, King Segis, that has eighty-four A. R. O. daughters, six with records above thirty pounds butter in seven days. The above records are proof of the high production ability of this herd, but as Mr. Reid says, he is confident that these same cows and a goodly portion of the others are capable of doing better than this, when they have the herd properly organized, and have made a longer study of the individual likes and characteristics of the animals in the herd. He has one or two very creditable candidates for thirty-pound records which the writer is confident will make this record provided they freshen right. Owing to the fact that there are forty cows bred to freshen this fall and winter they are offering ten head of attractive females for sale. Several of them have A. R. O. records or are from A. R. O. dams. The others are of equally good breeding and production ability, but as yet have not been given an opportunity. These are being priced reasonably, and will rapidly grow into more money. Two are daughters of Butter Boy Segis, three were sired by a twenty-eight-pound grandson of Hengerveld De Kol, two are eighteen months old heifers and four yearling heifers sired by Tritomia Ormsby. For further information write to the above address. See page 23.—Adv.

Shipped Red Polls to Seven States and Canada.

IF you think there isn't any demand for the Red Poll cattle, read the following report of recent sales made by Mr. H. A. Martin, Gotham, Wisconsin. Also notice that these sales were not made locally, but cover a wide range of territory, which also speaks well for Wisconsin-bred cattle. These sales date from April 1, 1916. One bull, Duke 28644, to E. G. Norton, Seville, Ohio. One car load, fifteen females and one bull, to H. W. Avery, Kings Ferry, New York. This was an excellent lot of breeding cows and heifers. One bull, Leslie 29491, to John G. Dudley, Brown City, Michigan. One bull calf to Fred Anderson, Kilbourn, Wisconsin. Two heifers to R. K. McBride, Covington, Tenn. Four bulls, two heifer calves and eleven cows and heifers to H. V. Clendenning, Harding, Manitoba, Canada. This is an old customer and he expects these cattle to be heard from later. One bull, Dandy 28850, to D. H. Ragles, Andover, South Dakota. One bull, Samson 28646, to Frank A. Stetzer, Mindoro, Wisconsin. For September delivery, one bull calf to G. H. Wadleigh, Tilton, N. H. This list of sales shows the popularity of the Martin Red Polls. His advertisemtnt appears regularly in this publication, and if you will write him he will gladly furnish you with any information you may want.—Adv.

The Meinking Polands.

WE recently saw the Poland China herd owned by R. Meinking, Bangor, Wisconsin, and we will say that he has his spring pigs "looking like the money." He has a large number and he has already made many sales of pigs of both sexes. We believe you will be satisfied if you buy a Meinking Poland. If not, send him back for Mr. Meinking don't want you to keep a pig that isn't satisfactory. He is one of the oldest breeders of the state, so evidently he has been treating his customers right in the past. Will you please mention The Wisconsin Farmer when writing for particulars. See page 24.—Adv.

An Efficient, Air-Tight Silo.

THE Triple Wall silo is advertised on page 14 of this issue by the Independent Silo Co., St. Paul, Minn. The important features of this silo are three walls, regular silo staves, felt lining, patented ship lock, red cypress siding and air-tight construction. There is no danger from windstorms with this silo and the company makes a liberal guarantee to insure the owner in this respect. The Triple Wall silo has no

hoops to tighten, but it holds strong and secure throughout. Free catalog and price list will be sent to anyone on request to the company. Write today. —Adv.

Overland Company Makes 1,000 Cars a Day.

THE announcement of the new Overland car, a four at $795 and a six at $925, which is found on pages 12 and 13 reveals the achievements of large scale production. Here are two cars of remarkably high quality and workmanship sold at prices which a small factory could not begin to maintain. The secret lies in turning out cars at the rate of 1,000 a day, in making a very small profit per car, but depending on a great volume of output to bring normal returns. The new four cylinder is claimed to be the largest car of its kind ever offered for so low a price. It has a wheel base of 112 inches and the famous Overland en-bloc 35-horsepower motor. Shock absorbing cantilever rear springs are part of the equipment. The gasoline tank is placed in the rear and the vacuum system insures a steady, even flow of gasoline at all times. A complete Auto-Lite electric starting and lighting system is furnished with each car, having connections so that all switches are on the steering column within easy reach. Without doubt this is a wonderful car for the money. The new six is no less a bargain for the price. It has a longer wheel base, 116 inches, a similar Auto-Lite system, cantilever springs like the four, and a snappy long-stroke forty-horsepower, six-cylinder motor that is a marvel in flexibility, speed and power. This car also has the gasoline tank in the rear and feeds by the vacuum system. No other six is in its class. Your nearest Overland dealer will be glad to show you these cars. Call on him at the next opportunity and write for catalog to The Willys-Overland Co., Dayton, Ohio.—Adv.

Guernsey Bull and Calves For Sale.

W. J. HEID, Fort Atkinson, Wis., is advertising for sale on this page a fine Guernsey bull of Langwater Starlight breeding and several bull calves from two to six months old. This stock is from A. R. dams and would make a valuable addition to any Guernsey breeder's herd. Those interested should write to Mr. Heid for descriptions and prices, mentioning ihs advertisement in The Wisconsin Farmer.—Adv.

How does $240 look for proceeds from a flock of 175 chickens from January 1st to June 8th? That's what Russell Kline, of the Orange Township Co-operative Egg Marketing Association in Blackhawk county, Iowa, received from his flock. Market eggs at 4 cents above the market price brought him $190 of this and hatching eggs sold brought $50. This was in addition to what his family ate and what he used in his own incubators. Since this Blackhawk association was organized about a year ago it has marketed 45,000 dozen eggs on the Waterloo market at 4 cents above the prevailing price. Its membership has increased from twelve to twenty-two. The high price for eggs is obtained because of the care with which the eggs are produced and because of the guarantee that goes with them. Every egg is stamped with an identification number and date, so that there can be no doubt as to where it came from in case of a poor egg.

OAKHURST MILK AND BUTTER KING 55045, a son of the $10,000 bull, Milk and Butter King. His daughters' bull calves are advertised for sale on this page by B. F. Winckler & Sons, Medina, Wis.

HOLSTEIN-FRIESIAN CATTLE.

Holstein Cows and Heifers For Sale
IN order to make room for our young stock we are offering 10 attractive Holstein cows and heifers. Two granddaughters of King Segis sired by Butter Boy Segis. We have tested a few of his daughters making 27.10—26.5 on a junior three year old—23.7 on a two-year-old daughter—and others almost equally creditable. The two for sale are 5 and 6 years old. Two 18 months old heifers sired by Tritomia Ormsby 85890. Four yearling heifers by the same sire. Two 3 year olds sired by a 28-lb. grandson of Hengerveld De Kol. We are pricing these at prices you can afford to pay. They have been bred and developed for production and show it in their conformation and udder development. Those of breeding age are bred to the 29-lb bull, Contest Colantha Bell Boy, a grandson of Colantha Johanna Lad. Come and see them or write

BONNIE MEAD STOCK FARMS, Randolph, Wis.

Purebred Registered
HOLSTEIN CATTLE
One reason of the fast growing popularity of the registered purebred Holstein-Friesian cattle is the almost universal recognition by medical authorities of the superior value of purebred Holstein cows' milk for direct consumption. This endorsement together with the proven ability of Holstein cows to produce much larger quantities of milk at less cost is sufficient for the dairyman who applies thought and business methods to his operations. Investigate the big "Black-and-Whites."

CURRENT EVENTS

AUGUST 1st marked the end of a heated term which ranged in extent of time from 15 to 21 days and covered almost the entire country. It was the hottest spell for fifteen years and a great suffering resulted, especially in the cities, where there were many deaths from heat. Throughout the central states the heat wave was a blessing to the backward corn, and fortunately the hot spell abated before any considerable damage was done. Light rains last week in many parts of the west were a great benefit to corn which in most sections is looking better than for many years.

THE Deutschland, Germany's mammoth U-boat merchant vessel, put to sea August 2d, and at the time this is written reports indicate Captain Koenig had evaded the allied war vessels waiting to capture her. The Deutschland submerged a short distance outside the three-mile limit, making straight for the sea in the daylight of the early evening instead of waiting for darkness as was expected. At the time the Deutschland left American waters there was not an enemy warship in sight.

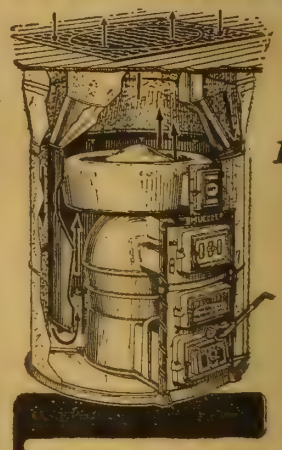
MANHATTAN Island and the Jersey coast were shaken July 30th by an explosion of war munitions which caused several fatalities and $25,000,000 damage. The explosion occurred on Long Tom Island, a small strip of land jutting into New York Bay from the Jersey shore. A long line of piers were burned and several barges laden with munitions were destroyed by the explosion and fire which followed. New York City was rocked by the blast and shells found their way to the statue of liberty in the harbor and did the statue considerable damage. Miles of streets in New York City were strewn with broken glass and fallen signs. An investigation is being made.

IN HIS address formally accepting the republican nomination for president of the United States, Charles E. Hughes, of New York, enlarged on his more brief statement issued following the nomination at Chicago. He went into detail in assailing the Wilson administration Mexican policies, starting out with the failure to recognize Huerta when other leading powers had extended recognitions, and winding up with the fruitless attempt to capture Villa, whom the administration had so recently befriended. A feature of Mr. Hughes' speech, and a rather unexpected one in the light of the republican platform at Chicago, was his stand in favor of suffrage for women, and a national amendment. Mr. Hughes later has said that the suffrage issue should be taken out of politics once and for all and decided on its merits as a national problem. He personally favors a suffrage amendment to the federal constitution, but was careful to state that as his personal views. Mr. Hughes was very outspoken in favor of America first, speaking frankly and openly for preparedness and a vigorous foreign policy which will command the respect of the world. He insisted upon protection for America everywhere and the restoration of a protective tariff, asserting that we would have felt many ill effects from the present tariff but for the prosperity which has come to us as a result of the war. Candidate Hughes expects to make a tour of the country, addressing the citizens on issues as he sees them.

THE third year of the great war in Europe has started with a general tightening of battle lines. On the eastern, western and Turkish fronts, Germany and her allies are on the defensive. The Russian offensive in Galicia threatens Kovel and Lemberg, which are expected to fall soon. Grand Duke Nicholas is pushing the Turks back toward Constantinople, which is still, however, 600 miles from his main body of troops. Several thousand Turkish troops have been transferred to Galicia to assist the Austrians in checking the Russian advance. Verdun holds out against the Crown Prince and the French claim slight gains. In the Somme region, the British and the French lines have been advanced from three to four miles at a cost of from 250,000 to 300,000 men. The German losses are reported considerably less. General Von Hindenberg has been appointed Commander in Chief of the eastern forces of the Teutonic allies and it is reported he will relieve a number of Austrian generals. The conflicting forces have been unable to agree upon any plan which will permit relief by the United States of suffering in Poland.

ROGER CASEMENT, former Irish leader, was hanged in the Pentonville prison, August 3d. He was convicted of high treason and the British government refused to consider appeals for clemency. Casement landed on the Irish coast from a German submarine just prior to the breaking out of the revolution in Dublin. He was convicted of aiding Germany to smuggle arms into Ireland.

Heats Whole House From One Register



Easily Installed in any House Old or New

Furnace Heat Without Pipes

No pipes—No waste heat—No need of tearing up—Can be installed in any cellar or pit at small cost. Big improvement over stove heating. Much better. Saves 25% fuel.

MUELLER PIPELESS FURNACE

Heats every room in the house comfortably from one register and keeps the air pure and wholesome. Keeps your house cleaner than stoves and requires less work to tend. Burns coal, wood or coke. Easily installed in any cellar no matter how small—can be used in houses originally built without cellar, by digging a pit.

WRITE FOR FREE BOOKLET

Gives you all the facts about the Pipeless System of heating and the Mueller Pipeless Furnace. Gives full details of construction and shows pictures of installation. Tells how to apply it to your own home, old or new; how to tell the difference between good and poor furnaces — the things to look out for and the things to avoid. Booklet sent free on request.

L. J. MUELLER FURNACE CO.,
204 Reed Street Milwaukee, Wis.

As we are makers of heating systems of all kinds since 1857--regular hot air pipe furnaces, steam or hot water boilers and vapor heating systems--we are in a position to give you honest advice on your heating requirements.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

HARVESTING THEN AND NOW.

IT WILL never do to live too much in the past or to hold up the "good old days" as being so much better than those of the present that the younger generation will become dissatisfied, yet I find the greatest pleasure imaginable in talking over old times with congenial friends and reading the reminiscences of some man who, like myself, finds his mind turning back, in the autumn of his life, to the springtime of youth. Times have certainly changed. From ox team to automobile, from the cradles in the wheatfields to the binders of today—surely here are such extremes as no other generation has ever witnessed.

I have already taken the occasion, in this page of mine, to tell the story of how the first reaper was received and of how Mr. McCormick's efforts almost proved futile because of the opposition of farm labor, in those early days, to this new-fangled contraption which bade fair, they thought then, to dispense with man labor altogether. I find a most interesting account, in one of the small-town newspapers printed in the grain belt, of the reception of those early reapers here in the middle West, where they were considered as much of a curiosity as the flying machine was ten years ago or the submarine freighter is today. The man who wrote these reminiscences in this grain-belt newspaper knows what he is talking about; he has followed the reaper as the grain was raked off the platform by hand, and has "done his bit" at the binding. That the memories are not unpleasant ones, merely of hot suns and aching back and that sort of thing, is evidenced when he writes:

The harvest days were not days of mere irksome toil. Farmers worked in groups, helping each other, taking the ripest fields first. What a beautiful sight, a half dozen cradlers in line with as many rakers, not infrequently the young women of the community, followed by stalwart young men as binders who vied with each other in each keeping up his part of the work.

Hard work, certainly it was, but this was lightened by the charm of social life. While the breezes played and moved over and through the ripened grain, frequently there were young hearts whose emotions, laughter and joy lit up love's dreams that ripened into the binding of two joys into one.

The older, with less romance, nevertheless made of it a real community interest, while men worked plans of community betterment were being discussed and brought into action which through process of evolution and advancement has given the gracious surroundings of the present.

It was not thought at all improper in those days to follow St. Paul's advise to Timothy, to take a little brandy for "Thy stomach's sake." All the old Hoosiers have distinct recollection of the old-fashioned distillery where pure peach brandy was made, and this was carried to the harvest field as a suitable tonic and preventative against chills and fever.

To the boyish heart there was no sweeter music than the clang of the old farm bell. It rang promptly at 11:30 and the cradles went quickly to a shady nook and all repaired to dinner. Neighborhood women had gathered in to help mother in preparing the dinner, which no evolution in the culinary has improved upon. This was harvest time fifty years ago.

I have always argued that a return to some of the sociable customs of the old days would be a good thing. In the midst of our present agricultural prosperity, we are apt to become a little too much self-centered and fail to avail ourselves of the congenial companionship which was one of the constant delights of the days that have passed. That is why I have urged in these columns that we have neighborhood clubs, to take the place of the barn raisings and corn shuckings of former days. Let us get together more and enjoy one another's companionship and bring back to farming the days when whole communities gathered together in frolics or to work communally, and townships were great, big family parties. We do not want to supplant the binder with the sickle or the automobile with the ox cart, but let us have our innocent farm pleasures and enjoy life and our friends as much as we can.

SUFFRAGE AND RACE SUICIDE

I AM in receipt of a letter from a good friend and subscriber, Mr. W. Reinicke, R. R. 1, Mitchell, Iowa, which interests me greatly. To be perfectly frank, I will admit that at first I thought Mr. Reinicke was prejudiced and had no real facts on which to base his assertions. Later on, when I looked the matter up in my books of reference, I found that he did, indeed, have some backing. Now I hardly know what to think. First, however, let us consider his letter:

The articles about Germany have interested me, for Germany is my old home country. Mr. Evans is a good observer. I have read so much nonsense in the last two years in American papers about Germany that I cannot help thanking Mr. Evans for his fine and unbiased lessons about the conditions in the rural districts of Germany.

But allow me to criticize his standpoint in regard to the German woman. Mr. Evans writes: "They (the German men) believe that women have lost their true function if they are not 'broad-bosomed mothers of stalwart sons.'" Some lines above he says: "The German men do not seem to have a very high opinion of their women folk."

Such statements are indeed remarkable and show to what a degree the unhealthy teachings of the suffragists have borne fruit. Does Mr. Evans not see that the stand the German farmer takes on this question is a natural, healthy and Christian stand, and that the stand of the woman-emancipator is unnatural, unhealthy and unchristian? As soon as women shrink from motherhood the race is doomed. Women suffrage and race suicide are companions. Both show decay, not progress. In the rural districts of Germany the mind and body of the people are still sound and healthful and that is good for Germany; it would be good for our country, too, if we had the same sound and natural conditions accepted by our people, instead of working them into a condition where women despise to become mothers and covet the business of men. If that kind of campaigning is going on, the doom of the white race is not very far off. As the views and teachings of the women-suffragists are in such fundamental questions contrary to the laws of nature and therefore a poison in the body of our great commonwealth, we should try to get rid of such disastrous views and instead of blaming we should enjoy conditions where women are still proud to be the mothers of many stalwart sons.

I am, indeed, delighted that Mr. Evans' articles should be so warmly commended. Personally, I thought them the fairest and most comprehensive articles on the subject I had ever read. I hope all my readers followed them from week to week and found them as entertaining as did Mr. Reinicke.

As to his connection of equal suffrage with race suicide, there is a matter we should all investigate, for it is most important. As I said in the beginning, I did not think there was any basis in fact for such an assertion when I first read the letter. However, I looked the matter up as best I could and here is what I found: According to the last census figures, the number of births in Colorado, in one year, was 12,164. Colorado is a suffrage state. Wisconsin and Missouri are not. With three times the population that Colorado has, Wisconsin had more than four times as many births in one year. With four times the population that Colorado has, Missouri had six times as many births. How are we to account for this discrepancy? I am in the dark and am seeking enlightenment. If any of my readers will take the pains to write me on this subject, giving facts, not prejudices or merely personal opinions, I will be most deeply indebted to them.

Does the fact that women have the right to vote in Colorado explain the birth ratio there being far below what it is in Wisconsin and Missouri, where they do not have the right to vote? Is Mr. Reinicke justified in what he argues? What facts can my readers give me on these important questions?

THE MOTOR CAR AND THE FARMER.

THAT the automobile not only speeds the farmer up until he becomes more efficient, but also that it makes him a better man is the interesting point raised by a motor-car dealer here in the grain belt. Granting that he has a selfish interest in what he says—for it is only human nature to want to succeed at one's own business—I cannot but believe there is much good, sound sense in it. Here is the way he reasons it out:

The auto is not eating when it is not working.

It does not require constant attention when it is not in service.

The farmer can go from his home to town in from one-half to one-tenth the time it takes him in horse-drawn vehicles. If the horse breaks a leg it is lost. If an automobile loses a wheel, it can be replaced.

You can use an automobile in the hottest and coldest weather without blunting your humanitarian impulses. You need not fear a humane officer when you abuse your machine.

A horse's pulling capacity is limited. A motor is built to propel from four to six times as much as a horse. Roads remain better when used by autos than when used by wagons. Rubber tires are easier on highways than steel bands.

Those in the country who have automobiles are within hailing distance of towns and cities. They can keep in touch with and enjoy city life.

To own an automobile makes the farmer a good roads enthusiast. He wants to go faster and smoother. He comes to realize that good roads are a profitable investment. He can decrease the cost of hauling by taking larger loads and using less power.

The psychological influence on the farmer is remarkable. It speeds him up. He becomes a better man. He becomes more alert and more broadminded. His interests are extended from the confined radius of five or six miles to hundreds of miles.

The value of the farm is increased from two to ten times because it has been brought nearer to markets and shipping points. Revenues for civic improvements have been increased by the auto.

The automobile keeps the children satisfied on the farm. They can enjoy both farm and city advantages.

The farmer who owns a motor car will almost always be found in the forefront of those who are endeavoring to improve their community along various lines of activity. They are the quickest to respond when it is proposed to organize a neighborhood club, for they can attend all the meetings and bring all their family, in comfort and without losing much time. They are the quickest to respond when the road problem is up for solution, for they know the close relationship existing between good roads and the enjoyment of farm life generally. They are the quickest to respond when anything which tends to knit the community more closely together and to quicken country life is suggested, for it takes a certain breadth of mind to see that the advantages of a motor car far more than offset the original investment and broad-minded men are what any community—urban or rural—needs.

I am not arguing that any man, be he city man or farmer, should buy an automobile until he has taken a careful inventory, and decided either that he can afford it or that it will so add to his earning capacity that it will soon pay for itself. But I am arguing that once a farmer buys a motor car he begins to see things in a broader and better light, and becomes more of a factor in country-life improvement. No man should go in debt for a motor car if he cannot afford it, but farming has become such an all-around industry, such a combination of industries nowadays, that there are few farmers who cannot afford a car if they use it to the pleasure of all the family and to increase their earning power by taking advantage of market fluctuations, quick trips to town with produce, and so on. What the motor salesman says has much truth in it, according to my way of thinking.

HELPING THE SOLDIER-FARMER.

INSTANCES have come to my attention frequently of kind-hearted farmers turning in to plow or to pick the corn of some neighbor who was sick abed, or had suffered troubles or bereavements which prevented him from carrying on his work. I have commented on such cases several times, always giving to the friendly helpers their well-deserved meed of praise. Now, I am delighted to be able to record another instance of a similar nature, where farmers turned in and plowed the corn of a neighbor who had enlisted and gone to the border to protect Uncle Sam's territory from the raids of Mexican bandits. Here is the story as a subscriber sends it to me:

The neighbors of Floyd McPherren, of Washington township, decided to do that young man a kind favor by plowing his thirty-five acres of corn, as he is a member of the national guard and is now on duty down on the Mexican border, and unable to give his crop the attention that it needs. So eleven men with their teams went over and slayed the weeds, having in mind the Mexicans which Floyd would probably exterminate.

That is what I call a good, neighborly deed, helping a man out when he really needs the help. The young farmer who responded to the call of duty and marched away did not stop to think what might happen to his crops; duty called him far from the field and he answered the call at once. Those who stayed behind heard duty calling them just as it called the soldiers; they were to continue the production and the prosperity of the grain belt and care for those who had been left behind. So, when the soldier's corn needed plowing, they went over and did it, simply and without any thought of being heroes. But heroes they are, in a quiet, modest way, for without them and their kind the sacrifices of the boys who went to the front are in vain. Behind all our martial heroism and sacrifice there must be a firm foundation of agricultural security. The men who are left behind are seeing to it that this is continued. There is an effective co-operation or partnership between the soldier along the Rio Grande and the corn plower and the wheat harvester along the upper Mississippi.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Better Health in the Country.

A SEASON of hot weather such as that which we recently passed through in Wisconsin emphasizes the better health conditions which prevail in the country. In Eastern cities there has been a great scare on account of infantile paralysis. At one time there were as high as 150 new cases a day and the deaths ran about 33 per cent of the cases reported. But we have had no reports of this disease in the rural districts.

Natural conditions make the country a much more healthful place in which to live. The air is not fouled by fumes from factories or rubbish piles. Where humanity is crowded the problem of sanitation is hardest to solve. But we must not get careless in the rural home just because it is favored by natural conditions. First of all be careful concerning the water supply. Shallow wells should be avoided. It is difficult to keep seepage from reaching the shallow well. This is especially true where there is no sewage disposal system. Impurities of every nature on the farm ought to be drained off in an opposite direction from the well. The human body demands a great deal of water and this is especially true in the summer time. Poor water may carry health-destroying bacteria into every part of the body. In a person at all susceptible to disease these bacteria will catch hold and cause great distress. Most of our typhoid comes from impure water.

Decayed matter of all kinds is a great source of disease. The garbage from the kitchen on a quarter section farm should be disposed of carefully either by feeding before it has become decayed or by burning. When we see how much is thrown out of the kitchen on the farm and think how many kitchens there are on a 160-acre tract in the city we get some idea of the better conditions which must prevail in the country. The country has an added advantage in that all vegetable matter intended for food is fresh when the housewife gets it. This is not always true in the city. The farmer and his family get clean, fresh food and this is a big advantage.

Eventually every farm should have a system of sewage disposal. There are various systems and they are getting down in price so that the average farmer can afford them. Modern plumbing means a great deal for better health on the farm. The septic tank, the chemical closet, and such systems are well worth investigating. The conveniences afforded by these modern systems is secondary to the insurance on the health of the family.

Above all things be clean. Cleanliness is the greatest enemy of infantile paralysis, as well as almost all other diseases. Sweepings from the house into the dooryard should be avoided. It is an easy matter to sweep dust and dirt out into the yard and let the wind blow it away; but it is slovenly housekeeping and no good housewife will do it. Those who sit out in the yard or on the porch in the evenings are very likely to breathe in a considerable quantity of this dust which is light and circulates through the air in particles so fine that they cannot be seen with the naked eye. It is far better to burn the sweepings either in the kitchen stove or by laying them on a newspaper and starting a fire. The best way to get rid of any refuse matter from the house or other buildings on the farm is to burn it.

The housewife may be very careful and have her trouble for her pains if there is no effort on the part of the men folks to keep the stables and feed lots clean. It is none of the housewife's business to do work around the stables, but it is some of her business to know that these places are not permitted to get rotten dirty. Her own health and the health of the family is at stake. We have learned to clean up the dairy barns pretty well, knowing that a good quality of milk cannot be delivered from unclean barns. The same interest should be taken where other animals than dairy cows are handled. Removal of the filth from the barns either direct to the fields or to some point distant from the house, is recommended most seriously.

We have said that the farmer and his family get good air, and this may be true on any farm. The screened-in porch is the rule rather than the exception in the country today. Keep the flies and mosquitoes out by all means. The Creator furnishes us good, fresh, clean air free. Don't keep the windows shut down and thus frustrate nature's plans for keeping you in good health.

Good water, plenty of fresh air, and keep everything clean, such are easy, simple rules which can be adopted without additional expense on any farm.

Providing Sinews of War For the Live Stock Rate Battle.

PROBABLY the most important hearing ever held before the Interstate Commerce Commission, so far as the live stock shippers of the country are concerned, is the one involved in the order of the commission directing a general investigation into the railroad rates on live stock and live stock products throughout the country. It is a foregone conclusion that the railroads will make this the occasion for seeking a general advance in rates on live stock all along the line, and thereby seek to obtain what was denied them in the western rate case last year.

It is essential that the great live stock interests of the country, and especially of the grain belt, should be prepared to meet the transportation interests on their own ground, and to defeat any effort toward a raise in rates or a decline in service. To do this properly, it is absolutely necessary that there should be adequate funds immediately available for preparing the evidence, for presenting it to the commission and for meeting the heavy expenses incidental to so important a battle for the common welfare.

One of the most discouraging things in connection with former fights by the shipping interests against the immense power and financial resources of the combined railroads of the country, has been the lack of sufficient funds. It is proverbial that what is everybody's business is nobody's business, and, as a result, the largest share of the burden has fallen on a few organizations and individuals who have been fighting the public's battles as best they could.

It is a tribute to such organizations that they have been able to accomplish so much in the face of the handicap under which they have labored, and it is a testimonial to the ability, industry and public spirit of such men as Judge J. H. Henderson, state commerce counsel of Iowa, and Mr. Clifford Thorne, chairman of Iowa's railroad commission, that the agricultural shipping interests of the central West have been so well represented as in the western rate case.

Mr. E. F. Keefer, secretary of the National Live Stock Shippers' Protective League, with headquarters at the Chicago Union Stockyards, has issued a timely word of warning and an appeal for financial support. The league's plan of raising funds for carrying on its work, with special reference to the big contest now looming up before the Interstate Commerce Commission, is for a voluntary assessment of 5 cents on each carload of live stock. The letter is as follows:

To Live Stock Producers, Feeders' and Shippers' Organizations, and to Live Stock Shippers generally:

The National Live Stock Shippers' Protective League, composed of live stock associations, shippers of live stock, live stock exchanges and slaughterers, also a number of state railroad commissioners, representing various western and central western states, is fully organized and its work begun.

The occasion for the organization is the necessity of united action of all who are interested, to secure just and reasonable rates, regulations, charges and efficient service, and to defend against any demands on the part of the carriers for unjust, unreasonable rates, charges, rules and regulations in matters of common interest pertaining to the subjects mentioned, and for such other purposes as may arise in that regard. It is a national transportation organization of shippers of live stock and its products, confined to that and excluding other matters.

The Interstate Commerce Commission has directed a general investigation into rates on live stock and products of live stock throughout the country, wherein the carriers will undoubtedly seek to increase their revenue by increased rates, and changes in various matters of the practices and rules of transportation. This must be met by the man who pays the freight, to the end of securing what is just, fair and reasonable. Many other matters like cleaning and disinfecting charges, live stock shipping contracts and limitation of liability are involved.

The executive committee has been selected by the respective interests to carry on the work. The membership of the executive committee affords ample assurance of the representative and high character of the organization and its efficiency. Every shipper of every car of live stock has this force for protection. The purposes are not to take the place of other organizations of shippers, but to combine the strength and efforts of all interested.

To carry out and to accomplish these ends, it is necessary to secure sufficient funds.

To do this we have adopted a plan of assessing 5c per car against the shipper, on every car of live stock shipped, to be deducted from the account sales of all live stock shipped to the market, and where shipped other than to market, the 5c per car to be paid by shippers direct to the treasurer of this organization.

In its very nature, this must be voluntary, but inasmuch as it so equitably distributes the expense of carrying on this work among the parties interested and who benefit thereby in direct portion to the interest which he has, it will receive the support of all who favor this great work.

It is necessary for the most part to proceed through the organizations of live stock producers, raisers, feeders and shippers as represented by their various officers, because it is impracticable to reach every shipper. If any shipper, accepting as he will the benefits of this work, which necessarily must apply to all alike, is not willing to pay 5c per car, the amount collected from his shipment will be refunded to him.

We appeal to you in your own interest and in the interest of the shippers of live stock generally, to heartily join in the work of this, your organization, and in the plan for financing the same on the basis above named. We feel sure that you will do this. The importance of preparing for it and fighting our battles by the joint work and at joint expense cannot be overestimated.

Expecting your hearty co-operation in the work of this organization and in the plan for financing same,

Respectfully submitted,
National Live Stock Shippers' Protective League.

With the certain knowledge that the railroads will be represented by the very best legal talent available, that they will have their case in the strongest form in which it can be presented, without regard to the expense, and that they will fight harder than ever before to make an apparent showing that will justify an increase in rates, it certainly behooves the live stock shipping interests of the country to get busy along such lines as those suggested by the National Live Stock Shippers' Protective League.

There is not a reader of this paper interested in live stock who could not well afford to contribute much more than the amount asked on each carload of stock, for the sake of helping protect himself from those who are seeking to exploit him, for the sake of rolling up larger dividends on vast capitalizations of watered stocks and bonds.

We trust and believe that the live stock raisers of the country will respond to the appeal which has been made with a will and that, as an expression of thankfulness for what has already been saved them by those who have borne the brunt of the fighting, as a protection of their own interests, and as a matter of public duty, they will see to it that sufficient funds are provided to enable their representatives to present their side, at this most important hearing, in an adequate manner, without the embarassing conditions that have too often handicapped them in their great work.

Tractor Does Not Scare Wisconsin Horseman.

A FEW days ago someone asked Ira Griswold, a Grant county breeder of Percheron horses, how he could reconcile his enthusiasm for both the horse and the tractor. On Mr. Griswold's 400-acre farm, he uses a 12-25 tractor. He practices spring plowing in order to have fall pasture as late as possible for his pure-bred stock. He states that his horses are never idle when the tractor is at work. Instead of displacing horses on his farm, Mr. Griswold says the tractor makes more work for horses, but the work for horses is lighter work. His tractor keeps ahead of his teams all spring and makes them hustle. In the fall he fills three silos with his tractor and does a lot of odd jobs such as grinding feed for 150 or more head of stock kept on his farm. Mr. Griswold says that the tractor has no trouble in turning over twenty acres of timothy and clover sod a day, and regards the cost of machine and its maintenance as paid for by the saving of horseflesh in spring work. This is the third season Mr. Griswold has used the tractor.

Mr. Fred Pabst, at Oconomowoc, bought his first tractor three years ago, and he liked it so well that he bought another this spring. He regards mechanical farming as practical, and expects to be present at the round-up and tractor demonstration at Madison, September 4th to 8th. Mr. Pabst recently made a statement that it would not have been possible for him to have harvested his enormous crop of hay this year and gotten it all in without the aid of truck and tractor. He used a hayloader attached to the rack, which would have been a very hard and heavy load for horses.

Wisconsin State Fair.

OUR readers should have well in mind the dates for the Wisconsin State Fair, at Milwaukee, September 11th, 12th, 13th, 14th, 15th and 16th. There will be distributed at this fair $65,000 in premiums and purses besides many thousands of dollars in special prizes. The Wisconsin Farmer is anxious that the farmers of the state support the fair, which is run largely for their benefit. The exhibits of dairy products and dairy cattle will be well worth seeing and will be an inspiration to those who give them attention. Plan to attend the Wisconsin State Fair.

Considerable effort has been made to make the amusement features of the 1916 fair the best ever staged in Milwaukee and the city of Milwaukee has arranged a $20,000 free festival which will no doubt add a great deal of interest. But we more especially urge our readers to visit the fair for the purpose of seeing the state's progress in live stock and general farming; to learn what your neighbor is doing and to profit by his success.

This has been a good hot summer, but by fair time the heat will long since have gone, and Milwaukee and the state fair offer a great opportunity to spend a few days in recreation and profitable study after the harvest.

This is the year of all years to bring the children and young people, as special contests and other forms of entertainment have been arranged for them, more particular mention of which has already been made in The Wisconsin Farmer.

Disking Alfalfa Ground.

THERE are many thin alfalfa fields in the corn belt this year as the result of partial winterkilling. Several instances have been brought to our attention where the crop amounted to not more than one-half a stand, and this condition always favors weed growth in an ideal way. One may rest assured on most corn-belt land, that if crops having an economic value are thin, the yield will be made up by worthless weeds, and this condition always raises the question as to whether or not it is advisable to bother with a thin hay crop.

However, those who have had a taste of alfalfa growing are not likely to yield easily to a little winterkilling, and numerous attempts have been made to revive and thicken the crop by giving the alfalfa a thorough disking after the second cutting. Many fields have been so thoroughly disked that scarcely a green vestige remained when the work was done, the thought in the minds of the grower being, no doubt, that he would either remedy the situation or kill the crop. There has been more disking of alfalfa fields this spring than ever before, and while the outcome of the practice is more or less questionable, under certain conditions, it is quite likely that the matter will be settled definitely this year.

In some instances the disking of alfalfa results in splitting the crowns, thereby admitting water and starting the rotting process. Some of our experiment station workers have denounced the practice of disking alfalfa fields because of the injury that is likely to be done in this way, though, on the other hand, men can be found who have repeatedly disked alfalfa fields without any unfavorable outcome. The disking generally brings about the destruction of a certain percentage of shallow-rooted annual weeds, though it is a mistaken notion to believe that blue grass or timothy, or crops of that kind, are in any way damaged by this kind of tillage.

In some instances those who have thin fields have used a little more seed before disking, and one case is called to our attention where ten pounds per acre was sown, after which the field was disked and cross-disked, the hope being that the fall rains would start the new seeding so that next year a full stand would show up. A little later we will appeal to our readers for the result of their efforts not only in those cases where disking has been practiced without seeding, but also in instances where the plan of both seeding and disking has been followed.

The Fight on Meat Consumption.

ONE of our subscribers, Mr. Geo. B. Smith, forwards a communication dealing with the meat boycott and urges the employment of more capital by farmers, in order that they may take up more and more the raising and feeding out of good cattle. Mr. Smith's letter follows:

A boycott on beef has been proposed by the city consumer as a means of lowering the price of beef. This is like "cutting off one's nose to spite the face." Better than a boycott on beef by the city man would be a co-operation with the farmer in raising more beef cattle. Many farmers would like to raise more beef cattle if they had the money.

Grain farming requires very little capital, and country money naturally drifts to the city. Banks in the country are required by law to deposit a large portion of their funds in central reserve cities. Bankers in these cities, naturally prefer to loan the funds thus accumulated at home under their close observation. Thus, the farmers own money gathered by the banking system in the cities is often used directly against him by the large market speculators.

There is a commendable effort on the part of money bankers to correct this and there is to be a banker-farmer meeting at Jackson, Mich., August 10th to discuss rural credits. The banker-farmer movement has been "aired" a good deal in the agricultural press and the writer has no doubt that many bankers are sincere in their offers to help the farmer. One city bank has employed a beef cattle expert at a large expense to assist in placing loans through its correspondent country banks for the purpose of enabling the farmer to keep more live stock.

The effort of the bank is certainly a concrete expression of its sincerity. We have no right to say that any bank is insincere, but there is a tendency even among banks that are foremost in the movement, when it comes to the practical, to do the thing that is easiest, i. e., make loans to city customers, who are near at hand instead of the farmer which latter loan must be handled through some outside connection. But others in the city must assist the farmer to keep more live stock as well as the city banker. People of wealth who are looking for safe and remunerative investment of idle funds, will do well to investigate farm loans. The writer personally knows of some good 5 per cent paper to be had from farmers who are practically out of debt and worth from $30,000 to $40.000. Small savers who wish something better than bank interest, could purchase this paper with perfect security and profit, and at the same time assist the farmer to keep more live stock. Like the man of wealth, the small saver will then have a country home where he will be always welcome in vacation time. Price conditions favor the farmer. He is as well fixed to pay interest as any man on earth, and he is honest.

Another powerful factor in increasing the number of beef cattle to come from the cities is in the newspapers. Nearly every farmer nowadays takes a daily paper and is influenced by its contents. When the newspaper talks about a boycott of beef no farmer cares to begin raising beef cattle, but when the newspaper tells him that the ranges in Montana are now wheat fields, and beef breeding offers an inviting opportunity for the small farmer everywhere, on account of the high prices for beef cattle, and the likelihood of further advances; tells him some of the principles of breeding, how a pure bred fixes the character of the calf so that by using a pure-bred beef bull he will get calves like the sire, even from thin cows of the dairy type, if the cows are grades, and not pure breds; tells him how he can raise beef calves with little expense at the farm on skim milk, it will have the effect of holding down the advance if it does not check it altogether, and is a plan that does not compel the city man to go without meat as does the plan of boycott, which some people have advocated.

Most of our readers are aware of the fact that the National Dairy Association proposes to expend hundreds of thousands of dollars in advertising dairy products. That plan is deemed practicable for the reason it is claimed that the average person does not realize the superior food value of dairy products. It is proposed to popularize milk as a beverage to the end that dairymen will have created for them a more stable market.

It has been suggested that a similar campaign be conducted for the purpose of popularizing meat as a part of the human diet. It is pointed out that the great nations of the world are meat eaters, and that the raising of live stock is the basis of the most substantial kind of prosperity in farm affairs. The workers of our cities need a constant supply of meat products, and as the productive capacity of our western ranges have been permanently reduced, we must look more and more to the great corn-belt region for our meat products. It is just possible that out of the movement designed to counteract the endeavors of the so-called vegetarians, there might come some unanimous action on the part of our various pure-bred live stock breeding associations. The cause in which they are engaged is a common cause, and questionably the use of part of the treasury surplus of some of these associations might be made to stimulate a demand for meat products, in order that the meat producer might find in the future a steadier market and a more constant demand.

Active in Fight Against Hog Cholera.

ALTHOUGH the loss of hogs from cholera during the last two years was materially less than it was three years ago, there is still sufficient loss to justify the most active kind of a campaign for stamping it out altogether. As Iowa is the leading state in the Union in hog production, it is most fitting that this state should lead the way in organized effort to stamp out this scourge. Recently some twenty-eight counties in that state have been organized into one district under Federal Inspector J. S. Koen. Dr. Koen has made an exceedingly good record in Dallas county in fighting hog cholera, and now the government proposes to enlarge the area that is placed under special supervision. One of the first undertakings of Dr. Koen in organizing this larger district is to standardize the prices charged by veterinarians for vaccination against hog cholera. In the past there has been considerable complaint about extortionate charges that were made in some instances, and one result of this has been to discourage stockmen in the use of serum. It has been decided in the twenty-eight counties that a charge of 10 cents per head will be made by the veterinarian for vaccination. In addition, he will be paid a traveling expense at the rate of 50 cents per mile. Added to this, of course, is the cost of the serum, and every effort will be made to reduce this to a point where swine breeders will give the most hearty kind of support to the movement for stamping out the disease.

Giving Two Sons the Right Start.

AN INSTANCE is called to our attention where a 280-acre farm, free from debt, is owned by a widow. Over 200 acres of this land may be used for farming purposes, the balance being pasture. There are two sons in the twenties, ready and willing to take over this land from their mother on some sort of share basis. One of the boys owns enough horses to operate the land, while the other has several hundred dollars in his bank account. The question comes up: What arrangement should be made so that the mother will receive returns from the land and the boys at the same time will be given a favorable start on their own account?

To begin with, it must be acknowledged that the arrangements to be carried out in this case will largely depend upon the mental and physical characteristics of the boys themselves. If they naturally like farm work and if they have always shown aptitude to learn from experience, then there is no reason why these two boys should not undertake to handle this 280-acre farm on a basis that will be profitable to them and satisfactory to their mother.

There are two theories of renting to be considered, namely, the cash system and the share division. As the chief lack of the boys in this case will be capital, presumably the share plan will be the wiser one to adopt. Implements will have to be purchased and enough feed for the work horses to carry them through the first season. If these boys are favorably known, they will have no difficulty in borrowing enough capital at their local bank to buy implements enough to handle this farm. Indeed, it would be quite in order, as this land is free from incumbrance for the mother to loan her sons enough capital so that they can purchase sufficient equipment to handle the first crop. To be sure there would be an interest charge for this capital, but if the land is productive it will be taken care of in due time.

One method of renting requires that each party shall receive half the returns from the land, while in other cases the owner of the land only receives two-fifths of the returns. On productive soils the half-and-half basis is the most common plan of renting, while on land that has been somewhat worn by cropping, the owner is fortunate to obtain a two-fifths return if at the same time the land is well farmed.

Then, of course, there is the pasture land, which usually rents for cash. As capital may be lacking to put in enough stock to graze the pasture the first year, it is quite likely that the boys will be able to get good returns from it by leasing to neighbors. Another plan would be for the owner to retain the pasture land and lease it directly to stockmen. Whatever plan is followed must be outlined in writing and signed by all parties. Remember that family matters are much more liable to be mixed up than are business affairs between strangers and for that reason a contract written in definite terms should be signed.

These young men are placed in a fortunate position and they can well afford to take their coats off and work shoulder to shoulder for a few years. Under normal conditions they will receive much better returns from this land than they can possibly command as wage earners, and it is only a question of buckling down together and working harmoniously not only for their own interests, but also for the best interests of their mother.

Too Much Grain Fed to Fattening Cattle.

IF THE RECORDS of our leading experiment stations are to be relied upon, certain old-fashioned methods employed in finishing beef cattle must be thrown into the discard. No station in the Central West can be credited with more reliable and more practical work in the interests of the farmer than the institution located at St. Anthony Park, Minnesota, and that station now proclaims the doctrine that the chief method of increasing profit in fattening cattle is to reduce the amount of grain nearly half and to increase the amount of roughage.

During the last few years eight different groups of cattle have been fed out at that station under varying conditions and in every case the 184 steers included in these experiments paid a profit over and above the value of the food consumed. In the case of steers that ran on pasture for two seasons this profit varied from $20 to $25 per head.

Prof. T. L. Haecker, who is in charge of the section of animal husbandry of the Minnesota station, says that nearly twice as much grain is fed under ordinary conditions of beef production as should be used in making the most economical gains. It is a well-known fact that many feeders use as much as fifteen, twenty and even twenty-five pounds of grain daily for a two-year-old steer, but Prof. Haecker in all his experiments never fed more than eleven pounds a day. He has been able to feed a steer from the time he weighs 100 pounds until he weighs 1,200 pounds on 3,288 pounds of grain, 2,899 pounds of hay and 3,240 pounds of silage. The grain used was made up of a variety composed of corn, barley, oats, bran, oil meal and middlings, these being fed in varying proportions. Practically one-fifth of the total grain ration was composed of oil meal. It was found that the grain cost for feeding the steers the first year amounted to $14.32 a head and for the second year $39.92, making a total cost of $54.24 for the grain consumed by the two-year-old steer up to the time he is finished for market. On this light grain ration a gain of approximately two pounds a day per head was made. The records show that the cost of feeding calves to a weight of 100 pounds amounted to practically ten cents per pound. From 200 to 300 pounds the feed cost 4.9 cents a pound. In the case of a steer weighing from 900 to 1,000 pounds the cost of a pound of gain was 9.3 cents, while for a steer weighing from 1,400 to 1,500 pounds the cost was 15.4 cents.

Prof. Haecker concludes, as the result of his somewhat extensive experiments in feeding cattle, that heavy grain feeding is wasteful and increases the cost of gains, correspondingly cutting down the profits. These results harmonize with those obtained from many successful breeders. One of the most progressive stockmen in the Central West, who feeds out hundreds of steers annually, has had exceedingly good results for a period extending over forty years in using a limited grain ration in conjuncton wth plenty of pasture. His claim is that he is not trying to see how much food his steers can destroy but, on the other hand, his constant aim is to get his steers ready for market at the least possible cost per pound.

Hampshire Breeders Are Pushers.

THE breeders of Hampshire swine are putting on a series of free public sales, to assist in raising a premium fund for the National Swine Show of America as well as for other large shows of national importance. The breeders are consigning several hundred head of their choicest individuals to these sales and will receive only 50 per cent of the selling price; the other 50 per cent will be retained for the premium fund. Various auctioneers will cry these sales free of charge, so there is no question but Hampshire breeders will soon get a large premium fund together and in that way stimulate interest in public exhibitions this year. The plan of these progressive breeders is worthy of emulation.

Milk Producers' Organization.

Brown County Farmer Tells Us How the New Association in His Neighborhood Was Organized and Gives Its Aims and Objects.

MR. Julius Van Calster, Brown county, Wisconsin, writes The Wisconsin Farmer, relating some facts incident to the organization of a milk producers' section of the Brown County Farm & Produce Association. This association had 70 charter members the fifteenth of July, and by this time it probably has 100. At the time Mr. Calster wrote The Wisconsin Farmer no move had been made for a higher price for milk, but this is one of the objects of the organization and the conditions which prevail, resulting in a milk shortage in the various portions of the state, will doubtless further the matter. The Brown County Association is endeavoring to enlist the support of at least one hundred fifty members before any concerted move is made looking toward an advance in prices. The price paid in July in Brown county was $1.30 per hundred. This same milk was retailed at 7 cents per quart with some talk of making it 8. Some of the buyers seemed to be very willing to cut the price of milk for the producer, but very unwilling to cut it to a corresponding ratio for the consumer.

A copy of the constitution and by-laws of the Brown County Farm and Produce Association has been forwarded to The Wisconsin Farmer. We publish it herewith for the benefit of producers in any other county who may have a thought of organization.

PREAMBLE.

We, the milk producers of Brown county, Wis., believing it to be to our mutual benefit, do hereby organize and agree to be bound by the following constitution.

ARTICLE I. NAME.

The name of this organization shall be the Brown County Farm and Produce Association.

ARTICLE II. OBJECTS.

The object of this association shall be to promote and safeguard the interests of the dairy producers, and to develop the dairy industry of this county, by keeping better cows, eliminating "boarders" and diseased animals, providing better sanitary conditions, improving the quality of the milk, increasing the output, decreasing the cost of production, including feeding, management of cows, and the handling of the milk, and by co-operating with the dealers to adopt a fair scale of prices for milk and cream, adjusted according to the percentage of butter fat, and the quality and sanitary conditions of the milk and dairy.

It is the purpose of this organization to conform with reasonable regulations as regards dairy inspection, and a committee shall be appointed to adjust differences between the dealer or dairy inspector and the milk producer. It shall be the duty of the adjustment committee to formulate reasonable regulations as regards equipment and management.

The testing of dairy herds is recommended by individual testing or by organizing a local testing class with the purpose of eliminating the unprofitable cows. An official milk tester may be appointed, who shall from time to time test the milk furnished by patrons at the several receiving plants. This official may act as an arbitrator to settle disputes between patrons and dealers on this point.

ARTICLE III. MEMBERSHIP.

Any dairy producer may become a member of this organization by paying the annual dues of $1 and agreeing to live up to the rules of this organization.

ARTICLE IV. OFFICERS.

The officers of this organization shall be a president, three vice presidents, and a secretary-treasurer; these five to constitute an executive committee who shall transact the business of this organization. These officers shall be elected at the regular annual meeting of the organization, which shall be held the second Monday in January of each year, and they shall serve one year, or until their successors are elected. These officers shall perform the usual duties of their several offices.

ARTICLE V. COMMITTEES.

The president shall appoint the following committees:

An adjustment committee of three to adjust differences between dealers and milk inspectors and members of this organization.

A program committee of three, including the secretary to arrange programs for meetings of this organization.

A working committee of three in each township to secure members for this organization, and to look after the interests of the organization in their several townships.

Such other committees as may be required to carry on the work of this organization.

ARTICLE VI. MEETINGS.

The regular annual meeting of this organization shall be held on the second Monday of January of each year, and other special meetings may be held from time to time on the call of the president.

ARTICLE VIII. AMENDMENTS.

This constitution may be amended at any annual meeting provided that two-thirds of all members present vote for such amendment. All amendments shall be submitted in writing.

BY-LAWS.

1.

Every member shall live up to the rules of this organization and shall assist in promoting the dairy interests of this county.

2.

Every member of this organization shall accept and abide by the decision of the adjustment committee.

3.

The secretary-treasurer shall receive reasonable compensation for actual time employed in the work of this organization. Other officers shall receive no compensation, but shall be paid for actual expenses incurred in carrying out the work of this organization.

4.

When special meetings are called the secretary shall publish notice of such meetings through the press of the county.

5.

The secretary-treasurer shall furnish a bond satisfactory to the executive committee.

Grade Jersey Banner Cow.

To the Editor:—The banner cow for the month ending July 20th, in the Waupaca and Butternut Ridge Cow-Testing Association, is a grade Jersey owned by E. O. Frihart, Weyauwega. She produced 65.5 pounds of butter fat, and 1,284 pounds of milk testing 5.1 per cent. This is a good record for a cow purchased last spring for $65. It is interesting to note that in five months this Jersey cow has produced almost as much butter fat under Mr. Frihart's care, as she did in the previous year, under another owner. This is certainly an illustration of how some cows will respond to good treatment and good feeding. This Jersey was an average cow under the former owner, treated in an average way, but she was made an exceptionally good cow under different treatment. Be sure that full duty is done toward the cow in care and feeding before she is condemned as of little worth. Mr. Ira Farley, of Butternut Ridge, Waupaca county, recently sold one of his good producing Holsteins to the Wisconsin Live Stock Breeders' Association at Madison, for demonstration work. We are proud to note that the officials of this association chose a cow of good merit from out of our association. This we regard as another good boost for Waupaca county cattle.

River Falls and Roberts Report.

To the Editor:—There were eighty cows under test in July in the River Falls and Roberts Association, which produced 40 pounds of butter fat or better. July showed a big drop in the list as it was dry and hot and flies bothered the cows a great deal. We hope to send the Wisconsin Farmer a better list next time. The following list includes the cows which produced 45 pounds of butter fat or better in July:

The Old Standby

Every farmer who has used an EAGLE Ensilage Cutter knows its absolute reliability. When your corn or other silage feed is ready for the silo, you want quick service with a safe, reliable, large capacity silo filler. Experience shows that the EAGLE is a compact, safe, well built, clean-cutting machine of extra large cutting capacity and reliable service.

EAGLE Ensilage Cutters

are simple, durable, light running machines. The deep-grooved and non-winding spike rolls give far greater feeding possibilities than any other cutter. Reverse lever permits instant stopping and reversing. They are machines with easy running, durable, positive-drive blowers that will not clog. *Get catalog at once showing other special features.* 26

The "Best" Potato Digger

Must Satisfy You or Money Back.

Here is a time-saver and money-saving Potato Digger so successful in its work that we can safely ship it on a "money-back" guarantee. Try it at our risk. If not perfectly satisfied, the test of the "BEST" POTATO DIGGER costs you nothing. The "BEST" POTATO DIGGER is the result of many years of experiment. Hundreds of tests were made in all kinds of soil before the machine was perfected. It is perfectly balanced. Lifting device enables one man to lift 500 lbs. on the shovel with ease. Adjustable seat to suit height of operator. Positively no injury to the crop no cutting or bruising as with hoe or fork.

COULD I MAKE IT STRONGER?

At the end of twelve months if a Galloway Spreader has not paid for itself, provided you have hauled out 100 loads of manure or more, and it has not proven everything I say for it, I agree to take it back, pay freight both ways and return your money no matter on which of my six plans you buy. Could I make this offer if I was not sure of my ground—that the spreader would please you—that it would pay for itself—that everything I have said about it would be backed up by the spreader itself? My new steel beater and wide-spreading V-rake pulverizes and tears the manure to shreds—worth $15 extra on any spreader, costs you nothing extra on the Galloway. INVINCIBLE PATENTED ROLLER FEED; this great exclusive feature on the Galloway Spreader makes it superior to all others—the secret of light draft—a feature worth $25 alone on any spreader—exclusive on the Galloway, but costs you nothing extra. NEW EVERLASTING PRESSED STEEL unbreakable tongue worth $5 more on any spreader—no extra charge on a Galloway. PATENTED AUTOMATIC STOP uniform clean out push-board, worth $10 on any spreader, exclusive on the Galloway, but costs you nothing extra. Those features have caused thousands of Galloway Spreader users to write us that the Galloway is the best spreader on earth. TOP DRESS CROPS NOW! Don't buy a spreader of any make or kind until you have tried a genuine Galloway at our risk.

We can furnish Blower or Enclosed Steel Carrier as desired.

Guernsey Gets Month's Record.

To the Editor:—The following is the report of the Manitowac County Cow-Testing Association No. 1, for thirty days ending June 17, 1916: The best cow in the association this month is a registered Guernsey, owned by Joseph Brennan, Cato, Wis. This cow is nine years old and weighs approximately 1,400 pounds. She freshened May 12th. Received only pasture during the time of her record, which is milk, 1,695.5, testing 5.0 per cent—84.8. A registered Holstein cow owned by Adolp Otto, Valders, was a close second, with 1,881.0 pounds milk, testing 4.2 per cent—79.0 pounds fat. Out of 480 cows tested, 115 of them made 40 or more pounds of butter fat, with 56 cows making over 45 pounds of fat. The registered Holstein herd of Torris Geraldson, of Manitowoc, had the highest average of fat production. Herd average, milk, 1,324.4 pounds; fat, 49.1 pounds. The grade Holstein herd of Pat Cahill, Grimms, had the greatest returns for $1.00 expended in feed. Amount of return for $1.00, $7.11, twenty-five cow herd. Following is the list of cows which produced 45 pounds of butter fat:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

H. R. Brewster, Official Tester.

Cow Testing Brings Results.

Some months ago The Wisconsin Farmer started to publish reports of Wisconsin cow-testing associations, and through the kindness of testers and secretaries we have been able to get hold of a good many of these reports. At the time these publications were started, The Wisconsin Farmer listed all cows showing forty pounds or better of butter fat in thirty days. The list became so long that we had to raise the standard and publish only those which show forty-five pounds on thirty-day test. Now the list of forty-five-pounders is swelling on us and testing the capacity of space, so that we expect soon to have to enumerate in the lists only the fifty-pound cows or better. This is best proof of the improvement which is going on among the herds of members of Wisconsin cow-testing associations.

Your Neighbor's Car

Suppose He Buys a Hudson Super-Six

One thing we can't forget in buying cars. That is pride of ownership. The car is a pleasure vehicle. And it spoils the fun to be hopelessly outrivaled in about the same-class car.

The Hudson Super-Six has proved itself supreme.

With this patented motor—certified a stock motor—it has done what no other stock car ever did.

It has made faster speed. It has done better hill-climbing. It has shown quicker pick-up. It has gone 1819 miles in 24 hours, breaking the best former stock car record by 52 percent.

It has beaten race cars by the dozen—cars of a very costly type. It has shown much more power than this size motor ever before developed. It has proved matchless endurance.

Suppose your neighbor gets this car. And you, while paying as much or more, get something less efficient. How will you feel when the two cars meet?

What These Things Signify

You do not care for reckless speed. Such power is rarely needed. But the Super-Six has the capacity. You know it to be the master of the road. It will do what you want without taxing half its ability. And that means economy.

It will cover more ground than lesser cars, without going any faster. This because of its quick get-away when you slow down or stop.

Its greatest supremacy—that of endurance—means years of extra service. How would you feel to have a like-class car excel yours in these respects?

Means 80% More Efficiency

The Super-Six motor—a Hudson invention—adds 80% to motor efficiency. That is, from a small, light motor it gets 76 horsepower. The same size of motor heretofore yielded us 42 h. p.

This result comes through ending vibration, the cause of motor friction. It gives such smoothness as you never knew before. And it means a long-lived motor.

It comes in a car, evolved under Howard E. Coffin, which has long stood for the acme in fine engineering. And it comes in the handsomest, best-equipped model that Hudson has ever designed.

If your neighbor gets it, and you don't, it may mean to you years of regret. In looks and performance, in prestige and endurance, he will have the advantage of you. Your Hudson dealer can prove these things beyond any possible question. And you should know them before you buy any high-grade car.

Any Super-Six owner—there are now more than 10,000—can tell you what it means to own one.

AILING ANIMALS.

Deed to Wife and Child—Wife's Property.

A Subscriber, Camp Bellspoint, Wis.—My mother died twelve years ago, leaving my father and four children, who are now of age and married. My father married again and has a son by his second wife. My father has money and land and has been sick for two years. He has given all his money and deeded his land to his second wife and said son. (1) Can the four children of his first wife get any of his property by law? (2) Can a wife claim the milk and calves from cows given to her by her parents?

Answer.—(1) The four children cannot get any of their father's property by law. (2) She can.

No Fence—No Damages.

A Subscriber, Alma, Wis.—A and B own adjoining farms with a public road between them. A uses his land for pasture, and has a lawful fence. B cultivates his land and has no fence. If A's cows should enter B's field, could B recover damages from A by law?

Answer.—On account of B having no fence he could not recover damages from A by law.

Not a Citizen.

Mr. Albin J. Johnson, Crivitz, Wis.—A child was born of foreign parents on board an American steamship coming from Europe to the United States. Is said child an American citizen?

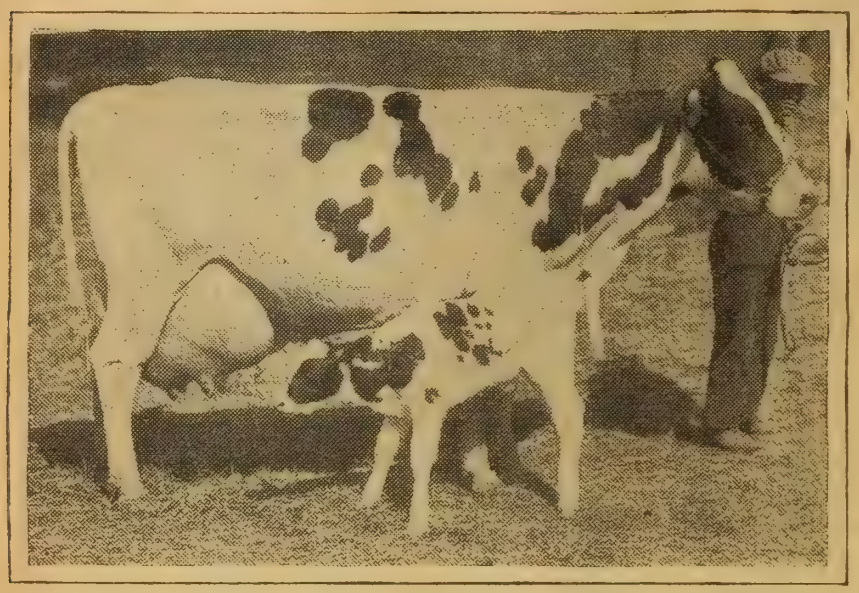
Answer.—Said child is not an American citizen.

That sweet clover will not grow on plowed ground is the claim made by farmers in some parts of Iowa. The Iowa Experiment Station men do not agree with this, however. A flourishing crop in Ringgold county that was sown on plowed ground has been called to their attention. The field is alongside the road from Mt. Ayr to Elliston.

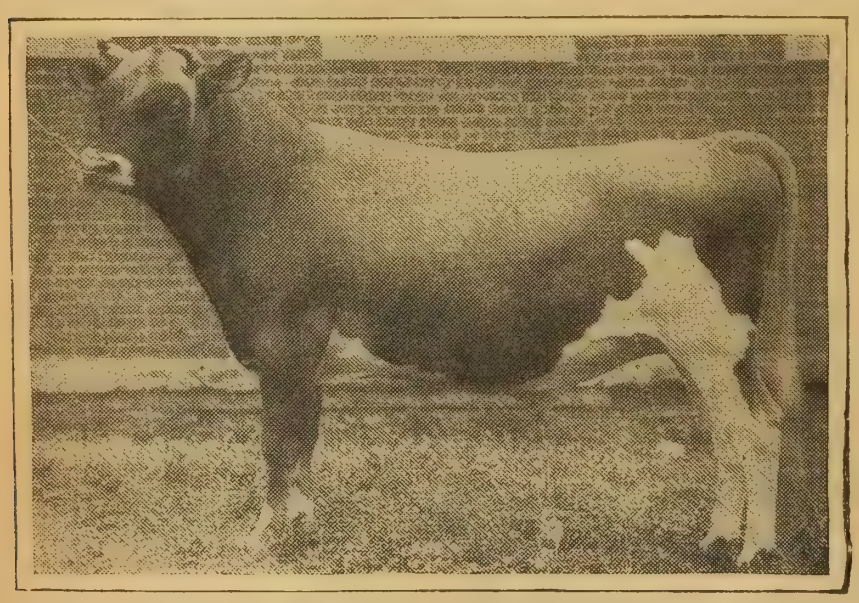
MANAGING THE DAIRY HERD.

Feed, Breed, Care and Selection the Fundamental Essentials or Principles in Building Up of a Dairy Herd—By F. H. Scribner, Fond Du Lac County, Wisconsin.

THERE are certain principles underlying all character of work, and the fundamental essentials or principles in the building up of a dairy herd I would like to divide into four classes, as follows: First, feed; second, breed; third, care; fourth, selection; and believe that the order given is their order of importance. Many breeders would say that breeding was of the most importance, but I have seen many a breeder that made a sad failure of the business because he ignored the feeding proposition, and made even worse than scrubs of his well-bred animals. Scant feeding means degeneracy, a weakening of all their constitutional and physical being, and not only incapacitates them for work, but making them, on account of their physical weakness, far more susceptible to disease. On the other hand, generous feeding of the right nature has a tendency to build up constitution and develop those tendencies that go to make up an animal that is worth while, in fact, feed is the only way that a dairy animal can be developed. The trotting horse can be developed by speeding a little each day, but the dairy cow is not built that way, and the man who is striving to improve his dairy herd must study this all-important question, so that a little later, when he begins to realize the necessity of better breeding, his time and money will not have been in vain. I find on looking over the long list of men, who have made a success in the dairy business, that they have followed along very closely to the lines of scientific investigation, or, if you please, good common-sense principles; that a cow, to do her best, must have about a balanced ration—that is, the right amount of protein to carbohydrates. Thanks to scientific research along this line—the chemist is able to tell us the composition of the different feeds. He tells us that protein is that element in foodstuffs that makes the muscle and growth, and that the carbohydrates furnish the heat and the energy. And, so, with this analysis, we are able to determine very closely a so-called balanced ration for our dairy cows. A cow to do her best must have her bodily condition kept right. This should be the thermometer which every feeder should go by. She must not be too poor—neither too fat, but in a good, healthy working condition. The cow's individuality should always be taken into consideration, and if she grows poor by feeding a so-called balanced ration, then this ration is not a balanced feed for her, and more of the carbohydrates or fat-making element should be fed. On the other hand, if a cow takes on flesh, then that is a sign that her ration is not balanced, and more of the muscle-making element—protein—should be fed. I visited a man the other day who had invested $200 in a pure-bred dairy sire, and in talking with him about feeding, he said: "Hay and corn fodder were good enough for his cattle," and we can imagine just about how much improvement he will make in the business. I also visited another man who was using his fourth pure-bred sire, and his cows graded up to thirty-one-thirty-seconds' pure-bred. They had all the markings of pure-bred animals, but were about as degenerated a lot of animals as I ever saw, simply through lack of feed.

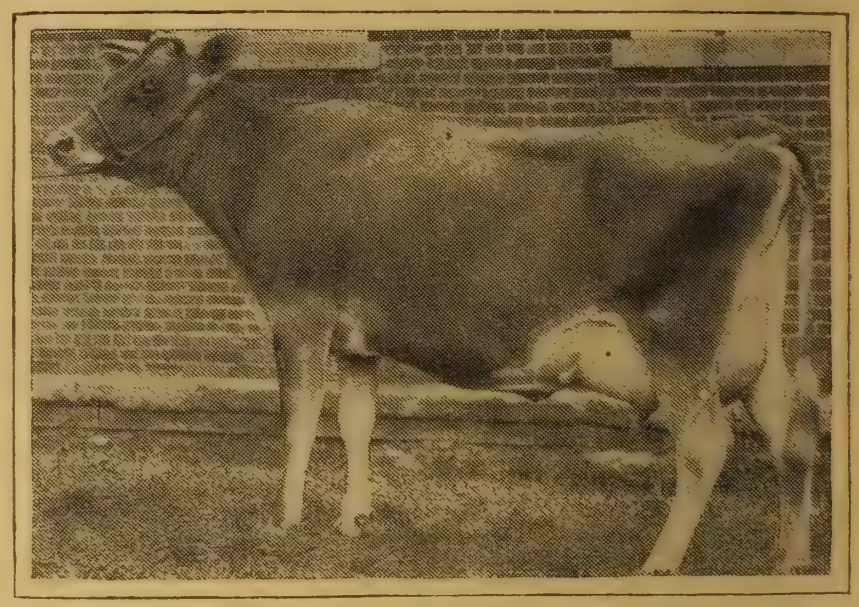


GENEROUS FEEDING OF THE RIGHT NATURE DEVELOPS THOSE TENDENCIES WHICH MAKE A DAIRY ANIMAL THAT IS WORTH WHILE.

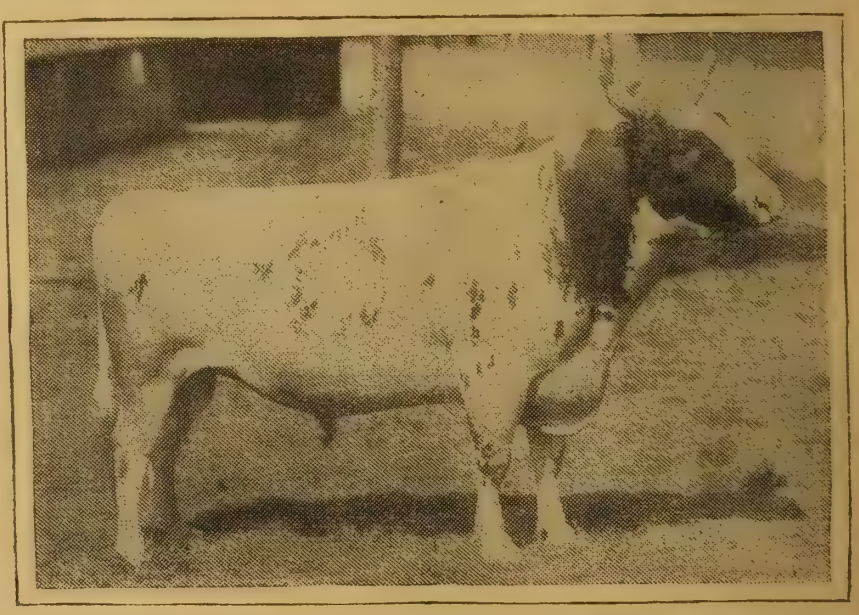


THE REAL VALUE OF THE SIRE IS BEST DETERMINED BY THE PRODUCING CAPACITY OF HIS MATERNAL AND PATERNAL ANCESTRY.

Class 2d. It is a fundamental rule in breeding that "like begets like." If we have an animal, whose ancestry for hundreds of years has been along dairy lines, is it not reasonable to expect that we shall get something of like characteristics. The dairy cow of today is more or less an artificial product. She has been brought up to this high point of milk production through scientific feeding and care. This seems to be an age of specialization, and I believe if dairymen would specialize more along this line, far better results would be obtained. Some seem to think they can get as good results from some of the dual purpose, or beef breeds, but it is about impossible to change the characteristics of these breeds that have been bred and trained so long for beef purposes. It is not my purpose to tell what breed of dairy cattle to use; our likes or dislikes may determine that, or local conditions may demand a breed that is better adapted to the work in that particular locality; but generally speaking, one will do best with what he likes best; he will usually take more interest, and get more enjoyment from his work. There are two things that are essential to success in any line of work, and they are "pleasure and profit." If there is no pleasure, a man does not dig into the secrets of the business, and does not learn the better and more economical way of doing things. Whatever breed is determined on, stick to it. Mixing of breeds is a positive failure in every sense of the word. Get the best there is in the particular breed you select and as a result of such work comes that uniformity of color, conformation and characteristics that brings enjoyment and pride.



A COW TO DO HER BEST MUST HAVE HER BODILY CONDITION KEPT RIGHT. THIS SHOULD BE THE THERMOMETER FOR EVERY FEEDER.



CARE GOES HAND IN HAND WITH FEEDING AND BREEDING AND IS ONE ESSENTIAL TO SUCCESSFUL DAIRYING.

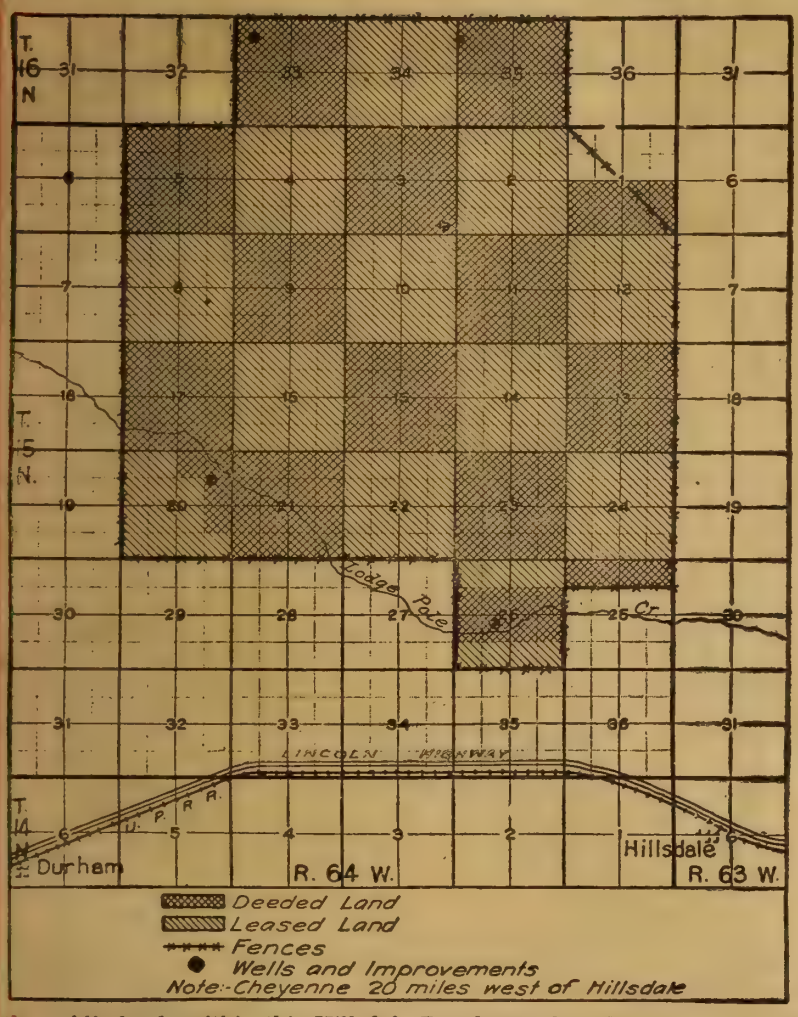
Class 3d. Care cannot be separated from feeding and breeding; they go hand in hand, and if anyone of these is dropped out, the best success cannot be obtained. One drawback to the dairy business is that too many people try to make it a side issue; the work attended to whenever it is most convenient. If there is any branch of work about the farm that requires systematic care and attention, it is the care of dairy animals. The giving or making of milk is more or less of a nervous-energy process, and an animal so delicately constituted is very susceptible to changes in its feeding and care. Regularity in feeding and milking may mean the difference between profit and loss. There is probably no animal that appreciates or will respond to kind and gentle treatment, more than a dairy cow, and as this costs so little, I wonder that people do not use it more. A cow's comfort should always be considered, as any increased comfort means added remuneration to the business. In a recent cow census which I conducted, it was not an uncommon thing to find the water tank frozen solid, nor to find the cows turned out doors in the early winter morning, and compelled to stay out till night almost, regardless of the weather. It seemed to be the thought of many that a cow must be able to stand hardship; they did not want any of the so-called improved dairy stock because they were not tough enough to stand it, and I thought as I visited these farms, surely these men have reached the height of their ambition, for they certainly looked tough. It is an old saying that an animal well wintered is half summered—and well summered is half wintered. The cows that are brought through the winter in a poor condition, and when they come to freshen are still poorer, are indeed handicapped for work, as it will take half the summer to regain their physical condition, and all idea of profit

There are no hot winds in the Golden Prairie District—maximum temperature at Cheyenne, summer 1916 to August 1st, as shown by the U. S. Weather Bureau records, 88.5 degrees above zero on June 28th and July 2d.

THE GREATEST OPPORTUNITY EVER OFFERED TO BUY A GOLDEN PRAIRIE FARM

and have included FREE a

5-YEAR LEASE ON AN EQUAL ACREAGE OF ADJOINING STATE LAND



ON THIS page is found a sectional plat of the famous Hillsdale Ranch 16,000 acres in a solid body. It is the last tract to be converted into farms in a district famed for fertile soil and banner yields of grain grown without irrigation. It is equal to the very best of the district and we are now placing it on sale in farm units of 160, 320, 480 and 640 acres at prices less than

This picture is reproduced from photo taken July 20, 1916, on the Fred Lempke farm and shows in the foreground a corner of Mr. Lempke's potato field, bordered by rows of thriving poplar, box elder and other foliage trees. Immediately adjoining and just across fence in the background is our Hillsdale ranch, as pretty, fertile and well-located a tract of agricultural land as the sun shines on.

half its actual value, including with each purchase, free, a five-year lease on an equal acreage of adjoining land owned by the state of Wyoming.

"Why," you ask, "is each farm tract adjoined by leased state land?" When, ten years ago, all the other ranches in the district were broken up, owing to the odd-numbered sections being owned by the ranchmen and the even-numbered ones by the U. S. Government, the national administration compelled the rancher to remove all fences surrounding government land, the fence surrounding this Hillsdale Ranch was not molested **because all the even-numbered sections within its borders were owned by the state of Wyoming.**

Field of winter wheat in shock and binder at work on farm of Richard Spatz, adjoining the Hillsdale ranch. Photo taken July 20, 1916. This same field produced 50 bushels of oats per acre in 1915, the wheat shown being drilled into the oats stubble in September.

Prior to that time the national government had, by special act of Congress, donated land to the state for university purposes, with permission to select it from all the government land in the state. That the state authorities selected the public lands within this Hillsdale Ranch may be taken as an evidence of its superior quality.

These state lands are now held in five-year leases dated May 1, 1916, at an annual rental of only ten cents per acre. At the expiration of the present lease the land may be re-rented from the state, or, on request, the state will offer it for sale at public auction on terms of one-tenth cash, the balance of the purchase price running eighteen years with 4 per cent interest.

FARM VIEWS ADJOINING THE RANCH

On this page are shown reproductions of photos taken on farms adjoining this Hillsdale Ranch. They speak for themselves and bear eloquent testimony as to desirability of your securing one of these farms at the low prices and remarkable terms on which we are selling them. The soil is rich and well grassed. No sagebrush, no sand, no alkali. The surface is level to undulating and adapted to tractor farming. Its location and rich native grasses make it particularly attractive for combined stock raising, dairying and mixed farming. We guarantee an inexhaustible supply of pure water at reasonable depth under every farm tract sold.

This photo taken July 20, 1916, shows the modern improvements on the Richard Spatz farm adjoining the Hillsdale ranch. Mr. Spatz purchased his first 160 acres from us in 1908, moving here from Alberta, Canada, that spring. He now owns over 1,000 acres of Golden Prairie land and about 200 head of cattle and horses, and his modern, electric lighted home is the equal to the best in the older settled states.

Markets and Social Advantages

Hillsdale, within two to ten miles of any farm tract in the ranch, is a thriving railroad town on the main line of the Union Pacific Railroad and Lincoln Automobile Highway. It has a farmers' co-operative grain elevator, two general stores, one hardware and implement store, blacksmith and machine shop, bank, lumber yard, church, common and high school. Durham, where there is a general store, post office, church and school, is six miles west of Hillsdale and four miles from nearest portion of the ranch. Cheyenne, the state capital, an up-to-date city, with churches, colleges, modern flour mill, creamery and splendid market for farm produce, is 16 to 24 miles from any portion of the ranch, with splendid automobile roads all the way. The surrounding neighborhood is settled with a high class of people, principally American, with a number of families of Scandinavian and German descent.

Our prices for the deeded land are $17.50 to $22.50 per acre, on terms of $5.00 per acre down and balance in easy annual installments, with 6 per cent interest, or, where one-half cash is paid, five years' time on balance, the same interest. As stated above, with each purchase of deeded land is assigned to the purchaser, free of charge, the lease, running five years from May 1, 1916, on an equal acreage of adjoining state land.

Come now while you may see the crops growing and in shock or stack on adjoining or near-by farms. Fill out and mail us today the coupon on this page. It will secure for you, free of charge, descriptive literature and full particulars, including an illustrated pamphlet showing pictures of crops grown for past ten seasons and statements of farmers as to yields secured.

FEDERAL LAND COMPANY
BURNS, WYOMING

FEDERAL LAND COMPANY, BURNS, WYO.

Gentlemen: Please mail me at once full descriptive literature of your Hillsdale ranch and the Golden Prairie District of Wyoming.

Name.....

Address.....

You may, if you wish, also fill out the following: I expect to make a visit of inspection about ..... and if suited will want to purchase .....acres.

Remember this: That we are protected from hot winds and extreme heat by the snowcapped Rockies, always on clear days in plain view to the southwest. This is fully explained on page 3 of the booklet entitled "Wheat Growing and General Farming Without Irrigation in the Golden Prairie District" which will be sent to all who fill out and mail us the coupon on this page.

would be out of the question. The stable conditions are an important factor, as well; comfortable methods of tying, a comfortable place to lie down, with good ventilation and light, all come under this head of care.

Class 4th. Selection. If we would follow the same judicious care in the selection of our cows as we do in our other lines of farm work, much more would be accomplished. In the selection of seed corn for our next year's crop, we take special pains to secure the most uniform and typical ears, and with our small grains use similar care, and run them through the fanning mill, discarding the small and shrunken kernels. These things are selected by the eye; but no one can tell by the looks of a cow within 100 pounds of what their possibilities are in the production of butter in a year. Consequently we have to do this by weighing and testing the milk, and while this is a very simple method, yet very few, comparatively, are taking advantage of it. In the promiscuous way of saving the heifer calves to supply the herd without any knowledge of what the possibilities are of their dams, it is no wonder that the average production is so low. On the other hand, if one only knows which the best cows are, and saves their heifer calves, how much quicker a productive herd might be established. The selection of the sire to head the herd should receive very careful consideration. Some are influenced by pedigree alone, and think if an animal is only registered, that is about all that is necessary. The real value of an animal of this character should not be determined alone by this, but by the producing capacity of his maternal and paternal ancestry. Ten thousand dollars was offered for Colantha 4th, Johanna's last son; this value was put on him because of his dam's ability to produce, having produced 1,164 of butter in a year. We cannot all have cows like this. The average production of the cows of the country is below 200 pounds' butter a year. Yet, many are making 400 pounds, and there are some making over 600 pounds. What makes the difference? Simply the fact that their owners have followed these four fundamental principles: Feeding, breeding, care and selection.

In and Around Wisconsin.

"It is wonderful how the corn has grown the past three weeks," says a Chippewa county farmer. From a backward condition at the end of June, corn came up to better than normal, and in some cases extra good. The hay crop in Chippewa county is also reported fine.

Muskrat farming was profitable in the marshes near Lake Winnebago within the past year. Reports under the new state law show that 58,435 muskrats were captured in Winnebago county alone and that the hides were sold for $25,220.00. One farmer sold 12,125 hides for $5,303.60.

A fair cherry crop is the report along the lake front counties. The price has been about $1.50 per crate of sixteen boxes, and this will allow a good profit even on the average crop. The high price of sugar this year has had a tendency to hold down the prices of cherries, notwithstanding the light crop.

Editor Hull, in the Jackson County Journal, recently called attention to the fine stand of corn on the C. S. Ristow farm. Since then he has been receiving communications from other farmers, who assert that they have corn which is just as good. There seems to be great interest in the corn crop this year in Jackson county, and promise of a big yield of good quality.

Because of the limited number of entries, the proposed sale of pure-bred draft horses planned to be held at Madison in November, by the Wisconsin Horse Breeders' Association, has been abandoned. Breeders will be interested to know that for the first time this year there is to be an auction sale of pure-bred draft horses at the Wisconsin State Fair held on Friday. This sale is in charge of Fred Pabst, Oconomowoc, Wis., and should prove a splendid opportunity to sell good animals. Since the horse breeders' sale has been abandoned, breeders having animals for sale should correspond at once with Mr. Fred Pabst, Oconomowoc, Wis., manager of the state fair sale.

Farmers will assemble at Washington County's Farm, at the experiment station Thursday, August 17th, to review progress of the year. A study will be made of the possibilities of hemp and soy beans as a Washington county crop. Reasons for growing the latter crop have been summed up briefly by R. A. Moore and E. J. Delwiche, of the College of Agriculture, as follows:

They are more resistant to drouth than clover or alfalfa.

They may be substituted as a catch crop for clover when the latter kills out or is buried in sand drifts.

They rank with linseed and cottonseed meal as concentrated feed for live stock.

They gather nitrogen from the air and store it in their roots, thus improving the soil in which they grow.

They may be grown with good results on soil too acid for clover.

A conference and picnic will be held at West Allis, Wis., Saturday and Sunday, August 26th and 27th, at the State Fair Park, under the auspices of the American Society of Equity and the Federated Trades Council of Milwaukee. One feature will be a calf show, judging contest and sale in which the breeders of Waukesha county will have a conspicuous part. After the calves have been judged and prizes awarded they will be sold to the highest bidder. All it is necessary to do is to bring the calves and enter them with the secretary, Charles Will, Menomenee Falls or Gavin McKerrow, of Waukesha, or through the secretary's office direct. The committee in charge of arranging the live stock contests include Chas. J. Will, Frank E. Fox, H. E. Reddelein and Gavin McKerrow.

Save Money on Coal For This Winter.

FARMERS have a big opportunity to save money on their winter's fuel supply by laying in coal now at summer prices. From $2 to $4 a ton can be saved by buying Tecumseh coal direct from the mine before cold weather sets in. This coal is clean, free from clinkers and averages very high in heating units. By a club plan several farmers could take a carload of this coal and get special low rates on it. Many Tecumseh coal clubs have already been formed and have met with success. The advertisement on page 24 tells how this may be done. Those interested should cut out the coupon in the advertisement and send it, properly filled in, to Martin-Howe Coal Company, Chicago, Ill.—Adv.

Period of Molting Depends on Hen's Health.

THE molting season is quite some distance away, yet a few words in advance on this matter, so important to every farmer and poultryman, may not be amiss. Molting is hard on the hens, and it is because of the weakening influence of the process that they cease to lay. It is obvious, therefore, that any measure which tones up the general health of the fowl, will enable them to finish molting more quickly and resume their normal productiveness. What is needed is a medicine that is tonical in its effects, that improves digestion, regulates the bowels and supplies the necessary antiseptics to make and keep the blood pure. Among the many preparations for this purpose, Dr. Hess Poultry Pan-a-ce-a seems to be quite favorably regarded. It certainly fills the above-mentioned requirements and is conveniently easy to feed, as it can be mixed with the mash, either wet or dry. Dr. Hess, the compounder, is a widely known veterinarian, looked upon by many as an authority on all ailments and constitutional peculiarities of poultry and stock. Another advantageous feature of his preparations is that they are all covered by a broad guarantee whereby dealers are instructed to refund the customer's money if they fail to do all that is claimed for them. The fact that they are handled by over 28,000 dealers throughout the United States and Canada is in itself proof of the merit of the Dr. Hess & Clark preparations, as it is an evidence of their popularity.—Adv.

Ann Arbor Baler
"THE BALER FOR BUSINESS"

Speed

Speed and big capacity give the Ann Arbor owner unbeatable advantages that mean extra profits, quick, money-saving work at lowest cost. Beat the weather man.

High speed with safety, true alignment of gears, extra long feed opening, quick "grasshopper" feeder arm.

Neat work, too—every bale smooth—free from "tails." Especially fitted for

Baling Hay, Alfalfa, Pea Vines, Soy Beans, Sudan Grass, Natal Grass and Lespedeza.

Power presses in separate or combination outfits. Use any engine. Hitch your tractor to the Ann Arbor.

Ann Arbor Machine Co.
73 Broadway
Ann Arbor, Mich.

LAKE FARM FOR SALE

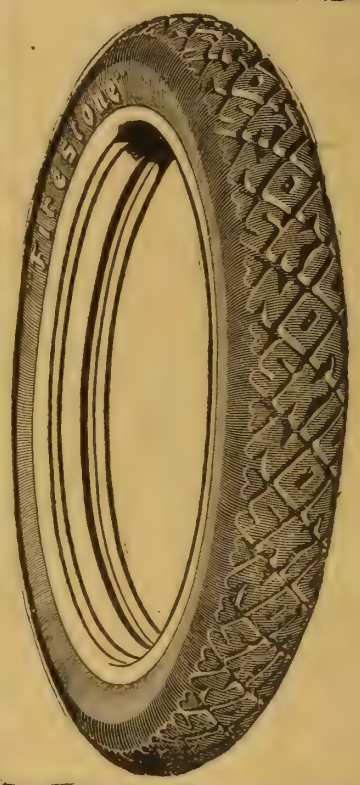
155 ACRES, Vilas county, 3 miles from Boulder Junction on the Milwaukee Railroad, good house, large barn, hog house, poultry house, machine shed, ice house, etc. 20 acres cleared. Home markets. Ten summer resorts within 7 miles. Good soil. Price $25 an acre. Write C. S. Aikin, 314 1st Ave. North, Minneapolis, Minnesota.

FARM WANTED. To hear from owner of farm or unimproved land for sale. Write at once C. X. Box 344, Olney, Illinois.

The Last Word "MILEAGE"

OPINIONS may differ on what constitutes a good tire until the mileage record speaks. Then Firestone mileage settles the argument. Firestone mileage talks convincingly. It has talked motorists into demanding twice as many Firestone Tires this year as last. It has talked many thousands of new dealers into joining the Firestone forces. It will talk you into insisting upon Firestones on every wheel and on the spare.

Firestone
Non-Skid Tires



now have Red Side Wall and Black Tread, a handsome color combination, the trademark of Firestone. It adds a touch of elegant "difference" to any car without showy effect.

The Firestone Non-Skid Tread means big economy of extra mileage while affording the greatest possible security against skid or slide.

Firestone Accessories give that help at the critical moment which the farmer—of all busy men—so much appreciates.

Firestone Cementless Patch FREE

Let us send you a Firestone Cementless Patch Free—also copy of book, "Mileage Talks," No. 17 Write today. Meantime, see your dealer.

Work of State Breeders' Ass'n.

Secretary Files With Governor Emanuel L. Philipp Report of Activities of Wisconsin Association For the Past Year.

AS SECRETARY of Wisconsin Live Stock Breeders' Association, Mr. A. W. Hopkins has filed with Gov. Emanuel L. Philipp, as required by law, a summary of the work done by the association for the fiscal year ending June 30, 1916. This summary emphasizes various branches of the association's work.

Through the co-operation of several railroad companies there has been carried on a series of live stock demonstrations from special trains. On these trains were shown good types of live stock adapted to Wisconsin conditions. With the exception of sires there were no pure-bred animals taken, the aim being to emphasize the value of the bred-for-production sires. Experienced stockmen accompanied the train and used the stock for demonstrating the value of proper breeding, feeding, management and care of live stock. In the past year special trains have made 47 stops and reached over 15,000 people.

In the fall of 1914 this association arranged with the managers of eight Wisconsin county fairs to present an exhibit of profitable and unprofitable farm animals. In this exhibit money-losing stock were shown in contrast to stock which insures the farmer a profit. These exhibits were discontinued in 1915 because of the foot-and-mouth disease. Nine more fairs will be visited with such exhibits this fall.

There are 128 community breeders' associations in Wisconsin. Within the past few years a large number of these have held summer conferences and demonstrations. The Wisconsin Live Stock Breeders' Association has undertaken to systematize this work and arrange conferences in circuits so that the speakers could be distributed to the best advantage and at low cost of money and effort.

In 1915 fifty-two state meetings were held in Wisconsin at an average expense of less than $6.00 a meeting. Forty such meetings have been held in Wisconsin this year up to June 30th at approximately the same cost. The association and the department of farmer's institutes have been holding live stock meetings on Wisconsin farms. Fifteen sheep meetings have been held in sections adapted to sheep raising.

Other activities of the association include boy's pig-growing clubs, baby beef contests in seven counties, live stock-judging contests, colt shows and campaigns for better live stock in the farm journals and state weeklies. Winners in the Wisconsin baby beef contest are to meet at Madison, November 22d-23d for the final show. Already forty-nine have filed entrance for this event.

The association has recommended a legislative enactment on the following subjects:

Dog law.
Misrepresentation of pedigree.
Interstate inspection of live stock.
Payment of one-half value of animals slaughtered on account of the foot-and-mouth disease.
Payment of one-half expenses of Wisconsin exhibitors at the National Dairy Show.

Several stockmen's conferences were held within the fiscal year and a great deal of information of value to Wisconsin live stock interest was furnished to outsiders. The Wisconsin Live Stock Breeders' Association, in order to encourage a greater use of milk record sheets, has printed and distributed among farmers, rural schools, high schools and county agricultural schools a supply of such records.

In June, 1913, the association arranged for a community exhibit of Wisconsin live stock at the Panama-Pacific International Exposition. Because its appropriation was cut down and because of the foot-and-mouth disease, but one carload of Wisconsin live stock was finally sent to San Francisco. That was a carload of Clydesdale horses, which made a splendid representation, capturing a majority of awards in its class. This exhibition cost the state $706.54. The breeders' association returned to the state treasury $4,000.00 cash which it was unable to use on account of inability to send its exhibit to San Francisco.

The association now has 1,500 active members.

Rock County Short-horn Breeders Organize.

Realizing the value of co-operation and organization, the breeders of Short-horn cattle in Rock county, Wisconsin, met at Janesville, Saturday, July 29th, and formed what will be known as the Rock County Short-horn Breeders' Association. There are more well-known Short-horn herds in Rock county than any other county in the state. By the following one can see the value of a county organization. Mr. D. B. Smith, of South Dakota, came to Wisconsin to buy a carload of dual-purpose Short-horns. In company with one of the field men of The Wisconsin Farmer they went to Janesville. Upon inquiry, they found it would be impossible to get a line on the cattle for sale unless each individual breeder was visited; consequently four days were spent in driving over that county and locating the cattle that were for sale. Had there been an association with a live secretary, he would have known who had stock for sale, and it would have been possible to have purchased this car of cattle in a day instead of taking five days for it, thereby saving the buyer a great deal of time and expense. This little incident served its purpose and the eighteen or twenty breeders that attended the meeting in Janesville were anxious to form a county association. Mr. D. B. Smith, of Mission Hill, S. D., gave a short talk on conditions in the Dakotas and said that there never was a time in his country when good Short-horns were in such demand as they are at this time. He says that the people in the West don't think there are any cattle in Wisconsin except Holsteins and Guernseys, this is due, of course, to the fact that these breeds have been widely advertised. Mr. T. P. Shreve, of The Wisconsin Farmer, talked on the value of co-operative advertising and mentioned several county organizations that had made a grand success by co-operation and consistent advertising. Mr. Markhem, secretary of the County Y. M. C. A. and one of the live wires of the county, deserves a great deal of credit for the success of this meeting. He acted as temporary chairman. The following officers were elected: D. P. Marquart, Milton Junction, president; Walter Little, Evansville, vice president; J. E. Kennedy, Janesville, secretary. The two officers, D. J. McLay, Janesville, and Jas. Campion, Milton Junction, were made directors. The next meeting will be held the first Saturday in September.

A Great Increase in Railroad Wages Means Higher Freight Rates and a Burden on Agricultural Prosperity

Do you think the railroads ought to increase the wages of their highly paid train employes $100,000,000 a year?

No great increase in railroad wages can be made without directly touching your pocketbook. Out of every dollar you pay the railroads 44 cents goes to the employes.

Compare the wages of these men (who have refused to arbitrate their demands for higher wages, and are threatening to tie up the country's commerce to enforce them) with those of other American workers--with yours.

On all the railroads in 1915 three-quarters of the train employes earned these wages:

	Passenger		Freight		Yard	
	Range	Average	Range	Average	Range	Average
Engineers . . .	$1641 3983	**$2067**	$1455 3505	**$1892**	$1005 2445	**$1526**
Conductors . . .	1543 3004	**$1850**	1353 2932	**$1719**	1055 2045	**$1310**
Firemen	943 2078	**$1203**	648 2059	**$1117**	406 1633	**$924**

You have a direct interest in these wages because the money to pay them comes out of your pocket.

Low freight rates have given American farmers command of the markets of the world.

With two-thirds of the cost of operating railroads the wages paid labor, any great increase in labor cost inevitably means higher freight rates.

A $100,000,000 increase in railroad wages is equal to a five per cent increase on all freight rates.

The railroads have urged that the justice of these demands be determined by the Interstate Commerce Commission (the body that fixes the rates you pay the carriers), or by a national arbitration board. The employes' representatives have refused this offer and have taken a vote on a national strike.

This problem is your problem. The railroad managers, as trustees for the public, have no right to place this burden on the cost of transportation to you without a clear mandate from a public tribunal.

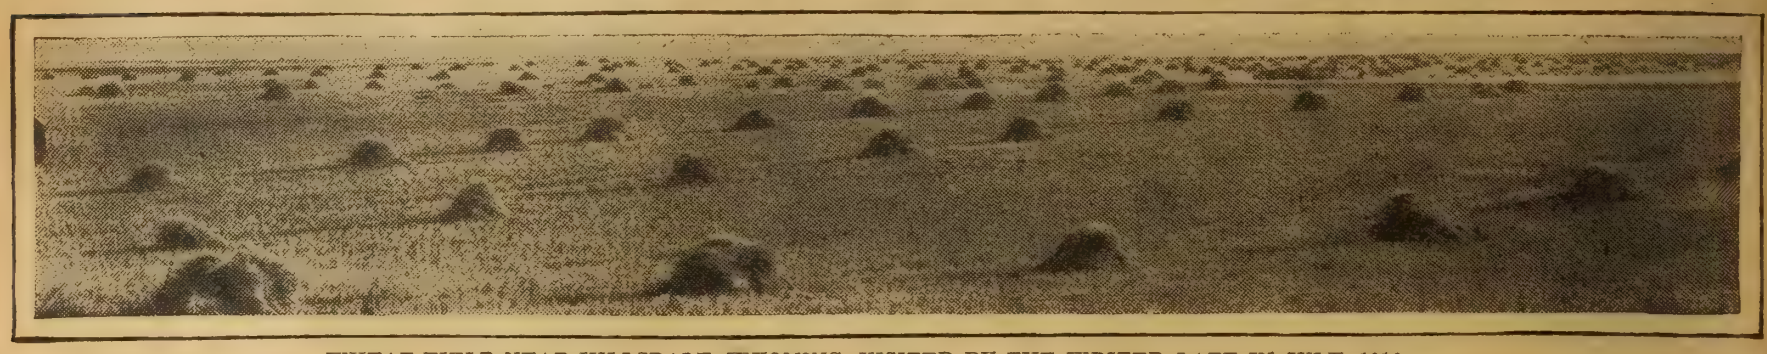
Where Grain-Belt Farmers Win.

Golden Prairie District of Wyoming Is Scene of Fine Farms and Good, Modern Homes and Fine Live Stock—Settled Largely by Grain-Belt Folks.



WHEAT FIELD NEAR HILLSDALE, WYOMING, VISITED BY THE WRITER LATE IN JULY, 1916.

NOT one year of great crops or one lean year, may rightly be taken as the test of the success of a farming country. The Golden Prairie district of Wyoming has been opened for farming for about ten years and there are successful and happy farmers there who have spent several years in the district and have done well. Last season the writer visited this district and found crops so abundant as to be almost unbelievable to our friends back in the grain belt. This year the same section was visited at about the same time and despite a lack of rainfall, registering three inches less than normal to August 1st, the farmers of the district are doing well; the stock in southeastern Wyoming is fat and sleek; winter wheat and rye came out good and rains the first week in August insured good crops of late spring sowing. While the crops are not so large as in 1915, the general average is good and the high prices of grain and stock insure a good, fair profit to farmers of the Golden Prairie district for their year's work.

RICHARD SPATZ FARM NEAR HILLSDALE, WYOMING.

It was the writer's privilege and pleasure to attend a farmers' institute at Archer, which is only a short distance from Hillsdale and Burns and Carpenter. This institute was well attended, most of the farmers coming from the territory around Hillsdale and the district concerning which we wrote last year. These farmers were intensely interested in dairying and dairy feed crops, and also in the breeds of beef cattle. A large majority of those who attended the institute came in automobiles and they were not cheap-priced cars either. Almost as large a percentage of farmers in the Golden Prairie district have automobiles as have farmers in the rich farming districts of the grain belt. This was a surprise to the writer even after he had seen the wonderful crop of 1915, which crop, by the way, paid out on many farms of the Golden Prairie district and left the farmers money with which to build new homes or buy cars or make a pleasure trip back east to see the folks.

Pure-bred cattle, especially Shorthorns and Herefords, are being rapidly introduced into the Golden Prairie district, 185 fine Short-horns being unloaded at Hillsdale the day the writer visited that place. At the institute agricultural college men strongly urged Holstein cattle for the dairy farms of the district, but the men on the farms who want to go into dairying are more inclined to the dual-purpose or milking Short-horn. There is market close at hand for all milk or butter which can be produced. Cheyenne, Wyoming, has one of the finest creameries in the country. Natural grass on the prairies around Burns, Archer, Carpenter and Hillsdale, produces milk of 3.5 to 6 per cent test and in good quantities. Many of the farmers in this section do not feed their cows more than two or three weeks out of the year. The usual rule is to give no feed except when snow covers the range and makes it impossible to find feed easily. Steers for feeding are imported into the Golden Prairie district from further west in Wyoming and sometimes from Omaha and St. Joseph or Kansas City. Although steers in our blue grass and corn sections are fed six months of the year, they are frequently topped by the range-fed steers from Wyoming. It is because of the small expense of feeding on the range that steers may be bought at the Missouri river yards and shipped to Wyoming, fattened and returned and sold at a good profit. A few years ago the Wyoming cattle man figured on $1 a year for branding, feeding and salting a steer. This was in large droves, however, and the expense is somewhat greater in smaller lots. The Wyoming feeder doesn't hesitate to keep cattle over a winter, as the expense of winter-feeding is so small. If he can add $25 to the selling price and his expense is not to exceed $1 to $2.50, he has a wide margin of profit without additional investment.

FARMERS' CARS AT WYOMING SUMMER INSTITUTE, JULY, 1916.

A great many interesting first-hand stories from settlers in the Golden Prairie district were secured by the writer. On this page is shown the farm home of Richard Spatz, north of Hillsdale and just adjoining the Hillsdale ranch. This new home is just about to be occupied. It is modern in equipment. Mr. Spatz has his own electric light plant, can telephone to town any time, has regular daily mail delivery, enjoys healthful breezes every day, and has the best drinking water we have tasted in a long time. Mr. Spatz formerly farmed in Minnesota and did well. He has 480 acres in crop this year and owns now 3,000 acres of Golden Prairie land. The larger portion of this he purchased with profits made on his farm. He told the writer that he cleared $10,000 last year. He has 200 head of stock all in the finest condition, including horses, cows, and hogs. Last year he raised two tons of alfalfa to the acre, one ton at each cutting, but this year his alfalfa did not do so well. This alfalfa, by the way, is much richer in protein than that raised in the grain belt states where the yield is often greater. Mr. Spatz is raising trees, box elders to be specific, and a group of trees almost four years old and 90 per cent growing out of the original planting, may be seen in the illustration. He was cutting wheat the day the writer visited his farm and gave it as his opinion the cut would run twenty bushels to the acre. Not such a large crop as in 1915 but a good paying yield.

ON THE FRED LEMPKE PLACE, GOLDEN PRAIRIE DISTRICT OF WYOMING.

POTATOES NEAR ARCHER, WYO., TA KEN LAST WEEK IN JULY, 1916.

Mrs. Spatz advised us that her cows give good quantities of milk testing 3.6 per cent to 4 per cent and she sells the fat at 28 cents a pound. The cows are fed only on native grass, except possibly a week or ten days in the winter after a big snow. A big snow means a little cattle feeding, but it is fine for the winter wheat. Spatz owns a tractor and does some plowing for his neighbors. He also has a threshing outfit. His fields of grain were not different in quality or yield from the majority of fields in his neighborhood. Several good homes are going up in the same neighborhood. Oats ran 50 to 60 bushels in this neighborhood in 1915 and recent rains will bring a good fair crop this season.

Fred Lempke, formerly a resident of Chicago, is building up a fine farm in the Golden Prairie district. An illustration showing his house, garden and trees three years old will be seen on this page. He says 95 per cent of the trees he planted grew. Someone has said that where trees will grow crops will grow, and trees are certainly getting a start in the Golden Prairie district of Wyoming. Mr. Lempke is growing Norway poplar, box elder and jack pines.

Roads are always good in Wyoming. Markets are close and every product can be sold for cash as soon as it is marketable. Potatoes are a good crop, and corn will do well, especially such as is to be used for the silo for winter feeding. Not a great many silos have been erected as yet, as there has been little demand for winter feed. The cornstalks are short, but the yield and quality of both the flint and dent varieties are surprisingly good.

The Golden Prairie district of Wyoming has no hot winds. The nights are always cool. Around 88 degrees above zero is the maximum on the hottest days of the year. The rainfall is well distributed and the soil produces very rich feed. Alfalfa meal mills are anxious to get Wyoming product because it is so much richer in protein than alfalfa grown in Mississippi valley altitudes. Because of this richness grass and forage crops put fat on the cattle even though the yield looks small. Where winter wheat and rye is practically a sure crop, where spring sowed grains have made good years in succession and produced in great abundance in good years, where cattle can be fattened for market or fed for dairy production at such low expense, where hogs do fine, where markets and market conditions are like they are in the grain belt, and where farm comforts and conveniences may be enjoyed by all—this sums up the Golden Prairie district. The writer met many people with whom he had a personal acquaintance and they were all enthusiastic about the country. The year just closing will bring good profits considering the prices paid for the land.

Corn Shows Good Prospect.

Backward Crop Approaches Normal Condition--Rain Now Needed--Small Grains Making Fair Yield--Live Stock Thrifty.

WISCONSIN.

Adams County.—The drouth is having its effect on corn, oats, potatoes and clover seed. The damage is mostly on high land. Early potatoes are proving to be a light crop. Rye is satisfactory. Corn needs rain badly. Hay produced well and clover and timothy will make good seed. Gardens are suffering from dry weather.—C. T. Leonard.

Buffalo County.—Corn is growing very rapidly on account of the extreme hot weather and promises a good crop. Small grain was much damaged by floods, especially in the eastern part of the county. Nearly all grain is damaged more or less, and some fields will not be cut. Potatoes are looking well. Berries are quite plentiful. Gardens are looking well, although they are beginning to show the effects of dry, hot weather. Haying is nearly finished and the returns are very satisfactory.—James G. Bates.

Chippewa County.—Weather has been very hot for the last week, and corn is in normal condition—it is just tasseling. Some of the potatoes suffered from blight the last week, but in general they are good. Haying is nearly finished, and a good crop is going up. Barley and rye are cut; oats are now being harvested. Oats are somewhat rusty, but otherwise good. Pastures are good in spite of the hot weather, and live stock are fine. Threshing from the shock just commenced.—Ernest Weitzel.

Door County.—For the last ten days crops have been suffering from hot weather and drouth. Rye and barley have good, well-filled heads and are now being cut. Oats are ripening prematurely on account of drouth. Early potatoes are small. The milk supply is falling off since pastures are drying up and flies are very bad. The cherry season is now on and the United Fruit Growers are shipping cherries at the rate of five carloads a day. The Early Richmonds were only 25 per cent of a crop, but the Montmorencys were fine and brought the average up to about 60 per cent normal. Cherry prices are good.—L. E. Birmingham.

Douglas County.—Weather is dry and potatoes and corn crops need rain. The hay crop will be an average; most of it is up. Rastures are drying up. The harvest of small grains will begin about August 15th. Rain is needed.—B. N. Stone.

Iowa County.—Everything is suffering badly from the continued heat and drouth. Oats, barley and other small grains failed to fill out well, and what promised to be a bumper crop will be only medium. The straw on the small grains is heavy. Hay was put up in perfect condition. Corn is shriveling up and only good rains can save it. Potatoes are small and average few to the hill. Pastures are drying up and the milk production is falling off. Harvests are slow because of the great heat. Rain is the thing we are needing.—Art G. Hoskins.

Jackson County.—Corn is suffering from heat and drouth. Some fields of oats on sandy soil are practically ruined because of drouth. Potatoes look fair, but need rain badly. The new seeding of grass is suffering greatly.—C. S. Ristow.

Juneau County.—Harvest is nearly finished. Barley appears well. Oats are not an average crop. Meadows and pastures are brown in color since there has been no rain since the middle of June. Corn and potatoes need rain. Fruit also is suffering from lack of rain.—C. W. Hale.

La Fayette County.—Oats and barley are nearly all cut. Oats are a little light due to hot, dry weather when they were filling. Barley is good. Corn is doing well considering the dry weather, but will need rain soon. Pastures are dried up, and cows are producing less milk. At some factories the milk supply has fallen nearly one-half. Most of the hay is up. Some farmers harvested grain before finishing haying. A very large amount of first-class hay was put up this year. The new seeding looks fine since the oats have been cut, but must have rain soon. Early potatoes are poor and late ones will be light unless it rains soon.—W. F. Pease.

Langlade County.—Most of the haying is finished. Rye, winter wheat and barley are ready to be cut. Early sown spring wheat is in the dough stage. Apples are falling off badly. Potatoes look well and do not seem to suffer much from the heat. Homegrown potatoes are now on the market. Pastures are fair; a warm rain made the clover sprout up quickly. Corn shows silks now.—Chas. Parsons.

Marquette County.—Only one rain fell in this region from June 9th to July 23d. Therefore, upland pastures have dried up. Oats on light soils are short and poor. Corn has a dark color and is doing fine. Some late rye of good quality has been cut. Potatoes have a fair stand and bugs have not bothered them. A lot of marsh hay of good quality has been cut. Cucumbers are growing fine since the rain. Live stock are healthy, but many horses have been overcome by the heat.—J. M. Williams.

Pierce County.—Weather has been extremely hot and dry. Small grains were badly injured. Early potatoes are poor. Pastures are dry. Corn and late potatoes must have rain soon.—G. K. Moore.

Price County.—A heavy crop of hay is being harvested. Winter grains are getting ripe and promise a good crop. Oats look fair, but are suffering somewhat from drouth. Potatoes and other vegetables promise fair yields. Pastures are in good condition. Live stock look fine.—C. F. Glissendorf.

Polk County.—With temperatures ranging from 90 to 100 degrees in the shade and no rain since June 28th, all crops are suffering. Haying is nearly finished. Barley is being harvested and the crop is fair. Oats are nearly ready for cutting. Corn and potatoes look well, but must have rain soon. Pastures are drying up; so is the garden truck. There will be a good crop of cucumbers for pickling.—P. F. Amery.

Portage County.—The continuous warm weather and no rain has hurried the oats so that they are now ready to cut. Corn has been growing rapidly until the present. The hay crop is nearly all up and yielded much heavier than usual. Potatoes look well, but the bugs have done considerable damage in some places.—Arthur H. Peterson.

Taylor County.—Oats and barley have improved wonderfully in the last three weeks. Barley is commencing to ripen. Rye has also improved and will make a good crop. Hay is a bumper crop this season and not all of it has been put up. All crops are about two weeks late because of the cold, wet spring. Hot weather is making the corn grow, and if the fall is favorable, we will get a good crop in this county. Potatoes look well and all vegetables are good. Pastures are all right, but if the dry weather continues they will suffer later on.—J. C. Hoffman.

Rusk County.—Weather has been favorable for haying and a large crop was put up. A few farmers have finished haying. Oats are liable to blight, although the present indications are for a good crop. Corn is growing rapidly and prospects are good. Two or three showers during July have kept pastures green, and dairy and beef cattle continue to do well. The potato crop will be an average.—T. M. Thomas.

Washburn County.—The warm weather during July has greatly improved the outlook for corn. The ears are forming well. A heavy crop of hay has been secured in excellent condition. Oats on the lighter soils are somewhat short and damaged by blight, but on heavy soils they look well. Rye and barley harvests are under way. Average crops are expected. The second crop of clover is coming into bloom. Pastures are getting short and some stock is being shipped out.—L. D. Garnhart.

Washington County.—Most of the rye, winter wheat and barley has been cut, and the yields will be good in spite of unfavorable weather conditions. Some of the oats will be poor on light soils because of the hot, dry weather, and some of the late seeding of oats will be light. Alsike clover is making a poor yield here. Much of the crop was cut for hay earlier in the season. The alfalfa crop, which is light, has been cut. Early potatoes are small, due to drying up of the vines, and if it does not rain soon, late potatoes and corn will suffer. Corn has done well so far.—M. P. Salter.

Waukesha County.—Crops are drying up in this vicinity. Where they have had local showers, the oats and barley look very well. A heavy hay crop was put up in fine condition. The intense heat for the last few days has curled the corn leaves so badly that the corn will be light in some places. Early potatoes will make a very light yield but the late ones may do well if it rains. The second crop of alfalfa is light. The new seeding looks fine.—W. J. Mann.

Wood County.—Weather is hot and dry and all crops are suffering from lack of rain. Corn on the sandy land has been wilting for two weeks, but on the lowland and in the river bottoms it looks fair. It is tasseling and ears are forming, but the crop will not be much unless it rains soon. Rye and barley are cut and each will make about one-half a normal crop. Oats ripened too soon. Early potatoes are poor; with rain late potatoes should be good. Hay made a good crop. Pastures are poor.—Fred E. Weber.

AMERICA'S MODEL EXPOSITION
— OPEN TO THE WORLD —

Dept. 30 Lincoln, Illinois

Berry Crop in Marinette County.

To the Editor:—Estimates from express and railway station agents and other reliable sources indicate that the total of the wild berry crop shipped from Marinette county this season will be in excess of $50,000.

In late years the harvesting of the wild berry crop has become an industry of considerable importance, offering as it does an opportunity for farmers and new settlers to bring in a considerable sum of money with no investment. Last year the berries shipped from the one station of Ellis Junction brought over $15,000, and just as heavy shipments were made from other small stations.

One of the greatest blueberry and raspberry crops in the history of the county is being harvested at the present time. In places the ground is literally blue with the heavy crop of blueberries. The wild strawberry crop was also heavy, and indications are that the wild blackberry harvest will be bountiful. Howard I. Wood.

Arrange For Potato Convention.

To the Editor:—On Monday, July 31st, the executive committee of the Wisconsin Potato Growers' Association met at Eau Claire with the local Eau Claire Convention Committee. Convention plans are rounding into form.

George Wallace, general freight agent of the Omaha railroad, has nearly completed arrangements with Wisconsin railroads to route several cars to Eau Claire at the time of the convention. This will enable all Wisconsin potato growing counties to send in large-sized exhibits. It is evident now that about twenty counties in Wisconsin will desire to equip county booth exhibits.

Early convention announcements are calling special attention to Wisconsin seed potato trade and to sorting and grading on the farm and at loading stations. The association will give considerable attention to these two subjects at the coming convention at Eau Claire in November.

Southern seed potato buyers are looking over Wisconsin conditions and several seeds contracts for the Triumph variety have been let. Inquiries are coming from as far as Bermuda Island.

A special premium list on school contest exhibits and potato club exhibits is out and will be mailed to all contestants in Wisconsin upon application.

J. G. MILWARD,
Secretary Wisconsin Potato Growers' Association.

Shawano County No. 1.

The Shawano County Cow-Testing Association No. 1 has recently completed the second month of its existence, with 385 cows under test. I would be pleased to see mention of our association in The Wisconsin Farmer. The following is the list of cows in the association which have produced 50 pounds of butter fat or better during the period of thirty days, ending July 9th:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	B. fat Pounds
Alfred Issacson					
Topsy, G. G.	10	5-1	1347	4.8	64.6
Gus H. Rousseau

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Breeding Necessary For Winter Eggs.

Feeding for winter eggs is very necessary, but contrary to the popular opinion, it is not the whole thing. No amount of care and attention can get maximum results from a bird that is not provided by nature to produce eggs out of season.

Among all forms of animal life, hens included, reproduction is largely a matter of inheritance. Some families are more fertile than others, with exactly the same environment. In the matter of producing eggs, we have a vastly different problem than that of producing a heavy flow of milk. The latter is a matter of feed. The former is a matter of both feed and reproduction. While good care will bring out the best in a mongrel flock, the fact remains that better results will be realized from the flock that is carefully bred along its own particular line.

One enthusiast claims that with the exception of the molting period, a hen should produce an egg each day of her life. This is not reasonable. Neither have the laying contests brought out anything of the kind. That it is possible to build up a strain of 200-egg hens is true, because it has been tried, and not found wanting. This means that the flock must be bred that way and fed rightly.

A very choice White Wyandotte hen was sold a few years ago at the seemingly unreasonable price of $800.00. When we hear of a bird selling for such a price, the conclusion is at once drawn that it is for show purposes alone, and it tends to discourage rather than to encourage farm poultry people, who do not expect to ever do anything with poultry other than from a commercial standpoint. This hen was an exception, and purchased for exceptional purposes.

Her purchaser was a born poultryman, and had many years' experience as manager of large poultry plants. When he began operations for himself, he had a definite aim, and that was to build a plant that would excel in the production of eggs. With this aim in view, he began picking up breeding stock here and there that had a bona fide egg record. The White Wyandotte in question had produced the then almost unheard of number of 200 or more eggs in a year. Although the utility side was uppermost, the other side, the markings, was never neglected, though a bird was never purchased for its show record alone. It must have both breeding and prestige at the work-a-day business.

From that hen this poultryman has built up a flock of hundreds of 200-egg hens. Little by little he, in the same manner, added breed after breed to his plant, all with the idea of keeping nothing except hens that have reached the 200-mark, and it was highly successful. This is his business, of course, and not applicable only in a limited manner to the farm where poultry is mostly a side line.

Eggs are sold for hatching, as well as baby chicks, and the immense incubators are kept busy all through the hatching season, with hundreds of disappointed customers who did not speak in time. More and more farm people are considering the egg side of the question. The past spring, at a farm where they have always prided themselves on their splendid big Barred Rocks, we were asked for the name of a reliable breeder of Rocks, with the idea of cockerels being purchased. "We want a good laying strain," was the keynote of the inquiry.

Instantly our mind ran to this poultry farm, where the prime factor is to produce heavy egg yields, and the address was given. His heavy egg yields did not just happen. They are the result of selection, year after year, always mating for a definite result. And results are realized, too. It has become a matter of inheritance for this flock to be depended upon to produce winter eggs, else it could, by no manner of means, be able to produce the 200 eggs yearly.

This poultryman has never shown a bird, though the breeding is looked after from this standpoint so carefully that his customers have been very successful. He has accomplished along this line what few breeders do or can. Followed no particular line or strain. Whenever a hen lays 200 or more eggs, and her breeding is straight, he buys her.

MR. FARMER
are you planning to install an
ELECTRIC LIGHTING PLANT
on your farm this fall? Do not decide to buy before you write us for descriptions and prices of our plants. We can show you something that will please you. Address
FROST ENGINEERING COMPANY
Evansville Wisconsin

BANKING BY MAIL
WHAT is it? It is a modern development in the banking business adopted by the Farmers & Merchants State Bank of Kewaunee, Wis., to enable its depositors to transact their banking business safely and conveniently by mail no matter where they live. You can open an account in this reliable bank with $1.00 or upwards and it will earn **4 per cent.** Write for further information why the Farmers & Merchants State Bank is the safest.
FARMERS & MERCHANTS STATE BANK
Kewaunee Wisconsin

ARE YOU GOING TO BUY LAND?
IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

IF YOU WANT 40 acres or more rich, clay loam clover lands in our co-operative settlements near Crandon, county seat of Forest county, Wisconsin, write us and state **what terms you must have.** We will send you booklet written under supervision State Authorities. Agents wanted. Per-Ola Land Co., 21 Main, Crandon, Wis.

125 ACRES Fine buildings, splendid soil, near town and school, $11,000, $3,000 cash, balance 5%. 80 acres, 30 under cultivation, no buildings, sandy loam, clay subsoil on good road, near school and two towns. $20 per acre. Other snaps. W. E. Webster, Hudson, Wis.

FOR fine farm lands at low prices and easy terms in Wisconsin's greatest dairy district, send for our free list, map and photographs of choice dairy, stock and grain farm bargains. Write Graham's Land Office, Marshfield, Wisconsin.

FARMS for sale. Wonderful bargains in five states with crops and stock. Send for catalog. D. B. Cornell Co., Gt. Barrington, Mass.

FOR Minnesota improved farms and land bargains, write or call on H. A. Hanson, 242 Temple Court, Minneapolis, Minnesota.

FOR SALE-Two farms with stock and crops Address John Trann, Stetsonville Wisconsin.

The "Man Saver" Holstein Ensilage Cutter
Will you test this cutter to prove for yourself that all we say and *more* is true?
No Man is Needed to Feed Fodder Into the Knives. Just throw the stuff, dry or green, onto the conveyor—the machine does the rest. The "Safety Head" adjusts itself to the amount of material fed. Save the expense of a man. Also risk of accident.
FOREIGN SUBSTANCES CAN'T DO DAMAGE. The sudden shock, when cutting head stops, automatically lets fly wheel and pulley run free.
For other advantages and name of our dealer in your locality, write
The Meili-Blumberg Co.
200 Main Street
New Holstein, Wis.

BINDER attachment and harvester cuts and throws corn in pile on harvester or windrows. Man and horse cuts and shocks equal to a Corn Binder. Sold in every state. Price only $22.00 with fodder binder. Testimonials and catalog FREE showing picture of harvester.
PROCESS MFG. CO. Dept. 226, SALINA, KANSAS

POULTRY.

S. C. R. I. REDS
FOR SALE—Hatching eggs from prize pens, half price for balance of season. Won 9 ribbons on 15 birds at Wisconsin State Fair, 1915; 4th pullet and 3d young pen at Chicago Coliseum, 1915. Winnebago Poultry Yards, R. 23, Omro, Wis.

HATCHING EGGS; prize-winning S. C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Atwater-Kent Lighting.

I want to know how a headlight can be run from an Atwater-Kent system, Type K.

Answer.—The above system is for ignition only, and cannot be used for lighting.

Gear Ratio on Motorcycle.

How is the gear ratio on a motorcycle having four sprockets figured?

Answer.—Divide the product of the number of teeth in the driven sprockets by the product of the number of teeth in the driving sprockets.

Lighting From Dynamo.

Could I successfully use a Knapp Type S dynamo motor for lighting a six-volt, fifteen-candle-power headlight on a motorcycle? The motor will generate six volts, four amperes at 1,500 R. P. M. Would the light be brighter than Prest-O-Lite? When geared fifty to one, how much power would the motor have?

Answer.—Your generator should supply the light, but might not be very durable under constant use. The light should be as bright as the Prest-O-Lite. Used as a motor, it should develop about one-thirtieth of a horse power.

Motor Bearing Trouble.

I have a 1912 Cadillac car that is causing me some trouble. It is equipped with a Delco starter and ignition. It has two timers, one for the storage batteries, and one for the dry cells. The motor runs all right when it stands in the shed, but when I run it three or four miles and stop, it misfires and stops when I try to start it again. The crank case and everything near the motor heat up so that one can hardly touch it. I had the car to a repair shop some time ago to have a knock taken out. Do you think they have done something to it to cause the trouble? What do you think is the matter?

Answer.—If your motor is hard to crank when hot, the repair man has adjusted the bearing a little too tight in order to take out the knock. When the motor becomes hot, the bearings tighten on the shaft, causing the motor to heat and lose power. Of course, there are other possibilities. An air leak in the intake could cause the trouble, the air leak being caused by a strain in the manifold, the strain being increased by the heat of the motor. Too much gasoline or too much oil might cause the trouble.

Ice Machines For the Farm.

In a recent issue you gave a description of a system for making ice on the farm. Can you tell me the number of feet required for the piping; how large the vat should be, how to mix the brine, and where to buy the ammonia? Perhaps you can give me the name of a firm making such a device. Does it require expert knowledge to run such a plant? We have a gas engine, and if we could make ice, it would be a fine thing to go hand and hand with the cream separator.

Answer.—The description given was of the common ammonia machine. Such a plant does not require much expert knowledge to run. It does require a fair knowledge of pipe fitting to install it, as the piping must be perfectly air tight, otherwise the ammonia would soon waste away. The brine is made by dissolving as much common salt as possible in water. For the brine tank, make a wooden box that just fits inside the icebox of your refrigerator, which should have a capacity of not less than 100 pounds of ice. Line this box with sheet lead one-eighth of an inch thick, soldering the joints. Make the brine tank coils of one-half-inch gas pipe, the pipes being about three inches apart or less. Two coils should be used, each just long enough and wide enough to fit up nicely against the side of the tank in the brine. The cooling water tank should be at least four times as large as the brine tank, and may be made of wood. Also about four times as much pipe must be used for the cooling water. It is possible that your hardware dealer could furnish you with a compressor and tanks. Or he might give you the address of some jobber that handles such goods. Write to the State University Chemistry Department of the state you live in for information as to where to obtain the ammonia. The ammonia is a gas, and comes in small steel tanks, highly compressed. The Johns-Manville Co., of Chicago, Ill., can furnish you with a complete outfit, ready to install. This outfit uses sulphur dioxide gas instead of ammonia.

Not Practical.

Please tell me how to make a battery tester which tests volts and amperes; also how to make a cheap storage battery.

Answer.—It is not practical to do either of these things on a farm. The tester may be purchased for about $1, and special tools and instruments are required to make it. It would cost as much or more to make the battery than to buy one, and unless properly constructed and charged, it would be a failure.

Tail Light on a Ford.

Please publish a wiring diagram for a tail light on a 1916 Ford auto. Would a six-volt, two-candle-power bulb burn out?

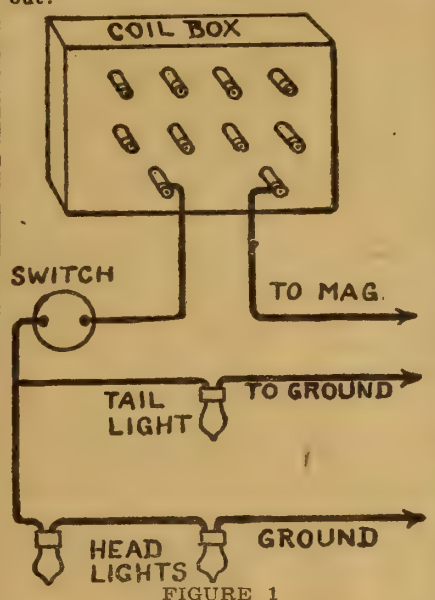

FIGURE 1

Answer.—Figure 1 shows how to wire the car. Use a two-candle-power tail light of double the voltage you are using for your headlights. The six-volt bulb would burn out.

Making Permanent Magnets.

Can you give me some information as to how to make permanent magnets? Also how to magnetize them?

Answer.—In our last issue we illustrated a coil suitable for magnetizing magnets. The magnets should be made of carbon steel, or a special grade of steel known as magnet steel. The magnet steel should be heated to a cherry red heat, bent to shape and allowed to cool slowly. The ends should then be dressed off square, and the ends hardened very hard. It is then ready to magnetize. When forging, the steel should not be heated hotter than a cherry red.

Jump Spark Coils to Charge Magnets.

Could two jump spark coils be used to charge magnets, by soldering two iron plates on the ends of the cores?

Answer.—The cores of a jump spark coil are not magnetized strongly enough to give a permanent magnet a complete charge. Make-and-break coils would work better, and might give a magnet a fair charge. Two coils would be required, placed so that the positive pole of the magnet would touch the negative pole of one core, and the negative pole of the magnet would touch the positive pole of the other core.

Design of Generator.

I have a motorcycle on which I would like to put a dynamo to light a headlight I want to run it on the belt. I have space enough for one about four and one-half inches diameter. Can you tell me what size wire and how many feet it will take to generate about six volts, and run a twelve-candle-power bulb? What kind of armature will supply the most current at the lowest speed?

Answer.—We could not say definitely what size wire or how much of it to use. However, we would suggest that you use about one-half pound of No. 14 wire on the armature, and one pound of No. 30 wire on each field coil. The slotted drum armature will give the best results, but the shuttle wound type is easier to make, and works well at a fairly high speed. You better buy a standard generator unless you wish to do some experimenting. An armature is wound with coarse wire for low voltage and comparatively high current; and with fine wire for high voltage and low current. Increasing the speed increases the voltage.

Diagram For Jump Spark Engine.

Please publish a sketch showing how to wire an I. H. C. upright gasoline engine.

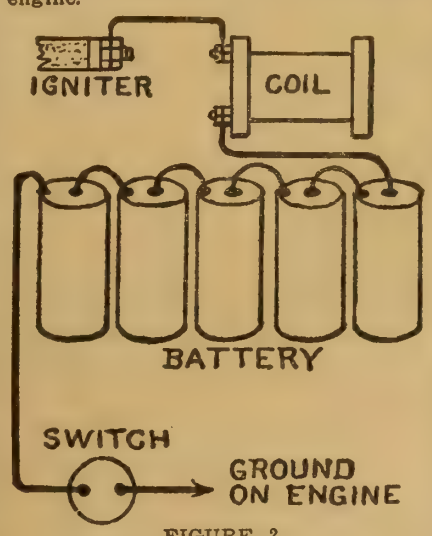

FIGURE 2

Answer.—We are publishing this diagram in Figure 2. This diagram applies to nearly all make-and-break engines.

Making Dry Cells.

How can I make a dry cell battery testing twenty to twenty-five amperes? Could the old carbons and zinc cups from an old cell be used? Where can I obtain the materials, and how much would it cost?

Answer.—The carbon could be used, also the zinc cup if not too badly eaten up. It should be scraped bright inside, and lined with wet cardboard. It should then be filled with a paste of manganese dioxide, moistened with weak sal-ammoniac water. The carbon should be placed in the middle. The end of the cardboard cup should be turned over the paste, a layer of dry sand put on it, and then a layer of tar to seal it. Your druggist can obtain the chemicals for you. It will cost you several times as much as to buy a cell.

Storage Battery Trouble.

We have a 1915 Studebaker touring car. We have trouble to start the engine after it stands still for an hour or two. In order to start it, we have to lift the air control valve on the carburetor. The lamps are also very dim. Please give us some information regarding our trouble.

Answer.—Your lights being dim indicates a run-down condition of your storage battery. The condition of your battery may be the cause of your trouble in starting. You should have your battery tested. The voltage of each cell when fully charged should be about 2.5. An overcharge would probably be good for your battery. When fully charged, the electrolyte should test about 1.3. Nearly all motors start easier with the air supply partly shut off.

WATERLOO BOY KEROSENE TRACTOR

$750

Pulls Three 14-Inch Bottom Plows

Operates 17-In. Silo Filler or 28-Inch Thresher

Today's Tractor
Tomorrow's Tractor

The Waterloo Boy low-priced, one-man, three-plow, CHEAP-FUEL tractor is the leading general-utility power machine. Built for the present and future.

Prolonged actual use by farmers in every part of the country, in all soil conditions, is the one satisfactory test for any tractor. The Waterloo Boy has stood this test. The demand for it is enormous. Our big output enables us to offer it at an exceptionally low price per plow-pulling capacity.

When You Buy a Waterloo Boy Tractor You Buy An Actual Demonstrated and Guaranteed Success—Not An Experiment

This tractor is doing the plowing, harrowing, seeding and harvesting on hundreds of farms in United States and Canada. Every user is an enthusiatic booster.

E. C. Heraldson, of Hanley, Sask., writes: "I broke 230 acres, doubled disked about 500 acres and threshed 18,000 bushels of grain with the Waterloo Boy Tractor. I ran a 28 x 42 with self-feeder and wind-stacker. It required 15 gallons kerosene and one quart cylinder oil for a 10-hour day while threshing."

The Waterloo Boy will increase the net profits of any farm from 25 per cent to 30 per cent by cutting the labor cost.

We can make prompt delivery. Let us send you the name of the nearest agent and write us for free illustrated catalog.

Waterloo Gasoline Engine Company
3800 W. 3rd Avenue Waterloo, Iowa

KEROSENE ENGINES
OTTAWA. LATEST DESIGN

Durable, Powerful, Reliable, Massive. Built to last; to do hard, heavy work. Uses Cheapest Fuel. Pull ½ to ⅓ horse-power more than rated. 3 Months Trial. Easy Terms. Sizes 1½ to 22 H-P. Easy to start. No Cranking. No batteries. 10 Year Guarantee. Most practical engine ever built. Engine book free. A Postal brings it.
THE OTTAWA MANUFACTURING CO.,
1191 King Street, OTTAWA, KANSAS.

Hay Stack Covers
Save your alfalfa and grain. Size 42x42 in. $42.00 per hundred. All sizes and weights to order. Quick service; best quality.
AMERICAN TENT & AWNING CO.
Minneapolis, Minn.

WITTE Engines
EVERY SIZE A BARGAIN. 2, 3, 4, 6, 8, 12, 16 and 22 H-P. Kerosene, Gasoline, etc.
WITTE ENGINE WORKS, 2711 Oakland Ave., Kansas City, Mo.
6 H-P, $89.90

Infantile Paralysis.

Since the original outbreak of infantile paralysis in New York City the disease has spread so rapidly and resulted in so many deaths among children that we are of the opinion a little information on the disease, its treatment and its effect on the patient would not be amiss. Circulars and bulletins have been prepared by the various state boards of health, and anyone desiring more information on the subject should apply to that source.

Infantile paralysis is a contagious and infectious disease and must be handled as such. The degree of susceptibility to the disease is low, as only about 6 per cent of exposed persons develop the disease as compared to 17 per cent for diphtheria, 22 per cent for scarlet fever and nearly 90 per cent for measles. The serious aspect of the conditions which confronts us can be fully understood when it is stated that the mortality during the various previous epidemics has ranged from 8 to 20 per cent, the death rate being highest in very young children and in adults, and lowest in children from three to ten years of age. But worse even than the direct mortality is the permanent paralysis of one or both of the arms or legs, with consequent withering of the affected members and the crippling of the patient for life. This occurs in over 75 per cent of the cases.

Dry, dusty weather seems to be particularly favorable to the spread of infantile paralysis and the disease is most prevalent during the months of August and September. Study of various epidemics has proven the infectious, communicable nature of the disease, though the exact modes of transmission from person to person are not known. It is thought possible, however, that it is transmitted through the air in dust, fomites, food or drink, and possibly by insects or even by animals. Healthy persons, also, may carry infection from the patient to a third person. The germ of the disease has not been isolated, but experiments have shown that it is present not only in the spinal cord, but also in the nasal mucous membrane, salivary glands and lymphatic glands, and it is also suspected that the virus is present in the intestines. It is very important, therefore, that all secretions and discharges from the patient should be disinfected, and bichloride of mercury, carbolic acid or fresh chloride of lime are suggested as means to this end.

The following sanitary precautions should be observed in caring for cases of epidemic infantile paralysis:

Put the patient in a clean, bare, well-ventilated room, screened to keep out insects.

The rest of the family should stay at home as far as possible.

No person should be allowed to enter the sick room except the doctor and the nurse.

Disinfection should be thoroughly carried out under direction of attending physician.

When the nurse leaves the room she should wash her hands in a solution made by adding two teaspoonfuls of carbolic acid to one quart of water or by adding two teaspoonfuls of formalin to one quart of water. She should wear an overgarment and remove same on leaving the room.

All clothes and bedclothes before removing from sick room and all washable clothes before removing from premises should be soaked for one hour in either of the two above named solutions.

All eating utensils and remnants of food used by patients should be boiled before being taken from the sick room.

All other occupants of the house should take frequent baths and use hydrogen peroxide, one tablespoonful to a glass of water, as a gargle and nose spray.

The house should be kept as free from dust as possible by sprinkling floors before sweeping and by using damp cloths for dusting.

All dogs, cats and other pets should be kept from the sick room.

All instances of acute paralysis in domestic animals about the house or farm should be carefully investigated, and all such affected animals should be promptly killed and the quarters in which they had been kept carefully disinfected.

Surrounding premises should be sprinkled daily.

Patients should be kept isolated until quarantine period has passed and the house has been fumigated.

As to the symptoms of the disease, infantile paralysis may be described as beginning suddenly, usually with fever, with severe brain symptoms (deafness, a profound sleepy condition, delirium and general convulsions). There is very rapidly developed a complete paralysis with entire relaxation of the muscles, the paralysis being of invariable distribution over the trunk and extremities, but generally in the form which attacks both the lower limbs. There is no severe disturbance of sensation; no paralysis of the muscles which control the bowels. A rapid improvement sometimes takes place and the general condition of the patient becomes better if the paralysis proves not to be of a progressive character, although restoration of movement of the affected parts is not uniform and is never fully attained. In some of the muscles there is extreme and rapidly progressing diminution of the muscles affected, together with degeneration of tissue; the development of the bones is retarded; the extremities are cold and blue. As the disease progresses considerable deformity of the limbs and trunk result, causing club-foot, curvatures of spine, paralytic contractions, etc.

The disease may occur at all periods of life, though it is most frequent in children between the ages of one and four years. It is susceptible of an unusual number of grades of severity, attacking some mildly, while others are made almost completely helpless. This shows the seriousness of an attack entirely apart from the danger from a mortality standpoint. There is strong evidence that some cases of this disease show only warning symptoms, possibly sore throat and slight fever. These cases, however, are believed to be as dangerously contagious as the paralytic cases, and when infantile paralysis is prevalent all such suspicious cases should be reported and treated with the same precautions as the clearly defined cases.

One more note of caution. It is expected that the present outbreak of infantile paralysis will tempt unscrupulous persons to offer for sale so-called "cures" or remedies for this malady, and officials of the department of agriculture who have in charge the enforcement of the Food and Drugs Act warn the public that any preparation put on the market and offered for sale as being effective for the treatment of infantile paralysis should be looked upon with extreme suspicion, for up to the present time no medicinal cure has been discovered. Food and drug inspectors are doing all in their power to protect the public from such unprincipled persons and they have been instructed by the department to collect samples of all medicines in interstate commerce for which such claims are made. Makers of such fraudulent remedies will be vigorously prosecuted whenever the evidence warrants action. So-called remedies for infantile paralysis which are offered for import into the country will be denied entry.

The food and drugs officials are particularly watchful in this instance because it has been noted in the past that whenever a serious epidemic exists, unscrupulous dealers prey upon the fear or ignorance of the public by flooding the market with worthless, hastily prepared concoctions, for which they assert curative properties which have no foundation whatever in fact. In the present instance, inspectors already have discovered shipments of a few mixtures.

The department will do everything it can under federal law to protect the public which, in times of panic, is apt to grasp at anything which promises protection or relief. The sale of such products at this time, the officials point out, is particularly threatening to the public health because many persons, relying on the false statements of impostors, neglect to secure competent medical advice. As a result, not only is the safety of the patient endangered, but in the absence of proper sanitary precautions, the likelihood of contagion is greatly increased.

It must be understood, however, that the federal food and drugs act applies only to products which are shipped in interstate commerce, that is, from one state to another, or which are offered for import or export, or which are manufactured or sold within a territory or the District of Columbia. Products which are made and consumed wholly within a single state are subject only to such state laws as may apply and are under the control only of state health officials. The federal law does not apply, for instance, to patent medicines made within the state of New York and sold in New York City. Persons buying or using a "remedy" made in their own state, therefore, must rely on the protection accorded them by their local health authorities.

To Make Good Jelly.

Canning-club specialists recommend that the following points be observed to make certain that jelly will be of good quality:

After the fruit has been boiled and the texture broken down it should be poured into a jelly bag and permitted to drain for a considerable time. Forcing the juice from the pulp will cause cloudy jelly. When the juice has been collected, place two teaspoonfuls of cold, unsweetened fruit juice in two teaspoonfuls of grain alcohol and mix by shaking gently. Allow it to settle for one-half hour, preferably in a glass tumbler. If a jelly-like substance collects in the bottom of the mixture it is evidence that pectin is present and the juice is suitable for jelly making. When the test shows absence of pectin, the white portion of orange peel, apples, or green citron melon may be added to the juice to supply the necessary pectin. Twelve ounces of sugar added to a pint of juice will make a jelly of the proper firmness and texture. Jelly is ready to be poured into the glasses when two rows of drops form on the end of a paddle or on the edge of a spoon held sidewise.

Simple Recipe For Grape Juice.

Wouldn't a little grape juice taste good next winter when the juices of other fruits are not obtainable? Grapes are said to contain sugars which are especially nutritious and all the sugars are carried with the juice of the fruit. Many housewives find the following a satisfactory way of making the juice: To two and one-half pounds of grapes add one pint of water and cook until soft. Drain through a jelly bag and add one and one-half pound of sugar, bring the juice to boiling, boil for five minutes and bottle while hot. The juice may be kept indefinitely and diluted to taste when served.

Red Chocolate Cake.

To the Editor:—To the lady who wanted a red chocolate cake, I am sending the following recipe:

One-four cup of butter, one cup of sugar, two eggs (well beaten), one-half cup thick sour milk, one teaspoonful of soda, one-half teaspoonful of baking powder, one and one-fourth cups of flour, five heaping tablespoonfuls of cocoa or melted bitter chocolate. Bake from thirty to forty minutes in moderate oven.

This makes a medium-sized cake, and is the red color. Put the layers together with boiled icing.

Will someone kindly send the recipe for mock angel food cake? I think I saw one in the paper some time ago, but did not have an opportunity to clip it out and I would be glad if some of the readers would send in their recipes.

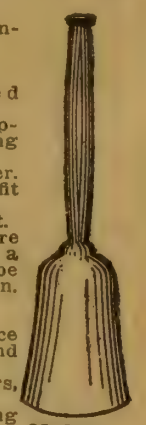
E. R.

Indispensable Canning Utensils.

To the Editor:—The following is a list of utensils that I have seen in my neighbor's kitchen and which I intend to add to my stock in hand. Some of them are indispensable to the art of canning, preserving and jelly making:

Wire sieve.

One set of paring knives, preferably plated.
Two preserving kettles.
One wire sieve or strainer.
One colander.
One ladle.
Three long-handled wooden spoons.
One large-mouthed, cup-shaped funnel for filling jars.
One flat bottomed boiler.
One wooden rack to fit the bottom of boiler.
One wire frying basket.
One seamless measure marked ¼, ½, ¾ and a full cup. This may be aluminum, porcelain or tin.
One wooden masher.
One pair scales.
One glass lemon juice extractor with handle and patent seed arrester.
Jars, rubbers, tumblers, covers for jelly glasses.
Paraffine wax for sealing preserves and jelly.
Straining bags.
Supply of tin cans and handy soldering set.
Supply of spices.



Modern vegetable masher.

The plated paring knives are to be preferred, because a steel knife will discolor the fruit as well as the finger. The quickest way to peel peaches is to fill the wire basket with peaches and plunge in boiling water. In less than five minutes lift the basket and immerse in cold water. Let them drain and peel. Tomatoes, plums, etc., may be peeled the same way.

Wire basket for blanching fruit.

Mrs. M. E. F.

Tomatoes and Corn.

To the Editor:—Mrs. M. D. E. asks about canning tomatoes and corn together. I can some every year and have very good success. Cut the corn from the cob, cook ten minutes, season with salt, pepper and a little sugar, then put the tomatoes in and let all boil up well and seal at once. I cut the tomatoes into inch pieces, so they take but a few minutes to cook.

Mrs. E. G.

Household Hints.

All bacon is improved by having boiling water poured over it before frying.

Always use very cold water (ice water if possible) when mixing pie crust.

Irons will retain their heat twice as long if you use a brick as an iron stand.

If you have occasion to wrap up a freshly iced cake, stick a few toothpicks into the cake, then wrap it up, and you will find that the toothpicks

keep the paper up very nicely and there is no danger of sticking.

When broiling chickens, lay them skin side up.

Vinegar and salt will remove lime from the inside of the teakettle. It will also clean aluminum cooking utensils, leaving them bright and clean without injuring the metal.

A small brush kept near the sink is fine for cleaning baking board, rolling pin, graters, etc. Use salt instead of soap for the bread board.

When baking oatmeal cookies calling for raw rolled oats, either with or without nuts or raisins, if the rolled oats are run through a meat grinder, (using the nut plate) the flavor of the cookies is greatly improved and they bake evenly. When using raisins and nuts mix with oats and then grind all together and put with your other ingredients.

Lace may be hemstitched to linen in the following way: Draw a thread about one-eighth of an inch from the edge of the linen and roll a hem to the drawn thread. Then baste the lace in place on the rolled hem and pull the desired number of threads. The hemstitching proceeds in the usual way, the stitches being taken through the rolled hem and lace. It requires a certain deftness to accomplish this means of applying lace to a straight edge, but when the knack has been acquired it is impossible to detect the stitches.

Pickle Recipes.

Chili Sauce.—Twelve large, ripe tomatoes, deprived of the skins but not the seeds. Slice or cut up small. Two large onions (sliced) two small green peppers (seeded and chopped fine), two tablespoonfuls of salt, four tablespoonfuls of sugar, one-half tablespoonful each of cloves, cinnamon and ginger, one nutmeg (grated) two (or more) cupfuls of vinegar. Stir gently until well done and as thick as desired. Bottle and seal.—Mrs. S. A. D.

Crab Apple Catsup.—Four pounds of apples chopped fine (Hyslop crab or any sour apple), one and one-half pounds of brown sugar, one pint of vinegar, one teaspoonful each of salt, cinnamon and cloves. Boil the apples and vinegar until nearly done, then put in sugar, spices and salt and finish cooking.—Mrs. A. S. D.

Cucumber Pickles.—Wash the cucumbers and pour over them a brine made of one gallon of vinegar, one cupful of salt, one cupful of sugar and one cupful of mustard. Keep the pickles under the vinegar.—Mrs. E. N. W.

Ripe Tomato Catsup.—Four quarts ripe tomatoes, two medium onions; boil and put through sieve. Then add three level tablespoonfuls of salt, one level tablespoonful of ground mustard, one-half tablespoonful of white pepper, one-fourth teaspoonful of cayenne pepper, twelve tablespoonfuls of granulated sugar, one quart of vinegar, one small green pepper, one bunch of celery, one teaspoonful of celery seed, one teaspoonful of allspice. Tie the spices in a bag. Stir often while cooking. Put through flour sieve.—F. M. Z.

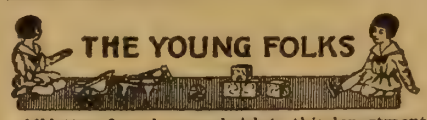
Good Cucumber Pickles.—Wash cucumbers and put in weak salt water for thirty-six hours. Pour off this water and replace it with boiling water and let stand until cold. To one quart of vinegar use three tablespoonfuls of sugar, a pinch of mustard and spices desired. Put cucumbers in the vinegar and let come to a boil. Seal while hot. —Mrs. E. R.

Dill Pickles.—Gather cucumbers in the morning when fresh and cool. Wash and place in jar. Sprinkle with salt and pour over them boiling water to cover. Do this three times. The third time, when cold, drain and pack in bottles or jars with spice and dill cut in small bits and pour over them sweetened vinegar and seal while hot.—I. F. T.

Pepper Sauce.—Ten large white onions, twelve red peppers, twelve green peppers, three tablespoonfuls of salt, three pints of vinegar, one and a half cupfuls of sugar. Chop peppers and onions fine and pour boiling water over them. Let stand five minutes, then drain and pour boiling water over them again. Let stand ten minutes, then drain well and boil fifteen minutes in vinegar, sugar and salt.

Green Corn Relish.—Part One.—Four large onions, one large cabbage, eight red peppers, twenty ears of corn, one and a half cups of sugar, one-half cup of salt, one quart of vinegar. Bring these to a boil. Part Two.—Three tablespoons of mustard, one tablespoon of turmeric, one-half cup of flour, one level tablespoon of celery seed, one scant quart of vinegar. Dissolve mustard, flour and turmeric in the vinegar until there are no lumps, add to the other ingredients, and cook all for thirty minutes. Makes six quarts.

Oil Pickles.—Slice 100 medium-sized cucumbers. Cover with strong brine and let soak three hours. Wash with cold water. Add three pints white onions (which have previously been soaked in water with a small piece of alum), three ounces white mustard seed, one ounce celery seed, two ounces white pepper, one pint olive oil. Mix and cover with cold vinegar. Seal in jars.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

This Boy Found a Way.

When a boy, or a girl either, for that matter, makes up his mind that he is going to do a thing, that thing will be done. A certain pig club boy has proved this statement in the manner in which he weighed his pig when all he had to weigh it with was a pair of small scales of a few pounds capacity, used by his mother in her household work. The example of this boy ought to stimulate other club boys and club girls who have similar problems to solve.

After taking stock, this boy found that he had a hog crate, a strong box, some chains, a high board fence, a long pole, and the small scales as material to be used in weighing his pig. He marked the middle point of the long pole and placed it over the fence. To one end he attached the crate and to the other end the box was fastened by means of the chains. Sand sufficient to balance the crate was placed in the box. The boy then gathered a quantity of small cobblestones, dropping them near the box. By placing a few grains of corn in the crate and using other grains of corn as bait, the pig was enticed into the crate. The door was closed and the pig was ready for the weighing. By putting the small cobblestones into the box until the box and crate balanced once more, the boy learned the weight of his pig in terms of stone. Now, these stones were small, as already stated, in order that no stone would be too heavy to weigh on the small scales. By means of the scales the stones were weighed and the total of the weighings gave the boy with fair accuracy the weight of his pig in pounds. His problem was solved in such a satisfactory manner that he used this arrangement during the whole contest. As a result he was able to determine not only the cost per pound of gain, but also the average daily gain of his pig by months and for the contest as a whole. Although his pig did not possess the merit to be a winner in the state contest, the boy received honorable mention for good work done.

From a Little Town Girl.

Dear Young Folks:—I am a little girl, eleven years old, and I am in the sixth grade at school.

I want to correct the impression given in one of the papers, for in Patty's letter she said, "I am a farm girl, of course, or I would not be such an interested reader of this good old paper." I am sure I am just as good a reader as Patty, even though I do live on two lots in town. I can hardly wait for the paper to come.

We have twenty-three little bantams, six ducks and 125 little chickens.

I have been taking music lessons for three years and I like my teacher fine. We have a garden and a good many flowers. —Geraldine.

Won Certificate and Silver Pin.

Dear Young Folks:—I have been reading your letters and I have enjoyed them very much. I am a little girl eight years old. I will be nine in November. I have one little sister and two brothers.

I like school very much. Brother Robert and I go together every day. This year we won certificates and silver pins for being neither absent nor tardy the whole nine months of school. Our papa likes us to go to school. We like our teacher and I am glad that we are going to have her again next year.

We are having a nice vacation. Robert and I spent one week with a little girl friend of ours. Now we are entertaining some little girls, one of them from Nebraska. We have lots of fun. —Roma.

Helps Make Hay.

Dear Young Folks:—I always read the letters that the little girls and boys write, so I thought I would write too. I am twelve years old, and I have two brothers and one sister. They are all married. I have one little niece.

My father owns 368 acres. We have chickens, ducks, geese, pigs, horses and cows. We milk eighteen cows. We have seven horses and one little colt. The colt is black with a little white dot in its face. Her name is Nellie.

I can bake, cook and wash, and I help do the milking every morning and evening. I have to help make hay, too.

I think it is a great lot of fun giving riddles. Mine is: Round as an apple, deep as a cup; all the king's horses can't pull it up. I think the answer to Carrie's riddle is an umbrella, because it will go up a stovepipe down, but can't go down a stovepipe up. —Elizabeth.

International Sunday School Lesson.

Lesson for August 13, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

The Grace of Living.

LESSON TEXT—II Cor. 9.

GOLDEN TEXT—In all things I gave you an example, that so laboring ye ought to help the weak, and to remember the words of the Lord Jesus, that he himself said, it is more blessed to give than to receive.—Acts 20:35.

Paul's letters to the church in Corinth are a divine commentary upon church government. A stricter adherence to the principles enunciated and a clearer interpretation of those principles to the church of Jesus Christ would save us from many errors and heartaches. In this rich and populous nation the lesson for consideration today is most vital, for it concerns one of the fundamental principles which underly the progress of mankind as well as the kingdom of God.

1. **Cheerful Giving** (vv. 1-7). One of the dangers assailing the early Christian church was that of division between the Jewish and Gentile believers. One party suggested that the Gentiles ought to have a closer union with the Jews; on the other hand, certain Gentiles could not see the necessity of the Jewish ceremonial, and in this Paul agreed with them, and, therefore, they refused to assume any unnecessary burden. The great feasts at Jerusalem were crowded with pilgrims, both Jews and Jewish Christians. The pilgrims were often very poor, and fatigue must have fostered diseases. Here then was a place where a work of ministry to the needy might be done with the money which had been systematically gathered through the weekly contributions of Christian believers. Note how skillfully Paul appealed to these Corinthians. He recognizes their forwardness of mind and their zeal (vv. 1 and 2, Am. R.). Most delicately does he compliment them upon their work, for, said he, "I glory in your behalf."

He desired their collections to be a matter of bounty, and not of covetousness or extortion. Paul's principle of giving is that it shall be a matter of free and beneficent gifts, not a matter of covetous greed; not a quid pro quo. He says that they who sow sparingly shall reap sparingly.

II. **The Results of Giving** (vv. 8-15). The law of reaping according to the seed we sow and of reaping in proportion to the quality and quantity of the seed sown is also to be supplemented by the law of the necessity of systematic giving (See I Cor. 16:2). One of the sweetest and most cheerful and inspiring promises of the Bible is found in verse 8 of this section, "God is able." He is able to make all grace abound, and he does this "to the bountiful giver." Nothing more surely limits the measure of grace that we receive than our penurious, niggardly giving (Phil. 4:19 and context). This giving of grace is "in order that ye always having all sufficiency in all things may abound unto every good work." God's abundant grace is bestowed upon us that we may work for others, and live abounding, sufficient lives in everything. How poor indeed our lives must appear when measured by the standard of this verse. Literally this is "hilarious giving." God loves the full-souled, hilarious giver who gives time and money. Such giving is like unto God's giving, who gave his only begotten son. If we sow as God provides, he will multiply the seed for sowing and increase the fruits of our righteousness. If we do not sow, he will cease to supply.

This liberality will work through us to others and thanksgiving to God on the part of those who receive (v. 11, R. V.). Such giving abounds to his honor and glory through the many thanksgivings which it will occasion (Heb. 13:15). The more we give, the more God will increase our power to give and in this way we will be enriched in everything unto all liberality. (Prov. 11:24-25). The church in Jerusalem, when the saints of Corinth had given proof by the ministration to their need, would glorify God for the obedience of the saints in Corinth and their confession of the gospel of Christ, and also for the liberality of their contribution unto them (v. 13, R. V.). They would repay their generosity with prayer (v. 14, R. V.) and they would long after them by reason of the grace of God which was in them.

Paul's words about our giving with thanksgiving to God for his unspeakable gift—(See Ch. 8:9) the unspeakable gift of God, Jesus Christ (John 3:16; Rom. 8:32)—is an exhortation to us. Nothing should so move us to give to others as the thought of what God has given of his very best and dearest for us.

The Sunday school, as the training school of the church, ought to give in-

Fill It Only Once A Week

Clean it only once a year. No wick. No glass globe. No danger even if rolled around in straw. Can't explode. Can't spill. Use it around barns, cow sheds, chicken houses, cellars, etc. The

COLEMAN GAS LANTERN

Makes and burns its own gas. Gives 300 candle power of strong steady light. Can't blow out or jarout. Made of heavily nickeled brass, Mica Globe. Guaranteed for five years. Ask your dealer—if not on sale in your town yet, write for catalog of 20 different kinds Gas Lanterns, Table Lamps, etc. Dealers or agents wanted in every locality.

SAFETY

STORM BLAST

LANTERN FREE

This Safety Lantern cannot catch fire or explode. It is absolutely safe at all times and on all occasions. If you drop it in the hay loft, no oil can escape; if the cow kicks it over, it goes out at once.

It cannot blow out in a cyclone because of the storm blast feature. It is just the kind of a lantern every farmer needs about the house and barn.

Patent opening device raises and swings the globe free for lighting, filling and trimming. This lantern is fully guaranteed and is endorsed by the highest authorities on fire insurance, fire fighting and explosives. If dropped or turned over it immediately goes out. Oil cannot run. Impossible to catch fire. A lantern you will always feel safe with in the house or barn.

OUR OFFER

Send $2.00 for a three year new or renewal subscription to The Wisconsin Farmer and we will send you one of these Safety Storm Blast Lanterns as a premium free and postpaid.

Mail all orders to

THE WISCONSIN FARMER

struction not alone in salvation truth and life teaching, but also in systematic giving. Train the children early to give to the church a portion of their substance, and they will learn to love it and support it in the years to come. Persistent practice is the secret of mastery here as in everything else. We say: "When a rich man dies he leaves all his wealth behind him."

True, but it is also true that we change into the currency of the country to which we are going the gifts which we have given here.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF FALL AND WINTER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1809—A smart attractive gown. The skirt is a three-piece model. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7⅞ yards of 44-inch material for a 36-inch size.

1806—A simple natty suit for mother's boy. The pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 2¾ yards of 44-inch material for a 4-year size.

1797—A simple dress for mother's girl. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 2¾ yards of 36-inch material for a 6-year size.

1540—A very becoming and comfortable lounging robe. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5⅝ yards of 44-inch material for a medium size.

1632—A serviceable laidies' apron. The pattern is cut in 3 sizes: Small, medium and large. It requires 5 yards of 36-inch material for a medium size.

1349—Girls' dress with plaited skirt, attached to an underwaist, and with sleeve in either of two lengths. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4 yards of 36-inch material for an 8-year size.

1788—A comfortable morning dress. The pattern is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5½ yards of 44-inch material for a 36-inch size.

1786—A neat and simple style. A wide box plait finishes the center front, and under this the closing is effected. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3¼ yards of 44-inch material for an 8-year size.

Waist 1420-Skirt 1421—A pleasing costume especially good for mature figures. The waist pattern 1420 is cut in 6 sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. The skirt 1421 is cut in 6 sizes: 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅛ yards of 44-inch material for the skirt, and 2¾ yards for the waist for a medium size. Two separate patterns, 10 cents for each pattern.

1558—Three-piece skirt with or without hem cuff for misses and small women. The pattern is cut in 4 sizes: 14, 16, 18 and 20 years. A 16-year size will require 3½ yards of 36-inch material for the skirt and 1¼ yards for the cuff.

1808—Dress for misses and small women. The pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 6¼ yards of 36-inch material for an 18-year size.

1556—Middy blouse for misses and small women. The pattern is cut in 4 sizes: 14, 16, 18 and 20 years. It requires 2⅝ yards of 44-inch material for a 16-year size.

TOLD IN THE HILLS

(Copyright Rand McNally & Co.)

SYNOPSIS OF PRECEDING CHAPTERS

The scene is laid in the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold. A neighbor, named Hardy, comes to his camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. He becomes well acquainted with his employer's sister, Rachel Hardy, who takes a great interest in him and is much in his company. Genesee Jack overhears a conversation between Miss Hardy and her aunt, from which she learns that he is not "fit company for a lady"—this is the aunt's view—and the relations between Rachel and the guide become strained. Disobeying his strict orders to stay with the party, Rachel Hardy rides ahead, her horse throwing her as it scares at a bear cub. She is severely hurt, but Genesee Jack finally finds her, and succeeds in getting her safely back to camp. Next morning Jack leaves the camp without a word of good-bye to the women folks. Two weeks later Rachel and Jim, while looking for lost sheep become lost and wander into MacDougall's shack and cook their supper, only to be surprised by Genesee walking in.

(CHAPTER VIII Continued)

"YES, of course it's I," she said, slipping her hand away after a little and dropping her face that had flushed pink in the firelight; "I don't look like a ghost, do I? You would not find a ghost at such prosaic work as getting supper."

"Getting supper?" he said, stepping back a bit and glancing around. For the first time he seemed to notice Jim, or have any remembrance of anything but the girl herself. "You mean that you two have been getting supper alone?"

"Yes, Jim and I. Mr. Jack, this is my friend Jim, from the ranch. We tried to guide each other after sheep and both got lost; and as you did not get here in time to cook supper, of course, we had to do it alone."

"But I mean was there no one else here?"—he still looked a bit dazed and perplexed, his eyes roving uneasily about the room—"I—a—a young Indian—"

"No!" interrupted the girl eagerly. "Do you mean the Indian boy who brought me that black bear's skin? I knew you had sent it, though he would not say a word—looked at me as if he did not understand Chinook when I spoke."

"Maybe he didn't understand yours," remarked Jimmy, edging past her to rake the potatoes out of the ashes.

"But he wasn't here when we came," continued Miss Hardy. "The house was deserted and in darkness when we found it, just as the storm came on in earnest."

"And the fire?" said Genesee.

"There was none," answered the boy. "The ashes were stone cold. I noticed it; so your Injun hadn't had any fire all day."

"All day!" repeated the man, going to the door and looking out. "That means a long tramp and tonight—"

"And tonight is a bad one for a tramp back," added Jim.

"Yes," agreed Genesee, "that's what I was thinking."

If there was a breath of relief in the words both were too occupied with the potatoes in the ashes to notice it. He shut the door directly as the wind sent a gust of rain inside, and then turned again to the pirates at the fireplace.

"What did you find to cook?" he asked, glancing at the "lay-out," as Jim called it. "I haven't been here since yesterday and am afraid you didn't find much—any fresh meat?"

Miss Hardy shook her head.

"Salt meat and eggs, that's all," she said.

"Not by a long shot it ain't, Mr.—Mr. Jack," said Jim, contradicting her flatly. "She's got a first-class supper; an' by George! she can make more out o' nothin' than any woman I ever seen." In his enthusiasm over Rachel he was unconscious of the slur on their hosts larder. "I never knowed she was such a rattlin' cook!"

"I know I have never been given credit for my everyday, wearing qualities," said the girl, without looking up from the eggs she was scrambling in the bake oven of a few minutes before. The words may have been to Jim, but by the man's eyes he evidently thought they were at Genesee—such a curious, pained look as that with which he watched her every movement, every curve of form and feature, that shone in the light of the fire. Once she saw the look, and her own eyes dropped under it for a moment, but that independence of hers would not let it be for long.

"Do you want a share of our supper?" she asked, looking up at him quizzically.

"Yes," he answered, but his steady, curious gaze at her showed that his thoughts were not of the question or answer.

Not so Jim. That young gentleman eyed dubiously first the lay-out and then Genesee's physique, trying to arrive at a mental estimate of his capacity and the probable division of the pone and potatoes.

"How about that saddle, now, Jim?" asked the girl. Whereupon Jim began a pantomime enjoining silence, back of the chair of the man, who appeared more like a guest than host—perhaps because it was so hard to realize that it was really his hearth where that girl sat at home. She noticed his preoccuption and remarked dryly:

"You really don't deserve a share of our cooking after the way you deserted us before!—not even a klahowya when you took the trail."

"You're right, I reckon; but don't you be the one to blame me for that," he answered, in a tone that made the command a sort of plea; and Miss Hardy industriously gave her attention to the supper.

"It's all ready," announced Jim, as he juggled a pan of hot pone from one hand to another on the way to the table. "Ouch! but it's hot! Say, wouldn't some fresh butter go great with this!"

"Didn't you find any?" asked Genesee, waking to the practical things of life at Jim's remark.

"Find any? No! Is there any?" asked that little gourmand, with hope and doubt chasing each other over his rather thin face.

"I don't know—there ought to be;" and lifting a loose board in the floor by the cupboard he drew forth a closely woven reed basket, and on a smooth stone in the bottom lay a large piece of yellow butter, around which Jim performed a sort of dance of adoration.

What a supper that was, in the light of the pitch-pine and the fierce accompaniment of the outside tempest! Jim vowed that never were there potatoes so near perfection, in their brown jackets and their steaming, powdery flakes; and the yellow pone, and the amber coffee and the cool slices of butter that Genesee told them was from an Indian village thirty miles north. And to the table were brought such tremendous appetites! at least by the cook and steward of the party. And above all, what a delicious atmosphere of unreality pervaded the whole thing. Again and again Genesee's eyes seemed to say, "Can it be you?" and grew warm as her quizzical glances told him it could be no one else.

As the night wore on and the storm continued he brought in armfuls of wood from the shed without and in the talk round the fire his manner grew more assured—more at home with the surroundings that were yet his own. Long they talked, until Jim, unable to think of any more questions to ask of silver mining and bear hunting, slipped down in the corner, with his head on a saddle, and went fast asleep.

"I'll sit up and keep the fire going," said Genesee, at this sign of the late hour; "but you had better get what rest you can on that bunk there—you'll need it for your ride in the morning."

"In the morning!" repeated the girl coolly; "that sounds as if you are determined our visit shall end as soon as possible, Mr. Genesee Jack."

"Don't talk like that!" he said, looking across at her; "you don't know anything about it." And getting up hastily, he walked back and forward across the room; once stopping sud-

denly, as if with some determination to speak, and then, as she looked up at him, his courage seemed to vanish, and he turned his face away from her and walked to the door.

The storm had stilled its shrieks and was dying away in misty moans down the dip in the hills, taking the rain with it. The darkness was intense as he held the door open and looked into the black vault, where not a glimmer of a star or even a gray cloud could be seen.

"It's much nicer indoors," decided Miss Hardy, moving her chair against the chimney piece and propping herself there to rest.

"Jim had better lie on the bed, he is so sleepy, and I am not at all so; this chair is good enough for me, if you don't mind."

He picked the sleeping boy up without a word and laid him on the couch of bear skins without waking him.

"There isn't much I do mind," he said, as he came back to the fireplace; "that is, if you are only comfortable."

"I am—very much so," she answered, and would be entirely so if you only seemed a little more at home. As it is, I have felt all evening as if we are upsetting your peace of mind in some way—not as if we are unwelcome, mind you, but just as if you are worried about us."

"That so?" he queried, not looking at her; "that's curious. I didn't know I was looking so, and I'm sure you and the boy are mighty welcome to my cabin or anything in the world I can do for you."

There was no mistaking the heartiness of the man's words, and she smiled her gratitude from the niche in the corner where, with her back toward the blaze, only one side of her face was outlined by the light.

"Very well," he said amicably; "you can do something for me just now—open the door for a little while; the room seems close with being shut up so tight from the rain—and then make yourself comfortable there on that buffalo robe before the fire. I remember your lounging habits in the camp and a chair doesn't seem to quite suit you. Yes, that looks much better, as if you were at home again."

Stretched on the robe, with her saddle on which to prop up his shoulders, he lay, looking in the red coals, as if forgetful of her speech or herself. But at last he repeated her words:

"At home again! Do you know there's a big lot of meaning in those words, Miss, especially to a man who hasn't known what home meant for years? And tonight, with white people in my cabin and a white woman to make things look natural, I tell you it makes me remember what home used to be, in a way I have not experienced for many a day."

"Then I'm glad I strayed off into the storm and your cabin," said the girl promptly; "because a man shouldn't forget his home and home folks, especially if the memories would be good ones. People need all the good memories they can keep with them in this world; they're a sort of steering apparatus in a life boat, and help a man make a straight journey toward his future."

"That's so," he said, and put his hand up over his eyes as if to shield them from the heat of the fire. He was lying full in the light, while she was in the shadow. He could scarcely see her features, with her head drawn back against the wall like that. And the very fact of knowing herself almost unseen—a voice, only, speaking to him—gave her courage to say things as she could not have said them at another time.

"Do you know," she said, as she sat there watching him with his eyes covered by his hand—"do you know that once or twice when we have been together I have wished I was a man, that I could say some things to you that a woman or a girl—that is, most girls—can't say very well? One of the things is that I should be glad to hear of you getting out of this life here; there is something wrong about it to you—something that doesn't suit you; I don't know what it is, but I can see you are not the man you might be—and ought to be. I've thought of it often since I saw you last, and sometimes—yes—I've been sorry for my ugly manner toward you. White people, when they meet in these out-of-way places in the world, ought to be as so many brothers and sisters to each other; and there were times, often, when I might have helped you to feel at home among us—when I might have been more kind."

"More kind!" whispered the man.

"And I made up my mind," continued the girl courageously, "that if I ever saw you again I was going to speak plainly to you about yourself and the dissatisfaction with yourself that you spoke of that day in the laurel thicket. I don't know what the cause of it is and I don't want to, but if it is any wrong that you've done in—in the past, a bad way to atone is by burying oneself alive, along with all energy and ambition. Now, you may think me presuming to say these things to you like this; but I've been wishing somebody would say them to you and there seems no one here to do it but me, and so—"

She stopped, not so much because she had finished as because she felt herself failing utterly in saying the things she had really intended to say. It all sounded very flat and commonplace in her own ears—not at all the words to carry any influence to anyone, and so she stopped helplessly and looked at him.

"I'm glad it is you that says them," he answered, still without looking at her, "because you've got the stuff in you for such a good, square friend to a man—the sort of woman a person could go to in trouble, even if they hadn't the passport of a saint to take with them; and I wish—I wish I could tell you tonight something of the things that you've started on. If I could—" he stopped a moment.

"I suppose any other girl—" she began in a deprecating tone; but he dropped his hand from his eyes and looked at her.

"You're not like other girls," he said with a great fondness in his eyes, "and that's just the reason I feel like telling you all. You're not like any girl I've ever known. I've often felt like speaking to you as if you were a boy—an almighty aggravatin' slip of a boy sometimes; and yet—"

He lay silent for a little while, so long that the girl wondered if he had forgotten what he was to try to tell her. The warmth after the rain had made them neglect the fire and its blaze had dropped low and lower, until she was entirely in the shadow—only across the hearth and his form did the light fall.

"And yet," he continued, as if there had been no break in his speech, "there's been many a night I've dreamed of seeing you sit here by this fireplace just as I've seen you tonight; just as bright and contented as if all the roughness and poorness of it was nothing to you, or else a big joke for you to make fun of; and then—well, at such times you didn't seem like a boy, but—"

Again he stopped.

"Never mind what I'm like," suggested the girl; "that doesn't matter. I guess everyone seems a different person with different people; but you wanted to tell me something of yourself, didn't you?"

"That's what I'm trying to get at," he answered, "but it isn't easy. I've got to start back so far to start at the beginning—back ten years, to reckon up mistakes. That's a big job, my girl—my girl."

The lingering repetition of those words opened the girl's eyes wide with a sudden memory of that moonlit night in the gulch. Then she had not fancied those whispered words! they had been uttered, and by his voice; and those fancied tears of Tillie's, and—the kisses!

So thick came those thronging memories that she did not notice his long, dreamy silence. She was thinking of that night, and all the sweet, vague suggestion in it that had vanished with the new day. She was comparing its brief charm with this meeting of tonight that was ignoring it so effectually; that was as the beginning of a new knowledge of each other, with the commonplace and practical as a basis.

Her reverie was broken by the sight of a form that suddenly, silently, appeared in the doorway. Her first impulse of movement or speech was checked as the faint, flickering light shifted across the visage of the newcomer, and she recognized the Indian girl who had hidden behind the ponies. A smile was on the dark face as she saw Genesee lying there, asleep he must have looked from the door, and utterly oblivious of her entrance. Her soft moccasins left no sound as she crossed the floor and dropped down beside him, laying one arm about his throat. He clasped the hand quickly and opened his half-shut eyes. Did he, for an instant, mistake it for another hand that had slipped into his that one night? Whatever he thought, his face was like that of death as he met the eyes of the Indian girl.

"Talapa!" he muttered, and his fingers closing on her wrist must have twisted it painfully, by the quick change in her half Indian, half French face. He seemed hardly conscious of it. Just then he looked at her as if she was in reality that Indian deity of the inferno from which her name was derived.

"Hyak nika kelapie!" (I returned quickly), she whined, as if puzzled at her reception, and darting furious sidelong glances from the black eyes that had the width between them that is given to serpents. "Nah!" she ejaculated angrily, as no answer was made to her; and freeing her hand she rose to her feet. She had not once seen the white girl in the shadow. Coming from the darkness into the light, her eyes were blinded to all but the one plainly seen figure. But as she rose to her feet, and Genesee with her, Rachel stooped to the pile of wood beside her, and throwing some bits of pine on the fire, sent the sparks flying upward, and a second later a blaze of light flooded the room.

The action was a natural, self-possessed one—it took a great deal to upset Miss Hardy's equanimity—and she coolly sat down again facing the astonished Indian girl and Genesee; but her face was very white, though she said not a word.

"There is no need for me to try to remember the beginning, is there," said Genesee bitterly, looking at her with sombre, moody eyes, "since the end has told its own story? That is—my—my—"

Did he say wife? She never could be quite sure of the word, but she knew he tried to say it.

His voice sounded smothered, unnatural, as it had that day in the laurel thicket when he had spoken of locking himself out from a heaven. She understood what he meant now.

"No, there is no need," she said, as quietly as she could, though her heart seemed choking her and her hands trembled. "I hope all will come right for you sometime, and—I understand, now."

Did she really understand, even then, or know the moral lie the man had told, the lie that, in his abasement, he felt was easier to have her believe than the truth?

Talapa stood drying her moccasins at the fire, as if not understanding their words; but the slow, cunning smile crept back to her lips as she recognized the white girl, and no doubt remembered that she and Genesee had ridden together that day at the camp.

He picked up his hat and walked to the door, after her kindly words, putting his hand out ahead of him in a blind sort of way and then stopped, saying to her gently:

"Get what rest you can—try to, anyway; you will need it." And then, with some words in Indian to Talapa, he went out into the night.

(To be continued.)

Engineering the Telephone

THE great Bell System, with its telephone highways connecting the farthest points of the country, is primarily a brain creation.

The telephone engineer is the genius of communication. Like the general of an army, he plans, projects and directs his campaigns far ahead. He deals with the seemingly impossible — transforming ideas and ideals into concrete facts.

His problems may involve doubling the capacity of a city's underground telephone system, or the building of a transcontinental line, or a serious war-shortage of supplies needed in telephone work.

Whatever the difficulties, they must be overcome so that the progress of the telephone shall continue equal to the ever-growing needs of the people.

It is not enough to provide only for the present—the future must be anticipated and discounted.

In the Bell System, more than two thousand highly efficient engineers and scientists are constantly working on the complex problems of the telephone business.

As a result, the service keeps step with present requirements and the assurance is given to every subscriber that the Bell System is prepared for whatever the future develops.

NATIONAL TRACTOR FARMING DEMONSTRATIONS

Round-up Tractor Show at Madison

The closing or round-up Tractor Demonstration of the National Tractor Demonstration Circuit will be held at

MADISON, WISCONSIN, SEPT. 4-8

A practical Demonstration of field work with all sizes and many makes of tractors. Tractor shows of the national circuit this year have been a wonderful success and thousands of farmers who have attended the demonstrations have found them intensely interesting and profitable.

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

H. A. Derenthal's Champion Chester White Herd.

SOME of the Wisconsin Chester White breeders would find it advantageous to visit East Side Stock Farm, Wykoff, Minn., owned by H. A. Derenthal. Chester White swine is the leading factor on this farm and to say that Mr. Derenthal has good hogs is putting it mildly. With all due respects to the other breeders of Chester Whites whom we have met in Wisconsin and Minnesota we will say that this breeder has the best lot of Chesters that it has been our pleasure to see. In the first place Mr. Derenthal is a caretaker and this is where so many breeders fall down. It would seem to us that if one is progressive enough to have registered stock it should be worth taking care of. The boar that appealed to us mostly was the senior yearling, Callaway's Kind. Here is a boar with good length, a strong back, excellent spring of rib and is above the average for size. He is sired by Callaway's Choice and his dam is by the $400 Triumph. This boar will be shown at a number of the state fairs. Ignatz is another senior yearling boar that Mr. Derenthal showed successfully at the Minnesota State Fair last year, winning junior championship in a strong class. He is sired by the many times champion, Wykoff Lad. This boar has been used heavily and it isn't likely he will be in condition to show this fall. There are some great spring pigs on the farm by this boar. S. M. Wonder is a good junior yearling prospect. He is sired by Jim's Wonder, a son of the noted Hoover boar, Wonder. This boar has the size and smoothness and should make a creditable showing. The most recent addition in a herd boar is Minnesota Wonder, a son of Wonder out of Modoc Maid 2d, considered by Mr. Hoover as being the best brood sow on his farm. This boar is of last fall farrow and while we would like to see him with a little more scale, one must consider him when it comes to quality and individuality. Mr. Derenthal will have a wonderful herd of sows at the fairs this fall and some of you men that talk about the little, short, fine-bone dumplings should make it a point to see the type that H. A. is trying to bring to the front. Coming down to the spring pigs, there are some real ones in this herd. Pigs with plenty of stretch, good bone, excellent strong arched backs and bred in the purple. Some of the best ones are sired by the good boar, Callaway's Kind. Others, that would appeal to many breeders are by Ignatz. There are also some by S. M. Wonder and Count Ben that are equally as good as those by the first mentioned boars. Most of the spring pigs are out of daughters of the champion, Wykoff Lad. If you are in need of some big, stretchy, early pigs there is an excellent litter by Chief Fillmore, a grandson of the Iowa champion, Frank. Take a tip from us and investigate the spring boars on this good Chester farm. We feel sure that they will please you. It isn't necessary to see them, unless you so desire, for we will stand back of H. A. Derenthal and guarantee that he will take care of your mail order to your satisfaction. Get his prices and breeding and when you write kindly mention The Wisconsin Farmer. See page 23.—Adv.

Fisher Sells Gold Bond For $700.

MR. D. B. SMITH, Mission Hill, S. D., owner of Elmwood Farm and one of the best herds of Duroc Jerseys in the West, recently came to Wisconsin to buy a carload of dual-purpose Shorthorns and incidentally to buy a herd boar if he found one that suited him. He bought his car of cattle and when he saw Gold Bond, the good boar owned by John L. Fisher, Janesville, it didn't take him long to close a deal for this boar. Gold Bond is without a doubt one of the most, if not the most fashionably bred boars in the United States and this is another illustration that breeding counts if backed up with individuality. We are sorry to have this good boar leave the state, for there are only a few real good boars in Wisconsin and they are badly needed to improve the swine in this state, but at the same time we are glad to know that Wisconsin can furnish herd boars good enough to head such a herd as the Elmwood Quality Durocs. To the writer's knowledge this makes the highest priced boar ever sold in Wisconsin. See page 23.—Adv.

Parker & Son Have Great Pigs.

WE have recently had a letter from E. H. Parker & Son, the Duroc breeders of Janesville, Wis., advising that their spring pigs are the best they ever raised. The last time we saw this herd they had some of the best prospects that we had seen and knowing that Parker is a good caretaker we are not surprised to learr that the pigs have come fast. This is a good place to investigate, for they have some Durocs that we are sure will appeal to you. As for breeding, they have the best. This herd will be represented at Milwaukee and if you don't know the congenial Parker be sure and make his acquaintance and incidentally look at his Durocs. See page 23.—Adv.

Carload of Short-horns Sold.

MR. D. B. SMITH, of Mission Hill, S. D., recently visited Rock county, Wis., and inspected a number of the milking Short-horn herds. After careful inspection of this stock, he bought a carload to be shipped to South Dakota and to be used as foundation stock for a milking Short-horn herd. Marquart Brothers, of Milton Junction, sold a two-year-old heifer and a herd bull for this shipment. This bunch of cattle was sold through the efforts of The Wisconsin Farmer.—Adv.

Dr. Roberts' Holstein.

A HOLSTEIN or in fact any dairy bred bull should be judged by the production records of his daughters rather than by the records of his dams. However, when both dams and daughters have produced good records we may feel sure that it is an established ability. King Hengerveld Pondyke owned by Dr. Roberts, Waukesha, Wis., is such a sire. He now has twenty A. R. O. daughters, two of which have made over thirty pounds butter in seven days. He is a son of King of the Pontiacs that has 175 A. R. O. daughters, two of which have records of forty and forty-four pounds butter in seven days. His dam was Pontiac Lunde, a twenty-five-pound daughter of the great bull, Hengerveld De Kol, that has 116 A. R. O. daughters, nine with records from thirty to 33.62 pounds butter in seven days. Two sons of King Hengerveld Pondyke are now being offered for sale. One is out of the cow, Kinsman Beauty, that has a record of 19.25 pounds butter in seven days and 675 pounds in a year with 16,032 pounds of milk. Her dam is also an A. R. O. cow and her sire is a son of Pontiac Aaggie Korndyke, that has forty-seven A. R. O. daughters, five with yearly records from 1,000 to 1,300 pounds butter. This young bull is a very fine individual, winning first at the great Iowa State Fair and second at Minnesota. The other young bull is out of the cow, Roberta Fearless Lassie, a show cow, that freshened on the show circuit last year, so was not tested. She will be tested this fall and is capable of making a creditable record. Her dam, Fearless Lassie, made 22.54 pounds butter in seven days and 757.33 pounds butter and 16,843.30 pounds milk in a year. Her grandam, Fearless Lassie, made 24.32 pounds butter in seven days, 78,403 pounds butter and 16,919.40 pounds of milk in a year. It will be seen that she inherits high production blood of the long time and persistent kind. These two bulls are three-fourths white, well marked and have wide, straight rumps. Send for extended pedigrees and prices. See page 22.—Adv.

Breeders Wanting 30-lb. Herd Sires

WE invite your attention to three young bulls. No. 151 calved March, 1916. Sir Korndyke Segis Johanna 127132, a 38 lb. son of the 40 lb. bull, Johanna McKinley Segis by King Segis, and whose dam Pontiac Lady Korndyke (A. R. O. record 38.03) is the highest record daughter of Pontiac Korndyke. Dam, Pabst Blackberry, a 31.68 lb. three-year-old by a 29 lb. grandson of Hengerveld De Kol. 2d dam, a 23 lb. three-year-old by King Pontiac Champion, a 31 lb. son of King of the Pontiacs, 3d dam, a 33.86 lb. daughter of De Kol Md's Butter Boy 3d. No. 156—Calved April, 1916. Sire, King Pontiac Champion, that has 41 A. R. O. daughters, the only one tested as a mature animal, made over 1,000 lbs. butter in a year. Dam a 31.51 daughter of Sir Hengerveld Model Johanna, that has twenty A. R. O daughters, two above 30 pounds. Good A. R. O. breeding for several generations. No. 152—Calved April, 1916. Sire, King Pontiac Champion. A 30.38 pound daughter of Hengerveld Model Johanna, a son of Hengerveld De Kol. Dam's dam, A. & G. De Freule De Kol 2d, a 29.68 pound cow. Several young bulls by the above sires, all out of A. R. O. cows, ranging in price from $100.00 up, depending on breeding and age. Be sure to address

PABST STOCK FARM, R. 30, OCONOMOWOC, WIS.

Wisconsin Farmer Advertisements Sell All Their Live Stock

KISER BROTHERS, Oregon, Wis., who recently advertised their Short-horns in The Wisconsin Farmer, are convinced that it is a splendid advertising medium for Wisconsin breeders. They say:

"We have been pleased with the results from the advertisements carried in your columns for us at different times. Our advertisements have brought inquiries from Minnesota, North Dakota, South Dakota, Michigan and Wisconsin, selling all stock offered for sale and more was wanted."

The Wisconsin Farmer advertisements are result-getters. Every week many breeders write enthusiastically of sales made through The Wisconsin Farmer advertisements. This letter is just one example. The Wisconsin Farmer carried 500 more insertions of Wisconsin display advertisements (not including classified) during the first six months of 1916 than any other farm paper in the state. The farmers know its value.

The Wisconsin Farmer, Madison, Wis.
GUARANTEED WEEKLY CIRCULATION 90,000

Kennedy Cattle to South Dakota.

INASMUCH as J. E. Kennedy, Janesville, Wis., is founding an all-Scotch herd of Short-horns, he sold most of his Scotch-topped and Bates cows to D. B. Smith, of South Dakota. With the exception of a dozen heifers, all of the Kennedy cattle are of the most fashionable Scotch breeding. He expects to add to his herd from time to time until he has one of the best herds in the country. He certainly has some wonderful cattle at this time. We haven't seen a bunch of heifers, that can be bought, that will compare with these being offered by Mr. Kennedy, and if he can close out the lot to someone, he will make a very attractive price. It will pay you to investigate this herd. Write for prices and description and mention this paper. See page 23.—Adv.

Marquart Bros. Make Satisfactory Sale.

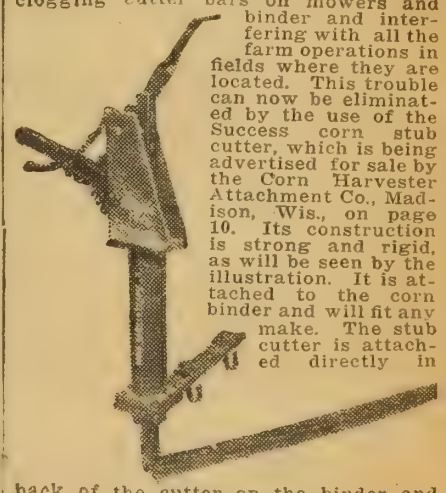
MARQUART BROS., Milton Junction, Wis., and owners of one of the best milking Short-horn herds in Wisconsin sold several head of cows and one bull to D. B. Smith, Mission Hill, S. D. Mr. Smith has visited several of the best herds in the East and he considers the Marquart herd one of the best producing herds he has ever seen. They could have sold a carload to this man, could they have spared that many. They still have some young bulls for sale. If you need one don't overlook this herd. See page 23.—Adv.

A Poland Herd With Few Equals.

MINNESOTA has several outstanding herds of Poland Chinas and one of the "headliners" is located at Prosper and is owned by that popular breeder, P. W. Young. Here is a big-type herd in every sense of the word, not "big-type" on paper alone, but the individuals that go to make up this herd impress one with their massiveness, as well as uniformity. Realizing the fact that the "herd boar is half the herd" Mr. Young maintains two of the best boars in any one herd that can be found. In Master's Giant we believe that P. W. has one of the greatest breeding boars of the present day, and he is no accident, for he comes from a line of breeding that has produced winners for several years. He is sired by Mondamin Master, a wonderful boar that the writer saw several times when owned by Zeke Barker, but who died while being fitted. The grandsire of Lyon Chief was one of the greatest sires in northwestern Iowa, being the sire of the Barker show herds that made such a cleaning in 1912 and 1913. The grandam, Gentle Jessie, was perhaps the greatest sow ever owned in northwestern Iowa. The dam of Master's Giant is Mabel's Choice 2d, a sow that the writer saw sell for $400. She is by the noted Smooth Price 2d by A Wonder 107353. Is it possible to write a better pedigree? Master's Giant was first prize winner in the yearling futurity at Iowa in 1913, and, as an aged boar was second in 1915, weighing 1,005 pounds. Mr. Young has a wonderful herd of sows sired by this boar and these great sows were bred to Orange Wonder, such is the cross of many of the best spring pigs we saw on this farm. There is difference of opinions on these two boars, but rest assured that either one of them are good enough to stand at the head of the best herd in the country. This boar was shown as a senior yearling at the Minnesota State Fair last year and won first in his class. His sire is Brown's Big Orange, said to be the best Big Orange boar in the country. His dam, Ellerbroeck's Lady A. by A Wonder 143421 was the top of the J. O. James sale in 1912. Orange Wonder is a boar of great scale, a high, arched back, excellent spring of rib, good head, eye and ear with good strong pasterns. Mr. Young made the right nick when he bred Master's Giant sows to Orange Wonder and if one could see the big, stretchy, quality boars that he is offering you would agree with us in this assertion. Of course, he has sows of other breeding, in fact his herd is full of the best bred sows money could buy. If you are going to buy a herd boar, investigate the Young Polands. His hobby is sending out boars to head pure-bred herds and he sure has the goods. His prices are consistent with breeding and individuality. We take pleasure in recommending this herd. Write for further particulars and in so doing kindly mention The Wisconsin Farmer. See page 23.—Adv.

Corn Stubs No Longer Necessary.

EVERY farmer is yearly confronted with the problem of planking down corn stubs when fitting his fields for grain. They are a source of great annoyance through the entire season, clogging cutter bars on mowers and binder and interfering with all the farm operations in fields where they are located. This trouble can now be eliminated by the use of the Success corn stub cutter, which is being advertised for sale by the Corn Harvester Attachment Co., Madison, Wis., on page 10. Its construction is strong and rigid, as will be seen by the illustration. It is attached to the corn binder and will fit any make. The stub cutter is attached directly in back of the cutter on the binder and the work is done at one operation. It cuts the stubs off close to the ground, which eliminates all the trouble. The cutter travels at an angle of 45 degrees and works like a razor, shearing off the stubs completely. The price of the cutter is $15, a small part of the real value. Every operation in an old cornfield will be made easier by cutting these stubs and the ground left in better shape for the next crop. Harrows clogged up with corn stubs do poor work and drag litter from one place to another. It is hard work lifting drags to free them from corn stubs and this has to be done many times a day. An interesting booklet entitled "Comfort in the Cornfield," has been written and will be mailed on application. It gives complete information in regard to the cutter and the work it does.—Adv.



Galloway Cattle For Sale.

IF any of our readers want to buy some good registered Galloway cows or heifers, or some good young bulls, they should write or go and see C. S. Hechtner, Chariton, Iowa, whose advertisement appears on page 23. He offers fifty cows and heifers and fourteen good young bulls for sale. Some of the cows are imported and most of them are sired by imported bulls and are out of imported dams. Write Mr. Hechtner about them and kindly mention this paper.—Adv.

2 Yearling Sons of the Richly-Bred Holstein Bull
KING HENGERVELD PONDYKE

THIS bull has 20 A. R. O. daughters, 2 with records over 30 pounds of butter in 7 days. He was sired by King of the Pontiacs, that has 175 A. R. O. daughters, 2 with records over 40 pounds. Bull No. 1, born December 18, 1914, ¾ white, good and straight. Dam, Kinsman Beauty, 19.25 lb. 7-day record, 675 pounds butter and 16,032 pounds milk in a year. She is a granddaughter of Pontiac Aaggie Korndyke. Price of bull $150. Bull No. 2, born September 24, 1915, ¾ white, very straight. Dam, Robert's Fearless Lassie, a show cow, calved on show circuit so not yet tested, but will be this fall. Her dam and grandam both have 7-day and yearly records 757-784 pounds of butter for the year. Price $125. Send for extended pedigrees. Address **DR. DAVID ROBERTS, R. 4, WAUKESHA, WIS.**

Holstein Cows and Heifers For Sale

IN order to make room for our young stock we are offering 10 attractive Holstein cows and heifers. Two granddaughters of King Segis sired by Butter Boy Segis. We have tested a few of his daughters making 27.10—26.5 on a junior three year old—23.7 on a two-year-old daughter—and others almost equally creditable. The two for sale are 5 and 6 years old. Two 18 months old heifers sired by Tritomia Ormsby 85890. Four yearling heifers by the same sire. Two 3 year olds sired by a 28-lb. grandson of Hengerveld De Kol. We are pricing these at prices you can afford to pay. They have been bred and developed for production and show it in their conformation and udder development. Those of breeding age are bred to the 29-lb bull, Contest Colantha Bell Boy, a grandson of Colantha Johanna Lad. Come and see them or write **J. J. REID & SON, OCONOMOWOC, WIS.**

HERE IS AN OPPORTUNITY

We are offering a few choice registered Holstein cows and heifers bred to the 29.50 pound bull

MAPLECREST HENGERVELD DE KOL 94154

WE also offer a 22.29 pound son of his for sale at $125. Send for an extended pedigree. It is a very well bred bull and the price is very low. **GROVE BROS., COLUMBUS, WISCONSIN.**

2 Holstein Bulls

OF serviceable age from Advance Registry dams with creditable records. Both sired by the richly bred bull, JULIP SEGIS KORNDYKE 80640, a grandson of King Segis out of a cow sired by a brother of King Segis. The bulls offered for sale have straight, wide rumps, good barrels, are well grown and are ¾ to ½ white. Prices $75 and $100.
L. V. Garvens Brookfield, Wisconsin

FOR SALE

TWO Holstein calves born January 14th and 24th respectively. Sired by Calumet Jonanna Abbekerk Champion 105829, whose dam gave 623.70 pounds of milk and made 28.71 pounds of butter in seven days, and whose sire is a son of the $10,000 bull, The Milk and Butter King. These calves are very good individuals. Address
A G. PINGEL CHILTON, WISCONSIN

Write NOW—

Get Summer Prices on Your Winter Coal

GET our wholesale coal prices. Direct to you from mines. Easily save $2 to $4 a ton. *Now* is the time when you can buy at *special summer* prices and cut your fuel bill this winter.

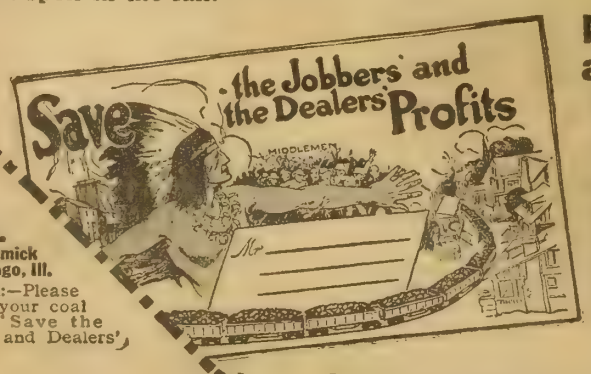
Here's your chance to save money and still get the best heat-producing coal ever mined. Don't miss it! Write us—mail the coupon or a postal at once for our special summer offer on

TECUMSEH COAL

Shipped From Mine Direct to You at Mine Prices

All pure coal—clean, free-burning and *free from clinkers.* And guaranteed to produce 13,400 B.T.U. (heat units) to the lb., which is unusually high. No money could buy better coal, so why pay long prices for your winter coal when you can get the best that's mined for a fraction of the usual price? Let us send you letters from users. Let us prove that you can save money and get better service. *Think of the money you can save!* Think of being able to forget the coal dealer this winter! Think of being sure of having enough coal in the bin to last all winter! Tecumseh coal is mined in the heart of the famous coal district of Indiana (from the famous No. 5 vein). Coal experts of large railroads, cities and corporations have tested this coal and endorse its high quality. Only 9 per cent ash and 9 per cent moisture.

Our personal guarantee bond protects you. Insures your getting best quality coal and protects you against shortage in weight. So you run no risk. You can be sure of saving money—you can be sure of getting coal that will heat your house to a queen's taste all winter—and you can get it *now* at *summer prices* and be ready for the first cold spell in the fall.



Martin-Howe Coal Co.
1937 McCormick Bldg., Chicago, Ill.
Gentlemen:—Please send me your coal circular, "Save the Jobbers' and Dealers' Profits."

Name_____

Post Office Address_____

Mail the Coupon—or a Postal Today—Get This Big Circular and Special Summer Prices

Wise coal buyers everywhere know that *now* is the best coal-buying time. And here is your chance. Save the fat profits that others have been making on your coal bills heretofore. Deal direct with the mines.

If you cannot take a carload yourself, read about our club plan in the column to the right. But in any case, write today and get our summer prices. Now is the time. Write your name and address in the coupon—or on a postal—mail today—and cut your coal bill.

Martin-Howe Coal Company
1937 McCormick Bldg., Chicago, Ill.

Club Plan

Two or More Farmers Take a Carload—Each Saves BIG Money

And it's a good plan—simple as A B C—where all concerned save money. Carloads run from 30 to 35 tons, the smallest, up to 50 tons, the largest. We will send you a small car and you and one or two or more neighbors can split it between you. Neighbors are glad of the chance; tell them about Tecumseh coal, show them the big circular we send you—let them read the letters from our customers and compare our prices with the prices coal dealers ask.

Thousands of Tecumseh Coal Clubs are working throughout the Middle West today. They are making big savings and are buying better coal. Get in on this, too—why pay outrageous coal prices? Get a neighbor or two to go in with you and split coal expenses in half—get better quality, heat-producing coal. **Fill out and mail the coupon today.**

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Wanted—A Four-Horse Evener.

I would like to know if some reader has a rule for making a four-horse hitch for a sixteen-inch sulky plow. The evener being so arranged as to keep three horses on the unplowed ground, and one in the furrow?

Answer.—We would like to hear from any of our readers who have made an evener of this kind. When replying please send sketch and dimensions.

Power Required to Pull Plows.

I enclose a sketch of a homemade tractor. Is the frame strong enough? Will a four and one-half horse power gas engine furnish enough power to pull two plows?

Answer.—Space will not permit us to publish the sketch. The frame appears to be strong enough. A four and one-half horse power engine should not be expected to pull more than one twelve-inch plow.

Batteries Run Down Rapidly.

I own a 1914 Buick car equipped with the Delco starting and lighting system with which I am having considerable trouble. The storage battery, at times when I put the car in the shed is all right. The next time I want to use the car, the battery is dead. What do you think is the matter? Could I take the storage battery out, and use dry cells in its place?

Answer.—Possibly you are leaving your switch closed, which would cause your battery to run down. If not, there is a short circuit in your switch or in the wiring. You better have an electrician test it. You could not use dry cells in place of the storage battery.

Lighting From Wet Battery.

I would like to ask a few questions about wet batteries. Will batteries constructed on the principle of the one recently illustrated do for lighting small electric lights? Also, would Leclanche cells do for such work where used only a short time each day?

Answer.—Only storage batteries may be successfully used for house lighting. Wet and dry cells are too expensive for this purpose. Wet or dry cells may be used, however, when a small light is required for a short time only. Three cells of the type illustrated, connected in series, would supply a six-volt, two-candle-power light for some time. This type is one of the best for both lighting and ignition. The Leclanche cell is not suitable for lighting.

A Cycle Car.

I would like to know if I could build an auto, using a one and one-half horse power gasoline engine. Would that be power enough to run it? What size sprockets would I need? I want it to go fifteen miles per hour. Would wet batteries run the engine, and how many would I need? Would bicycle wheels hold the frame and two people?

Answer.—Motorcycle wheels could be used, but bicycle wheels would be too light unless the car is handled very carefully. It would load the engine quite heavily to run the car at fifteen miles per hour, but it might do so under favorable conditions. If your engine makes about 1,000 R. P. M. and you use twenty-eight-inch bicycle wheels, use a sprocket on the drive wheels having five times as many teeth as the sprocket on the engine. You should arrange a clutch of some kind for starting and stopping. You will also need a reverse. Wet batteries would not be practical. Use dry cells.

Pumping From a Well.

Under the heading "Pumping from a Distant Well" in a recent issue you state that it would be possible to draw water a distance of 600 feet with a rise of forty-five feet from the bottom of the well. I do not think this will work, as I have always understood that thirty-three feet was the limit.

Answer.—We appreciate the above correction. When answering the letter referred to we got the impression that the shop was twenty feet above the water level. Upon reading the letter again we find that this is not the case; that the water would have to be raised forty-five feet instead of twenty feet. It is impossible to raise water over thirty-four feet by suction. It is not practical to raise it by suction much over twenty-five feet with an ordinary pump; and it is better to place the pump cylinder within twenty feet of the water. To pump from a well twenty-five feet deep by an engine in a shop 600 feet away and twenty feet higher than the well it would be necessary to locate the cylinder twenty feet or more below the shop floor and pipe from there to the well. The lay of the ground would determine whether or not this would be practical. Of course, it would be possible to locate the pump at the well and drive it by windmill quadrants, or a rope drive. An electric plant is a good solution of a problem of this kind, as the pump may be located at the well and driven by a motor.

Automobile Patents.

What is meant by "vibration" in an automobile? Are automobile accessories registered in the United States Patent Office? Are there any companies buying such patents? What does it cost to register a patent?

Answer.—Vibration is a trembling movement, usually produced by an unbalanced condition of the engine. All United States patents are registered in the United States Patent Office. We know of no reliable firm making a business of buying patents. The cost of obtaining patents varies, usually being about $80. It is almost necessary to have a good patent lawyer to obtain the patent. For information as to how to obtain a patent write to the commissioner of patents, Washington, D. C.

A Reversing Switch.

I would like to know how to make a reversing switch for my electric motor. In Figure 1, with the battery wires attached to 3 and 4, the motor runs forward. When the connections are made as shown by B, Figure 1, the motor runs backward. Please illustrate a switch for reserving the motor without changing the wires. I run the motor with dry cells, but would like to run it from a Stromberg-Carlson generator. Please explain how to do this.

Answer.—In Fig. 1, sketch A shows the connections to run the motor forward and sketch B the connections to run the motor backward. Figure 2 shows the reversing switch and the connections to the motor. A reversing switch is a common double pole, two-throw switch, with the corner binding posts connected as shown by the dotted lines. With the switch handle up as shown the motor will run forward; as one blade of the switch

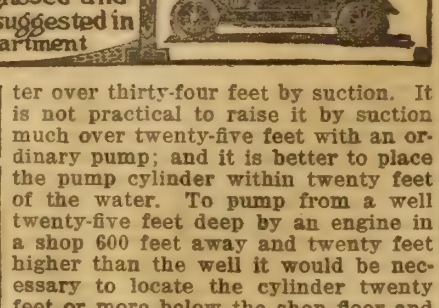

FIGURE 1.

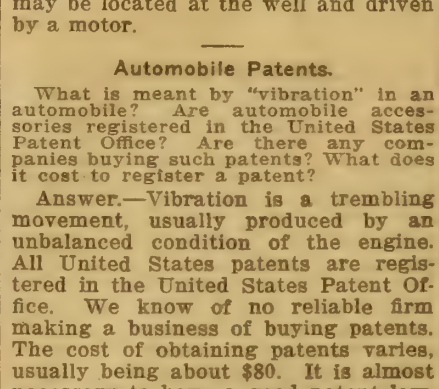

FIGURE 2.

connects one and two, while the other blade connects the negative wire with four through the diagonal wire from Y to four. With the switch handle down four is connected with two and one with the negative wire, which are the same connections as B, Figure 1. The usual way to connect in a reversing switch is to connect the two middle terminals of the switch to the armature lead wires and the two upper terminals of the switch to the field coils.

We are not familiar with the generator you mention. If not too large for the motor connect it to the motor just as you do the batteries. Battery motors may be run from a lighting circuit by passing the current through a small candle power light for resistance.

Ford Motor Overheats.

We have a Model T Ford car, equipped with an Atwater-Kent ignition system. After just a short trip, the water boils very badly, but not enough to interfere with the operation of the car. We recently had the engine thoroughly overhauled, but that did not stop the engine from getting hot. What could be the trouble?

Answer.—We are inclined to believe that your ignition is set so as to occur a little too late. To set the timer, loosen the screw that prevents it from turning. Place the piston in No. 1 cylinder at top dead center between the compression and power strokes. Then slowly turn the sparker backward until a click is heard. Then tighten the screw to hold the sparker in position at this point. Remove the distributor cap and note the position of the distributor block. The terminal to which it points should be connected to No. 1 cylinder. The other cylinders, in their proper firing order, are connected to the other terminals in rotation. The firing order of a Ford car is 1-2-4-3.

Other causes of overheating are: Loose fan belt, carbon in the cylinders, too much gasoline and clogged water pipes. Naturally, a motor does not cool as well in summer as in winter.

Our Cover Page.

Wisconsin Farmer readers will be interested in a little more definite description of the cover page this week than we were able to give on the first page. The cows shown on the front page are owned by Fred Pabst and are a part of the Holstein herd at the Pabst Stock Farm, Oconomowoc, Wisconsin. In the upper left hand corner will be found a picture of Pabst Hengerveld De Freule 135438. This cow has an A. R. O. record of 30.30 pounds of butter in seven days and her dam has a record of 29.50 pounds of butter for a similar period. The upper right hand picture shows Pabst Blackberry, the 31.68 pound three year old in the Pabst herd. The lower picture is Pabst Hengerveld Colanthus, another of the Pabst herd, with a record of 31.51 pounds of butter in seven days. These three celebrated Holsteins are a great credit to the dairy development of the state and stand high in Holstein circles in the Union. They are a fine dairy type.

EAGLE GAS Tractors

Built for Wisconsin Farms

Here's the EAGLE TRACTOR built especially for Wisconsin farms. It is the famous EAGLE two-cylinder engine in tractor form. Does all that is required of a tractor and delivers an abundance of smooth power for all belt work such as threshing, ensilage cutting, etc.

The EAGLE GAS TRACTOR will stand rough and ready usage. It is just the right weight to be practical on any medium-sized farm. All unnecessary weight has been cut out, yet nothing that would add to the strength, durability or *dependability* has been sacrificed.

This tractor is simple in construction, simple in operation and easily accessible. The average man can readily learn to work it or keep it in repair without help.

FOUR MODELS

8-16 Two Cyl. Weight 4850 lbs.
12-22 Two Cyl. Weight 5030 lbs.
16-30 Two Cyl. Weight 5700 lbs.
16-30 Four Cyl. Weight 5500 lbs.

All EAGLE GAS TRACTORS have four wheels with two drivers. They pick up a sudden load and get to normal speed quickly and smoothly. All have the famous EAGLE Valve-in-Head motor and use low grade fuel, giving low operating cost.

Every Wisconsin farmer should learn about EAGLE GAS TRACTORS. Write at once. 21

EAGLE MFG. CO., 683 Winnebago Street APPLETON, WIS.

NOW IS THE TIME!!—

UNTIL SEPTEMBER FIRST

PRESENT LOW PRICES CONTINUE

On and after that date spreader prices **must advance.** Malleable castings cost more, steel costs more, all materials entering into construction of Galloway Manure Spreaders have advanced and we are forced to raise the prices September 1st when new material contracts begin.

That's why I say if you need a spreader in the next three months, six months, **twelve months or longer, you should buy now. The saving is worth making!** Remember at the end of twelve months if a Galloway Spreader has not paid for itself, provided you have hauled out a hundred loads of manure or more, and has not proven everything I say for it, I AGREE TO TAKE IT BACK, pay freight both ways and return your money, no matter on which of my six selling plans you buy. Could I make this offer if the Galloway Spreader did not back up everything I said for it—if I were not sure that my spreader would please—would pay for itself on your farm? My new steel beater and wide spreading V-rake pulverizes and tears the manure to shreads—WORTH $15 EXTRA ON ANY SPREADER—costs you nothing on the Galloway. My Invincible patented roller feed—an exclusive feature on the Galloway—makes it superior to all others, the secret of its light draft—A FEATURE WORTH $25 ALONE ON ANY SPREADER—coste you nothing extra on the Galloway. These and other features fully explained and illustrated in the second edition of my big free catalog. DON'T BUY A SPREADER of any make or kind until you have tried a Genuine Galloway AT OUR RISK.

MY BIG BOOK FREE
Ask for it today. A postal gets it. Your copy is ready. 250 pages illustrating and describing the great Galloway line of manure spreaders, cream separators, gasoline engines, farm tractors, vehicles, farm and household necessities. Just drop me a postal.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

BIG PROFITS IN LIVE STOCK.

I HAVE frequently taken the occasion, especially during the last year, to urge on my readers the advisability of building up and breeding up their herds to the highest point of efficiency, contending that never before were the returns from pure-bred live stock farming so good or so sure. I do not know that there remains much, if anything, which I can say, if what I have already said has not convinced my readers. Perhaps I might best set forth this story of a New York stockman, as I find it told in one of our big national magazines, as a good illustration—and conclusive proof, too—of what I have been arguing. Here is the story as it comes to me:

Frank M. Jones, of Oneida county, New York, a farmer boy, has become very wealthy through developing his hobby that fancy stock pays better than ordinary cattle. His father was a farmer of the old school who thought that cows were cows, and only after a bitter struggle was persuaded to sell his herd. For the price of thirty cows, young Jones purchased two young heifers of excellent lineage and fed and groomed them with his own hands until they reached maturity. One of the two had a calf that was christened Pontiac Lass. When Pontiac Lass first began to yield milk, it was plain that she was an extraordinary animal. Finally he asked a group of dairy experts to look her over. The result was three world's records for milk and butter. Frank Jones now has 140 animals valued at considerably more than $250,000, but Pontiac Lass still holds the championship. His cows are bovine aristocrats. Their lives are heavily insured and at the first sign of illness a veterinarian hastens to attend them. His experience is a practical demonstration of the most up-to-date dairying methods and profits to be won from fancy stock raising. It is particularly striking when we remember that the total initial capital for the venture was not more than $1,400.

With the opportunities what they are certain to be once the European war is over, I am firmly convinced in my own mind that the American stockman confronts a period of greater prosperity than he has ever known before, and that opportunities exist in the live stock field the like of which never before existed. We may not all make the phenomenal success that Frank M. Jones has made, but the opportunity to get in on the ground floor is ours if we will only take advantage of it in time.

BUYING A FARM.

IT IS somewhat like carrying coals to Newcastle to give a farmer advice on buying a farm, yet there is so much sound sense in something I read in one of our big national magazines last night on this very subject I cannot refrain from passing it on to you. Here are the six essential rules for farm buying as given there:

1. Be perfectly certain that your neighbors are congenial, for farming in an uncongenial neighborhood is impossible.
2. Locate near a school and a church—you can get labor easier even if you do not use them yourself.
3. Be sure the country is healthful—and the water pure.
4. Look well into the transportation facilities; roads, railroads and rates.
5. Find out where the markets are.
6. Then buy a good piece of farm land.

I greatly fear all too many of us put the sixth rule first and ignore one or all of the other five altogether. Yet the more I think it over the more convinced I am that the rules are arranged in the proper order of importance. The day when land was everything in successful farming is at an end, just as much as the day when brawn was everything and brain was nothing. We must have good soil in order to produce good crops, but we cannot remain making even good soil produce well and satisfy ourselves with our work if we do not have neighbors, school and church facilities, markets and good health. What would it benefit us if we had the most fertile oasis in the world, producing 100 or even 200 bushels of corn and sixty or even 100 bushels of wheat to the acre, if this fertile oasis were surrounded by an impassable desert, with no neighbors, markets, schools, churches or any of the things which go to make life worth the living? Yes, the farm we buy must be of fertile soil, but that is not all nor greatest in the making of a permanently prosperous and happy farm home.

Nor must we overlook the importance of the third rule; I am tempted to put it first, for what can be more important than the health of our loved ones? All too many farmers are careless of their water source, securing their household supply from shallow wells contaminated by stable refuse and worse. When it is so easy and inexpensive to have the state authorities make a chemical analysis of our drinking water, why do we neglect this all-important matter? At this season of the year our water supply is second to no other factor in determining the health of the entire family. Let us consider this most carefully when we come to look about for new quarters in which to build our future homes.

THE BLESSING OF THE RAIN.

SOME weeks ago I wrote a little article quoting Coates Kinney's poem entitled "Rain on the Roof," and another poem devoted to rainy-day topics, entitled "Loafin' in the Stable." A subscriber is so kind as to send me an extract from a recent magazine article written by a woman who has evidently homesteaded in Kansas in the early days and who recalls how the first drop of rain was a godsend to them all, breaking the drouth which bade fair to undo all the work of eager hands for many and many a weary day. I am going to quote rather liberally from this article, for I have no doubt but that it will awaken memories in the minds of many of my readers who, like the woman who wrote it, have cried, "Thank God, it's raining:"

Why, even now, after all these prosperous years, when the loss of an occasional corn crop is more than made up by the oat and wheat crops, and we have no cause for money anxieties—even now, sometimes when I waken in the night and hear the first patter of raindrops on the roof, I unconsciously send up a prayer of thanksgiving and cry, "Thank God! it's raining."

We knew what it meant to us, that soft, healing touch of the rain, like a flood of soothing tears after a long, deep grief. The rain whose coming would rouse the dry, parched, cracked, starving earth to placid fecundity once more; that would turn brown, dead grass soft and green again—what a blessing it was! We can never have too much rain, we who lived through those first years in Kansas. We would rouse in the hot nights when we heard those first pattering drops on the roof and make a quick sortie into the night to bring in the coops of young chickens to the dry safety of the kitchen. The rains were like the drouths, intense and concentrated. The wind would roar, thunder would boom about our heads, and the lightning would fizz and crackle ominously.

"Going to be a regular gully-washer," we would say to one another, and go to sleep again, resting in a pleasant sense of calm security—all our worries and anxieties washed away by the rain. For, somehow, the rain generally did come—just in time. Nearly always in time. Sometimes it didn't. Just often enough to make the fear that it wouldn't mark in a few lines and wrinkles that no amount of massage or cold cream can rub out now.

There is not much that I can, or need, add to the picture. It is perfect as it is. It is well for us all, young and old, to remember the days of tribulation which the pioneers suffered, for out of them has grown the sustained prosperity of today. "After all these prosperous years," began the woman who wrote the extract I have set forth above. I am glad that she has reaped so certain and so pleasant a reward, for having endured what she did nothing is too good for her and hers. The lesson she learned has been learned by thousands of others, and today a land of diversified farming rises superior to drouth or wet season or any other untowardness, for if one crop fails there is another to fall back upon, as Kansas and all the grain belt have learned so notably in the last few years. It is a good thing for us all if, having learned the lesson (sometimes by bitter experience), we can look back upon it and write of it so philosophically and so inspiringly as the woman whose words I have here set forth.

A WAR STORY.

I AM indebted to a subscriber for sending me a newspaper clipping which tells a most interesting war story. Here is the clipping as it was sent to me:

Thirty-eight years ago young Augustus Bliss, of Warwick, quit cutting brush on his father's farm, hung his scythe on a pine tree, and went off to war. The soldier boy never came back, and the scythe has never been taken down from the tree where he hung it, but has become embedded in the growing pine. This pathetic reminder of the great civil struggle is a familiar sight. The father of young Bliss was building a dam, and sent his son to cut some briers that grew about some stone that he needed. After cutting the briers the boy hung the scythe on a small pine tree standing near. A day or two later he enlisted and went to the front with the Thirty-sixth Massachusetts Infantry. He was only eighteen years old. He died of fever in an army hospital somewhere in Mississippi, and his name is on the roll of honor on the soldiers' monument at Orange.

Surely that young hero could hardly wish for a more fitting monument than the old tree with its rusted scythe, mute testimonial to his patriotism. There are a few stories in history (perhaps they are mere legends, but I hope they are true) which appeal to our emotions and arouse our patriotism far more than the tales of actual battles themselves. Such stories, for instance, as that of Israel Putnam plowing on his farm in Connecticut when the news came of the battle of Lexington. You may recall that he unharnessed his team, left the plow in the furrow, mounted his horse and started, without stopping to change his clothes. Such stories as center around the career of Captain John Stark, who swore to defeat the British "or Molly Stark would be a widow before night," and so on and on: stories of humble men—farmers for the most part—who have become our national heroes because they dared and did to the utmost of their ability.

The scythe hanging in the pine tree is a monument which stands to perpetuate the name and fame of a man who deserves as much from his country as any of the great generals who led battalions into battle, for he gave up all he had to give for his country: His life. It is a humble story, commemorating a humble man who might otherwise have lived and died naught but a farmer, yet it is a story of sacrifice and heroism which brings the tears to my eyes to contemplate.

I have always contended that some of our greatest national heroes are men entirely unknown to fame, men who have done their work well and set their families and their communities an example which have made the whole world better. Who among us shall say that these men are not heroes, even though they never smelled gunpowder? I remember some words I read once in one of the best books, in my opinion, ever written. The words were these:

For there are many great deeds done in the small struggles of life. There is a determined, though unseen, bravery which defends itself foot to foot in the darkness against the fatal invasion of necessity and of baseness. Noble and mysterious triumphs which no eye sees, which no renown rewards, which no flourish of trumpets salutes. Life, misfortune, isolation, abandonment, poverty, are battlefields which have their heroes, obscure heroes, sometimes greater even than the illustrious heroes.

The soldier who hung his scythe on the tree and went away from his farm, never to return, is a hero, in my mind, as great as any commander in any war. But shall we not go further and say that the man who does his work well, no matter how humble and prosaic it is, in peace as well as in war, is a hero, and furnishes an example which should thrill and inspire as fully as much as any man who falls in battle, clutching the blood-stained flag?

LIVE STOCK PRICES.

I AM indebted to a farmer friend for an interesting story showing how live stock has increased in value in the last generation. According to him, a chicken is worth more today than a turkey was a few years ago, a turkey more than a hog, a hog more than a cow, and a cow more than a horse. Here is an actual incident, as vouched for by my correspondent:

In March, 1879, I went down to Texas to look over 2,000 head of steers in Matagorda county, southern Texas. While I was down looking over the young cattle I was asked by the manager of the ranch if I cared to buy some older steers. The owner, I was told, had a number of six-year-old steers that he would sell, although he was not anxious. He was going to hold them until he got his price, he declared. The manager impressed upon me, however, that I need not hope to buy unless I was willing to pay the owner's price. I asked the price, and was told that he wanted $15 a head. Think of it—$15 a head for six year olds, and today calves are bringing $85.

Nothing could better prove my oft-made contention that there are bigger and surer profits in live-stock farming today than ever before. Of course, it may be argued that while six-year-old steers were only bringing $15 a head in the old days a dollar had bigger purchasing power then, and the farmer could get much more for his money at the town store than he can today. Granting this, there are few who will contend that a dollar would buy as much thirty years ago as a dime will today, and that is about the ratio involved in the story of the Texas steers. The good old days had their advantages, no one is more willing or ready to admit this than I am; but the future beckons with promises the like of which we have never known before. We must not make the mistake of living too much in the past, or envying the opportunities gone by. We should dedicate ourselves to making every possible use of the present and to preparing for the golden opportunities of the future.

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Another Silo Would Have Helped.

IT MAY be considered rushing things a little to advocate two silos on every farm when there are a good many farms in Wisconsin where the first silo has not been built.

But experience has shown the present season that summer silage will come in very handy in a dry year. One of our best authorities has said that we ought to farm every year just as though it were going to be a dry year. If this doctrine holds water, perhaps we ought to have summer silage every year in anticipation of short pastures. At any rate the extra silo is worth thinking about. Those who had it this year profited wonderfully at the milk pails and some of our dairymen who were not thus prepared suffered losses in the same direction.

The best information which we can get from those who have had summer silage is that they have saved considerable money by having it. Of course, we realize that a dry summer in Wisconsin is the exception. But for those who place great dependence for support in the sale of milk or cream, and who would suffer to some extent if the flow of milk were cut off, we think the question of a second silo for summer feeding is well worthy of consideration.

Wisconsin Stands Up Well in Dry Weather.

MR. D. S. BULLOCK, of the animal husbandry department, Wisconsin College of Agriculture, writes The Wisconsin Farmer some good ideas on how Wisconsin can stand a dry summer. He says:

"Dry spells" do not have in them the terror for Wisconsin stockmen that they do for the farmers in many sections of the grain-belt states. Wisconsin farmers are constantly fortifying themselves against such unavoidable handicaps by getting humus in their soil through the growing of legumes, the raising of live stock, and the feeding of as much coarse fodder as possible on the farm. By so doing they are increasing the humus content of the soil, and so its water holding capacity.

The use of summer silage as a substitute when natural feed becomes short makes the stockmen in many respects independent of the weather. The silo has been one of the greatest and most important factors in making Wisconsin the great live stock state that it is today. More and more the stockmen of the state are realizing that silage is absolutely essential not only for the dairy cow, but for other live stock as well. We now have 56,000 silos and the number is rapidly increasing. Several of our northern counties built more than 100 silos each last season. The backward season of a year ago was a lesson to many, and more silos are under construction than last year. Every farmer who keeps a large number of live stock realizes that he is insuring the future productivity of his farm. He realizes that by feeding out the coarse fodder grown on the farm and returning the manure to the soil, good crops are almost a certainty.

More than 80 per cent of the fertilizing elements in the feed eaten by stock is returned to the soil in the manure. These plant foods are in a form readily available for the growing plant. The stockman is thus building up his soil and laying a future foundation for the production of larger and better crops. Very many Wisconsin farmers are insuring themselves against dry spells by feeding both live stock and their fields.

Mr. Bullock recently came to the college of agriculture staff and is engaged in extension work which gives him an excellent opportunity to get first-hand information over the state.

Horses Are Not Losing Out in Wisconsin.

DESPITE the inroads supposed to be made in the horse industry by the automobile and the tractor, the horse is holding his own and gaining. This statement was made by Dr. A. S. Alexander, of the Wisconsin College of Agriculture, before the recent Wisconsin Bankers' Association meeting held in Madison. We quote from the address:

Horses, despite the automobile, are increasing in numbers. In 1914, Wisconsin horses increased 27,000 head and in 1915, 7,000 head. From 1906 they have increased 116,068 head worth $1,439,243 in Wisconsin. Valued at $124 each Wisconsin horses are worth today $88,288,000, to say nothing of the mule.

Wisconsin cows are worth $92,125,000; our sheep $3,519,000 and our swine $19,278,00, figuring the cows as worth $55 each and sheep at $5.30 and swine at $9 each.

The $200,000,000 or more now represented in our horses, cows, sheep and swine might be doubled by the general employment of pure-bred sires and the right kind of dams.

More than 50 per cent of all of the sires in use in Wisconsin are grades and scrubs.

Pure-bred sires are bank builders. Scrub sires are bank wreckers.

There are 1,814 pure-bred public service stallions in Wisconsin and their good work is being retarded and broken down by 1,239 grade and scrub stallions. The grade sires number 922; the scrub sires, 317. The place of every grade and scrub sire should as quickly as possible be taken by a pure-bred, sound, suitable and prepotent sire. Such sires would quickly revolutionize our live stock industry. We bespeak the earnest and enthusiastic co-operation of every banker in the elimination of all undesirable sires.

There are 1,111 pure-bred Percheron sires in Wisconsin. This is the favorite and predominating breed and it is doing wonders in the improvement of our horses; but almost a like number of grade Percherons —sired by these pure-bred horses—are also used in this state and they are preventing or antidoting the good work of their sires. They are a compliment to their pure-bred sires, of course; but they are a menace to the industry and should be suppressed.

That it is easily possible to improve the live stock of this state in a short period of years is shown by Dr. Alexander when he says:

Grading up can quickly and satisfactorily be done by the persistent, consecutive use of pure-bred sires of the same breed upon selected females. It would be quite possible in fifteen to twenty years in every developed district of Wisconsin to substitute for every animal therein a practically pure-bred, grade-up animal of specific sort and high efficiency. We ask you bankers to help in making such a possible and profitable change.

And let it not be understood that the pure-bred sire is the sole necessary factor in animal improvement. It is as necessary and important that the right sort of dam should be employed. Too often it is thought that when a mare is no longer good for anything else she may be profitably employed for the production of colts. Some men think it profitable to start breeding operations with a dozen cheap, footsore mares from the city, but I assure you, gentlemen, that it would be far better to start with one right mare, mated each time to the best available pure-bred sire. One right pure-bred mare has earned many thousands of dollars for her owner by the time she was nine years old and many a mare of that sort has gone on producing until twenty years old or over. A sound, well-formed, pure-bred mare that is a consistent breeder is a little fortune to any man. Bankers can well afford to loan money for the purchase of such mares, or sires and dams of the kind we have been describing, to take the place of grade and scrub sires and unsound, unfit or unsuitable dams throughout the state. We have nothing to say against the tractor, but as a stockman, I may be permitted to say in favor of the brood mare and the other suitable dams of the farm, that they produce stock to take their place when they are gone, pay for their living by work as well, whereas the tractor in time goes into the scrap pile and has never produced a little tractor pup, or foal, calf, lamb or pig to take its place.

We advocate live stock breeding for the reason, too, that animals concentrate farm crops into easily marketed commodities and also insure the fertilization of our farms. The banker should be interested in the production of milk, cream, butter, cheese, beef, pork, mutton, wool and the better horses we have described. These commodities mean cash in every district, prosperity for the farmer and business for the banker as a surplus will remain for depositing and interest earning.

All splendid advice from a thorough live stock student and practitioner who knows what he is talking about.

Shawano County Milk Record.

THE Wisconsin Farmer has a most encouraging letter from C. M. Reydberg, Shawano county, Wisconsin, tester in charge of Shawano County Cow-Testing Association No. 1. Report of this association will be published in the dairy columns of this paper next issue. One cow in this association produced 1,144 pounds of milk in thirty days ending July 31st, which is at the rate of 36.9 pounds daily. This production was made by a Guernsey and the test is shown by the record to be 5.6 per cent fat. The fat for the thirty-day period was sixty-four pounds. A Durham cow in the same association produced sixty pounds of fat in thirty days from 1,184 pounds of milk testing 5.1 per cent. There are fourteen cows in this Shawano county association which produced better than forty-five pounds of fat for the month. The Guernsey cow which held the record for the month in this association gave milk valued at $21.76 for the month, while the feed cost was, according to the statement of the tester, $1.75, netting $20.01. One Holstein cow in the herd came very close to the records above given. The record cow belongs to Chris Hansen, Underhill, Wisconsin.

A few good cows like these in any herd will soon begin to increase the farmer-dairyman's bank account.

The Fertilizer Situation.

AT A CONVENTION recently held by the manufacturers of commercial fertilizer, more enthusiasm was displayed than has been the case since the beginning of the European war. Every fertilizer user knows that owing to the fact that the German potash supply has been cut off since the war began, there has been a great scarcity of this constituent which has made itself felt in increased prices during the past year. Not only have fertilizers advanced, but their content of potassium has had to be greatly reduced. Naturally, this has interfered considerably with crop production in some localities. On the other hand, the scarcity of potassium has led to experimenting in this country for the purpose of producing this constituent at home. Some progress has been made along that line, and from now on a considerable amount of potash will be produced from kelp on the Pacific coast.

While prices will be high for the next crop year, the advance in price will not be so much as to make the use of fertilizers unprofitable. It was stated at the convention that, as a rule, the amount of fertilizer required for an acre of wheat will not cost more than the price of a bushel of wheat above former values. Perhaps some good will also accrue from this fertilizer scarcity. Possibly some means other than adding purchased plant food to the soil may be resorted to. If it should lead the great army of fertilizer users to sow more leguminous crops for fertilizing purposes, the extra price that will have to be paid for the commercial article will be a godsend to these men.

While there is much land that will not produce crops profitably without the addition of commercial fertilizer, there is no question but that the plowing under of legume crops on a large scale would make it possible to utilize commercial plant food to much better advantage than is now being done.

Co-operation With Young People of the Farm.

FARMING is becoming more and more an exclusive occupation, made so by high land values. On this account, possession of land by the younger generation must in the main be through inheritance. A few generations ago it was possible to buy land in the corn belt at a figure so that full payment could be made for it by two or three crops, but this situation has entirely changed. Attention is called to the fact by one of our subscribers who holds the opinion that land owners are remiss in their duty to children if some special provision is not made so that the younger generations get a fair start in farming affairs. The communication of this subscriber follows:

The increase in the value of land has brought about many new problems and conditions. Many an old tight-fisted farmer is a menace to the upbuilding of our state because he does not in any way encourage his sons or his daughters. He rather prefers to kill their ambition by the hard rule of trying to pocket their savings and keeping his grown-up children in subjection.

There are many young men with well-to-do parents who wish to establish homes of their own, who have labored long and hard at home, who are deserving enough to be trusted with a few thousand dollars of their parents' money, but instead the parents are hard and oppressive toward them and say that they had to make their own start, and contend that the children have the same opportunity as they. Now, any reasonable, thinking person knows that it was easier to get a start in life twenty years ago than it is today, and it is strange that so many men care nothing for the welfare of their own children.

I think a young man ought to receive a certain portion of his parents' property when he is twenty-one, and a daughter ought to be encouraged to remain on the farm by her parents' good will and kind support. What is the use of an old farmer trying to be a tyrant when he might take more interest in the social welfare of the younger generation and the upbuilding of the soil? So many retire and move to town. We, the younger generation, need the veteran farmer with us as we never needed him before. We need his co-operation and advice. We need his capital to make the farm more productive. We need more live interest in yeomanry and less interest in luxury and ease. Anyone who remembers the open undulating prairies of a few years ago can notice how rapidly changes have been brought about; how great cities have sprung up in the past forty or fifty years where no cities stood before, and a visit to any of the large cities will open one's eyes to the fact that whole blocks and new streets are opened every year, making the city larger year by year. A few years ago I was in the Twin Cities of Minnesota and it seems a marvel the way these cities are spreading their great arms in every direction and how new streets have been laid as far as the eye can see, and this within a period of four or five years.

On the other hand, as we look away over our farms we see how speculation and hard methods of greed and tyranny have almost ruined thousands of acres of fine land and one does not have to go far to find land that will not produce over twenty bushels of corn per acre under favorable conditions, and right here is a strong argument that we need the capital on the farm and in the hands of the ambitious young farmer where it belongs, rather than in the hands of the veteran who holds it dear from force of habit, lacking patriotism and love for the young man and the young woman who are trying to make things go without capital on a farm worth $20,000. We know that it takes equipment to run a farm nowadays; we know that land rents for more; why not give this problem due consideration in order that live stock and machinery and gress seed may not be lacking for those trying to meet the odds?

We are not sure but what there is some sound reasoning in the analysis here given. Where the taste of boys and girls is naturally favorable to farm life, there is no practical way for indulging that taste unless the landowner will make some special concessions in the form of loans in order that some may be given a start in life. In too many cases a father belittles the ability of his sons in business matters and this unquestionably is the basis for the conservatism referred to by this subscriber. We do not like the term "tight-fisted," and if a change is made in the general attitude of landowners toward the start in life which they propose to give their sons the matter will have to be approached in a different way.

In nine cases out of ten a hustling son will handle land better than a stranger tenant, because he has greater interest in its future and, that being the case, the father can well afford to extend privileges to his son that would ordinarily not be extended to the renter. The farmer's son who is not assisted financially in order to get a start must drift to the towns and cities, with the chances against him that he will make as marked success there as he would if he remained on the farm and thereby reap the advantage of the training received during his youth and his young manhood.

Our Poland China Silver Trophy.

Offered in the Futurity Classification at the Wisconsin State Fair at Milwaukee, September 11th to 16th, '16.

IN ORDER to stimulate interest in Wisconsin in the hog business The Wisconsin Farmer offers two silver trophies, one for the Poland China Futurity, shown herewith, and another for the Duroc Jersey Futurity, shown on this page. This is the third year The Wisconsin Farmer has offered a Poland China Futurity trophy. The cup will be presented to the breeder winning the largest number of points in the Wisconsin Poland China Futurity class. The Poland China Futurity is managed and guaranteed by the American Poland China Record Association, Union Stockyards, Chicago, to which all futurity payments are due. Rules governing the futurity classes will be furnished each year upon application to the secretary of the Wisconsin State Fair, Madison, or West Allis, Wisconsin. The trophy offered by The Wisconsin Farmer is a special prize in addition to the cash prizes offered. The Wisconsin Farmer trophy in 1914 was won by M. Madson, of Dane county, and in 1915 by J. D. McDonald, of North Bend. These gentlemen are among the best breeders of the state and they have been pleased to have opportunity to win and display this trophy which testifies to their success and the quality of their stock.

Wisconsin Tractor Demonstration.

OUR readers are asked to keep in mind the Wisconsin Tractor Demonstration, to be held at Madison, September 4th-8th. Last week the writer attended the great tractor at Fremont, Nebraska, and met there Mr. F. M. White, of Madison, who is manager of our Wisconsin show. Mr. White was lining up exhibits for Madison and getting pointers on how to make the greatest possible success of the round-up show here in Madison in September.

Tractor manufacturers are engaged in a far-reaching educational campaign for the purpose of demonstrating to the public just what may be accomplished in the field with a tractor, and just how useful a tractor may become in other farm operations. Special emphasis will be placed on the value of tractor power for silo-filling, threshing, for harvesting of hay and grains, etc.

Plowing has been the chief feature at the tractor shows in other states, and our Wisconsin farmers will certainly be interested in this important feature.

A great many people who are skeptical of tractor performance still admit "it is coming some day." To convince these people that the day of the tractor is really at hand is the purpose of these demonstrations.

The demonstration is well worth seeing. It offers a splendid opportunity for Wisconsin and northern Illinois farmers to visit the capital city of this great state. Madison is always an interesting place. Come out and see for yourself just what the tractor will do.

Horticultural Society Summer Meeting.

The summer meeting of the Wisconsin Horticultural Society will be held August 22d at Lake Geneva, as the guests of the Lake Geneva Gardeners' Association. J. G. Sanders, state entomologist, will speak on "Common Insects of Orchard and Garden;" R. A. Vaughn, of the college of agriculture, on "Fungous Diseases of Garden Plants;" R. H. Roberts, of the college, on "The Fruit Bud;" Axel Johnson, of Lake Geneva, on "Perennials;" W. J. Moyle, of Union Grove, on "Roses for City and Country;" and A. Martini, of Lake Geneva, on "Planting Home Grounds." There will be informal talks by members of the Milwaukee Florists' Club; a visit to the state trial orchard and considerable entertainment, ending with a lake trip and a visit to the Yerkes observatory.

Janesville Big Fair a Success.

The Janesville Fair Association held their most successful fair last week from August 8th to 11th. Owing to the fact that threshing was in full swing the attendance for the first two days was not large, but a rain Wednesday night stopped the threshing and the last two days of the fair were record breakers. A heavy rain during Thursday afternoon interfered with the racing program. The feature of this fair is the excellent show of live stock, and there was more stock on the grounds this year than at any previous fair. There were 360 head of cattle on display, dairy cattle predominating. There was an excellent showing of Short-horns, also Herefords. The Clydesdale exhibit was equal to that of the state fair. The swine show was also the best ever seen at this fair, numbering 223 head, Duroc Jerseys predominating. In Short-horns the prizes were fairly well divided among several good herds. Gerald Arnold, Galesville, Wisconsin, had the grand champion bull. Chas. Rogers & Sons, Union Center, Wisconsin, had the grand champion female, winning on a senior calf. J. C. Robinson, Evansville, Wisconsin, was the heaviest winner on Herefords, both championships going to this farm. The Jean du Luth Farms, Duluth, Minn., won all prizes on Red Polls. Boynton Bros., Avalon, Wisconsin, won both Polled Durham championships. Jas. VanEtta, Lima Center, Wisconsin, won sweepstakes on his Clydesdale stallion, and McLay Bros., Janesville, Wisconsin, won sweepstakes on their Clydesdale mare. The Duroc Jersey show was excellent and there was strong competition in all classes. John L. Fisher, Janesville, Wisconsin, won both championships of this breed. C. S. Flesch, Mt. Ida, Wisconsin, had the grand champion Poland China boar and L. P. Martiny, Chippewa Falls, Wisconsin, owned the grand champion sow of this breed. Geo. Clarke, Janesville, Wisconsin, had a nice exhibit of Berkshires, but no competition. There was a light showing of Chesters and Hampshires. Wm. Kirst, Tomah, Wisconsin, had the grand champion Chester White boar.

Mr. Wheeler Chosen President.

J. R. Wheeler, of Columbus, vice president of the Farmers & Merchants' Union Bank and probably one of the best-known bankers in the state among farmers, was chosen president of the Wisconsin Bankers' Association at its convention in Madison last week. Mr. Wheeler has been vice president the past year and has served many years on the agricultural committees. William M. Post, of Milwaukee, was chosen vice president; Lewis Larson, of Cumberland, treasurer; and Walter Kasten, of Milwaukee; C. M. Smith, of Shell Lake; G. A. Babcock, of Grand Rapids; and F. E. Woodward, of Watertown, members of the executive committee. The executive committee re-elected George D. Bartlett, of Milwaukee, as secretary, and were instructed to employ an assistant secretary.

Grand Rapids, Wood county, will have a new creamery in operation before September 1st, the machinery now being installed in the Mott & Wood cold storage plant.

Wisconsin Farmer Duroc Trophy.

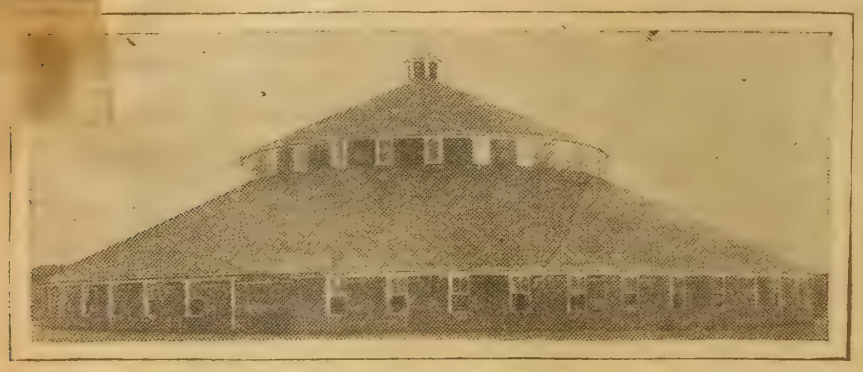
Offered in the Futurity Classification at the Wisconsin State Fair, Milwaukee, September 11th to 16th, '16.

MUCH interest has developed in the National Duroc Jersey Record Association Futurity for 1916, and The Wisconsin Farmer, in an effort to stimulate even greater interest, has added this year to its live stock trophies one for the Duroc Futurity at the Wisconsin State Fair. An appropriation for cash prizes has been made by the national association, which has charge of this classification and guarantees its conduct. The rules are generally understood by breeders who have nominated herds in this class, but each year the secretary of the Wisconsin State Fair will furnish the rules or they can be secured in advance from the National Record Association. An exhibitor can exhibit at only one futurity and that must be the futurity in his home state. The Wisconsin Farmer trophies, both in the Duroc and Poland China futurities, have been on exhibition in Milwaukee, and will be ready for delivery at the state fair grounds as soon as the awards are made. This is the first year that The Wisconsin Farmer has offered a trophy in the Duroc Futurity, but the interest already shown by breeders practically insures the award will be continued indefinitely. This paper will make announcement of the winners and next year we hope to see even a larger number of entries and a more spirited contest. Wisconsin has ideal conditions for hog raising and we should have many more good herds.

Marshfield's Sale and Show Barn

Combination Pavilion, Only One of Its Kind Known Completed, and Will Be Dedicated During the 1916 Fair.

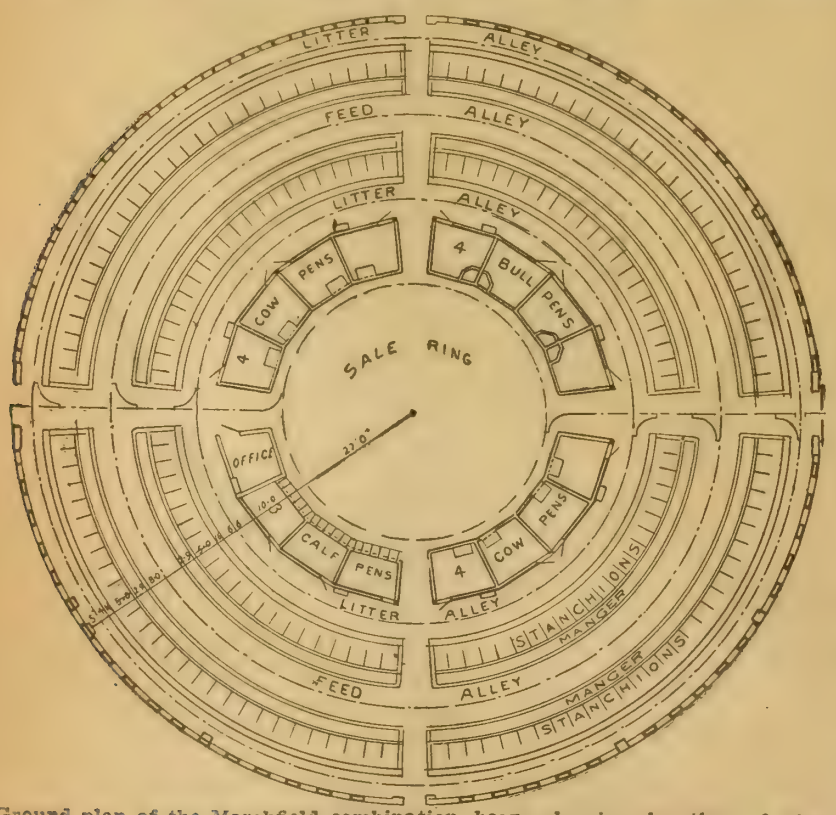
TO TAKE care of the increasing interest in live stock sales in Wisconsin, many communities are building or have built sale barns and pavilions to accomodate both the breeders and the buyers. The success of a sale is no doubt increased by the facilities for handling the stock just as a good show barn aids the proper showing of stock at a place to hold such sales. This combination of events, with the co-operate spirit that has always existed in that community between fair officials and breeders, led to conferences as to what could be done to relieve the situation, and the result is the modern, sanitary barn pictured on this page, which is ideal for both show purposes and sales. The fair last year had 197



Sanitary and fully equipped sale and show barn just completed on the fair grounds at Marshfield, Wood county.

fair. This latter realization has also brought about the erection of many show barns on county and district fair grounds in Wisconsin of late years, but it remained for the breeders of central Wisconsin, in co-operation with the business men of that vicinity, to erect at Marshfield, Wood county, a combination sale and show pavilion on the fair grounds there that is, so far as known, the only building of its kind in the entire country.

This new show and sales barn, as it has been termed, has just been completed and will be formally dedicated with the cattle exhibit at the Central Wisconsin Fair, at Marshfield, on August 29th-September 1st. It represents an expenditure of $6.500 and is the outgrowth of a co-operative spirit that is highly commendatory, and The Wisconsin Farmer wishes to congratulate the breeders and business men who united and brought about its erection. The spring sale last May of the central Wisconsin breeders was held in this barn, but at that time it was only partly completed and only a partial idea of its completeness could be secured then by those who attended.



Ground plan of the Marshfield combination barn, showing location of stanchions, sale and judging ring, entrances, etc.

The combination barn is the outgrowth of two factors. First, the cattle exhibit at the Marshfield fair has grown so rapidly of recent years that the fair officials were confronted with the problem of providing additional room. Second, the pure-bred dairy industry had grown to such a point that annual sales were in order and the breeders were without an adequate head of cattle entered, and despite the fact that a new show barn had been built that spring, it was necessary to use tents for the overflow. Now, with the new barn, it is expected to take care of this year's entries in the one building.

The barn is so constructed and arranged that 237 head can be accommodated in the stanchions in addition to the number which can be cared for in the eight cow pens, four bull pens and three calf pens. It is circular and 150 feet in diameter. It is fully equipped with steel stanchions and pens, and there are two rows of stanchions in addition to the row of pens. These are so arranged that it is possible to pass beside and in front of a cow standing in the stanchions, as a glance at the accompanying ground plan will indicate. The cattle in the outer row of stanchions face in and those in the second row face out, so that a person walking in the feed alley can see from the front all the stock shown. This feed alley is eight feet wide, while the outside litter alley is five feet four inches, permitting plenty of room to pass between the cows and the wall, and the center litter alley is six and a half feet wide. This arrangement of the stock at the fair, it is believed, will be especially pleasing to both exhibitors and visitors, and there has already been a heavy demand from other fairs and communities for plans of the Marshfield barn, which promises to serve as an ideal.

In the center is the sale ring, fifty-four feet in diameter, and during the fair this will be used also for judging. Above the cow, bull and calf pens there are seats accommodating a thousand persons, and, as particular attention has been paid to ventilation, as noted by the large number of windows and outlets, the air will always be fresh. There are four entrances, all leading into the sale ring. This ring will have the regulation tan bark, while the remainder of the barn is floored with concrete.

Funds for the erection of the barn were secured by popular subscription. The breeders, members of the Central Wisconsin Live Stock Breeders' Association, subscribed $3,000, the Wood county board gave $1,900 from the county funds, the bankers of Marshfield added $250, the business men of Marshfield subscribed $1,250, and the Central Wisconsin State Fair Association the balance.

To make the barn self-sustaining, the fair association, which controls the building, charges a fee of 50 cents a stall for show purposes and $2 for a box stall. The breeders will pay 1 per cent on the sales for its use at the annual stock sales.

In and Around Wisconsin.

Ray Baker, assistant secretary of the Wisconsin Live Stock Breeders' Association, spent several days at the Sauk County Fair held at Baraboo. Mr. Baker was in charge of an exhibit of "Profitable and Unprofitable Stock." This was quite a feature at the fair and the educational value to the farmers was considerable.

Joseph Egelhof, of Iowa county, writes The Wisconsin Farmer that everyone has been busy with harvest in his neighborhood. Help has been scarce and crops very heavy. His letter was written August 3d and he writes that he had just finished cutting oats. He used 145 pounds of standard twine on forty-seven acres and this gives some idea of the oats in his vicinity this year.

George L. Harrington, of Walworth county, has had some experience killing quack grass, which he relates in the Elkhorn Independent as follows:

Shallow plowing is one of the most important features of killing out quack in a pasture or on sod land.

After plowing our field was thoroughly pulverized, not once or twice, but until the sides cut down through the sod. This cut up the quack roots and brought them to the surface. Then at least once a week the field was gone over, sometimes with a pulverizer, or with a spring tooth harrow, or a common drag. All during this time the quack was never allowed to get started.

In the middle of the summer, after the roots all seemed to be dead, the piece of land was sowed to sugar cane. A grain drill was used to do the seeding and 150 pounds of seed to the acre used. A very heavy crop was the natural result. It was cut with the grain binder, the reel taken off on a windy day, so the wind blew the stalks over on to the apron of the binder. It was cut one way. There was no sign of quack grass at this time, and none has been seen on the field since.

I am satisfied that the quack was all killed before the crop was planted. The idea is to get the roots up to the surface where the sun will kill them. A dry season was in our favor, too. During a wet year I believe I could kill the quack, but it would require more attention. It is a mistake to plow deep, I think, because quack roots lie just below the surface, and if the ground is plowed deep the roots are buried deep enough to get a new start.

A few figures on the value of the silo will not come amiss at this time. The silo makes it often possible to save a corn crop which, owing to early frosts, might not mature. A well-known authority mentions the following to keep in mind when building a silo:

The walls must be air tight.
The walls must be smooth inside.
The best type of silo is round.
The roof should be waterproof.
The materials should be substantial to stand great pressure.
The cost should be from $2 to $5 for each ton capacity, if the total is to exceed 100 tons.
A silo should be placed as near as possible to the place where silage is to be fed.
A silo should be on the least exposed side of the barn.
One hundred tons of silage will feed twenty-five head of stock for 200 days.
A silo fourteen feet in diameter and thirty-five feet in height will hold 100 tons.
Any kind of a good silo is a valuable piece of property on a farm where live stock is kept.

A Heave Remedy.

HORSEMEN should send for the free booklet of the Newton Remedy Company, Toledo, Ohio, which discusses the standard veterinary remedy for heaves made by this company. Most horsemen have had more or less experience with this disease and will welcome an efficient remedy. The Newton remedy is a cure for heaves, a conditioner and worm expeller. It sells at $1 per can at all dealers or may be obtained at the same price from the company through parcel post. See advertisement on page 12.—Adv.

Model Holstein Breeding Farm.

Herd of Three Hundred Registered Animals on Pabst Stock Farm Result of Careful Breeding and Selection.

WISCONSIN, during the past decade, has rapidly developed as a dairy state, until today, outstripping all rivals, she stands pre-eminent as the leading dairy state of the Union.

Not only does Wisconsin produce large quantities of butter and cheese of high quality but within her borders are produced large numbers of heavy producing, richly bred cattle. During the comparatively few years that official testing has been done it has proven that the dairy cattle of Wisconsin stand second to none in production ability. Large herds have been developed whose average yearly production is a revelation to those not acquainted with the progress of recent years.

KORNDYKE SEGIS JOHANNA,
The $12,500 son of the $25,000 bull, Johanna McKinley Segis. His two nearest dams averaged 39 pounds of butter in seven days.

One such Wisconsin herd is the herd of registered Holsteins maintained on the Pabst Stock Farm, Oconomowoc, Wisconsin. The herd consists of close to 300 registered animals of high production ability, good Holstein type and of proven lines of breeding. Great care has been taken in the selection of breeding stock, and no effort or means has been spared in securing the best obtainable.

Three sires are in service in the herd, viz: King Pontiac Champion 53418, Maplecrest King De Kol 91584 and Korndyke Segis Johanna 127132. They represent the highest producing families of the breed.

The senior herd sire, King Pontiac Champion, is an outstanding individual weighing well over a ton. He is not only a fine individual himself and backed by high production blood but he transmits these good qualities to his daughters. They are fine, straight, deep-bodied cows with well-developed milk organs. Although he is still a comparatively young bull, he already has forty-one A. R. O. daughters with creditable records both from seven days up to a year. These daughters are still young, only one being mature, and on semi-official work made over 1,000 pounds of butter in a year. His daughter, Champion Dora Korndyke, as a three year old made 26.74 pounds of butter in seven days and Pabst Lily of the Valley, as a two year old, made twenty-four pounds of butter in seven days. His daughter, Pabst Lulu Lady, at two years and three months of age gave 20,002.9 pounds of milk and made 849 pounds of butter. His daughters all show large, capacious, evenly balanced udders with smooth, long teats.

The bull, Maple Crest King De Kol, is an outstanding individual and royally bred. His sire, Friend Hengerveld De Kol Butter Boy, and his dam's sire, Pontiac Aaggie Korndyke, are the world's greatest sires for high yearly record daughters. His dam, Maplecrest Pontiac Hartog, as a two year old made twenty pounds of butter in seven days. She is a full sister to Maplecrest Pontiac Flora Hartog, that made 30.33 pounds of butter in seven days. His dam's dam and grandam have records of 30.91 and 30.14 pounds respectively. As yet he himself has no daughters in milk, but as individuals they cannot be surpassed and show promise of being heavy producers.

The junior herd sire, Korndyke Segis Johanna, is one of the most richly bred bulls in the Northwest. His sire is the $25,000 bull, Johanna McKinley Segis, a son of the forty-pound cow, Johanna De Kol Van Beers and King Segis. His dam is the thirty-eight-pound cow, Pontiac Lady Korndyke, the highest record daughter of Pontiac Korndyke. An entire volume could be written on the breeding back of this young bull and the records made by animals in his pedigree. His dam and sire's dam average 39.05 pounds of butter in seven days and 154.15 in thirty days.

It is impossible to go into detail in regard to the females in the herd, but they are of equally good breeding. Official and semi-official testing is continually being carried on, every female of milking age having a seven-day record working out the proper rations for producing a heavy flow of milk is shown by the records made during the past spring season. The heifer, Pabst Blackberry, as a three year old made 31.68 pounds of butter in seven days;

KING PONTIAC CHAMPION.
Daughters and granddaughters of this bull are making fine records in the Pabst herd.

and the majority yearly records. During the past four years experimental work has been conducted along the line of feeding for official test and much valuable data has been secured.

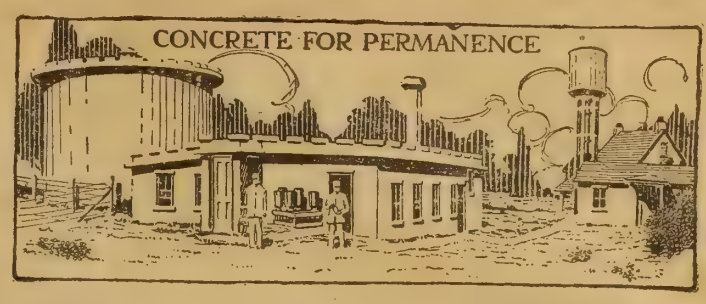
That they have been successful in Edith De Kol Burke Hengerveld made 33.86 pounds of butter; Pabst Hengerveld Colanthus made 31.51 and Pabst Hengerveld De Freule made 30.38 pounds of butter in seven days. Now that they have struck the thirty-pound gait they will in all probability produce a goodly number of thirty-pound records during the coming fall and winter.

THE HEIFERS RAISED IN OPEN SHEDS ON THE PABST STOCK FARM LOOK STRONG AND VIGOROUS AND ARE WELL GROWN.

However, Mr. Pabst is not alone satisfied with developing heavy-producing animals of good Holstein type, but he insists they also be strong and of the highest degree of health. An innovation in the way of rearing young cattle has been tried out for the past two years, viz: Raising of heifers in open sheds. This, of course, is the usual method with steers and beef cattle, but has been thought to be too severe for dairy cattle. Mr. Pabst has been thoroughly convinced that it not only preserves the health of his cattle and gives them greater vitality but that it also tends to higher production. A two-year-old heifer thus raised recently made twenty-four pounds of butter in seven days. The young stock looks strong, healthy and vigorous and are well grown.

From the foregoing it will be seen that every effort is being made to build up a herd of richly bred animals of high production ability, good type and strong constitution. The great breeds of New York will find a formidable rival in this herd, as we look for this herd to produce a number of world records in the near future.

The herd now numbers close to 300 animals; but as yet Mr. Pabst is offering no females for sale. He is virtually closing out both his draft and driving horse stud and hereafter will devote his entire farm of 1,400 acres to the breeding and development of Holstein cattle.



WHAT ONE MAN DID WITH MEDUSA

Mr. Edward A. Kuharske, of Rockford, Ill., is a leader in the advanced method of concrete construction for the farm. He believes in having his farm equipment up-to-date and practical—and his neighbors have not been slow in following his example Mr. Kuharske has made his neighborhood a typical Medusa Colony.

A horse barn, milk house, water tower, a silo and a barnyard fence—all made with Medusa Waterproofed Gray and faced with Medusa White Portland Cement—are some of the recent improvements made by Mr. Kuharske. He writes "*Medusa Portland Cement* has always given the very best results in silos, foundations and for various farm structures."

What he has done—you can do. You can make your concrete work sound, permanent and waterproof and beautiful by using the Medusa Cement products with

Medusa Waterproofing

Makes your concrete structures weatherproof—and you use a leaner mix. It is the cheap, efficient way for making concrete last.

We also make

Medusa Waterproofed Portland Cement
(Gray or White)

a mixture ground in the factory in the right proportions for any kind of work and *guaranteed watertight* when properly used.

Live Stock Conditions Are Good.

Dry Spell Caused Diminished Milk Flow in Some Localities in the State, But Stockmen Generally Look Upon Conditions as Good.

FROM letters sent to The Wisconsin Farmer we gather the following facts of interest to live stock breeders of the state. It is apparent that stock generally have stood up well under the dry weather of July and that fields and animals are greatly refreshed by the recent heavy rains. The chief damage done by the dry weather was upon pastures and a consequent diminishing effect on the milk flow. The short pastures made summer feeding necessary and those who were caught without any summer silage were forced in many instances to go to considerable trouble and expense for feed. In general live stock men are encouraged at the outlook and at the good prices which prevail in the state.

Live Stock Looking Fine.

(By George F. Clark, breeder of Shorthorn cattle and Berkshire swine, Rock county, Wis.)

Live stock in this community is looking fine considering the weather conditions. Pastures are pretty dry, but have stood the drouth remarkably well. Our rains have been confined to local showers. The corn and potatoes need a good rain at this time. We do not find much of a surplus of stock, due likely to the fact that feed has been so high and scarce that everyone is cutting down to a considerable extent. If we could get rains and a matured corn crop there will be a fair demand for stock feeders of both sheep and cattle. Barley is of fine quality and a fair yield. Oats are light and the later they are the lighter they seem to be.

Janesville, Wis., August 7th.

Never Knew Business Better.

(By H. W. Griswold, Guernsey breeder, La Crosse county, Wis.)

Stock has been doing very well here and I never knew business to be any better. I have sold on an average of ten bulls a month for the last three months and also sold a good many females. I never did any more business than at the present time and I think cattle in this neighborhood are in good condition.

West Salem, Wis., Aug. 8th.

Should Have Had Summer Silage.

(By Earl Roberts, Waukesha county, breeder of Guernsey cattle and a director in the Waukesha County Guernsey Breeders' Association.)

July has been a hard month. The hot weather, accompanied by the drouth, has dried the pastures as only a real dry spell can do. It is a lamentable fact that the provisions for such a state as now exist are lacking on the majority of farms. Only a small percentage of the farms have any silage for summer feeding. The corn has not been sufficiently far advanced to warrant feeding it. Under such conditions a marked falling off in the milk flow has been inevitable.

A few days ago we had a very fine rain and conditions will improve from now on, as corn has now reached a stage where it can be fed to supplement the pasture. I look for no ill effects except those arising from the decreased flow of milk. It will mean that many cows will have to be kept as boarders temporarily, or until they again freshen. The hay crop was good except that alfalfa winterkilled. Small grains are well up to average and corn is still an uncertain quality. For these reasons I believe that very few will sacrifice any good dairy stock.

Oconomowoc, Wis., August 8th.

Report From Grant County.

(By Dobson & Eastman, breeders of Poland Chinas, Grant county, Wis.)

We have had a bad drouth in Grant county and the weather very hot, for a long time registering from 90 to 110. In our immediate vicinity we have not had rain enough to settle the dust for forty-three days, which is the longest drouth for thirty years. However, the extreme north and south of our county have had some heavy rains. During the forty-three days lots of horses died cutting the grain which was finished cutting by August 1st and threshing has well begun. Oats are running from forty to sixty-five bushels per acre. Corn needs rain badly, but has stood the drouth bravely. The early corn is starting ears and the later corn will soon. The oats are fairly good quality, weighing ninety to ninety-five pounds per sack. Hay crop about 110 per cent and all made in fine shape. Pastures are getting dry and short. Pig crop is good, but are small and poorly fed, will be late to market. Milk production has decreased 40 per cent. Beef cattle will soon begin to move and are in very good condition.

Lancaster, Wis., August 7th.

Drouth Now Broken.

(By Wm. F. Belda, Dane county, Wis., breeder of Chester White hogs.)

The drouth is now broken and I also hope we will have a little cooler weather. Have noticed no ill effects on live stock except that they have lost some flesh, which I believe they will regain quickly after the grass freshens. The hog crop is small around here, as most farmers sold off most of the breeding stock last fall on account of poor corn. There was practically no corn matured here. Very few feeders to be had. Most all calves were vealed and most surplus stock sold.

DeForest, Wis., August 7th.

Cattle Looking Well as Usual.

(By Dr. David Roberts, breeder of Holstein and Ayrshire cattle, Waukesha county, Wis.)

A great many of live stock owners in this part of Wisconsin have been feeding such feed as green clover, green alfalfa and green oats in connection with their regular pasture which was very much affected by the dry weather, and for this reason the cattle are looking as well as usual. I do not know of any dairyman offering any of his cattle for sale on account of the shortage of feed, especially those who have pure breds, and it might be cheaper for him to sell his grades than to do so.

Waukesha, Wis., August 9th.

Stock Stood Up Under Hot Spell.

(By Wm. A. Connell, Waukesha county, breeder of Aberdeen Angus and Holstein cattle.)

The live stock situation in this vicinity seems to be prospering. The stock went through the hot spell in good shape, but the extreme hot weather has left behind it flies more numerous than I have ever seen them before, which will eventually cause a big loss to the live stock.

The surplus stock seems to be pretty well picked up, in this vicinity at least.

Farmers in this part of the state are going heavier into stock farming every year, and, therefore, create a local demand for a great deal of the surplus stock, especially good breeding stock.

The future for live stock farming looks good to me, as the farmers in general are beginning to learn that good high-grade or pure-bred stock are most profitable, and there seems to be a great demand for such at present in this locality.

Menomonee Falls, August 8th.

Summer Silage Helped.

(By F. E. Faranto, Holstein Breeder, Waupaca county.)

Live stock conditions in this section are good. Pastures are rather short owing to the dry weather, but most of the farmers have silage for summer. There is always plenty of good cattle for market in this locality, that is, of the grades and natives. There are also plenty of pure-bred Holstein bulls, young stock, at reasonable prices. So far as the hot weather is concerned it has no ill effect on cattle in this vicinity.

Manawa, Wis., August 8th.

Condition of Show Cattle.

(By Henry A. Eberhardt, Manitowoc county, Wis., breeder of Hereford cattle.)

Cattle came through the winter here in good shape. Mine were in show condition. I sold a lot that went to Montana, but we've had rather a disagreeable season so far; in the spring it practically rained all the time. I didn't turn the stock out until the 15th of June, as I had lots of silage and clover hay. This is practically a dairy district, about fifteen Hereford breeders and a few Short-horn breeders. I sell all my cattle for breeding purposes. The average hay crop was short in Manitowoc county. Grain is only about half a crop from what we had last year. The hot weather we have had for the last four weeks was not good for grain and stock. Pastures were almost burnt up. It was quite difficult to keep the cattle eating well during the hot weather, which we intend to show at the fairs this fall.

Manitowoc, Wis., August 6th.

Beef Cattle Look Fine.

(By Seth L. Crall, Rock county, breeder of Short-horn cattle, Shropshire, Cheviot and Dorset sheep, and Duroc and Poland China swine.)

In regard to live stock conditions in this section of Rock county the stock here is mostly dairy. Pastures on the high lands have been badly burned and some herds have fallen off in milk production. We have a few small herds of beef cattle which are in good flesh. Small grain in this neighborhood turned out fine. Corn is rather a poor stand and is hurt some by the hot weather. The pig crop is light and pigs small for their age. Very few sheep in this neighborhood, but they are all looking well.

Evansville, Wis., August 8th.

Scarcity of Feed.

(By M. H. O'Keefe, breeder of registered Holstein cattle and Duroc Jersey swine, Dane county, Wis.)

On account of the long dry spell, pastures are short and cattle are thin. Feed is very scarce in this section. Farmers have been buying their feed for some time back. Cows are yielding only a small quantity of milk on account of the shortage of feed. Flies have never been so bad. Many young pigs. Most of them farrowed late. Many horses have been overcome by heat the past two weeks and some of them died.

Rain, hail and wind storms of last week did much damage to the growing crops. Corn knocked down and hail spoiled many crops of tobacco. Corn is growing since the recent rains, but the crop is thin. Many misses. Oats and barley are good and are yielding many bushels to the acre. Some shock threshing done. The hay crop average is not very heavy. Potatoes are somewhat blighted, but on account of the recent heavy rains are setting a new growth. Many new silos are being put up in this section and by all indications feed will be somewhat scarce this winter owing to the fact that nothing has been left over from last year.

Waunakee, Wis., August 7th.

Hogs Doing Well But Not Large.

(By A. P. Cortte, Dodge county, Wis., breeder of Berkshire hogs.)

We have passed through the long hot spell and have had several rains. Some cattle had to be sold on account of dried-up pastures. Some farmers had silage to feed, which helped a great deal. Milk production shrunk from 30 to 40 per cent. Corn and potatoes suffered from drouth, but are picking up nicely now, and outlook is for a good corn crop. Hay crop was pretty good—all the hay is of good quality; no rain during the cutting time. Barley averages around thirty to thirty-five bushels per acre, oats around fifty to sixty—of good quality. Wheat is very good. Hogs are doing very good, but not as large in numbers as other years. There will be some cattle for market; not many, for this is a dairy section. In general, conditions look very favorable.

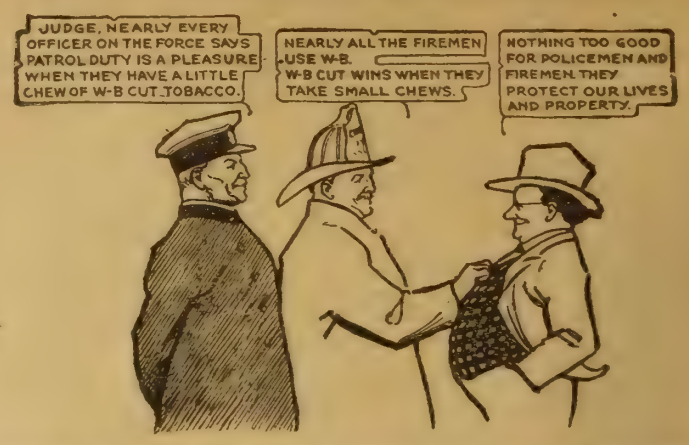
Lomira, Wis., August 10th.

Have Had Good Rains.

(By A. G. Austin, Rock county, vice president Wisconsin Ayrshire Breeders' Association.)

Live stock in this neighborhood are not seriously affected by the dry weather. We have just had a good rain, which will insure a partial corn crop if conditions are at all favorable. Prospects of an under-normal corn crop may cause some droves of hogs to be decreased, and short pastures have cut the milk flow. This is felt now by local dealers

There are fewer hogs in the county this summer than usual, owing to shortage and high price of corn. The feeding situation is favorable, especially for those having silos. Mixed hay



THE way that a small chew of W-B CUT Chewing gives tobacco satisfaction is a revelation and a treat to tobacco users. It's *rich* tobacco—and the *salt* brings out the taste without the grinding and the spitting, that's another reason why it's appreciated by a gentleman. You don't have to keep reaching for a fresh supply, a little nibble lasts.

Dealers who want customers to have fine tobacco carry W-B CUT —10c the pouch.

yielded under favorable conditions two to two and one-half tons per acre, and grain is turning out well (except where it was late). Corn won't average much more than 70 per cent of normal. So as far as hog feeding goes, this will be done under a disadvantage. Janesville, Wis., August 11th.

Beef Cattle Doing Well.

(By Irving Jewell, Iowa county, breeder of Hereford cattle and Cotswold sheep.)

Cattle are doing well. We have also had a hot, dry spell, but we have had a couple of fine showers and it is cooler.

We cannot remember when pastures were as good as they were this spring and for that reason the beef cattle have plenty of grass, although it is dry. There are the usual number of cattle to be shipped out this year. Corn is poor in some sections and for that reason more cattle will be shipped from grass. Lots of rough feed for wintering stock cattle.

Mineral Point, Wis., August 10th.

Expect Great Butter Exhibit

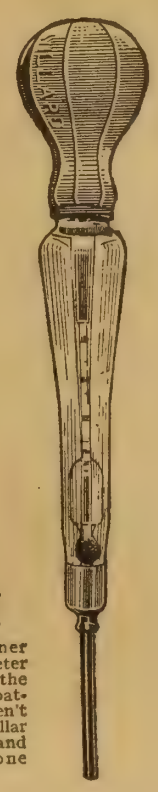
To the Editor:—Every one interested in the butter and cheese exhibit at the coming Wisconsin State Fair is looking for a large number of entries. A large exhibit of dairy products should be placed before the judges when they begin their work at the State Fair Park on September 5th. The three thousand makers in Wisconsin factories are this year going to show what good butter and cheese can be made in the state. All factory men are interested in quality, and in the part that Wisconsin must play in furnishing the nation's supply of good butter and good cheese.

The 1915 dairy exhibit was the largest in the history of the state fair, and another mark will be set this year if the factory men will do their part. The superintendent, Mr. Fred Marty, of the Wisconsin Dairy and Food Commissioner, has in his possession a complete list of all the butter and cheese makers that have applied for permit to make butter or cheese. Thus each one may be supplied with the necessary blanks and shipping instructions. It is his wish that all exhibits of butter and cheese reach the State Fair Park, West Allis, not later than Saturday, September 2d, in order that all entries may have an equal chance when placed before the judges.

A number of cheese makers have already stored away in a curing room the cheese that will represent their factories at the State Fair. A number of butter makers are already at work instructing the milk and cream producers how to care for their product in order that the best article can be made. A certain factory man in Wisconsin, receiving nothing but cream skimmed on the farm, who has been a regular exhibitor at the Wisconsin State Fair for years, is again ready to do his part. The good work that this man has done in his community to interest his patrons in good butter can best be illustrated by the copy of a letter the creamery company received from a commission firm. "Have sold the butter for the top price, as it was very fancy. There is no trouble in getting the top price if all the churnings run uniform as was the case with the last two shipments."

It pays to exhibit butter whenever a good chance offers itself. Remember September 2d—the day the butter should be delivered at State Fair Park, West Allis, Wisconsin. C. E. Lee.

Assistant Dairy Commissioner of Wisconsin.



A Battery Safeguard

Every car owner needs a Hydrometer syringe to test the condition of his battery. If you haven't one, enclose a dollar with the coupon and we will send one postpaid.

Willard Storage Battery Co.,
Cleveland, Ohio

Please send me one hydrometer syringe, for which I enclose one dollar.

Getting Your Battery Past Its "Baby" Stage

A new battery is like a baby—if well nourished it is bound to live longer.

That's why it pays to buy a Willard. Our new free service plan helps you take care of your battery while it is young. It teaches you what you should know about battery care. It offers valuable suggestions for prolonging battery life.

The purchaser of a Willard Battery is sure of a good start. With over 750 service stations at your disposal you may be sure of enough free, expert service to keep it in good condition during its "baby" period.

After that it is easy—you have learned how to take care of your own battery. Willard Service affords suggestions that prevent trouble. Ask about the new plan.

The Karkhoff Variety of Wheat.

To the Editor:—I am enclosing herewith a postal of a field of winter wheat, the seed of which I received two years ago from Prof. E. J. Delwiche, of the Ashland Branch Experiment Station. It is pedigree No. 208 of the Karkhoff variety. Last year our yield was forty-seven bushels per acre, and we have just threshed it this year, and our yield was forty-four bushels per acre, and I assure you it is all wheat, for I shipped a bushel to the International Wheat Show, Wichita, Kansas, October 4-14, 1915, and was awarded first premium in the winter wheat class. The wheat is a bearded variety and has a medium weight, stiff straw and stood the winter well, for last winter was a test. Our field was on a northern slope and was unprotected. Much winter wheat of other varieties in this vicinity killed out.

FORTY-FOUR BUSHELS OF WHEAT TO THE ACRE OF THE KARKHOFF PEDIGREE NO. 208. SCENE ON KRUEGER FARM, DODGE COUNTY, WIS.

I believe Mr. Delwiche has in this No. 208 a variety well adapted to Wisconsin conditions, and that can be depended upon to stand our winters. Much more winter wheat could be profitably grown by our Wisconsin farmers, but they have been heretofore unable to secure good, hardy varieties. This wheat is grown on several places in our state this year, and if the readers of The Wisconsin Farmer will write Prof. E. J. Delwiche, Ashland, Wisconsin, he can inform them where to get it. Growing winter wheat has several advantages: First, divides up the work of seeding; second, divides up the harvest; and third, it is excellent to seed down to clover and timothy, or alfalfa. Seeding should be done Sept. 5th to 20th.

Henry E. Krueger.

Dodge Co., Wisconsin.

OBLIGATION ON STOCKMEN.

From an Important Address by Dean H. L. Russell, of the Wisconsin College of Agriculture, Before Wisconsin State Bankers' Association at Madison Last Week.

THE magnitude of this industry with reference to the sales of live stock may be appreciated when one considers the number of cattle shipped out of the state for dairy purposes. By taking the records of the veterinary division of the department of agriculture as to tuberculin tests made on cattle exported in interstate shipments it is possible to make an estimate of the importance of this phase of agriculture. These records naturally do not include all of the cattle shipped outside, as only those animals are tested that are sold into states which require a tuberculin test certificate. In the year 1914, 18,443 cattle were tested for interstate shipments. These went to thirty-seven states and three foreign countries. The probable value of this stock was fully $100 a head, so that practically $2,000,000 was brought into Wisconsin as a result of this business. We have no definite figures as to the extent of the business within the state, but the best judgment obtainable places the home sales in excess of the outside sales.

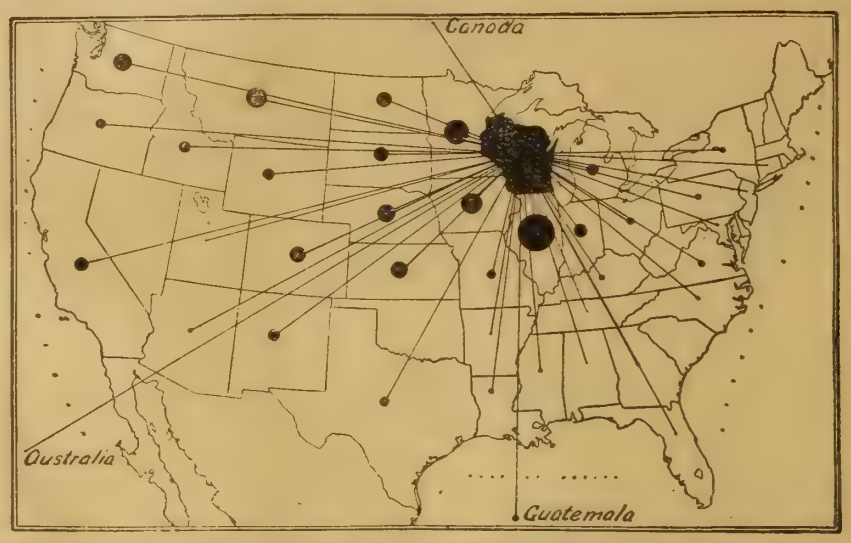
A moral obligation rests upon us as a state to see that the cattle supplied to this trade are free from any diseases that are of a transmissible nature, for it is now demonstrated beyond all doubt that the most fruitful source of spreading disease is, through the introduction of animals that are infected, but in which the disease has not yet advanced to a recognizable stage.

While this moral obligation should be sufficient to control our actions, the legal requirements of other states are constantly being increased. Recognizing that the disease is most commonly spread by transfer, practically all states now require cattle to be tested before being admitted to their borders. If a breeder is going to do interstate business, it is, therefore, imperative that he test his herd; otherwise no end of trouble and expense is in store for him if he tries to make outside sales.

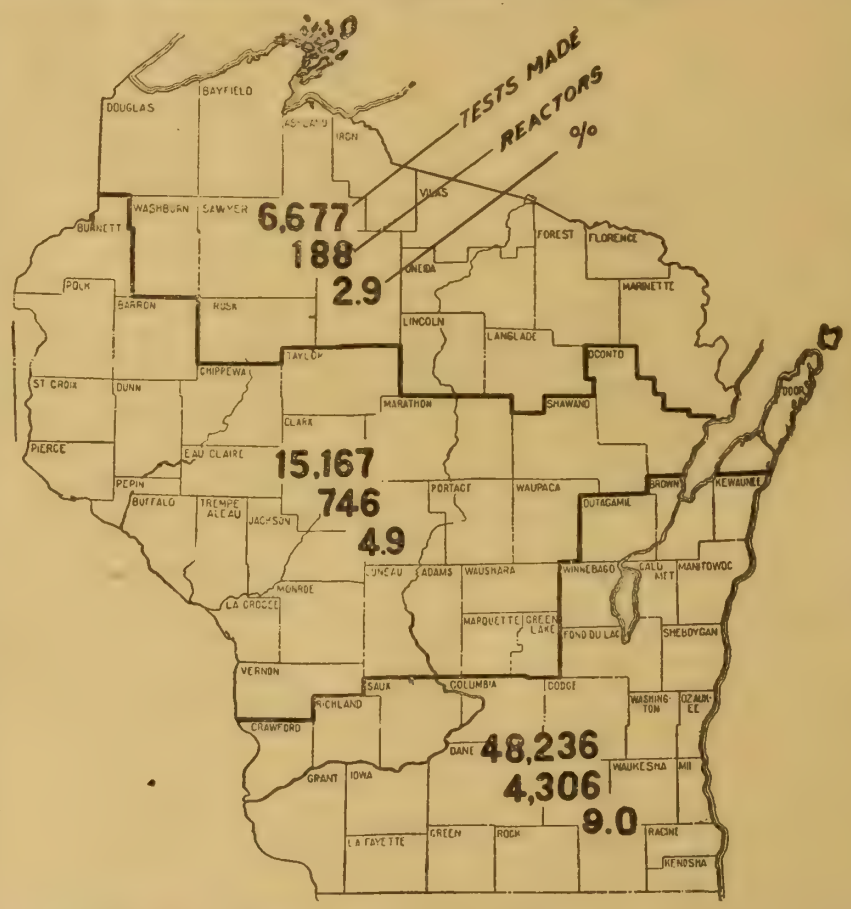
Good business policy would also dictate such a course of action, so that the buyer within the state would have the same assurance as a man outside.

Much has been done in this respect by the breeders in the state. The county breeders' organizations have in many cases adopted the tuberculin test as a feature of their plan of community effort with the result that such associations are able to advertise collectively their herds as free from tuberculosis.

While the necessity of perfectly healthy herds has been more prominently brought to the attention of the breeders by virtue of the financial advantage to them, there are, however,



MAP SHOWING DISTRIBUTION OF WISCONSIN CATTLE SALES IN 1914. ILLINOIS BOUGHT OVER 5,000 HEAD. MINNESOTA, IOWA, KANSAS, NEBRASKA AND FAR WEST BIG PURCHASERS.



UPPER WISCONSIN BREEDERS SHOULD BE URGED TO PURCHASE DISEASE-FREE CATTLE. THE PERCENTAGE OF DISEASED CATTLE IN UPPER WISCONSIN IS NOW ONLY 2.9.

oped with reference to its dairy possibilities. The most recent data indicate that there are now approximately 1,700,000 dairy cattle in the state and of these probably 55 per cent are found in twenty-seven southern and eastern counties where dairying has been prominent.

Gradually the situation with reference to the nature of dairy products produced is changing. Chicago is reaching out constantly for its supply of milk and cream. The dairy sections of southern Wisconsin offer the logical place to secure this supply and the consequence is that the milk trains for Chicago start in the vicinity of Madison and Fond du Lac and pick up a full load on the way to the city. More and more this condition will obtain, for the creamery and cheese factory can hardly afford to pay as much for their raw material as the city dealer who sells milk and cream for direct use. The result of this transformation inevitably means that the new northern counties which are now going into dairying with such rapidity will in the not distant future be much more important sources of production of the butter and cheese supply of the state.

By virtue of the natural advantages which many of these sections now possess the conditions for dairying are more favorable in upper than in southern Wisconsin. Nowhere in the state, and, in fact, but very few places in the United States, do the clovers and forage grasses grow as luxuriantly as in the north. The result is that summer fodder is produced in the greatest luxuriance. When this is supplemented with silage, which can be readily grown in nearly all parts of the state, the feed problem is solved. The heavy mantle of snow protects the perennial forage crops with the result that "winterkilling" rarely occurs. Abundant supplies of cool water, somewhat cooler climatic conditions, and a rapidly expanding population, who not only recognize the great value of dairying, but who are willing to perform the steady labor necessary to make it a success, are all factors which are exerting a profound influence on the rapid expansion of dairying in that region.

The ultimate result of this change in the character of the dairy business is likely to make the new North in time the leading dairy manufacturing section of the state. If this condition should obtain, it will mean more and more that the future supplies of live stock for sale will be grown in these sections. Shipment of whole milk to the city or condensery means increasing difficulty in raising calves, just as is now witnessed in the milk-supply-

MEMBERS OF WISCONSIN BANKERS' ASSOCIATION ATTENDING LIVE STOCK DEMONSTRATION AT COLLEGE OF AGRICULTURE, MADISON, AUGUST 8.

altogether too many individual sellers of pure bred as well as grade stock who have not yet taken the necessary step to safeguard the purchaser.

There is already in progress a movement with reference to the development of Wisconsin dairying that is designed to exert a profound effect on the future growth of this business in the state. While Wisconsin now stands preeminent as a dairy cattle state (having passed New York, its leading competitor, since the last census was taken), yet the state as a whole has only been partially developing sections of Illinois that are tributary to Chicago.

At the present time the amount of

(Concluded on page 12.)

UPPER WISCONSIN

Late Blight Feared.

R. L. Cuff, county agricultural agent for Barron county, had received reports up to August 1st, indicating danger to the potato crop from late blight. He recommended spraying with Bordeaux mixture as the surest preventive. Mr. Cuff has been busy the past two weeks examining fields and assisting farmers in preparing the proper mixture.

Bordeaux mixture consists of the following ingredients: Copper sulphate (blue vitriol), four pounds; quicklime, four pounds; water, fifty gallons, according to the Wisconsin experiment station.

Dissolve the copper sulphate by suspending it in a porous sack in twenty-five gallons of water. Carefully slack the lime until a smooth paste is obtained, which should then be added to a large amount of water. Strain this solution carefully and add water to make twenty-five gallons. Finally pour the limewater into the blue vitriol solution, stirring the mixture constantly. A good Bordeaux mixture should have a distinct blue color.

A stock solution of copper sulphate can be made by dissolving one pound to one gallon of water. Then, in making the spray mixture, one gallon of solution represents one gallon of copper sulphate. A thick lime milk solution may be made also of one pound to one gallon of water. If kept separately, stock solutions last indefinitely. To dilute, pour both solutions into the water at the same time, and through a strainer.

Paris green or lead arsenate for potato bugs may be added to Bordeaux mixture in the same quantity that it is added to water.

Growth in Ladysmith Creamery.

No better evidence of the growth of Upper Wisconsin along the lines of dairying could be had than the reports which are coming in from the creamery companies. The Ladysmith creamery, a farmers' co-operative concern, had ninety-six customers in June, 1915. In June, 1916, this had been increased to 156. For the first two weeks in July, 1915, this creamery paid out in cash to customers $1,772.36. In the first two weeks of July, 1916, this sum was increased to $2,509.75. For June, 1916, there were about forty customers who received $50 cash or better and several who received more than $100 cash. When one travels through the country in Rusk county and sees the fine fields of grass it is not surprising that this is growing to be a great dairy section. Ladysmith itself is only about a decade old and the agricultural development of the county has all come in the past ten years.

Inter-County Holstein Breeders' Picnic.

The Inter-County (Dodge and Jefferson) Holstein Breeders' Picnic was held at Juneau, Wisconsin, Tuesday, July 18th. The weather was bright, but the temperature was very high. Although the attendance was not as large as hoped for, due no doubt to the rush of work. The morning was occupied by several judging contests by boys and young men, which proved of interest to spectators as well as participants. After a very pleasant picnic dinner, all repaired to a large tent, belonging to the Lincoln Chautauqua Co., where an interesting program was held.

Prof. Garland, of the University of Wisconsin, spoke on "Alfalfa," which proved interesting and profitable. He brought out many new ideas, and reminded us of many old ones that are apt to be forgotten.

Mr. Glover, president of the Dairy Union, spoke on "Production Records Versus Show Ring Records." He handled the question very sensibly and fairly to both sides.

Maintaining that a cow's general type would tend to govern her ability as a producer of milk or beef and that our aim should be to breed cattle of the highest type, he, however, said that a heavy producing cow not of ideal type should not be discarded as a milker or as a breeding animal, but that care should be taken to mate her with a bull of good type.

Everyone present felt highly repaid for the time spent in attending the meeting, both in renewing old acquaintances and the new things learned.

Creamery Records Broken.

All creamery records for the big Barron Creamery, at Barron, Wisconsin, were broken in June, when 574,600 pounds of cream were received from 871 patrons. The butter fat record for June was 163,060.1 pounds and the cash paid out to farmers was $53,000. The average price per pound paid for butter fat was 30 cents. Charles Becker received $223.41 for cream for the month, being the high man from standpoint of receipts. Almost 100 patrons received more than $100 cash for cream from the Barron creamery in June. The total amount paid for cream this year was almost $6,000 more than in 1915.

Settlers Interested in Establishing Herds.

To the Editor:—Rusk county farmers are progressive and interested in up-to-date methods of farm management. This fact was verified by the number of farmers who left their hay fields to attend the annual farmers' meeting held on the state demonstration farm at Conrath August 3d. The attendance was not as large as the attendance of previous years due to the tremendous amount of hay that is yet to be made in Rusk county. The interest manifested in the meeting was never better, however.

Prof. E. J. Delwiche, superintendent of the state demonstration farm, placed emphasis on the crop rotation that would tend to overcome the "lodging" of oats on our fertile clay loam soil. Experience at the state demonstration farm has allowed Professor Delwiche to recommend the introduction of either winter wheat or winter rye into rotation for the clay loam soil, to replace the former rotation of small grain, clover and corn. Five tons of clover has been harvested from an acre on the demonstration farm at Conrath and the crop this year gives promise of exceeding this record. Winter wheat sown on new breaking promises a yield of about twenty bushels per acre, while twenty-eight bushels have been grown as a third crop on new land.

Prof. J. G. Milward, of the Wisconsin Potato Growers' Association urged the farmers to use greater precaution in spraying their potatoes against the potato beetle. He estimated that several thousand dollars' worth of damage done resulted from neglect in poisoning the beetle in an early age in this county.

Professor Bulock, of the extension department, conducted a judging demonstration and a judging contest. The new settlers in this region were very much interested in this part of the program and they find it necessary to purchase a large number of cows in order to establish herds. Most of these cows have no milk records and the settlers are forced to depend upon his own judgment in buying.

The county representative is testing eighteen herds in the vicinity of Conrath for milk and butter fat production each month. The milk is weighed from each individual cow five times per month and is tested for butter fat once each month.

Why not build an

"Old Faithful" Hemlock

Granary or Corncrib?

You'll be surprised to see how little a fine granary will cost if you use "Old Faithful" HEMLOCK lumber, the farmer's standby. "It's been 200 years on the job."

Of course it IS hard to find time to give to building in this busy season—but just think of the profit in being able to hold your grain for the top price instead of being forced to sell it at any old price. Just figure up the profit you would have made last year if you could have stored at least part of your crop for the rise in prices.

We will gladly help by furnishing two kinds of real practical working plans free—granary shown above or small crib.

PLANS FREE The plans are on sheets 2x3 ft. Send for the new HEMLOCK booklet and use the PLAN COUPON which is in it. All you have to do is to present the coupon to your LOCAL LUMBER DEALER and he will supply you FREE with any one or two plans in our book, which contains houses, barns, garages, and small farm buildings. All plans are new and original and are drawn by architects who know the farmer's needs. If your lumber dealer hasn't the plans he will get them from us.

LANDS AND HOMES

PROSPERITY IN CANADA

$900,000,000 in new wealth added in 1915. Enormous crops and low taxation make farmers rich. Wheat average, 36.16 bushels per acre in Alberta, 28.75 bushels per acre in Saskatchewan, 28.50 bushels per acre in Manitoba. Taxes average $24 and will not exceed $35 per quarter section, includes all taxes; no taxes on improvements. Free schools and full religious liberty, good climate. Get your farm home from the Canadian Pacific Railway. 20 years to pay. Good land from $11 to $30 per acre; irrigated lands from $35, and the government guarantees your land and water titles. Balance, after first payment, extended over nineteen years, with interest at 6%; privilege of paying in full any time. Before final payment becomes due your farm should have paid for itself. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land itself. Particulars on request. Ready made farms for sale. Special easy terms. Loans for live stock. In defined districts, after one year's occupation, under certain conditions, we advance cattle, sheep and hogs to farmers up to a value of $1,000. We want you; we can afford to help you. We own the land; we want the land cultivated. Our interest are mutual. Buy direct and get your farm home from the CANADIAN PACIFIC RAILWAY. Send for free book. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Ave., Calgary, Alberta, Canada.

UPPER WISCONSIN FARM LANDS.

WE ARE selling a part of our 10,000 acre tract, located in Oneida County on beautiful lakes with the best known soil in upper Wisconsin, in the heart of the choicest dairy spot on earth. To see these lands is to buy them. Write or inquire Oneida Farms Co., E. M. McVicker, Prop., 1202 First National Bank Bldg., Milwaukee, Wis.

Obligation on Stockmen.

(Continued from page 10.)

tuberculosis in Upper Wisconsin is comparatively small, as is shown by data secured through the courtesy of Commissioner Norgord, of the department of agriculture.

Tuberculin Tests Reported to State Board of Agriculture for 1914 and 1915.

	No. Tests	No. Reactors	Percentage Affected
Old dairy section (27 southern and eastern counties)	48,238	4,306	9
Relatively new dairy section (29 central and western counties)	15,167	746	4.9
Relatively undeveloped section (15 northern counties)	6,677	188	2.9

Tests made by the various county agricultural representatives who are at work in most of the northern counties show that where reactors are found very frequently they have been purchased.

With the very rapid strides that are now being made in dairying in the still newer regions it is a matter of greatest moment that special efforts be made now to buy only perfectly healthy animals. If the foundation stock for the building up of these northern herds could be insured against tuberculosis it would mean the saving of large sums of money for the future.

No region has the opportunity that this new North now has. Will it recognize its advantage and profit thereby?

Wisconsin bankers occupy a most progressive position which they have assumed in aiding rational agricultural development. Bankers and commercial clubs are joining hands in helping to finance the needs of the settler with reference to introduction of live stock and other agricultural requirements. The rural credit problem in Wisconsin is being solved by home talent in a most sane and hopeful way.

Wisconsin Farmer Advertisements Bring Many Sales.

HERE are two typical letters from some of the live stock men who have recently advertised their stock in The Wisconsin Farmer and found it profitable:

George W. Smith & Sons, of Burnett, Wis., breeders of milking Short-horns and Poland China swine, write: "Our sales have been very satisfactory and we will continue with you as long as we have the goods to sell. You seem to send us the buyers."

H. B. Drake, of Beaver Dam, Wis., another successful Short-horn breeder, writes under date of July 15, 1916: "I have been an advertiser in The Wisconsin Farmer off and on for the past twenty-five years and am pleased to state that the results of my advertisements are better today than they have ever been before. You may continue my advertisement in The Wisconsin Farmer until I stop it."

Let The Wisconsin Farmer help you sell your stock. It's a result-getter.

THE WISCONSIN FARMER, MADISON, WIS.

Guaranteed Circulation, 90,000.

Potato Growers' Meeting.

At a recent meeting, for the purpose of making preliminary arrangements for the coming state potato growers' convention, to be held at Eau Claire in November, chairmen of all Eau Claire committees were present. These chairmen are as follows:

On Transportation—George Wallace, general freight agent of the Chicago, Minneapolis & Omaha Railroad.

On Arrangements—R. F. Kaiser, secretary Civic and Commerce Association, Eau Claire, Wisconsin.

On Publicity—W. L. Swift, Eau Claire Press Association.

Bankers' Agricultural Committee of Eau Claire, chairman, D. Woodruff.

The railr ads of Wisconsin will make special provision to provide facilities to handle county exhibits and other large exhibits shipped to the convention. Special cars will be routed from potato growing counties of Wisconsin to Eau Claire. Chairman George Wallace of the Omaha Railroad is making these arrangements for the State Association.

Early announcements will be made relative to the special school contest exhibit which will be a feature this year. Several thousand boys and girls in Wisconsin are growing potatoes under special contests and potato clubs. The State Association will offer attractive cash premiums, ribbons and banners in the school contest class. The special premium list and announcement is in the hands of the printer and will be furnished to the boys and girls in potato club work at a very early date.

Unusual interest is manifest in potato exhibits for the various potato growing counties. It is expected that at least twenty-five counties in Wisconsin will be represented at Eau Claire.

For information, address J. G. Milward, secretary Wisconsin Potato Growers' Association, Madison, Wisconsin.

For information on arrangements at Eau Claire, address Sec. R. F. Kaiser, Civic and Commerce Association, Eau Claire, Wis.

Wisconsin's seed inspection laboratory will be moved to Milwaukee in September. Farmers and dealers who are in the habit of sending what they suspect to be "dodderized alfalfa" or "quackerized alsike" to the state seed inspectors for analysis will have a chance to accompany their samples, watch the testers work and confer personally with the men who are spending their time striving to reduce the state's annual seed loss. Their headquarters will be at the state fair park, West Allis, during the week of the state fair, September 11th-16th. Here the complete equipment for testing all kinds of agricultural seeds under the state inspection service will be in regular operation for the entire week as a part of the exhibit of the college of agriculture. Purity tests of seeds intended for individual planting will be made free of charge and as far as possible all weeds brought in for identification will be given their respective places in the botanical "rogue's gallery." While it is not likely that many germination tests will be called for, such as come in will be made and the official reports returned later.

An increase of 1 cent a quart in the retail price of milk in the city of Fond du Lac has brought forth an argument between consumers, distributors and the dairymen as to the reason therefor. The farmers deny they are getting any more for their product than a year ago, despite the fact that during the hot, dry weather of this summer the flow was 50 per cent less. C. H. Brugger, a dairymen in that county, says the increase is one adopted by the distributors, and that the farmers on August 7th were getting the same for their milk as they were on that date last year.

The C. E. Blodgett Cheese, Butter and Egg Company has sold its plant at New Richmond to John E. Gallagher, who will continue in the flour and feed business while the Blodgett Company erects a new storage plant to take care of the rapidly-growing cheese and butter business in the St. Croix valley.

WITH OUR ADVERTISERS.

Galloway Cows for Sale.

ON page 22 C. S. Hechtner, Chariton, Iowa, advertises fifty head of imported and home-bred Galloway cows and heifers for sale and fourteen head of young bulls. He wants to reduce his herd and will make the price right to anybody that wants Galloway cattle. When writing Mr. Hechtner kindly mention this paper.—Adv.

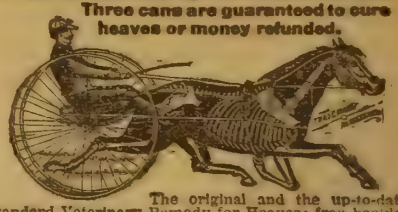
New Willard Battery Service Plan.

THE new Willard service plan provides a way for prolonging the life of your batteries. As part of this plan more than 750 free service stations are at the disposal of users of Willard batteries from which may be learned the best way to care for batteries in order to get the most satisfactory service from them. Those interested should read the advertisement on page 9 and write for information on the new plan. An offer is made to car owners of a hydrometer syringe for testing out batteries, which will be mailed postpaid on receipt of $1. Those who wish to send for it should fill in the coupon attached to the advertisement and mail it with $1 to the Willard Storage Battery Company, Cleveland, Ohio.—Adv.

DEATH TO HEAVES

NEWTON'S Heave, Cough, Distemper and Indigestion Cure.

Some cases cured by 1st or 2nd $1 can. Three cans are guaranteed to cure heaves or money refunded.



The original and the up-to-date Standard Veterinary Remedy for Heaves; free booklet explains fully. 34 years sale and veterinary use.

CURES HEAVES BY CORRECTING CAUSE—INDIGESTION. IT'S A GRAND CONDITIONER AND WORM EXPELLER

Safe. Most economical. Excellent for Cattle and Hogs. $1.00 per can at dealers, at same price by parcel post.

THE NEWTON REMEDY CO., Toledo, Ohio

A Silo Filler With Recruiting Attachment.

SMALLEY silo fillers reduce costs of filling the silo and eliminate the work of one or two men. They run at low speed and save power, but the fan speed can be increased or decreased, independent of the knife shaft. A grip hook table feeds the cutter automatically and thus does away with the work of from one to three men, depending on the size of the machine. In addition to filling silos, the Smalley machines will make alfalfa or hay chop simply by using the recutting attachment. Combination feeds can be made with this attachment—for instance, clover, cornstalks, pea vines, etc., can be chopped up together. The advertisement appears on page 14 and those interested will find it worth while to send for the free book issued by the Smalley Mfg. Co., Manitowoc, Wis.—Adv.

The Kirst Chesters.

IF you are in the market for a Chester White boar or sow pig of spring farrow, those being offered by Wm. C. Kirst, Tomah, Wis., will please you. He hasn't as many as some, but, as is often the case with the man that only has a few, they have had the care and will please when shipped. Most of them are sired by Rutter's Best, a son of Silver Coin out of a dam by Dixie Boy. This is a right good yearling boar and the pigs by him are showing up well. There is a very good three-year-old sow in this herd sired by Lyon Chief, out of a Best of All dam. This sow has the scale and the eight pigs she raised are among the best on the farm. A granddaughter of Combination 2d is a good sort of a yearling and raised a litter of six by Rutter's Best. Write Mr. Kirst what you want in the way of Chesters and he'll describe just what he has. See page 23.—Adv.

A Silo For the Farmer.

THE silo is a great money-saver for the feeder and dairyman. In lean years, or when there is danger that the corn crop will not mature, the silo owner can rest at ease, for he knows he will have feed enough for his stock during the winter. New silos are being built all the time, and those who have none should give the subject careful thought. It will pay to investigate the Taber Lined silo, manufactured by the Taber Lumber Co., Keokuk, Iowa. This silo is practically everlasting, rot-proof, worm-proof, storm-proof and acid-proof. The material used is wood staves, and the whole silo is thoroughly creosoted; then the oustide is painted and the inside coated with an acid-proof lining. Several desirable features of the Taber Lined Silo are given in the advertisement on page 14. Those interested should write to Dept. D of the company named above for complete catalog.—Adv.

Tried and Tested Motor Cars.

NOTHING radically new is ever offered to Reo motor car buyers. Everything has been thoroughly tried and carefully tested before it gets to the buyer. And this largely accounts for the success of the Reo car among motorists. New body types are offered from time to time, and improvements in details are constantly being made as fast as the increase in mechanical science permits; next season the Reo will have many of these improvements, but the price will not change, except in the case of two important reductions, and the new types will have the old stamp of Reo perfection. At present the Reo stands very high in the esteem of buyers, and the factories have on hands a greater number of orders than at any other time in Reo history. The enormous production and sale of Reo cars is proof of their popularity in the motor car world. Therefore, those who are looking for a new car, will make no mistake by investigating the Reo, made by the Reo Motor Car Company, Lansing, Mich., and advertised on page 24 of this paper.—Adv.

DAIRY

Would Exempt Pure-Bred Sires.

Langlade County Dairymen at August Picnic Urge Legislature to Cut Off the Taxes on Pure-Bred Sires in Wisconsin.

LANGLADE county dairymen assembled at their third annual cow-testing association picnic, at Antigo, early in August went on record as favoring the enactment of a law by the next legislature, exempting pure-bred registered sires used on the farms of Wisconsin, from taxation. The active support from the members of the legislature from the district shall be urged.

Despite the rush of a very busy harvest season, somewhat earlier than expected, because of the hot summer, dairymen and friends turned out in goodly numbers to the annual summer gathering. In addition to being the means of bringing some of the most prominent men in the agricultural field with their messages of importance and inspiration and uplift to the county, the cow-testing picnic performs a very important function as a social agency. The association membership is distributed over six townships, and these summer gatherings afford a splendid means of their getting together. The basket lunch always proves one of the attractive features of the Langdale county meeting. Farmers often invite their city friends to enjoy the dinner and the day with them.

Commissioner of Agriculture C. P. Norgord, guest of honor for the occasion, in his address emphasized the importance of building up good producing, clean, disease free; dairy herds on Wisconsin farms. He painted a bright and most hopeful picture of the possibilities of dairying in northern Wisconsin counties. The cow-testing association movement he characterized as one of the greatest agencies for dairy improvement yet inaugurated in the state. Recognizing this, the state fair management has made provision for prizes ranging from $30 to $80 per head for the best ten cows in the cow-testing associations of the state.

These honor cows will be given a prominent position at the coming state fair.

Mr. Norgord laid special emphasis on the importance of the tuberculin test in ridding our herds from tuberculosis, explaining his plan of the accredited herd list. Farmers were urged to avail themselves of the service of his department when considering the purchase of stock. If the herd from which purchase is to be made is on the accredited list, the buyer will have the assurance that the stock is right from the health standpoint. Better-fed, better-cared-for dairy cows, cleaner barns and stables, cleaner creameries and cheese factories were urged by E. L. Aderhold in his address. Dairymen, he pointed out, must co-operate with factory operators whether in private or co-operatively owned factories, and deliver only a first-class product. "Cream and milk should be bought and paid for by grade as it is now by test." "It is not fair to the careful farmer to dump his clean, wholesome cream into the same vat with the dirty, old, stale cream of the farmer who is careless and doesn't care a rap, and have both paid the same," said Mr. Aderhold. "I think that the farmer who delivers 200 pounds of butter fat in a year from a cow in a clean, sanitary condition is a better farmer than the one who gets 500 pounds per cow and brings that in a dirty, unwholesome condition.

Wonderful improvement has been made in many of our cheese factories and creameries between the first and second inspections made under the new creamery and cheese-factory license law, said Mr. Aderhold.

R. J. Schaefer advised the dairymen not to buy pure-bred animals just because of the name, or because of a low price. It takes too long to start and build up a good herd with the ordinary animal. Take advantage of what some honest breeder has been able to accomplish. Mr. Schaefer said by all means to get a good bull; one whose dam and grandams have made good records. When buying an animal which has no registered or cow-testing record, be sure to watch her milked. If it is a good sire, you are after watch the dam milked. Don't be in too big a hurry. A good deal of time can be saved in the long run by getting the right stock, even if it takes a little time to find it.

Following is a copy of the resolution adopted at the meeting:

Recognizing the importance of the live stock industry to our state and realizing that substantial improvement can only be brought about by the use of pure-bred sires, we, the members of the Langlade County Cow-Testing Association, and the Langlade County Holstein Association, recommend the enactment of a law by our next legislature exempting from taxation all pure-bred registered sires used on the farms in our state.

We further recommend that a copy of this resolution be sent to the senator and to the assemblyman from this district and that their active support for the enactment of the law be urged.

Sterilizing Dairy Utensils.

A government report of interest to Wisconsin dairymen says that ordinary washing of dairy utensils will not free them from bacteria. Farmers' Bulletin 748, which may be obtained from the U. S. Dept of Agriculture, Washington, D. C., describes a simple and homemade steam sterilizer which can be made at a cost of $5 to $10.

The sterilizer for cans and milk pails consists of (1) a roasting pan, (2) a specially prepared, insulated cover for it, and (3) a steam outlet pipe that runs through the cover. An ordinary roasting pan of standard size, about 20 inches long, 14 inches wide, top measurement, and 3 inches deep, will be satisfactory.

The insulated cover for the pan is in three layers, the lowest of which is a sheet of galvanized iron covering the roasting pan and lapping a little over the edges. On the bottom of the cover solder flanges to meet and fit the inside edges of the pan and make a tight cover.

For the steam pipe, cut a hole 1½ inches in diameter and around it solder securely a steam outlet pipe 4½ inches high and 1½ inches in diameter.

To make the second layer of the cover, use a piece of asbestos board five-sixteenths of an inch thick and slightly smaller than the metal sheet. In the center cut a hole which will fit tightly around the steam outlet pipe.

For the top layer of the cover make a shallow pan of galvanized iron 14 inches square, with sides five-eighths of an inch high, and cut a hole for the steam pipe. When the pan is pressed down tight on the asbestos, solder it firmly to the steam outlet pipe.

On the pan, solder, on edge, 4 strips of stiff, galvanized iron three-eighths of an inch wide. They should start 1 inch from each corner and should run to within 1 inch of the outlet pipe. These strips provide ridges which raise the milk can from the pan and permit free circulation of steam.

Paper may be used instead of asbestos for the middle layer of the cover. Pack papers tightly to a height of three-eighths of an inch over the galvanized iron bottom and on top place another galvanized-iron sheet of the same size. Solder these two sheets all around the edges so as to make a tight seam. This makes an insulated cover and pad about three-eighths of an inch thick, which will be found as satisfactory and even preferable to the asbestos insulation.

The sterilizer may be used on the kitchen stove, or other stove, or over any other heat that is sufficient to furnish steam at the end of the outlet pipe at least 205 degrees F., or preferably 210 to 211 degrees. A thermometer, if placed in the outlet pipe, will show whether the steam is hot enough.

Place the outfit, with 1 inch of water in the pan, on the stove, and see that the cover fits tightly. The first steam that comes from the apparatus will have a temperature of about 140 degrees F. Wait until a thermometer placed in the outlet pipe shows at least 205 degrees F. Then place the milk can—previously washed and rinsed—inverted over the steam outlet and resting on the ridges. Sterilize for five minutes; remove, shake out any water, and place the can upright on the floor. The can should be absolutely dry in one or two minutes. If not, it is an indication either that the steam was not hot enough or that the can was not washed clean. Remember that the steaming does not remove dirt, so that previous washing is essential.

Sterilize the milk-receiving tank and separator parts and all milk pails in the same way and for the same time.

Before strainer cloths, separator parts, can covers and small utensils can be sterilized, it is necessary to provide a bottomless, galvanized-iron box 15 by 15 by 11 inches high, to be used as a sterilizing chamber. The four sides of the box should fit tightly into the shallow pan and the box itself should be provided with a tightly fitting metal cover equipped with a handle.

To handle strainer cloths, string a wire across one side three-fourths of an inch from the top and one-half inch from the side. Before placing the box in position, hang the strainer cloth on the wire, folding it so that one edge may be reached easily without handling the entire cloth. Set the can covers upright along the sides of the box inside, with the tops of the covers against the box. The box should hold 3 covers at one time. After steaming, place covers on cans as soon as both are dry and do not remove until the cans are to be filled with milk. The pails, as well as the tank and separator parts, should be kept always in a clean place, out of reach of dust.

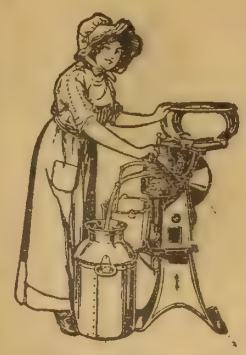
Wisconsin Ayrshires Win.

To the Editor:—Rusk county, Wisconsin, people are exceedingly proud of the record that is being made by the Ferndale farm herd of pure-bred Ayrshires, managed by Frank Stare, of Ladysmith, Wisconsin. Last week at the North Dakota State Fair the Ferndale herd won eleven firsts, five seconds, four thirds and one fourth on single entries.

The aged bull—Ferndale Victor—was champion of his class as was the junior bull—Ferndale Lessnessock Jem. In the aged cow class May of Hillcroft stood first, and Ferndale's Mode was champion junior heifer. Ferndale Victor and May of Hillcroft were awarded the grand championships. The following herd and group prizes were taken by Mr. Stare's herd: First and second on graded herd. First and second on breeder's young herd. First and second on breeder's calf herd. First and third on the get of a sire, and first and second on the product of a dam.

This herd was also awarded the Ayrshire Breeders' Association cup and the silver cup offered to the breeder winning the most money in individual classes on animals bred by himself and the trophy cup offered for the best young herd of dairy cattle.

These winnings are exceedingly gratifying when we consider that perhaps the most promising cows in the herd were left at home because Mr. Stare did not wish to interfere with the advanced registry testing, which is in progress at the Ferndale Farm. The herd will be shown at Grand



Don't Delay buying a

DE LAVAL SEPARATOR

a single day longer

IF YOU ARE SELLING CREAM or making butter and have no separator or are using an inferior machine, you are wasting cream every day you delay the purchase of a De Laval.

THERE CAN BE ONLY TWO real reasons for putting off buying a De Laval; either you do not really appreciate how great your loss in dollars and cents actually is or else you do not believe the De Laval Cream Separator will make the savings claimed for it.

IN EITHER CASE THERE IS one conclusive answer: "Let the local De Laval agent set up a machine for you on your own place and SEE FOR YOURSELF what the De Laval will do."

YOU HAVE NOTHING TO RISK and more than a million other cow owners who have made this test have found they had much to gain.

YOU CAN'T AFFORD TO WAIT till next spring or even for another month. Let the De Laval start saving cream for you RIGHT NOW and it will earn its cost by spring.

SEE THE NEAREST DE LAVAL agent at ONCE or if you do not know him write us direct for any desired information.

Mishicot Association.

The following table gives the names and records of the cows in the Mishicot Association, Manitowoc county, which have produced forty-five pounds of butter fat or more for the thirty-day period ending July 31, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
George Wellmer					
Brownie, N.	8	5-27	1377	3.6	49.57
Wm. Butaladt					
Darkie, N.....	9	6-26	1077	4.6	49.54
Albert Johannes					
Daisy, G. H.....	6	3-6	1239	3.9	48.32
Anna, G. H.....	9	11-12	1404	3.3	46.33
Henry W. Schmidt

The biggest butter and cheese exhibit ever brought together in Wisconsin was shown at the state fair in 1915. It is expected the exhibit will be even larger this year.

POULTRY.

S. C. R. I. REDS

FOR SALE—Hatching eggs from prize pens, half price for balance of season. Won 9 ribbons on 15 birds at Wisconsin State Fair, 1915; 4th pullet and 3d young pen at Chicago Coliseum, 1915. Winnebago Poultry Yards, R. 23, Omro, Wis.

HATCHING EGGS; prize-winning S. C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8. 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

Recent Rains Save Growing Crops

Drouth Is Broken in Most Parts of the State---Pastures, Corn and Potatoes Are Benefited---Grain Yields Fair, Hay Excellent.

WISCONSIN.

Barron County.—Oats have been affected by the hot weather during July and not more than 75 per cent of a crop is expected. They have lodged badly. Corn also suffered from dry, hot weather. Potato bugs have been troublesome in some fields, and together with adverse weather conditions, have cut down the yield. Pastures are getting short. Hay made the biggest yield in several years. No grain has been threshed yet. A good rain on August 4th helped all growing crops.—Wm. Bartlett.

Chippewa County.—A long, dry, hot season has made all crops look poor. A light rain on August 4th and 5th will improve them. Barley has done well, but oats were later and did not fill well. Threshing will begin soon. Potatoes are nearly a failure because of bugs and drouth. Corn looks well. Buckwheat will make a good crop if the weather is not too hot when it begins to fill. Gardens have been pretty badly damaged. Milk cows have fallen off in milk production.—James A. Smith.

Crawford County.—Corn is suffering from drouth, and as it is now tasseling out, there will be little corn if it does not rain in the next few days. In this part of the county, we have had only one shower since the first of June. Oats that were seeded early are good, but late oats are light because of hot, dry weather. Good crops of wheat and rye have been harvested. Threshing will begin soon. Potatoes will probably make a light crop. Pastures are drying up very fast. Fruit is poor because of drouth.—George Ashbacher.

Dodge County.—A heavy rain last week broke up the long dry spell which has caused considerable damage to the corn and pastures. The potato bugs have done much harm this year. Some of the barley has been threshed; it turned out poorer than last year. The average is about thirty bushels per acre. The oats also will be a little short this year.—E. R. F.

Dunn County.—Excessive heat and drouth in July damaged the grain and potato crops. A fine rain on August 4th will benefit the corn and parched pasture. A good corn crop is assured on heavy soils. Potato vines are turning brown and it is difficult to tell the effect the rain will have on this crop. Winter grain is good. Spring wheat is badly shrunken. Oats, especially early ones, are good. Barley is good. The second crop of clover hay is fine.—E. A. Finley.

Eau Claire County.—Harvesting of grain is nearly finished. Barley and oats will be light on account of the hot, dry weather in the latter part of July. Corn is doing well; a good rain on August 4th helped this crop very much. Rain helped the potatoes, which have not been doing well. Bugs have been troublesome and late potatoes have not set well. Pastures are dried up. No threshing has been done yet. Some grain has been stacked. Flies and gnats are bad. The grain crops will not be as good this year as last.—C. A. Koll.

Florence County.—The hay crop was heavy and weather conditions were favorable for putting it up. Oats and barley promise well. Rye will be a good crop, although not much of it is raised here. Potatoes are fair. About half a crop of fruit will be harvested. Pastures and meadows look fine. We have had sufficient rain.—Phill Kelms.

Forest County.—The largest hay crop known in the county has just been put up. Oats are being harvested; they were damaged by rust and tangled by storms to considerable extent. Other grains are good. Rain has been sufficient and potatoes promise a normal crop. Corn is doing splendidly and pastures were never better at this time of year.—H. A. Kamm.

Green Lake County.—All crops have suffered from hot, dry weather. Harvesting is nearly finished and some threshing has been done. The grain is reported light. Recent heavy rains have made the outlook for corn much more favorable. Early potatoes are very poor.—G. B. W.

Juneau County.—Threshing returns show a fair yield of grain. It is a little light on account of hot, dry weather in July. Pastures are dried up, which has caused stock to be sold that was unfit for market. Dry weather has affected the corn some. Potatoes and gardens also have suffered from drouth. A big rain on August 3d and 4th brought welcome relief. Alsike clover hulling shows a very poor yield.—J. H. McNown.

Kewaunee County.—Recent drouth and hot weather have ripened the barley at least one week too soon and shrunk it some. Oats, potatoes and garden truck all have suffered from the same causes. Rain on August 5th has refreshed the meadows and pastures. Most of the hay is harvested and an average crop of the finest quality is reported from all sections. Fruit is not abundant and some of the apples look poor. The unusual number of cattle are on pasture and all are doing well.—Fred Lutz.

La Crosse County.—Rains during the last week have partly overcome the harm done to the corn and potatoes by the drouth. Potato prices have advanced slightly. Some threshing has been done, and the reports say all grains are somewhat inferior in yield and quality than last year. The crop of timothy hay was never better and considerable wild hay is yet to be put up.—S. J. D.

Manitowoc County.—Hay crops are harvested and the yield averaged better than was expected. Grain harvest is under way and fair crops are reported. Corn is doing well. Potatoes have made a growth lately. Pastures are a little dry.—Otto Berge.

Marinette County.—A good crop of hay was secured in excellent condition. Grain harvest has begun. Barley and oats were driven a little too hard by the heat, and these crops will not be as heavy as last year; still, they will be fairly good. Corn is pushing ahead and will make a good crop if warm weather continues. Recent rains will insure a good crop of potatoes, although the bugs have bothered them a great deal. Rains have helped the pastures, which are holding out remarkably well; this is shown by the slight decrease in milk supply furnished to factories. Stock are in good condition and some are being sent to market.—H. B. Pederson.

Oneida County.—Harvesting has just begun. The grain is short and broken because of heavy rains. Indications are that the oats crop will fall about 35 per cent short of last year's crop. Considerable smut is in the grain. Corn is late and, although there will be little ripe corn, there will be plenty of silage. Potatoes look fine, but the dry weather in July prevented them from setting as well as they did last year. The second crop of clover hay is coming on in good shape. Rain has been plentiful during the last two weeks, and therefore, the pastures are holding out well. There are many more dairy cows this year than last.—Clyde Burkhart.

Ozaukee County.—The barley crop is in the barns. It turned out fair; straw is plentiful, but the heads are short and small. Oats are ready to cut; they look poor and in many places are very short in straw. A recent rain helped the corn and potatoes very much. Fruit and vegetables are pretty fair. Pastures are nearly dried out.—Nic J. Mueller.

Polk County.—A heavy crop of tame hay has been harvested, and practically all the grain is in the shock. Threshing has not commenced, but indications are that the grain will be light in many cases. Marquis wheat is doing very well; the estimated yield on several fields is from fifteen to twenty bushels per acre. Oats are very light, while barley is about an average crop. Corn is uncertain at present; the pollen may have been injured by protracted dry weather and intense heat. Potatoes will probably be below normal, but prices will be good. Pickle growers are now busy with their harvest, and the yield of this crop is good.—Wallace Fountain.

Price County.—The best hay crop ever cut in this county is now under cover. Warm weather is just what crops needed here. Good showers about once a week kept away the drouth. Corn is doing fine; early flint has been in silk for more than a week. Oats are about ready to cut. The average stand of oats is about 15 per cent less than last year. Potatoes, both early and late, are doing well and a good average yield is expected. Pastures are extra good. Berries of all kinds have yielded well.—J. W. Fox.

Sauk County.—One of the longest drouths ever known here has been broken at last. Much damage was done to the new seedings, young clover in many fields being literally burnt out, especially in barley and oats fields. The heavy rains of the last few days have improved the outlook for corn and potatoes, but the cornstalks will be short. Threshing of oats and barley has commenced; these crops are averaging about the same as last year, but the oats are a little light in weight.—Richard F. Klemm.

Sheboygan County.—Continued dry weather during the latter part of July gave ample opportunity to put up hay in fine shape and harvest rye and barley. Corn has grown very rapidly. We may not get much ripe corn, but the way it has been shooting up promises plenty silage. Pastures were very short, but soaking rains on August 3d and 4th will help them along. The new seedings of clover and alfalfa also were benefited by the rains. Late potatoes will improve also.—M. J. Hoppert.

Shawano County.—Rye and barley are good crops. Winter wheat is good, but spring wheat shows effects of hot weather. Oats also have been affected by hot weather. Potatoes are few in the hill. Bugs are causing trouble. Corn is growing fine, and if present weather continues, it will make more than an average crop. Pastures are good. We have had sufficient rain.—M. J. Wallrich.

Taylor County.—A splendid crop of hay was harvested in fine condition. Oats harvest is now on and the crop is fair. Barley and rye are poor, but corn and potatoes are above the average. Weather is fine and farmers are in good spirits.—John E. Miller.

Winnebago County.—Haying is finished and the cargo is much better than was expected. The late, wet spring followed by about six weeks of drouth has been unfavorable for grain and potatoes. The drouth has been broken by heavy showers and this will help the corn much of which is spotted because of failure of the seed to germinate. Threshing has begun. If showers continue, pastures will revive and this will be a great help in feeding stock since fodder is rather scarce.—Seymour L. Smith.

ALTJE SALO NETHERLAND MECHTHILDE A. R. O. record 23.35 pounds butter made thirty-eight days after calving, dam of the yearling bull advertised for sale on page 22 by Arthur Rust, West Allis, Wis.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Life Most Enjoyable.

The question of what to do to interest the growing boys and girls in farm life and keep them on the land is one that confronts many a farm parent. We do not believe that any of our young people wish to leave the farm because of any aversion for the country itself; it is not because they do not love the broad acres, the live, growing things, the pure air; it is not because they do not want to work—they all expect to work when they go to the city; but it is the possibilities for entertainment and relaxation in the after-work hours that draw most of the young people cityward. The social life of the towns and cities as compared to that of the country is more to the liking of young men and women.

At a recent rural life conference Archbishop Ireland talked to the farmers in attendance along this line, and his remarks are of interest to every farmer and farmer's wife interested in keeping their children on the farm. The archbishop said:

We should promote sociability, assimilation, friendship and amusement. Were I again to establish a farm colony I would first place in the center of it a theater or a community hall, and a library. I would urge practical education. I would teach cooking because American cooking is the worst in the world.

I would have the farm home the pleasantest in the land, with flowers and growing things inside and out—a charming place to enter.

I would have the farm parlor open every night and have the neighbor young people to come in and sing and have the young people to go to the neighbors and amuse themselves.

It is also the opinion of Archbishop Ireland that in order to keep their sons and daughters around them on the farm parents must demonstrate that farming is profitable, and not only that, but share with them the profits they have gained. He believes that when the sons become of age they should get their share, and the daughter hers when she marries:

We must show the country young people, he says, that the farm life is the most enjoyable and most independent life, and we must help to make it more so. The farmer is his own master. He is king on his own ground, subject only to his own commands.

The Play of the Girl and Boy.

As the little children grow up their desires for recreation and play broaden. The boys want to go fishing and hunting and swimming. The country always holds some new phase of life or experience and, if rightly directed and understood, the child can gain untold riches from the nature lore that surrounds him. Here again the father and mother can be of inestimable value to him, encouraging and helping him in every tendency which he shows. Gain his confidence, cultivate and enjoy with him the things which interest him; and let him come to you with all his treasures and his great adventures.

So only can you give to your children and gain from them the great and happiest moments of life.

If your girls want the same experiences in the "great out-of-doors," let them have them, although at this older period, home and its possibilities attract a girl. Here the mother should gain her daughter's confidence and with the spirit of love teach her the things that will make her a womanly woman and a worthy future mother. The great tragedies in girls' lives have come from this lack of understanding between mother and daughter.

The household duties could all be primarily learned in the spirit of play—make each duty a game—and finally through the play side its real value will be seen and appreciated. This is not as foolish as it may sound, for it is the basis of the greatest girl movement in the country today, and thousands of young girls are gaining a greater, truer knowledge of life's work through first seeing it in the guise of play and pleasure.

No one is too old to play a game, so if you have, or will take, a few spare moments in your day's work—go out into the yard and play a set of tennis, or a game of tether-ball, volley-ball or quoits with your daughter, your work and hers will have a keener interest all the rest of the day, because you have played and played together. —Edwina Mary Layman.

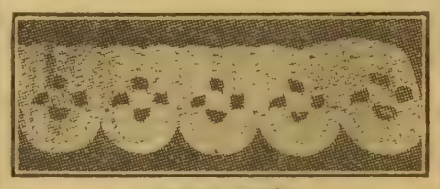
Narrow Crocheted Edging.

Chain 13.

First row—One treble in 4th stitch from hook, 5 trebles in next 5 stitches, chain 2, skip 2 stitches, 1 treble in next stitch, turn.

Second row—Chain 6, 3 trebles under 2 chain, chain 2, skip 2 trebles, 4 trebles in next 4 trebles, turn.

Third row—Chain 3, 1 treble in each 4 treble, 3 treble under 2 chain,



A NEAT EDGE.

2 chain, 15 trebles under 6 chain, 1 double in last stitch of foundation chain, turn.

Fourth row—One double in each of 15 trebles (back loops), chain 1, 2 trebles under 2 chain, 1 treble in each of 6 trebles, turn.

Fifth row—Chain 3, 1 treble in each of next 6 trebles, chain 2, 1 treble in 1 chain, space before scallop, turn, and repeat from second row, for length required, making the 1 double at end of 15 trebles in the chain space before, scallop.

Remedies for Ivy Poisoning.

Direct contact with the poison ivy plant is not always necessary to produce poisoning, as the poison may be transferred from clothing, gloves and implements, also from towels used by those who have been in contact with the plant. When there is reason to believe that there has been exposure to the poison repeated washing with warm water and strongly alkaline soap as soon as possible is advisable.

There is no one remedy that will cure all cases of ivy poisoning, and in severe cases a physician should be consulted. Specialists of the department have found the following methods and formulas useful in many cases: At the outset, removal of the cause of the irritation may be accomplished by cleansing the inflamed surface repeatedly with alcohol, or with a saturated solution of sugar of lead in alcohol, using a fresh bit of lint or absorbent cotton each time, to avoid spreading the irritant. The sugar of lead solution cannot be used over extensive areas because of risk of lead poisoning. Covering the inflamed parts with lint or absorbent cotton kept constantly moist with limewater or with a saturated solution of bicarbonate of soda will afford relief. When this cannot be used a simple ointment, such as zinc oxide ointment, is recommended. A solution containing one ounce of fluid extract of grindelia to one pint of water applied on cloths and allowed to evaporate may afford relief. Black wash, prepared by adding one dram of calomel to one pint of limewater, may be applied two or three times a day, allowed to dry, and followed by zinc oxide ointment. This treatment must be used with caution in extensive cases because of the possibility of mercury poisoning. The acute inflammation of ivy poisoning is sometimes followed by eczema and secondary infections of the skin, which, in mild cases, will yield readily to treatment with bland antiseptic ointments. A formula highly recommended for ivy poisoning and often especially helpful at this stage is the following:

Carbolic acid	2 grams.
Resorcin	2 grams.
Bismuth subgallate	4 grams.
Equal parts water and lime-water to make	250 c. c.

This solution may be dabbed on the affected parts several times a day.

Recipe for Dill Pickles.

Take medium-sized cucumbers. Let them stand in water overnight or twenty-four hours. Remove, wash and dry. Put grape leaves on the bottom of a stone jar, then pack in a layer of cucumbers very solid and cover with dill and cherry leaves. Repeat this process, being sure that the cucumbers are packed in solid and that plenty of dill is used. When the jar is full, cover with dill, cherry leaves and grape leaves; some horseradish may be added. For a two-gallon jar mix half cup coarse salt, one cup vinegar and one gallon of water until the salt is dissolved. Pour over the cucumbers, place a plate on top and a weight on top of the plate. It is essential that cucumbers be held down solid. Do not put into a cool cellar for ten or twelve days. Remove pickles as needed, replacing weight each time.

Sweet Gherkins.

Fill a tub with salt water strong enough to bear an egg. Put gherkins not over a finger long in this and let them stand nine days. Take them out and harden them by letting them stand in fresh cold water for several hours; then spread them out on a folded tablecloth to free them of moisture. Pack them in glass quart jars, fill with cold vinegar and set them aside for three weeks in a cool place. Then open the jars, drain off the vinegar and to that of each jar add one cupful of sugar, one-half teaspoonful of extract of mace and the same of extract of cloves and cinnamon and cayenne pepper to taste. Stir until the sugar is dissolved, pour the liquid over the pickles, close the jars and set in a cool place.

Mustard Pickles.

One quart chopped onions, one quart chopped cucumbers, two quarts chopped green tomatoes, one head chopped cabbage or cauliflower, six chopped green peppers. Salt and let stand overnight; then boil until tender. Make a dressing of three quarts good vinegar, six cups sugar, one-fourth ounce tumeric, four teaspoonfuls celery seed, one-half pound ground mustard, one cup flour. Rub dry ingredients together, stir till smooth in vinegar and boil till it thickens (two or three minutes). When cold pour over the cold vegetables and seal in warm jars. The mixture will thicken somewhat after standing a few days.

Dressing the Broiler.

In preparing a spring chicken for broiling, remove the backbone, neck, and keel bone. The backbone and neck may readily and easily be removed at one time. Hold the bird, breast down, and with the use of a sharp knife, insert the same through the back and cut each side of the vertebral column. Remove the neck in like manner and leave the viscera plainly exposed for immediate removal. The keel bone should be removed by first cutting around the outline of same from the inside. Then gradually scrape the flesh away leaving the skin underneath unbroken. The bird can then be laid perfectly flat for broiling, and when perfectly prepared there should be no incision to show.

A Serviceable Rug.

To the Editor:—I would like to tell Miss E. E. A. how I made some rugs from old coats and trousers. I cut and sewed them into carpet rags, making them about an inch wide. I then crocheted them into an oval rug, using a hook made by my husband from a broken pitchford tine. They are quite heavy to handle, but when completed make a good looking, serviceable rug. I have one that I have used continually for four years and it is still in good shape. I used gray and brown for the center and cut up a heavy red skirt for the border.

This is the season when we are troubled with ants and I will tell how I solved the problem. I placed a tin coffee can lid under each cupboard leg and kept them filled with water. I then have a safe place to keep all the things which attract ants. I also keep a sponge soaked in sweetened water and laid in their path. As soon as it is full of the little insects I dip it in hot water to kill them. Whenever I find their nests I drench them well with boiling water.

Have any of the readers ever used flowering bulbs as Christmas gifts? If so, what kind of bulbs do you use and when do you start them so as to have them blooming at Christmas time? I would be glad to receive this information. Mrs. H. B. C.

Another Canning Recipe.

To the Editor:—I want to tell Mrs. M. D. E., in answer to her inquiry, how I can corn and tomatoes together.

Use one-third as much corn as tomatoes. Salt to taste and boil until both are thoroughly heated through. Seal at once in sterilized glass jars or cans. If jars are used, wrap in paper and keep in a cool, dark place.

Mrs. F. F. S.

Household Hints.

If the meat grinder or egg beater works hard, put glycerin in the bearings. It is a lubricant which will not taste in the food and it is not at all harmful.

Use paper on the table when preparing fruit, vegetables, cracking nuts, etc., then simply roll the refuse up in it and your table is clean.

Olives and English walnuts ground together and moistened with mayonnaise make an appetizing luncheon sandwich.

Have your plumber fit a zinc top to your kitchen cabinet. It costs but $1, is perfectly sanitary and is fine for rolling out cookies, pastry, kneading bread, etc.

If the basket of an old baby buggy is removed and several boards or slats nailed across, a great deal of time and weariness is saved on wash day. You may place your basket of clothes on this and wheel it along with you and your clothes are hung up much more easily and quickly.

Buttonholes in stiff material like serge often fray badly before they are worked. To avoid this mark the position of the buttonholes by a piece of thread, stitch around it on the machine before cutting and the edge will hold firm until it is worked.

There is no better food in the hot summertime than green vegetables. They furnish the necessary mineral matter to the body and they are low in fuel value, so that they do not tend to make the body hotter. They fill up quickly and give a feeling of fullness, thus preventing overeating and consequent disorders.

Recipes.

Fried Chicken With Olive Sauce.—Cut up well-dressed chicken, dip in seasoned flour and brown in butter. Then cook slowly until thoroughly done. Serve with olive sauce.

Olive Sauce.—Brown two tablespoonfuls each of onion and carrot cut fine in a tablespoonful of butter; add a tablespoonful of flour and brown. Stir in a cupful of stock (beef extract will do if you have no stock at hand) and cook until smooth, add one dozen stuffed olives and let stand until the olives are well heated through.

Spanish Rice.—Chop one large tomato, one green pepper, one onion. Sprinkle one teaspoonful of salt over the mixture. Melt one tablespoonful of lard in a spider and when hot pour one cupful of dry rice over it, and keep it moving until the rice is thoroughly heated, but not discolored. Add six cupfuls of boiling water and the chopped vegetables. Cook all together until the rice is tender, adding more water as it becomes necessary.

Stuffed Sweet Peppers.—Six large peppers; remove seeds and white membranes. Scald peppers, allowing them to remain in water five minutes; drain and stuff with a filling made of two cupfuls of stale bread crumbs, one cupful of cold cooked chicken, one-half cupful of tiny mushrooms and one-half cupful of peas. To this add one-half teaspoonful of minced onion. Mix altogether with one cupful of white sauce. Season with salt and pepper. When peppers are filled, place in a pan and add enough water to keep them from burning. Bake from twenty to thirty minutes.

Stuffed Tomatoes.—Select large tomatoes of even size and scoop out a small place in the top and fill with a stuffing made as follows: Fry one small onion, chopped fine, in a tablespoonful of butter. When nearly done add some bread crumbs moistened with a little milk or water, and season with salt and pepper. Put a bit of butter on top of each and bake. Or the tomatoes may be filled with the following dressing: Chop very fine any kind of cold meat or fowl, with a very small piece of bacon; fry an onion, chopped fine, in a tablespoonful of butter and when nearly done add the meat, some bread crumbs, pepper and salt, cook a minute, mix well, add the yolk of an egg and fill the tomatoes. Place in a baking dish and sprinkle bread crumbs over the top, with small bits of butter on each tomato, and bake.

Hickory Nut Ice Cream.—Shell enough hickory nuts to give a pound of meats. Put them through a vegetable chopper and make a paste of them by moistening with a little water and sugar sirup. Melt two tablespoonfuls of sugar and when it begins to brown add water to dissolve it and a quart of cream or rich milk, two cupfuls of sugar and the nut paste. Mix and freeze.

French Omelet.—Beat four eggs slightly, just enough to blend yolks and whites. Add to this four tablespoonfuls of milk, one-half teaspoonful of salt and one-eighth teaspoonful of pepper. Put two tablespoonfuls of butter in a hot omelet pan and when it is melted add the mixture prepared. As it cooks, prick and pick up with a fork until the whole is of creamy consistency and firm enough to fold. Place on a hotter part of the range so that it may brown quickly underneath. Fold and turn on a hot platter. Before folding, grated cheese, jelly or chopped meat may be added.

LET US TAN YOUR HIDE: COW, HORSE, or calf skins for coat or robe. Catalogue on request. The Crosby Frisian Fur Co., Rochester, N. Y.

Breakfast in the Sky.

The little moon puts on a bib
Made out of misty cloud,
And, if she spills her share of rain,
It's just what she's allowed.

The very hungry baby stars
Arise before the day
To fill their shiny mugs with cream
From off the milky way.

The little dipper feeds the moon;
The big one feeds the sun;
But he is never satisfied,
For when his meal is done

He drinks the dewdrops off the grass,
And in a single hour
He empties all the breakfast cups
Held by each thirsty flower.
—Garnet Noel Wiley in the Mother's Magazine.

Enjoys Her Camera.

Dear Young Folks:—I am fourteen years old and I live on a farm of 130 acres. We have another farm of sixty acres. I have one sister and three brothers. We have several horses and cattle and a few sheep.

I spend much of my time with the camera and I like it very much. I finish my own pictures and also finish them for other people for 3 cents apiece.

I feel very sorry for Gladys, as I know I would miss my father if he were gone.

I will be in high school next year and I think I will enjoy it very much.
—Laura.

Takes Music Lessons of Sister.

Dear Young Folks:—I have always enjoyed your letters very much. I am a girl nine years of age and in the fourth grade. I love to go to school.

I have two sisters and one brother. My oldest sister goes to high school and I take music lessons of her. We can play duets.

We live on a farm of 160 acres four and one-half miles from town. We have six horses and two colts and five head of cattle.

I liked the story of The Endless Tale.

I think the answer to Hazel's riddle—up and down, up and down, touching neither sky nor ground—is a pump handle.
—Jessie.

Has Written Often.

Dear Young Folks:—I am thirteen years old and am in the eighth grade. We got a new piano this summer and I am taking music lessons. I like music very much.

We live on a farm of 160 acres. We have an incubator and all kinds of chickens. We also raise turkeys and geese. We live in a big house close by the timber and the creek. Papa is cutting timothy now and we will thresh soon.

I hope I will see my letter in the paper, for I have written often before, but I guess there has never been room for my letter.

Ella asked the riddle: What is the strongest key? I think the answer to it is don-key. Here is another one: What goes round the house and round the house, but makes only one track?
—Mayme.

Has Nine Bird Houses.

Dear Young Folks:—I read your letters every time the paper comes and enjoy them very much. I live on an eighty-acre farm. I have two sisters and one brother. My sister has ten chickens and I have thirty-nine little ducks.

We belong to the Rochester Liberty Bell Bird Club. We have put up nine bird houses and the wrens have built in all of them.

We have three horses, five cows, one dog, two cats and one kitten.

I will give you a riddle. What is in Rome but not in Italy? It is twice in a moment, but not in a second; it is in timber, but not in the trees.

Knows Bird Willie Describes.

Dear Young Folks:—I think I have found out what the bird is that Willie has described. It is a flicker. It is also known as a golden-winged woodpecker or high-holes. The northern flicker is found in North America east of the Rockies. I received a bird guide for my birthday and that is where I found the flicker.

I read all of the letters from the boys and girls and enjoy them very much.
—Ruth.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF FALL AND WINTER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1351—A dainty summer frock for misses and small women. The pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 7½ yards of 27-inch material for an 18-year size, with 1 yard for bolero.

1795—A practical and easily developed outfit. The pattern includes all three garments. It is cut in 5 sizes: 2, 3, 4, 5 and 6 years. It requires ⅞ yard for the drawers, 1½ yards for the underskirt and 2⅛ yards for the dress, of 36-inch material, for a 4-year size.

1805—A simple practical ladies' apron. The pattern is cut in 3 sizes: Small, medium and large. It requires 3¼ yards of 36-inch material for a medium size.

Waist 1807-Skirt 1815—An attractive expression of good style. The waist pattern 1807 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt 1815 is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. For the entire dress 6⅞ yards of 36-inch material will be required for a medium size. Two separate patterns, 10 cents for each pattern.

1796—Ladies' dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 44-inch material for a 36-inch size.

1588—Girls' dress in one-piece style with sleeve in wrist or elbow length. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3 yards of 44-inch material for a 6-year size.

1295—A simple set of underwear for girls. Drawers, petticoat and underwaist. Cut in 6 sizes: 2, 4, 6, 8, 10 and 12 years. The drawers require 1½ yards of 36-inch material, the petticoat requires 2 yards and the underwaist 1⅛ yards for a 10-year size.

1787—Girls' dress, with two styles of sleeves. Pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3½ yards of 44-inch material for an 8-year size.

1792—A stylish skirt model. Cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 4¼ yards of 44-inch material for a 24-inch size.

1642—A splendid style for morning or home wear, with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40 42 and 44 inches bust measure. It requires 7½ yards of 36-inch material for a 36-inch size.

1339—A dainty and becoming negligee. The pattern is cut in 3 sizes: Small medium and large. It will require 4½ yards of 44-inch material for the full length style, and 2¾ yards for sack length, for a medium size.

1803—A simple but attractive design. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2½ yards of 44-inch material for a 38-inch size.

International Sunday School Lesson.

Lesson for August 20, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Riot at Ephesus.

LESSON TEXT—Acts 19:23-41.

GOLDEN TEXT—The love of money is the root of all kinds of evil.—I Tim. 6-10.

Teachers ought to have good maps and keep before the minds of their classes both the ancient and modern [illegible] the places Paul visited. Paul [illegible] Ephesus nearly three [illegible]3 to 56. The events of [illegible] lesson occurred about three years [illegible] lesson in Acts.

[illegible]ssionary Work of Paul (vv. 1-10). How long Paul remained at Antioch after his second journey we do not know, but having passed through the "upper coast" he came to this city of Ephesus, which was an important city and a great mission field. In Revelations 2 and 3 is a list of the churches which he evangelized from this center. It was a great and effectual door for him (I Cor. 6:9; read also Acts 20:17; 2:35). In this city Paul found a religious guild of 12 members (see vv. 2-7), whose religious experience needed the enrichment of the Holy Spirit; a like need is ever before the Christian church.

II. The Miracles Wrought by Paul (vv. 11-20). Ephesus was a center of magic and witchcraft, and special power was given Paul to work miracles which confounded the magicians in this, their stronghold. The Gospel proves its power most and best by transforming the characters of men. Deeds of love and service are the best proofs of Christianity, and these are the things which awaken heathen nations to seek after the Christian religion. But such deeds are often imitated as in this case. (See v. 13.) However, only the real spirit of Christ can work the true workings of the Gospel, and thus the name of the Lord Jesus was magnified in Ephesus. Imitation is often the sincerest form of flattery.

III. The Mob's Attack Upon Paul's Work (vv. 21-41). The first result of Paul's work was the burning of the books of magic (vv. 18-20). Many who had been dupes of the magicians ceased their secret practices and declared their wrongdoings in this public manner. Literally, book after book was thrown into the fire, much the same as in Florence Savonarola had his "bonfire of vanities." Paul's wonderful success had to have its testing before he left. The Gospel "way," the way of salvation, of true living, is sure to create a stir sooner or later. Preach the Gospel faithfully and fully, and it will stir up any community. It is not necessarily a bad sign when things begin to be disturbed. It may simply indicate that the fire is getting hot. The good results of revivals do not hurt business, but they do hurt the devil. So that "big business" was intensely stirred up in the city of Ephesus. Demetrius, their leader, uttered a striking and truthful commendation of Paul (v. 26), although it was entirely unintentional. (See I Thess. 1:9-10). Demetrius does not seem to seek to controvert the preaching of Paul, or that it did not square with the word of God, but rather that it would interfere with financial considerations. The modern world is full of descendants of the Ephesian silversmiths—politicians and business interests which defend the saloon, and fairly respectable citizens who receive rents from such business, or from immoral or unsanitary properties, and who cry out against any reform which interferes with trade and money making. There are many today who are very enthusiastic religionists if they can coin money out of it or get into an office.

At this theater meeting (Paul was not present, vv. 29, 31) Demetrius appealed (1) to wealth, (2) to religion, (3) to the honor and fame of the city, and (4) he also made an esthetic appeal, (vv. 25, 26, 27). The Jews put forward one of their number, Alexander, to make a defense unto the people, and to show that they were not in sympathy with Paul and his companions in their preaching against the worship of Diana or that as Jewish Christians they did not maliciously hope to destroy the worship of Diana and the business interests of that city. Their effort, however, only stirred the mob to a larger shout, "Great is Diana of the Ephesians," which lasted for two hours.

Those who yell the loudest think they are sure to prove their point, though in such a way the point does not stay proved. Paul combines fearless courage and humble common sense, and, while he fain would appeal to the mob (v. 30), he refrained. The mob must soon awaken to the manliness and spirit of Paul's soul. It was the town clerk who interfered (v. 35-41) and by skillful management quelled the excited mob. He was the temple keeper and showed that the worship of Diana was so settled in Ephesus that no company of Jews could overthrow it, and that they did not have any real cause for violence.

He also emphasizes the fact that the image of Diana, their chief god, had been miraculously sent to them by Jupiter. He called attention to the fact that Paul had not committed the wrong of which he was charged.

SYNOPSIS OF PRECEDING CHAPTERS

The scene is laid in the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold. A neighbor, named Hardy, comes to his camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. He becomes well acquainted with his employer's sister, Rachel Hardy, who takes a great interest in him and is much in his company. Genesee Jack overhears a conversation between Miss Hardy and her aunt, from which she learns that he is not "fit company for a lady"—this is the aunt's view—and the relations between Rachel and the guide become strained. Disobeying his strict orders to stay with the party, Rachel Hardy rides ahead, her horse throwing her as it scares at a bear cub. She is severely hurt, but Genesee Jack finally finds her, and succeeds in getting her safely back to camp. Next morning Jack leaves the camp without a word of good-bye to the women folks. Two weeks later Rachel and Jim, while looking for lost sheep become lost and wander into MacDougall's shack and cook their supper, only to be surprised by Genesee walking in. Later they were again surprised by the appearance of an Indian maid whom Rachel thought Genesee introduced as his wife.

(CHAPTER VIII Continued)

HIS words to Talapa were in regard to their guests' comfort, for that silent individual at once began preparations for bed making on her behalf, until Rachel told her in Chincok that she would sleep in her chair where she was. And there she sat through the night, feeling that the eyes of the Indian girl were never taken from her as the motionless form lay rolled in a blanket on the floor, much as it had rolled itself up on the grass that other day.

Jim was throned in royal state, for he had the bed all to himself, and in the morning opened his eyes in amazement as he smelled the coffee and saw the Indian girl moving about as if at home.

"Yes, we've got a new cook, Jim," said Miss Hardy, from the window; "so we are out of work, you and I. Sleep well?"

"Great!" said Jim, yawning widely. "Where's Mr. Jack?"

"Out, somewhere," returned the girl comprehensively. She did not add that he had been out all night, and Jim was too much interested with the prospect of breakfast to be very curious.

He had it, as he had the bed—all to himself. Miss Hardy was not hungry, for a wonder, and Talapa disappeared after it was placed on the table. The girl asked Jim if that was Indian etiquette, but Jim didn't know what etiquette was, so he couldn't tell.

Through that long vigil of the night there had returned to the girl much of her light, ironical manner; but the mockery was more of herself and her own emotions than aught else, for when Genesee brought the horses to the door and she looked in his face, any thought of jesting with him was impossible; the signs of a storm were on him as they were on the mountains in the morning light.

"I will guide you back to the home trail," he said as he held Betty at the door for her to mount.

"Go in and get some breakfast," was all the answer she made him. But he shook his head and reached his hand to help her.

"What's the matter with everyone this morning?" asked Jim. "There hasn't been a bite of breakfast eaten only what I got away with myself."

Genesee glanced in at the table. "Would you eat nothing because it was mine?" he asked in a low tone.

"I did not because I could not," she said in the same tone; and then added, good-humoredly: "Despite Jim's belief in my appetite it does go back on me sometimes—and this is one of the times. It's too early in the morning for breakfast. Are you going with us on foot?" as she noticed Mowitza, unsaddled, grazing about the green turf at the edge of the timber.

"Yes," he answered, "I have not far to go."

She slipped past him, and gathering her dress up from the wet grass walked over to where Mowitza browsed. The beautiful mare raised her head and came over the grass with long, light steps, as if recognizing the low call of her visitor; and resting her head on the girl's shoulder, there seemed to be a conversation between them perfectly satisfactory to each; while Mowitza's owner stood looking at them with a world of conflicting emotions in his face.

"I have been saying good-by to Mowitza," she remarked, as she joined them and mounted Betty, "and we are both disconsolate. She carried me out of danger once, and I am slow to forget a favor."

It was a very matter-of-fact statement; she was a matter-of-fact young woman that morning. Genesee felt that she was trying to let him know her memory would keep only the best of her knowledge of him. It was an added debt to that which he already owed her and he walked in silence at her horse's head, finding no words to express his thoughts, and not daring to use them if he had.

The valleys were wrapped in the whitest of mists as they got a glimpse of them from the heights. The sun was struggling through one veil only to be plunged into another, and all the cedar wood was in the drip, drip of tears that follow tempests. Where was all that glory of the east at sunrise which those two had once watched from a mountain not far from this? In the east, as they looked now, there was only faint streaks of lavender across the sky—of lavender the color of mourning.

He directed Jim the way of the trail, and then turned to her.

"I don't know what to say to you—or just how low you will think me," he said in a miserable sort of way. "When I think of—of some things, I wonder that you even speak to me this morning—I'm ashamed to look you in the face!"

And he looked it. All the cool assurance that had been a prominent phase of his personality that evening when Hardy met him first was gone. His handsome, careless face and the independent head were drooped before hers as his broad-brimmed hat was pulled a little lower over his eyes.

Some women are curious, and this one, whom he had thought unlike all others, rather justified his belief, as she bent over in the saddle and lifted the cover from his dark hair.

"Don't be!" she said gently—and as he looked up at her she held out her hand—"nika tillikum" (my friend); and the sweetness possible in the words had never been known by him until she uttered them so. "My friend, don't feel like that, and don't think me quite a fool. I've seen enough of life to know that few men under the same circumstances would try as hard to be honest as you did, and if you failed in

some ways the fault was as much mine as yours."

"Rachel!" It was the first time he had ever called her that.

"Yes, I had some time to think about it last night," she said, with a little ironical smile about her lips; "and the conclusion I've come to is that we should afford to be honest this morning, and not—not so very much ashamed;" and then she hurried on in her speech, stumbling a little as the clasp of his hand made her unsteady through all her determination. "I will not see you again, perhaps ever. But I want you to know that I have faith in your making a great deal of your life if you try; you have the right foundations—strong will and a good principle. Mentally, you have been asleep here in the hills—don't find fault with your awakening. And don't feel so—so remorseful about—that night. There are some things people do and think that they can't help—we couldn't help that night; and so—good-by—Jack."

"God bless you, girl!" were the heartfelt, earnest words that answered her good-by, and with a last firm clasp of hands she turned Betty's head toward the trail Jim had taken and rode away under the cedar boughs.

Genesee stood bareheaded, with a new light in his eyes as he watched her—the dawn of some growing determination.

Once she looked back, and seeing him still there, touched her cap in military fashion, and with a smile disappeared in the wet woods. As he turned away there crept from the shrubbery at the junction of the trails Talapa, who, with that slow, knowing smile about her full lips, stole after him—in her dusky silence a very shadow of a man's past that grows heavy and wide after the noon is dead, and bars out lives from sunny doors where happiness might be found. His was bent low, thinking—thinking as he walked back to the cabin that had once held at least a sort of content—a content based on one side of his nature. Had the other died, or was it only asleep? And she had told him not to find fault with his awakening—she! He had never before realized the wealth or loss one woman could make to the world.

"Ashamed to look her in the face!" His own words echoed in his ears as he walked under the wet leaves, with the shadow of the shame skulking unseen after him; and then, little by little, the sense of her farewell came back to him, and running through it, that strong thread of faith in him yet, making his life more worth living.

"Not much in my present outfit for her to build any foundation for hope on," he muttered grimly as he saddled and bridled Mowitza, as if in hot haste to be gone somewhere, and then sat down on the doorstep as if forgetful of the intention.

Talapa slipped past him with an armful of bark for the fire. Not a word had passed between them since the night before, and the girl watched him covertly from under drooped lids. Was she trying to fathom his meditations, or determine how far they were to affect her own future? For as the birds foretell by the signs in the air the change of the summer, so Talapa, through the atmosphere of the cabin that morning, felt approach the end of a season that had been to her luxurious with comforts new to her; and though the Indian blood in her veins may have disdained the adjuncts of civilization, yet the French tide that crossed it carried to her the Gallic yearning for the dainties and delicacies of life. To be sure, one would not find many of those in a backwoodsman's cabin; but all content is comparative, and Talapa's basis of comparison was the earthen floor of a thronged "tepee," or wigwam, where blows had been more frequent than square meals; and being a thing feminine, her affections turned to this white man of the woods who could give her a floor of boards and a dinner-pot never empty, and moreover, being of the feminine, those bonds of affection were no doubt securely fastened—bonds welded in a circle—endless.

At least those attributes, vaguely remembered, are usually conceded to be the more gentle half of humanity, and I give Talapa the benefit of the belief, as her portrait has been of necessity set in the shadows, and has need of all the high lights that can be found for it. Whatever she may have lacked from a high-church point of view, she had at least enviable self-possession. Whatever tumult of wounded feeling there may have been in this daughter of the forest, she moved around sedately, with an air that in a white woman would be called martyrlike, and said nothing.

It was as well, perhaps, that she had the rare gift of silence, for the man at the door, with his chin resting grimly on his fists, did not seem at all sympathetic, or in the humor to fit himself to anyone's moods. The tones of that girl's voice were still vibrating over chords in his nature that disturbed him. He did not even notice Talapa's movements until she ceased them by squatting down with native grace by the fireplace, and then—

"Get up off that!" he roared, in a voice that hastened Talapa's rising considerably.

"That" was the buffalo robe on which the other girl had throned herself the night before; and what a picture she had made in the firelight!

Genesee in two strides crossed the floor, and grabbing the robe, flung it over his shoulder. No, it was not courteous to unseat a lady with so little ceremony—it may not even have been natural to him, so many things are not natural to us human things that are yet so true.

"And why so?" asked Talapa sullenly, her back against the wall as if in a position to show fight; that is, she said "Pe-kah-ta?" but, for the benefit of the civilized reader, the ordinary English is given—"And why so?"

Genesee looked at her a moment from head to foot, but the scrutiny resulted in silence—no remark. At length he walked back to the chest against the wall, and unlocking it, drew out an account book, between the leaves of which were some money orders; two of them he took out, putting the rest in his pocket. Then writing a signature on those two—not the name of Jack Genesee, by the way—he turned to Mistress Talapa, who had slid from the wall down on the floor minus the buffalo robe.

"Here!" he said tersely. "I am going away. Klatawah si-ah—do you understand?" And then, fishing some silver out of his pocket, he handed it to her with the notes. "Take these to the settlement—to the bank store. They'll give you money—money to live all winter. Live in the cabin if you want; only get out in the spring—do you hear? I will want it myself then—and—I want it alone."

Without comment Talapa reached up and took the money, looking curiously at the notes, as if to decipher the meaning in the pictured paper, and then:

"Nika wake tikegh Talapa?" she queried, but with nothing in her tone to tell if she cared whether he wanted her or not.

"Not by a—" he began energetically, and then, "you are your own boss now," he added, more quietly. "Go where you please, only you'd better keep clear of the old gang, for I won't buy you from them again—kumtuks?"

Talapa nodded that she understood, her eyes roving about the cabin, possibly taking note of the wealth that she had until spring to revel in or filch from.

Genesee noticed that mental reckoning.

"Leave these things alone," he said shortly. "Use them, but leave them here. If any of them are gone when I get back—well, I'll go after them."

And throwing the robe over his arm again, he strode out through the door, mounted Mowitza, and rode away.

It was not a sentimental finale to an idyl of the wood, but by the time the finale is reached the average human specimen has no sentiment to waste. Had they possessed any to begin with?

It was hard to tell whether Talapa was crushed by the cold cruelty of that leave taking, or whether she was indifferent; that very uncertainty is a charm exerted over us by those conservative natures that lock within themselves wrath or joy where we ordinary mortals give expression to ours with all the language possessed by us, and occasionally borrow some adjectives that would puzzle us to give a translation of.

Talapa sat where he left her, not moving except once to shy a pine knot at a rat by the cupboard—and hit it, too, though she did belong to the sex divine. So she sat, pensively dribbling the silver coin from hand to hand, until the morning crept away and the sun shone through the mists.

What was it that at last awakened her from an apparent dreamland—the note of that bird whistling in the forest in very gladness that the sun shone again? Evidently so, and the Indian blood in her veins had taught her the secret of sympathy with the wild things, for she gave an answering call, half voice, half whistle. Silence for a little, and then again from the timber came that quavering note, with the rising inflection at the finish that was so near an interrogation.

It brought Talapa to her feet, and going to the door, she sent a short, impatient call that a little later was answered by the appearance of a comely buck—one of the order of red men—who lounged down the little incline with his head thrust forward as if to scent danger if any was about; but a few words from the girl assuring him that the coast was clear—the fort unguarded—gave him more an air of assurance, as he stepped across the threshhold and squatted down on the side of the bed.

"Genesee gone?" he queried in the musical melody of consonants.

Talapa grunted an assent, with love in her eyes for the noble specimen on the bed.

"Gone far—gone all time—till spring," she communicated, as if sure of being the giver of welcome news. "House all mine—everything mine—all winter."

"Ugh!" was all the sound given in answer to the information; but the wide mouth curved upward ever so slightly at the corners, and coupled with the interrogative grunt, expressed, no doubt, as much content as generally falls to the lot of individual humanity. One of his boots hurt him, or rather the moccasins which he wore with leggings, and above them old blue pantaloons and a red shirt; the moccasin was ripped, and without ceremony he loosened it and kicked it toward Talapa.

"Mamook tipshin," he remarked briefly; and by that laconic order to sew his moccasin, Skulking Brave virtually took possession of Genesee's cabin and Genesee's squaw.

Through the gray shadows of that morning Rachel and Jim rode almost in silence down the mountain trail. The memory of the girl was too busy for speech, and the frequent yawns of Jim showed that a longer sleep would have been appreciated by him.

"Say," he remarked at last, as the trail grew wide enough for them to ride abreast, "everything was jolly back there at Mr. Jack's last night, but I'm blest if it was this morning. The breakfast wasn't anything to brag of, an' the fire was no good, an' the fog made the cabin as damp as rain when the door was open, an' he was glum an' quiet, an' you wasn't much better. Say, was it that Injun cook o' his you was afeared to eat after?"

"Not exactly," she answered with a little laugh; "what an observer you are, Jim! I suppose the atmosphere of the cabin was the effect of the storm last night."

"What? Well, the storm wasn't much worse to plow through last night than the wet timber this morning," he answered morosely; "but say, here's the sun coming out at last—by George! How the wind lifts the fog when it gets started. Look at it!" And then, as the sunlight really crept in a great shimmer through the pines, he added: "It might just as well have come earlier, or else kept away altogether, for we're as wet now as we can get."

"Be thankful that it shines at all, Jim."

"Oh, the shine's all right, but it shines too late."

"Yes," agreed the girl, with a memory of shamed, despairing eyes flitting through her brain. "Yes, it always shines too late—for someone."

"It's for two of us this time," replied grumbling Jim, taking her speech literally. "We've had a Nick of a time anyway this trip. Why that storm had to wait until just the day we got lost, so we'd get wet, an' straggle home dead beat—an' without the sheep—I can't see.'

"No, we can't see," said Rachel, with a queer little smile. "Perhaps—perhaps it's all because this is the end instead of the beginning of a cultus corrie." (To be continued.)

YOU Are Paying $2 to $4 Too Much For Your Coal!

We Will Show You How to Cut Coal Bills Almost In Half

THE place for you to buy your coal is at our mines. Direct from the big Tecumseh mines, located in Knox County, Indiana. Buy direct from the mine owners themselves and pay only the mine wholesale price. Get Tecumseh Coal the same as hundreds of Indiana farmers are doing and have done for years. They know from actual experience that Tecumseh gives them better coal value, more heat and less waste at a lower price per ton. And besides the big saving in money we offer, consider this:

Tecumseh Coal

is mined from the famous number five vein in Knox County, Indiana. Reputed by the State Geologist to produce the *very best* coal mined in the state consequently the Middle West. Tecumseh will give you extra coal quality at a lower price. We absolutely guarantee Tecumseh Coal to prove out 13,400 B.T.U.'s (heat units) to the coal pound with only 9% ash and 9% moisture. Our guarantee spells pure coal quality; coal that is clean, minus slate and dirt. It means added heat with less actual waste at a lower cost per ton.

Tecumseh Users Save $50 to $100 on Season's Supply

You can do the same. Find out how much we really can save you. A postal card will bring you complete information. Don't pass this up. You can see it means money to you. Write us today—let us prove this story of coal economy. We want you to know more about our monstrous big mines—our latest model mining equipment and our wonderful money-saving "direct-from-mines-to-you" coal plan. Write now while the thought is in your mind.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Ceylon Court Farm Durocs.

THE writer recently had the pleasure of spending the day at Ceylon Court Farm, Lake Geneva, Wis., and while there inspected the herds of swine and cattle; the stud of Percheron, Shire, Belgian and Hackney horses and in fact was royally entertained by the manager, C. W. Gilbert, who is maintaining one of the highest-class breeding establishments in Wisconsin. An interesting feature article could be written about this farm and the breeding work being done that would be of interest to every reader of The Wisconsin Farmer. We will, however, in this article confine ourselves to the herd of Durocs maintained here, as there is enough of interest in regard to this one herd for one issue. The Duroc herd numbers about seventy head at the present time. Great care has been used in the selection of breeding stock, and no money or labor has been spared to secure the best to be had. A daughter of the great boar, Superba, was recently purchased. He was by the Professor by Ohio Chief. There are also several daughters of the great boar, Defender, in the herd. He, it will be remembered, is the only boar of the breed to be twice grand champion at the International. There are also daughters of Orion's Pal, a grandson of Orion's Chief; Model Cherry, bred by McKee Brothers and several daughters of Chief Defender. In a letter recently received from H. E. Browning he states that Chief Defender was a litter mate to the great boar, Disturber (which weighed 1,120 pounds). His dam's sire was the Illinois grand champion boar, Chief Col., which sold for $2,100. She was one of the biggest Duroc sows in America and the most noted brood sow of the breed. These sows are out of daughters of such boars as Proud Advancer, Geer's Climas, Advance 2d and Chief Col. I do not think I ever saw a stronger lot of sow pedigrees in any one herd. The sires in service have been even better. During the past year three boars have been in service, viz: Upland Defender 8th, a grandson of Defender; Chancellor 42649 by Instructor by The Professor and out of Lulu's Queen and Ceylon Court Defender by Lee's Defender and out of a daughter by Marion's Wonder. Many of our readers for the past two or three years have been anxious to get some Cherry Chief, Defender, Professor and Advance blood, and this gives them an exceptional opportunity to secure it without going outside of the state. When writing kindly mention that you saw their advertisement in The Wisconsin Farmer which appears on page 23.—Adv.

A Breeder With the Right Idea.

ED PATTERSON, JR., Bloomington, Wis., is one of the younger breeders of Duroc Jersey swine in Wisconsin. He realizes that he cannot compete with the older breeders at the start, but he does realize that he can "grow" if he ships good stock. He has sorted his boars and has picked fifteen that he feels will give satisfaction wherever they go. These he expects to fill his mail orders with and when these are sold he says he will not ship any more. A poor pig, even though you sell him at a cheap figure hurts the breeder. Perhaps your buyer doesn't care what he gets just so he is a boar, there are many farmers of that caliber, but perhaps his neighbor has good hogs and buys good boars, but if he should visit the first farmer and should learn where he bought the boar, it is a certainty that he would not be impressed with the herd from which the boar came—so we say a poor boar had better be castrated than shipped or sold for breeding purposes. We feel that Mr. Patterson will treat you fairly and sell you a good boar at a resonable figure. He also has a small herd of Shorthorn cattle and he will have a few bulls to sell at a later date. Notice the advertisement in this issue and if interested write Mr. Patterson and mention this publication. See page 23.—Adv.

Erwin's Durocs.

SOME time ago while in Grant county we heard of the Jake Erwin Durocs at Bloomington, Wis., so we, of course, investigated. He hasn't as large a herd as some breeders in the state, but he has some good individuals and that is what most of us are after, the good ones. Many of the spring crop are sired by Bob Col. 2d by Bob Col., and the pigs by this boar are showing up well. Mr. Erwin shows at some of the county fairs and you will no doubt have a chance to meet him at some of these shows. If you don't get to meet him it would be well to write him for description and prices or if you can, visit his herd. His advertisement appears in this issue and when you write please mention The Wisconsin Farmer. See page 23.—Adv.

Heid's Guernseys.

A CHOICELY bred young bull of Limewater Starlight breeding is advertised for sale on page 22 by W. J. Heid, of Fort Atkinson, Wis. His sire is one of the best berd bulls in Jefferson county and is an excellent individual. He is very long bodied with a good, straight, level back and rump, great spring of rib and heart girth and a pliable, loose skin. The bull offered for sale is an equally good individual and will make an excellent header for a pure-bred herd. For pedigree and further information write to the above address.—Adv.

Henderson's Holsteins.

A FINE young bull sired by the 33.86-pound bull, Pabst Burke De Kol King, is advertised for sale on page 22 by J. H. Henderson, Elkhorn, Wis. This bull is one of exceptionally fine breeding. His dam, Edith De Kol Burke Hengerveld, made 33.86 pounds of butter in seven days from 644.10 pounds of milk. In thirty days she made 125 pounds of butter and in 365 days made 845.10 pounds of butter from 20,106.10 pounds milk. She is a daughter of De Kol 2d Butterboy 3d, which has 118 A. R. O. daughters. The sire of Pabst Burke De Kol King was King Pontiac Champion, which has forty-one A. R. O. daughters, twenty-one of which have records above twenty pounds, none of them being matured cows. The only daughter tested as a matured animal made 1,024 pounds of butter in a year. King Pontiac Champion in turn is a son of King of the Pontiac, that has 186 A. R. O. daughters, two with records above forty pounds. The dam of the bull offered for sale by Mr. Henderson is a 17.93-pound daughter of Sir Piebe Netherland Gem and a granddaughter of Paul Beech De Kol, that has 105 A. R. O. daughters, fifty with records from twenty to thirty pounds of butter in seven days. This young bull shows an exceptionally fine pedigree on both sides and we advise our readers to get in touch with Mr. Henderson when in the market for a head sire.—Adv.

MASTER'S GIANT 190781 owned by P. W. Young, Prosper, Minn., and without a doubt one of the greatest breeding boars in the Northwest today. This is an untouched photograph. See field note and advertisement in this issue.

Bulls From Milking Short-horns.

WE recently saw the bulls being offered for sale by R. W. Lamb & Son, Janesville, Wis., and if any of our readers are in need of a bull of serviceable age one of these bulls will suit. They are out of big, well-bred dams, that are good producers at the pail and these bulls are being priced well worth the money. They are red in color and are in nice condition for immediate service. Get their prices at once and mention The Wisconsin Farmer when writing.—Adv.

E. E. Jones Short-horns.

THE Jones Short-horn herd will be represented at several of the state fairs and some of the leading county fairs and if you are interested in Short-horns you will be interested in the cattle owned by E. E. Jones, Rockland, Wis. He will have out some heifers and a few young bulls that are outstanding individuals. Also take a look at a white bull he will show sired by Collynie Sultan. Mr. Jones is president of the state Short-horn association and if there is any information you want relative to the Short-horn sale to be held in Madison, November 3d, Mr. Jones would be a good man for you to see. See page 23.—Adv.

The Atwater Show Herd.

WHEN L. F. Atwater, Bangor, Wis., drives some of his Durocs into the show ring this fall there will be "something doing." We have never seen his former show herds, but if they were any better than the herd that will face the judges this year, it is no wonder that he carried off the bulk of the ribbons. He is coming out with a herd of sows that are going to be hard to beat and we don't believe there will be another herd at the shows that will have more size and uniformity of type than the Atwater herd. We want you to see this herd of big Durocs. Pay special attention to his senior and junior yearling sows as well as his under-year stuff, see if you don't think they are models to pattern after. Take a look at his new herd boars, Illustrator King and the fall boar by Cherry Chief. He will have no boars to sell at the fairs this year, for they are being reserved for the boar sale to be held October 18th, but he will have some with him to show the kind that will go to make up this sale. From the present outlook he will have forty of the best spring boars the writer ever saw listed for public sale. Notice the picture in this issue of some of the boars that will be in the sale. This picture was taken in June. Don't forget to visit the Atwater pens at the state fairs and La Crosse. See page 23.—Adv.

Garvens' Holsteins.

YOUNG Holstein bulls sired by Julip Segis Korndyke, a grandson of King Segis, are advertised for sale on page 22, by L. B. Garvens, Brookfield, Wisconsin. King Segis is held by many to have been the greatest bull of his generation, for though he lived to be just six years of age, he has eighty A. R. O. daughters, ten with records above thirty pounds. The young bulls offered for sale are out of equally well-bred cows with good A. R. O. records. In the herd are several daughters of King Hengerveld Pondyke, that has thirty A. R. O. daughters, two with records over thirty pounds. In the herd is also Aaltje Salo Cornucopia Netherland, a full sister to the 33.60-pound cow owned by Arthur Rust. There are also several daughters of Johanna Pontiac De Kol, that has twenty-five daughters, five with records from twenty-five to thirty-three pounds of butter. The young bulls offered for sale cannot be faulted as individuals, having good, straight rumps, wide, deep barrels and of excellent type throughout. See advertisement on page 22.—Adv.

CHESTER WHITE under a year old herd that won wherever shown, including the Wisconsin State Fair. Owned by W. C. Scheibe, Burlington, Wis., whose advertisement appears on page 23.

Guernseys Sell Well.

GUERNSEY cattle are in demand by Wisconsin Farmer readers, according to S. A. Merriman, Ft. Atkinson, Wis., whose advertisement appears on page 22. Among the sales recently made he reports the following: Dew Drop King of Riverside, to Roy Morical, Phillips, Wis.; Irna's Casterillins, to John Linny, Brooklin, Wis.; Hazel of Riverview, to G. F. Sanborn, Eagle River, Wis.; Corinnes Wonder, to Wm. A. Stark, Jefferson, Wis.; Callote of Riverside and Meadow Lark of Riverside 2d to C. E. Bodette, Marshfield, Wis.; Joker of Fairview, to Fred Junior, Jacksonport, Wis.; Orvilas Duke of Riversiew, to Alfred Heitz, Jefferson, Wis.; Joiner's Queen, and Peter of Riverview, to Peter Koehler, Jocksoncreek, Wis.; grade bull to Philip Baumgartner, Waubeno, Wis.; grade bull to Evert Henken, Waupun, Wis., grade bull to Ira Garfoot, Cross Plains, Wis. In a letter received July 17th he says: "I wish you to continue my advertisement on Guernsey cattle in The Wisconsin Farmer for the balance of the year. I have been having very satisfactory results during the time which it has been running and have sold all of my yearling bulls and all of the heifers that I can spare. I am now offering some very fine bull calves two of which are now ready for service. I find that it pays to carry my advertisement continuously, as I am able to get better prices when I am not overstocked than when I have a surplus on hand at one time and I am convinced that the service given by The Wisconsin Farmer helped to dispose of all my surplus cattle. Respectfully yours, S. A. Merriman."—Adv.

Smiley's Good Poland Boars.

WM. SMILEY & SON, Albany, Wis., have what is considered by men that know, one of the good herds of big-type Poland China in Wisconsin. They also have one of the largest herds that we have seen. The spring crop numbers over 200 head and it is needless to say that after these pigs have been sorted there will be some great prospects. The Smileys have used some outstanding boars and they have proven to be breeders of merit. Major Hadley is too well known to need any introduction in Wisconsin. We will say that there are some great sows on th place sired by him. Wisconsin Jumbo 2d is a boar of great scale and some of the best pigs on the place are sired by him. He is sired by Longfellow Jr. and his dam was by Big Jumbo—where can you find better big-type breeding? In Monarch and Major Miller, Messrs. Miller have in our estimation, two excellent boars and we liked the pigs by these two boars a little better than anything we saw on the farm. The Smiley's enjoy a reputation for fair dealings and if you are going to want a boar this fall don't overlook this good herd. This is an old established herd and it is a pleasure for The Wisconsin Farmer to recommend it to their readers. In writing for particulars please mention The Wisconsin Farmer. See page 23.—Adv.

Rober's Holsteins.

SIR WAYNE JOHANNA DE KOL is the sire at the head of the herd of Lawrence Rober, Lyons, Wisconsin. He is one of the best bulls in southern Wisconsin, being both an excellent individual and cholcely bred. His dam, Portage Pauline 2d, made 31.17 pounds of butter in seven days, giving 663 pounds of milk. In thirty days she made 125 pounds of butter, 2,727 pounds of milk. His sire, Jewel Paul 16th, is out of a twenty-four pound sister of the forty-pound cow, Johanna De Kol Van Beers. At the present time Mr. Robers is advertising thirteen daughters of this bull for sale, five of these are heifer calves from four to ten months old, eight of them are yearling heifers, which will be bred if desired. Mr. Robers is also offering two fine, young bulls for sale sired by Sir Wayne Johanna De Kol. These are both out of A. R. O. daughters of Sir Aaggie De Kol Acma and both are backed by several generations of A. R. O. breeding. For extended pedigrees and further information in regard to the animals offered for sale, write to the above address. See page 22.—Adv.

Kiesling's Guernseys.

ATTENTION is called to the change of advertisement of E. H. Kiesling, Jefferson, Wis., which appears on page 22. In a letter just received he says: "Change advertisement from calf born October to one born in March, 1916." This bull was sired by Glenwood's Noble Sequel 23999, and is out of a heavy producing cow. For further information in regard to breeding, etc., write to the above address.—Adv.

Holt's Jerseys.

REGISTERED Jersey bulls are advertised for sale on page 22 by H. Holt & Son, of Oconomowoc, Wis. These range in age from nine to sixteen months and are from heavy producing cows of choice type and breeding. They were sired by Inex Rosaries Oxford, an

excellent individual bull of choice breeding. For further information in regard to breeding and prices write to the above address.—Adv.

Menke's Polands and Short-horns.

THERE is no finer stretch of farm land in Wisconsin than that lying between Fox Lake and Green Lake, Wis. Here one sees thousands and thousands of acres of barley, oats, wheat, corn and hay, all in high, well-drained fields of good, black loam soil. On such land is being maintained the Poland China and Short-horn herds of A. Menke & Sons, Markesan, Wis., whose advertisement appears on page 23 They are breeding big-type Poland Chinas and have some seventy spring pigs. These were sired by Prairie Chief, a grandson of Martiny's noted boar, Climax, a winner at both the Minnesota and Wisconsin State Fairs. The sows in the herd are daughters of Wonder by Smooth Wonder 2d of Peter Mouw breeding; Big Orange Chief by Big Orange of Peter Mouw breeding; Matchless Sunbeam of L. P. Martiny's breeding; and others equally good. The litters this year ran from eight to twelve in the litter. The Short-horn herd is one of great promise. The present herd sire is Collynie Victor 387634, one of the finest type bulls we have seen. He was first-prize bull at the North Dakota State Fair and the Interstate Fairs at Kankakee and La Crosse, Wis. He was sired by Scottish Favorite of I. M. Forbes breeding. The cows in the herd are fine type animals of Imp. Young Mary, Imp. White Rose, Imp. Duchess Bertha and Marie Donna breeding. At the present time two young bulls are offered for sale sired by Roan Stanford he by Lord Stanford and out of a daughter of Young Hamilton. The dam of the bull offered for sale is Rosy 98349 by Ringmaster and traces to Imp. Arabella. She is a fine milking cow and a good individual. For further information in regard to the animals offered for sale write to the above address.—Adv.

Wehmhoff's Short-horns.

WHEN motoring through Racine county some time ago, we stopped at the farm of Henry Wehmhoff, Burlington, Wisconsin, and had the pleasure of inspecting his fine herd of Short-horn cattle. The herd consists of 125 registered animals of choice breeding. They are straight Scotch and Scotch Top strains, many of them being heavy milkers. This herd has been built up by the careful selection of good breeding stock. The pure Scotch females in the herd trace to the cow, Clarinda, a daughter of Imp. Cecelia of Cruickshank breeding. Among the bulls used at the head of this herd were Corsair bred by C. C. Norton and sired by Bapton Admiral. There are also several daughters in the herd of Victor 323863 bred by the Elmendorf Farm, Lexington, Kentucky. He was by Marion's Champion by Lovat Champion. There are also several daughters of Royal Standard bred by J. & W. B. Watt and sired by Judge by Royal Sailor. At the present time Mr. Wehmhoff is offering a few yearling heifers and bulls. These were sired by Orange Clipper by May's Clipper, a son of Imp. May Blossom. The heifers are bred to Clipper Sultan by Sultan Royal by Whitehall Sultan. For further information in regard to the animals now offered for sale, write to the above address. See advertisement on page 23. —Adv.

Keep Your Eye on McDonald Polands.

THE J. D. McDonald big-type Poland Chinas will start for the fairs next week. We recently saw this show herd and all we have to say is that someone must have some phenomenal Polands if they take it all away from McDonald. This herd will be shown at Iowa State Fair, Minnesota, Wisconsin, perhaps Chippewa Falls and La Crosse and from there some of the herd will go to the National Swine Show at Omaha. Besides the regular show herd Mr. McDonald will have a number of choice sale boars and gilts. He is very anxious to meet his old as well as new friends and customers at these various fairs! It will pay you to see his Polands, for it will give you a mark to shoot at and he can convince you that one can raise big-type Polands and still retain that quality that is so desirable. His post office is North Bend, Wis., but you will find J. D. with the Polands for the next six weeks. Don't forget to see this herd. See page 23.—Adv.

Rhoda's Holsteins.

THE Holstein herd of W. H. S. Rhoda, Watertown, Wis., is one of the best in Jefferson county. They have made a large number of very creditable records during the past five years. Great care has been used in the selection of breeding stock not only as to A. R. O. backing, but also as to individuality and production ability. Mr. Rhoda is a careful, discriminating judge of Holstein conformation and his herd shows the result of careful selection. At the present time he has several young bulls ready for service or nearly so from high producing dams. Whatever your wants may be in the way of Holstein cattle he can supply it. See advertisement on page 22.—Adv.

Rosencranz's Holsteins.

WHEN you talk about Duchess Ormsby breeding you will find no better example of it than in the bull, Hillvale Champion, that heads the herd of E. E. Rosencranz, Oconomowoc, Wis. This is the most richly bred Duchess Ormsby bull in the state of Wisconsin. He traces six times to the noted cow, Duchess Ormsby, and his six nearest dams test over 4 per cent of fat. At the present time Mr. Rosencranz is offering a son of this bull out of a cow sired by a grandson of Pontiac Korndyke. Send for an extended pedigree of this young bull when looking for a herd sire. See page 22.—Adv.

A Leading Brown Swiss Herd.

ONE of the best, as well as one of the oldest herds of Brown Swiss cattle to be found in the state of Wisconsin is owned by Andrew Martin, of West Salem. This herd was established twenty years ago. The foundation, numbering four richly bred heifers, was purchased from that prominent breeder, Thos. Inman. A few females have been added from time to time, but practically the entire herd of some sixty head has been bred by Mr. Martin. During recent years this Brown Swiss herd has been prominent in the show yards and in this issue of The Wisconsin Farmer we reproduce a picture of Jennie Martin, a cow that was first wherever shown in 1915. Many of the cows in the herd have advanced registry records and twelve more are in test at this writing. An important feature is the fact that there has never been a re-actor in this herd. Mr. Martin has tested regularly with excellent results. Many of the younger cows are sired by Collier, he a son of the great producing cow, Cinderilla 2d, A. R. over 12,000 pounds of milk. The present herd bull is one of great scale and also traces to Cinderilla 2d. His dam is on test at this time. Mr. Martin is an excellent caretaker and if you visit his farm you will find his cattle in good condition. At this time a number of young bulls are being offered for sale. They are right in every respect, well bred, well grown and are being priced well within their value. Anyone interested in this breed of cattle will certainly enjoy a visit with Mr. Martin and looking up the herd. Get particulars, but better yet visit the farm. In writing please mention this publication. See page 23.—Adv.

Downing's Holsteins.

AN exceptionally fine, young bull is advertised for sale on page 22 by Dr. W. M. Downing & Brother, Waukesha, Wisconsin. He is a son of their noted sire, Downing Pontiac Butterman, that has been shown very extensively in the leading fairs during the past three years. He is an excellent individual, weighing over a ton, has a long, wide, straight rump, great spring of rib, and deep barrel. His dam, May Netherland Pauline 2d, in seven days made 24.56 pounds of butter. The dam of the young bull for sale is Downing Pontiac Dairymaid, A. R. O. record 21.37 pounds of butter in seven days. She is a daughter of King Hengerveld Pondyke, that has twenty-five A. R. O. daughters, two with records above thirty pounds. King Hengerveld Pondyke is a son of King of the Pontiacs, that now has 180 A. R. O. daughters, two with records above forty pounds, and seven others with records above thirty pounds. The dam of Downing Pontiac Dairymaid is also May Netherland Pauline 2d, making the sire and dam of the bull for sale half brother and sister, both being out of the same cow. His sire and dam were shown at the Wisconsin State Fair in 1913-14-15 and each time won first as produce of cow. The young bull himself is a fine individual, well-grown and well marked. Send for his extended pedigree and picture to the above address.—Adv.

The Ackerman Poland Herd.

IT IS about time to begin thinking about that Poland China boar and when going over the advertisements in The Wisconsin Farmer don't overlook the "ad" of W. F. Ackerman, Glen Haven, Wis. There are some good sows in this herd and one of the good boars of the state stands at the head. This is A.'s Big Orange by Long Orange, a grandson of the noted Big Orange. His dam is by Klever's Giant. This boar has one of the best backs we ever saw on a boar of any breed, he has an excellent spring of rib, good, deep sides and has good feet and bone. We consider A.'s Big Orange one of the four or five best Poland boars in Wisconsin. Not only is he a good individual, but he is a good sire, for the best fall boars we have seen, other than show stuff, we saw on the Ackerman farm. The spring pigs are equally as good. Here is a herd that should be considered and if you want a boar or some gilts write Mr. Ackerman for prices. We feel confident you will get your money's worth. Please mention The Wisconsin Farmer when wriing. See page 23.—Adv.

Dopp Brothers' Holsteins.

A 19.80-pound son of Beauty Pietertje Prince Ormsby, is advertised for sale on page 22 by Dopp Brothers, Ixonia, Wis. Beauty Pietertje Prince Ormsby is an exceptionally well-bred sire, being a son of the thirty-two-pound bull, Beauty Pietertje Prince, and out of a twenty-two-pound sister of Pietertje Maid Ormsby, that made 35.56 pounds of butter in seven days. He is of intense Ormsby breeding, tracing on one side to Duchess Ormsby through her daughter, Duchess Ormsby 2d and to Queen Ormsby on the other side. For further information in regard to the bull offered for sale write to the above address.—Adv.

Kitty Clay Durhams.

J. WARREN HOYT, Rosendale, Wis. has a fine herd of Durham cattle of milking strain. At the present time he is offering a fine yearling bull, ready for immediate service. This bull was sired by Badger Boy 46th, a deeply bred Polled bull. The dam of the bull offered for sale was Champion Rose 4th, that is now giving 1,000 pounds of milk a month. Mr. Hoyt has several younger bulls from heavy milking cows, that he is pricing very reasonably. For further information in regard to these animals write to the above address. See page 22.—Adv.

Rust's Holsteins.

THE writer recently spent a very pleasant evening at the home of Arthur Rust, West Allis, Wisconsin, and learned many interesting facts while there in regard to their herd of Holstein cattle. This is one of the oldest herds of cattle in the state, having been established nearly forty years ago. Official testing has been carried on for a number of years and many fine records have been made. The Rusts have long been known as careful, discriminating judges and the great herd which they now own is the result of many years of careful selection and development. The Aaltje Salo family, on which they have developed their present herd, is one of wonderful production ability. One of their foundation cows, Aaltje Salo 5th Netherland, has eight A. R. O. daughters and has held the world's record for the past five years for a number of A. R. O. daughters. One of her granddaughters recently made a record of 33.60 pounds of butter in seven days. Another of her granddaughters, Aaltje Salo Netherland Mechtilde, is the dam of the young bull now advertised for sale on page 22. This cow made 23.35 pounds of butter in seven days, thirty-eight days after calving. She also has three A. R. O. daughters, one of which at four and a half years of age made 28.63 pounds of butter in seven days. The sire of the bull offered for sale is Daisy Johanna 5th, first prize two-year-old at the 1915 Wisconsin State Fair. His dam, Marlo 2d, made 27.02 pounds of butter in seven days. For an extended pedigree and further information in regard to these animals, write to the above address.—Adv.

Scheibe's Chester Whites.

WE dropped in a few days ago at the farm of W. C. Scheibe, Burlington, Wis., to look over his crop of spring pigs. We were greatly pleased to note the fine condition and the good size of his spring boars and gilts. Mr. Scheibe's Chesters have won very heavily at the state fair during the past three years and we predict that he will be high up in the money at the state fair this fall. His present crop of pigs were sired by Eagle Chief and Highland Joker. Eagle Chief has always been a leading winner at the Wisconsin and Minnesota State Fairs, as well as at several of the major county fairs in the state. Highland Joker won second as under a year boar at both the Minnesota and Wisconsin State Fairs. His sows had a clean sweep at the 1915 Wisconsin State Fair with the exception of the aged class. While at the farm we saw Mr. Scheibe's new herd boar, Perfect Prince, that we predict will make one of the best boars in the state. He was by Model Prince and out of a daughter of Chief Keokuk. See advertisement on page 23.—Adv.

Bruins' Jerseys.

ONE of the best herds of Jersey cattle in the state of Wisconsin judged from a production or show ring standpoint is that of Ed Bruins, Fairwater Wis., whose advertisement appears on page 22. Mr. Bruins has been one of the leading show men of the breed for the past several years, taking in many of the state fairs and dairy shows. His herd has won a great many honors in all classes. During the past two years he has been doing register of merit testing and has made many very creditable records. He has made several importations from the Island of Jersey and has a large herd of imported and American bred animals. At the present time he is offering a few heifers and two yearling bulls for sale. These bulls are from dams having over 500 pounds of butter in a year. For extended pedigrees and further information in regard to these animals write to the above address.—Adv.

Wenham's Bates Milking Short-horns.

THE Bates milking Short-horn herd of George Wenham & Sons, Ft. Atkinson, Wisconsin, is one of the best and oldest in the state. It is one of the few Bates herds still in existence, and we advise our readers who aim to breed milking Short-horns to get in touch with this firm. At the present time they are advertising several choice yearling bulls ready for immediate service. These come from a long line of heavy producing cows, many of them testing over 6 per cent fat. They are of a well-known and popular Bates families, viz., the Wildeye and Clay Buttercup families. When at the farm a few weeks ago we saw these young bulls and were impressed with the uniformly good backs, long, straight, wide rumps and typical dairy conformation of these young bulls. See advertisement on page 23 of the animals now offered for sale.—Adv.

Prepare For Winter.

WINTER time will be upon us before very long with its cold blasts and heating problems and it is not too early to decide on how to heat the home during the coming winter. Therefore, the advertisement on page 17 of King-Bee heaters is timely, and it is worthy of attention since these heaters are economical, efficient and highly desirable in the home. A complete catalog will be sent on request to Cutler & Proctor Stove Company, Dept. 40, Peoria, Ill.—Adv.

HOLSTEIN-FRIESIAN CATTLE.

Breeders Wanting 30-lb. Herd Sires

WE invite your attention to three young bulls. No. 151 calved March, 1916. Sir Korndyke Segis Johanna 127132, a 38 lb. son of the 40 lb. bull, Johanna McKinley Segis by King Segis, and whose dam Pontiac Lady Korndyke (A. R. O. record 38.03) is the highest record daughter of Pontiac Korndyke. Dam, Pabst Blackberry, a 31.68 lb. three-year-old by a 29 lb. grandson of Hengerveld De Kol. 2d dam, a 23 lb. three-year-old by Pontiac Champion, a 31 lb. son of King of the Pontiacs, 3d dam, a 33.86 lb. daughter of De Kol Md's Butter Boy 3d. No. 156—Calved April, 1916. Sire, King Pontiac Champion, that has 41 A. R. O. daughters, the only one tested as a mature animal, made over 1,000 lbs. butter in a year. Dam a 31.51 daughter of Sir Hengerveld Model Johanna, that has twenty A. R. O. daughters, two above 30 pounds. Good A. R. O. breeding for several generations. No. 152—Calved April, 1916. Sire, King Pontiac Champion. A 30.38 pound daughter of Hengerveld Model Johanna, a son of Hengerveld De Kol. Dam's dam, A. & G. De Freule De Kol 2d, a 29.68 pound cow. Several young bulls by the above sires, all out of A. R. O. cows, ranging in price from $100.00 up, depending on breeding and age. Be sure to address

PABST STOCK FARM, R. 30, OCONOMOWOC, WIS.

2 Yearling Sons of the Richly-Bred Holstein Bull
KING HENGERVELD PONDYKE

THIS bull has 20 A. R. O. daughters, 2 with records over 30 pounds of butter in 7 days. He was sired by King of the Pontiacs, that has 175 A. R. O. daughters, 2 with records over 40 pounds. Bull No. 1, born December 18, 1914, ¾ white, good and straight. Dam, Kinsman Beauty, 19.25 lb. 7-day record, 675 pounds butter and 16,032 pounds milk in a year. She is a granddaughter of Pontiac Aaggie Korndyke. Price of bull $150. Bull No. 2, born September 24, 1915, ¾ white, very straight. Dam, Robert's Fearless Lassie, a show cow, calved on show circuit so not yet tested, but will be this fall. Her dam and grandam both have 7-day and yearly records 757-784 pounds of butter for the year. Price $125. Send for extended pedigrees. Address **DR. DAVID ROBERTS, R. 4, WAUKESHA, WIS.**

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. Ready for immediate service. His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address

ARTHUR RUST — WEST ALLIS, WISCONSIN

HERE IS AN OPPORTUNITY

We are offering a few choice registered Holstein cows and heifers bred to the 29.50 pound bull

MAPLECREST HENGERVELD DE KOL 94154

WE also offer a 22.29 pound son of his for sale at $125. Send for an extended pedigree. It is a very well bred bull and the price is very low. **GROVE BROS., COLUMBUS, WISCONSIN.**

We are offering for immediate sale 400 head of registered and high-grade cows and heifers; also registered service bulls. Nothing but the best. Will make extra low price on 55 registered Guernsey heifers. Call at our farms or write.

EDGEWATER STOCK FARM — FT. ATKINSON, WIS.

DUCHESS ORMSBY and ALCARTRA COWS

HOLD the world's 7-day and year records for both butter and milk. They have startled the world by their achievements during the past year. We are offering a few young bulls sired by King Pietertje Hengerveld Ormsby, that is a full brother to the former world's record cow, Pietertje Maid Ormsby. Several bulls are from Alcartra bred cows. **BONNIE MEAD STOCK FARMS, Randolph, Wis.**

Purebred Registered
HOLSTEIN CATTLE

Half a million purebred Holsteins. There are in the United States nearly half a million purebred Holstein-Friesian cattle and this number is being increased at the average of sixty thousand annually. To the man who considers dairy farming as a business proposition, the fact that these figures represent the actual growth of the "Black-and-White" breed in this country since 1871 is a powerful testimony that the profits which breeders and owners of Holsteins enjoy are most satisfactory. Investigate the big "Black-and Whites."

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

OTTER CREEK FARM

BOOKING orders for March Durocs from large, mature sows. B. M. Arries, Augusta, Wis.

SHORT-HORN CATTLE.

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. **Are you a dairyman?** A Short-horn bull will not reduce your milk supply and he will get you calves that will be quickly salable at a much higher price than you can get from a dairy bred bull. **Are you a farmer?** The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperment, takes on flesh readily, and yields a liberal flow of milk. The Short-horn alway works improvement.
AMERICAN SHORT-HORN BREEDERS' ASS'N, 13 Dexter Park Ave., CHICAGO, ILLINOIS

RIVERSIDE STOCK FARM
SHORT-HORNS

YEARLING HEIFERS AND BULLS FOR SALE. Sired by the choicely bred bull **Orange Clipper 433897.** Straight Scotch and Scotch top—some from heavy milking dams. We can supply the type you like best—red or roan color. Prices reasonable.

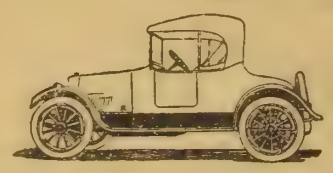
READY for heavy service. Well grow, of good, level type; sired by Casper L. and out of a heavy producing, show type cow. Allyn's breeding on both sides. Address
Chas. F. Lau **Thiensville, Wis.**

Reo

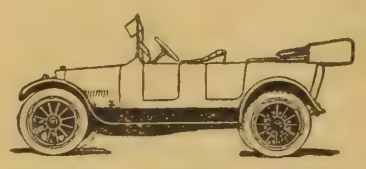
Announcing
The Reo Models and Prices

Two Important Price Reductions — Two Interesting New Models

Prefaced by a Few Pertinent Paragraphs Pertaining to the Reo Policy and Program

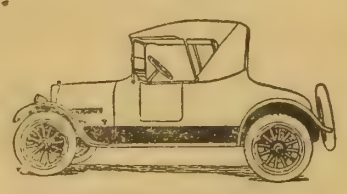


The New Four-Cylinder, 3-passenger Reo Roadster, $875



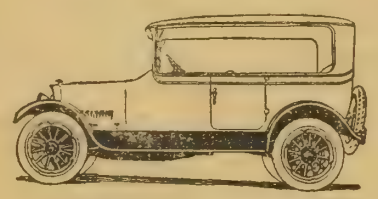
The New Reo the Fifth, "The Incomparable Four," $875

The New Four-Cylinder Reo Enclosed Car, $1025

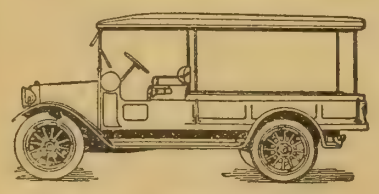


The New 4-passenger Reo Six Roadster, $1150

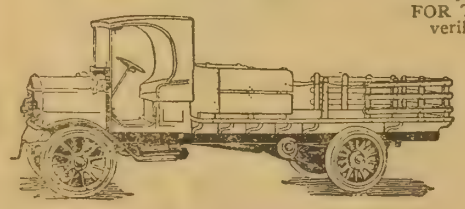
The New 7-passenger Reo Six Touring Car, $1150



The New Reo Six 7-passenger Sedan, $1750



1500-pound Reo "Speed Wagon," $1000



2-ton Reo Truck (Chassis only, with Driver's Seat and Cab), $1650

(All Prices are f. o. b. Lansing, Michigan)

FIRST LET US SAY, since it is relevant at this time, that Reo has not, is not now, and will not be concerned in, or a part of, any merger, combination or consolidation with other automobile concerns.

THE AIR HAS BEEN FULL of rumors of proposed plans for the uniting of several rival concerns for weeks past. The wildest rumors have gained currency and some credence.

ANY CONCERN THAT COULD by its financial standing lend strength; by its organization and experience lend confidence; or by its reputation lend respectability to such a plan, has been mentioned in the gossip.

AND SO REO, THE PIONEER—financially one of the strongest in the world—has been much discussed, much coveted by promoters.

THAT'S WHY WE SAY at this time—and we desire to make it as strong and clear as words can convey—Reo is not and will not be one of these.

REO WILL CONTINUE to do business at the old stand in the old Reo way, striving from day to day to give to Reo buyers just as much of value as our experience and facilities will permit—and that, as you already know, has always been just a little more than you could obtain elsewhere.

WE HAVE NOTHING TO SELL, we Reo folk. Nothing save the legitimate product of our factories.

WE ARE MANUFACTURERS—not promoters. Merchandisers—not stock manipulators.

THAT WHICH WE HAVE we prize so highly none other could see the value we'd put on it.

WE HAVE A PERMANENT business—of how many other automobile concerns can that be truly said? That asset—who can inventory—who appraise?

NO: WE HAVE NOTHING TO SAY against such combinations, nor against those who make or who join them. Undoubtedly they are good—for those on the inside.

AS TO THEIR INFLUENCE for good or ill on the trade—or the consumer—time alone can tell. Anyway that question has not been asked, nor that phase considered, apparently—so why should we try to answer it?

WE WILL SAY THIS THOUGH—that the spirit of "I've got mine, so I don't care," which is invariably preceded by "When I get mine, etc."—has, in our opinion, seriously retarded this great industry and lowered the general standard of the product.

TOO FEW HAVE BUILT for permanency—too many, alas, for the quick clean-up.

GROOMING A BUSINESS for such a coup involves forcing production to the limit to show paper profits—and the result is a product of mediocre quality at best.

FRANKLY WE DON'T KNOW—we Reo folk—where we could put the money (did we listen to the siren song of the promoter); we don't know where we could reinvest the money with equal safety and with as good prospects for, not larger, but as steady and certain returns permanently. We don't know.

THE REO POLICY IS SUCH; the Reo product is such; Reo reputation is such; that this business is as sound, as permanent, as sure as any other business in the world—in or out of the automobile industry—bar none. It is so regarded by bankers and business men the world over.

ASK YOUR OWN BANKER—he will tell you.

SO WHAT COULD WE GET in return for this business (honestly get, of course) that would be a fair exchange.

THIS BUSINESS WAS CONCEIVED IN PRIDE—and that pride of achievement is its greatest guarantee of quality in the product to you—and of its permanence to us.

THEN THERE'S THAT OTHER ANGLE that some might call foolish sentiment but which we, old fashioned Reo folk, regard most seriously—namely, the obligations we have assumed toward distributors and dealers and buyers of Reo Motor Cars and Trucks.

COULD WE, IN HONOR, entrust to any other the fulfillment of those obligations—and enjoy the money we had received?

WE REO FOLK HOLD that the sale of a car is not the consummation, but only the beginning of a transaction.

TO OUR WAY OF THINKING we assume, at the time we accept the check in payment, an obligation that shall endure so long as that car is in operation.

YOU SEE, WE ARE OLD FASHIONED—very old fashioned, we've been told.

BUT THIS IS AN AD and we should talk business—"hard cold business" in an ad. So we'll say no more on that subject! Leave it to those who are interested in such things—those who have a price.

YOU WANT TO KNOW—everybody always wants to know—what models Reo will make the coming year, and the price of each.

OF COURSE THERE ARE NO NEW MODELS—new chassis models we mean. You do not look for, do not expect, do not want new chassis models from Reo.

THAT ISN'T THE REO WAY. Refinements—of course. Detail improvements—wherever and whenever we can find a place or a way to make them.

NOTHING RADICALLY NEW is ever offered to Reo buyers. For it isn't new when it gets to you—it has been thoroughly tried and conclusively proven before we let it get into a Reo car.

NEW BODY TYPES—YES—and some that put Reo in the highest class of cars in looks as well as in performance and longevity. We'll treat of each in turn.

REO THE FIFTH COMES FIRST, of course. First not only among Reos, but among motor cars.

FOR THIS IS THE GREATEST automobile ever built, we verily believe.

THIS IS THE SEVENTH SEASON that Reo the Fifth has been standard in practically its present form.

NO: THE PRICE WILL NOT BE CHANGED this season. We will not increase—we cannot lower it.

ACTUAL COST OF MAKING is now more ($50 more) than when the present price, $875, was set a year ago. And we had made this model so long; had so refined and perfected manufacturing processes; had reached such an high state of efficiency in production; and cut dealers' discounts so low that we had, then, reached rock bottom.

IT WAS AN ACHIEVEMENT of the first magnitude to produce such a car and sell it at such a price—$875.

TODAY YOU SEE OTHERS increasing prices all along the line. They must do so. They have no choice.

ORDINARY BUSINESS RULES dictate that we also "tilt" the price of Reo the Fifth $50 at least.

BUT REO PRIDE PROMPTS that we absorb the extra cost, as we have for months past, and keep the price where it is until conditions will, happily, return to normal.

THE FOUR-CYLINDER ROADSTER—same wonderful chassis, same price, is the smartest thing on wheels—the most popular car in the world among physicians, and all professional and business men. Also $875.

TO SUPPLY A GROWING DEMAND for an enclosed body on Reo the Fifth chassis, we have planned to build a limited number. The quality will be Reo—which is to say, excellent. The top is rigidly supported at front and rear. Removable glass panels convert it into a veritable limousine for winter, and these discarded and with Jiffy curtains (which are also furnished) it is an ideal summer touring car. The price is $1025.

THE NEW REO SIX will continue in its present popular forms—the 7-passenger touring car and the classy 4-passenger roadster; and we will make a limited number with Sedan bodies to supply an insistent demand for this type of body on this splendid chassis.

THE PRICE IS REDUCED $100 on the 7-passenger and roadster models. Now $1150!

NOW YOU WONDER, and naturally, how we can reduce the price of the Reo Six models and not the Four—especially after what we have just told you about the increased cost of production.

SEEMS ILLOGICAL at first blush—doesn't it? But it isn't. For the truth is never illogical. And the truth is that despite the present higher prices of materials and labor still it costs us less to make this six-cylinder model than it did a year ago.

THIS POPULAR REO SIX is now in its third season. It has passed the same stages through which its great four-cylinder namesake went—initial costs have been absorbed, charged off. And in accordance with that unswerving Reo policy we give the buyer the benefit and set the price at $1150 f. o. b. Lansing.

WE WILL MAKE A LOT MORE of those 4-passenger Six Roadsters the coming season. We underestimated the appeal and the demand for this model. It proved one of the most popular Reos ever built.

THE SIX SEDAN speaks for itself, though, truth to tell, an illustration does it scant justice.

YOU MUST SEE IT where you can study its artistic lines and faultless finish to fully appreciate this latest Reo which we price at $1750.

NOW A WORD ABOUT THE TRUCKS since 90 per cent of all Reo automobile distributors also handle Reo motor trucks.

PRICE OF THE 1500-POUND REO "Speed Wagon" has been reduced to $1000.

SAME REASON—SAME POLICY—reduced cost of manufacture despite higher present cost of materials—as enunciated in speaking of the Reo Six.

AND THAT TWO-TON REO. What shall we say? What need we say? We submit, it is the greatest 2-Ton motor truck in existence. Has been standard for longer. Has given greater proof of its sturdiness and efficiency and low cost of upkeep.

IF WE ARE TO JUDGE by that over-demand, we may well assume that we could sell all that we could make were the price $2500, instead of $1650.

AND FINALLY A WORD about the big general plan—a brief reiteration of the Reo policy.

WE STILL ADHERE to our determination never to make more Reo cars or trucks than we can make and make every one good.

TEMPTATION IS GREAT of course. Dealers protesting, buyers begging for more Reos. But we know—we know—on what solid foundation this Reo success was built; and we'll jealously guard that policy to the last.

RIGHT NOW—AUGUST—there are more orders on hand at the factories than at any previous time in Reo history, orders hopelessly in excess of factory output—and that also is greater than ever before.

AND RIGHT NOW Reo stands higher in the esteem of buyers and of the trade than ever before.

$30,000,000 PER ANNUM is not small by any means. Reo is in fact one of the largest in point of production. We have no ambition, however, to be the largest. Don't want to make all the automobiles—only the best.

RATHER THAN INCREASE the quantity we shall strive always to improve the quality so that, as the art advances and cars generally improve, still Reo will continue to be known as—*"The Gold Standard of Values."*

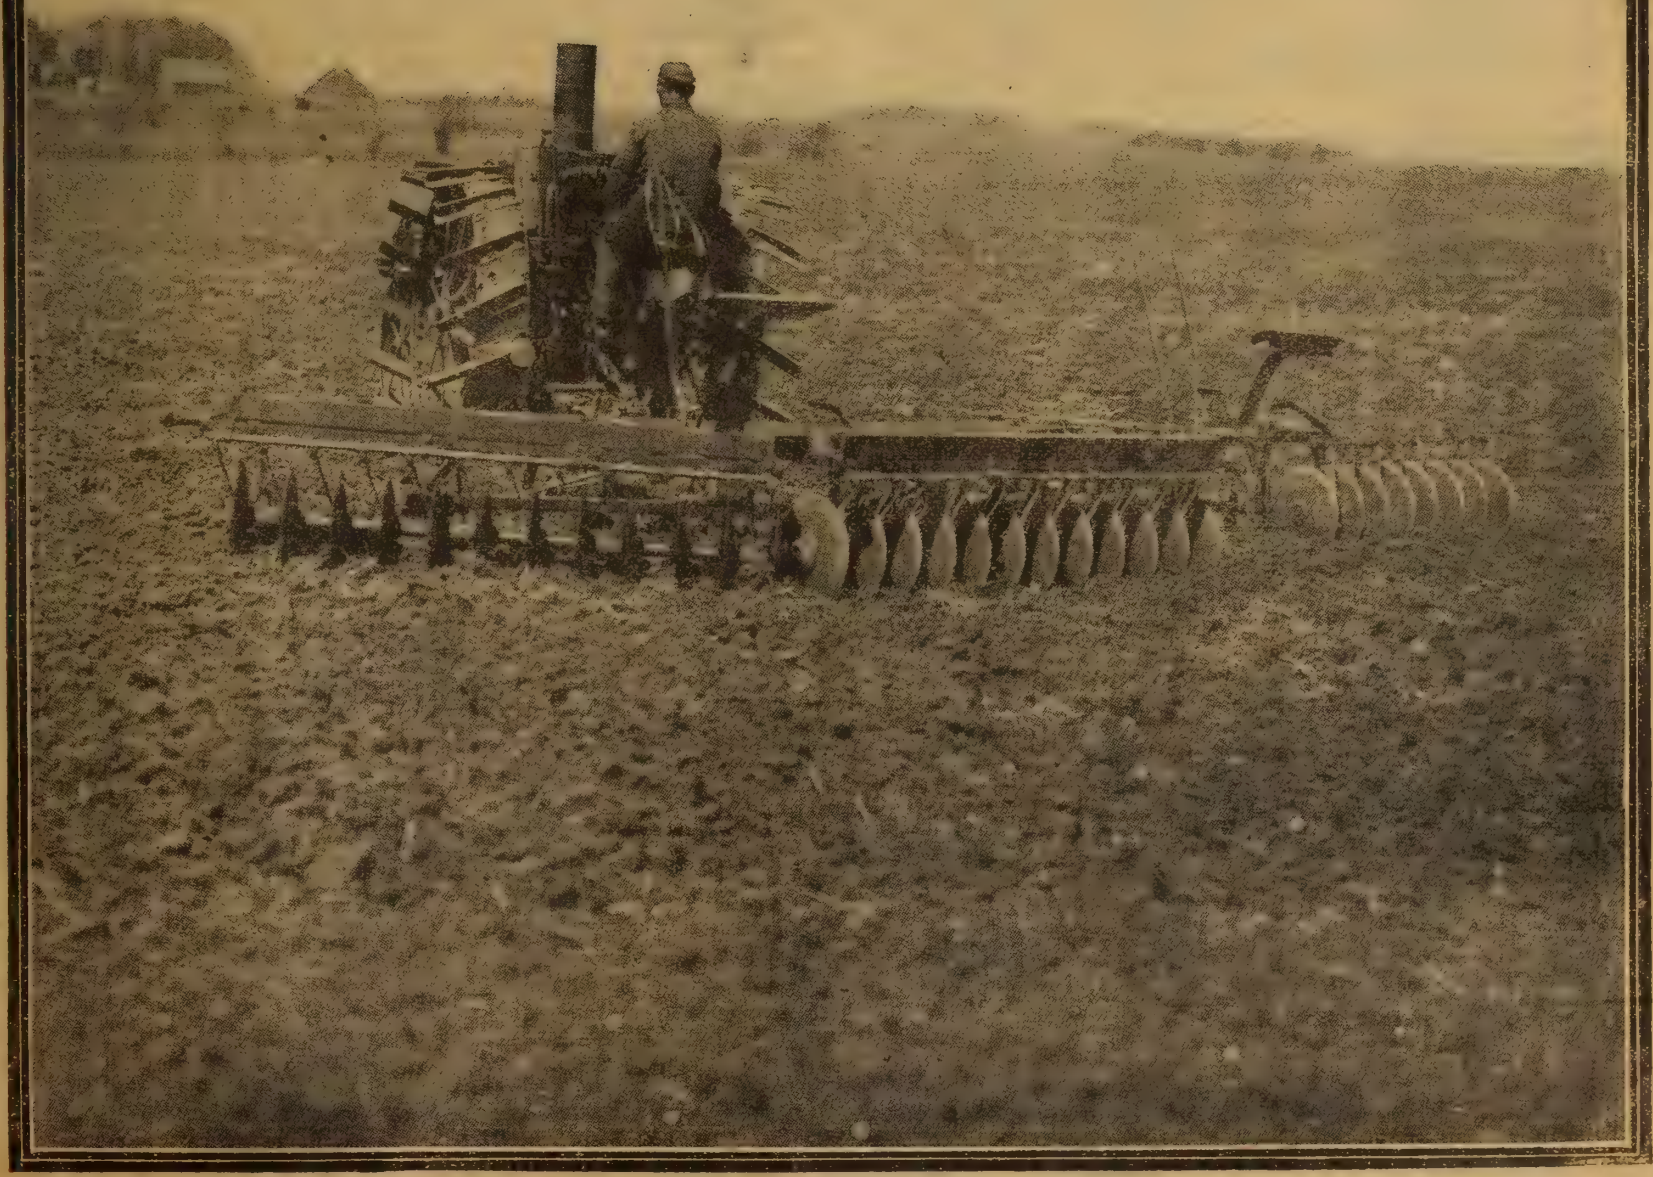
DAY OF THE TRACTOR AT HAND



Waterloo Boy KEROSENE Tractor

The Waterloo Boy Kerosene Tractor will be put through the severest of tests at the following Tractor Demonstrations. You are invited to be present.

Madison, Wis. - Sept. 4th to 8th
Bloomington, Ill. - Aug. 21st to 25th
Indianapolis, Ind. - Aug. 28th to Sept. 1st

$750 Farm With Fewer Horses and Fewer Men

This is the tractor you will choose if you see it work.

We cordially invite you to attend the great Tractor Demonstrations listed at the head of this advertisement, and see the Waterloo Boy Tractor put through some of the hardest working tests.

You can learn more about it in half an hour's demonstration than we can tell you in pages of printed matter.

Your time will be profitably spent because in choosing a tractor you cannot afford to make a mistake — you want the best your money can buy. You will be surprised and interested by

The Wonderful Performances of the Waterloo Boy Tractor

Its Low Price — **Great Power** — **Simple Design**
Low Operating Cost — **Strong Construction** — **Easy Management**

This tractor is the right size for profitable work on the farm, large or small. An all-year-round profit maker. Has power enough for two or three small farms.

One farmer writes us: "I plowed every foot of my land, have it in fine shape. Also did some custom plowing (raw prairie soil) for two of my neighbors. I have been running my power corn sheller all winter, with the tractor engine, shelling for the neighbors."

Pulls three 14" bottom plows 7" to 8" deep

Great Power Low Price — Cheap Fuel

A Three Plow tractor at only $250 per plow pulling capacity. Pulls three 14-inch plows with ease in heavy soil.

A successful kerosene burner—saves $175 to $195 a year in fuel cost over any gasoline tractor of same capacity.

Has working capacity of eight horses. Plows eight acres a day at fuel cost of 18 cents per acre.

Belt power for 17 inch silo filler or 28 inch thresher with self-feeder, self-weigher and wind stacker.

Fully Guaranteed

Long Life Reliable Power

Frame of heavy steel angle iron braced and rebraced; steel-cut, case-hardened gears; wide bearings; steel axles, sand caps on all wheels, automatic oiling. Powerful twin-cylinder moderate-speed motor is perfectly balanced, gives steady, even power. Removable inspection plate gives access to all working parts—makes adjustments easy.

Protect Yourself Permanently Against the Harvest Labor Problem

You can depend on the Waterloo Boy Kerosene Tractor to save you worry and expense during the rush season—it may save your crop. With it you can do the work of 8 horses in the field—pull the binder, mower, hay rake or loader; also operate thresher, silo filler and all belt machinery. When harvest is over pull the manure spreader, and do your fall or spring plowing, harrowing and seeding in record time.

The Tractor With An Established Reputation and a Strong Guarantee

That's an important point for you to consider when deciding on a tractor. The Waterloo Boy is not an experiment. It is a proven success. Its work at all the tractor demonstrations, on hundreds of farms, and the fact that it was one of the four Waterloo Boy Prize Winners at the Panama Pacific Exposition, attest its practical value.

This tractor is the latest and greatest addition to the Waterloo Boy Line—built to sustain the reputation which Waterloo Boy machines have held for 20 years. *We stand behind it with a strong guarantee.* We make prompt delivery and give you service on short notice when needed.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

MORE ABOUT THE NEW RURAL CREDIT LAW.

IT IS QUITE apparent (judging from the large number of letters I have received within the last week or two) that farmers generally are interested in the new rural credit system. Whether they are simply curious as to its workings or are looking to it to solve many of their financial problems I am unable now to say, but they are eager for details, that is sure.

Here, for instance, is a typical inquiry from a grain-belt farmer:

Dear Mr. Pierce: I have just read your editorial on the farm credit bill, appearing in your July 27th issue and I wish to make inquiry concerning it. Can you tell me when this bill goes into effect, where the banks are to be located and how soon they will be ready to do business with farmers?

Perhaps, in view of numerous inquiries of a similar nature, it might not be amiss to give some more general information in regard to this matter here, supplementing what I set forth in the July 27th issue. The president has already appointed the members of the board: Herbert Quick, of West Virginia; W. S. A. Smith, of Iowa; Charles E. Lobdell, of Kansas, and George W. Norris, of Pennsylvania, making the last-named chairman. The board will devote the next three or four months to the selection of the twelve cities in which the new farm-credit banks are to be established. Naturally, there will be considerable rivalry among the cities and the board will be obliged to investigate many claims, just as was done before the federal reserve banks were established, a year or so ago. For this purpose, the board began a national tour this week, holding its first meeting in Portland, Maine. Sessions will be held in the grain belt this week and next at the following cities: Madison, Des Moines, Sioux Falls, Fargo and St. Paul. The hearings will be public and farmers and farmers' organizations are invited to appear before the board and submit information which they think will assist in solving the important problem of determining the boundaries of the districts and locating the federal land banks. There is every intention apparent to locate the banks where they are most needed, and, while some luckless cities will feel themselves slighted, we must believe that the board will make the best selection possible, for the president's appointees are honorable men.

I have seen it semi-officially stated that the new system will not be in working order for six months at least and I believe this is correct, for there is much preparatory work to be done. Some complaint has been made as to the red tape with which the new system is encumbered. Let us hope that this may be cut away in time. The same red tape encumbered the rural mail service, the parcel post and the postal savings banks, when they were first inaugurated, but they have survived these encumbrances and are now firmly established.

In our eagerness to do everything possible to increase farming productiveness and efficiency we must not make the mistake of assuming that any new legislation is going to change human nature or bring about the agricultural millennium. Farmers who are not entitled to loans under the existing financial system will not be entitled to them under any new system that might be created, for no law can make a dishonest man honest or increase the efficiency of the shiftless. I want to print here a little editorial I found in one of the big eastern papers. It is quite to the point:

Any farmer who is plowing rented land will make a mistake if he acts on the assumption that under the new rural credits law he will be able to raise money to buy land. Under the new law, any farmer who owns his own home may mortgage it. Probably he should feel grateful that the new law at least does not take from him any of the privileges he formerly enjoyed. The fact remains that his privileges are not increased. The primary purpose of the act, as explained by the Agricultural Department, is to permit agricultural prosperity by enabling farmers to borrow money on farm mortgage security at a reasonable rate of interest and for relatively long periods. There are to be twelve land banks. But the basis of these banks is the co-operative organizations of farmers which will pass upon the credit of those who seek loans. No farmer can borrow unless he is a shareholder, and for this reason many farmers will prefer to borrow without investing in bank shares. As a matter of fact, farmers are already well supplied with mortgages on reasonable terms. The insurance companies have $646,961,371 in farm mortgages at an average rate of 5.55 per cent. The new law says that the Federal banks shall not charge above 6 per cent. The farmer will have to give the same kind of security he formerly gave, and the new system will not make a good borrower out of a poor one.

Let us resolve to give the new financial system a thorough and a fair trial, awaiting the results with an open mind. Time alone will tell if the farmer is to reap the benefits which the sponsors of the new law so enthusiastically promise.

AUTOMOBILE ACCIDENTS.

THE charge was made in my hearing the other night that most of the automobile accidents which have been occurring in one of our large grain-belt cities were caused by out-of-town drivers, farmers mainly, who either did not know the ordinary traffic rules or did not observe them. I refuted the charge warmly, admitting that there might be some local regulations which the visiting automobilist would not know, and, therefore, could not observe until they were called to his attention, but that the ordinary rules were known to all and were observed by small-town drivers and farmers as much as anybody.

I firmly believe the man who made the charge was wrong and that I am right. The farmer is a careful operator of machinery, for he has learned—perhaps by experience, in his early days—that mishandling machinery results in broken castings—if not in more serious accidents—and these in turn bring costly delays, so that it pays to be careful and to look after a piece of machinery as one looks after a horse. There is no reason why farmers should be blamed for a majority of automobile accidents in any city. Yet, at the same time, we should all of us resolve to be such careful observers of the ordinary rules of the road that this serious charge will not be laid at our door any more.

Certain things are so fundamental in automobile driving they are known—and must certainly be practiced—by all farmers who drive to any town or city. In the first place, we all know to drive on the right side of the street or road, that is fundamental, whether we are behind Old Dobbin or a "twin six." In the second place, speeding is dangerous and is rightly prohibited. There is no excuse for any man traveling faster than twenty or twenty-five miles an hour and at this pace only on a clear, unobstructed highway, where there is no danger from intersecting streets or roads and pedestrians are conspicuous by their absence. In the third place, when driving in a crowd, we should not proceed on the assumption that those immediately behind us and in front of us are mind readers; they are entitled to know which way we propose to go. When turning, an outstretched hand, pointing in the direction we propose to go, may avert a serious accident; likewise, a gesture when we are obliged to stop suddenly, because of engine trouble or a stoppage of the cars in front, may save our rear fenders.

These are ordinary rules of the road which we should all remember and observe. In addition, it would be well when farmers drive into town to find out, at the first possible moment, the local regulations. Some towns and cities here in the grain belt do not allow motor cars to remain "parked" on down-town streets more than twenty or thirty minutes. If they are left longer, the driver is subject to a fine. Again, there are ordinances against turning a car around in the middle of the block, street intersections being the only place this is permitted. Again, there are ordinances against bright headlights, compelling the use of dimmers or lights which throw their rays down so as not to blind the driver of an oncoming vehicle or a pedestrian. Many farmer visitors who fail to acquaint themselves with these local regulations are indignant when they are arrested and fined for some violation. I believe they should be notified and not summarily arrested and made to pay a fine for violating some ordinance with which they could not possibly have been familiar. Notification cards thrown in every car or signs posted in conspicuous places would save many law infractions and many hard feelings.

Let the farmer who drives a car see to it that he is particularly careful in town, for his own protection and that of others. Accidents are so easy to occur and so numerous, we should all do what we can to lessen and avert them. The automobile is here to stay, it is wonderfully useful to the farmer and adds greatly to his enjoyment of life; let us see to it that it is used with the maximum of results and the minimum of accidents.

THE TRACTOR SHOWS.

IF ANYTHING more were needed to prove that the tractor is the farm machine of the hour, the attendance at the tractor demonstrations and the eagerness with which the thousands of farmer-visitors investigate the various makes provide it. The series of demonstrations here in the grain belt is well nigh at an end, the crowds being at Bloomington, Illinois, this week, and Madison closing the grain-belt circuit week after next, Indianapolis coming in between Bloomington and Madison next week.

I confidently anticipate that more tractors will be sold to farmers here in the grain belt in the next year than were ever sold before in twice the time, for never was interest so high. Those who have not already attended one of these demonstrations should plan to do so before the series is at an end. They are object lessons of practical farm efficiency and advancement second to nothing, not even our state fairs, splendid and educational as they have grown to be. A visit to any one of the demonstrations is worth any man's time. Plan to attend one this year if possible; next year, by all means.

A QUEST FOR HOMINY.

I WONDER how many, if any, of my readers can tell just where to get some of the old-fashioned hominy of former years. Not the product which masquerades under that name today, but the genuine, yellow-corn hominy which we older folks knew in our youth, of which the present generation apparently knows nothing.

This matter was first brought to my attention by an eastern man who declared, with emphasis and heartfelt regret, that "in all the cornfields, in all the grist mills, in all the kitchens, hominy is only a memory to the older members of mankind." He went on to admit that there is something nowadays which has taken the name, but not the place, of the old-time article, but it is not the hominy for which he is seeking. Nor has his search been conducted in any half-hearted manner, he is in deadly earnest, witness what he says:

I have been deluged with letters telling of innumerable places where one might obtain hominy, and into these places I have chased the fleeing will-o'-the-wisp, only to find something entirely different—what every New England boy knew half a century ago as hulled corn, or the monstrosity that any self-respecting New England boy would have been ashamed to know, a pale-faced, blanched, Japanese-like form of corn, known as hominy-grits. Now, it is neither hulled corn nor this so-called hominy-grits the loss of which I am deploring, but real hominy from yellow corn.

This eastern man, who begins to fear he must go hominy-less the rest of his days, has been prosecuting his search diligently, from one end of the land to the other. And with what result? Let him tell the story of one disappointment after another:

In the heart of the country, at an old homestead, I found a man that said, "I know just what you want," and, smacking his lips, continued, "My, but I can remember those hominy-pies even to this day." "That is it. You have got it right," I said. "Pies with luscious raisins and a custard, all made of the real old hominy." "Well," he continued, "I do not know as you can get it in stores nowadays. We have dis continued it in the North, but they are not quite up to us in the South, and they still have hominy." "You mean," I said, "they are far ahead of us if they still have hominy and we have not." "I will give you a few addresses," he said. I wrote to several, including a famous old grist-mill in Richmond, Virginia. One man was kind enough to write, "We have the real hominy," and to send me a liberal package. Imagine my disappointment when I found it was nothing but such as is sold at department stores.

John Greenleaf Whittier, why do you not come back and reprimand some of these grocers for using your classic "bowl of samp and milk" as a misuse of the name samp? It is about as near what you had in mind as huckleberries are to peas.

Went to visit a man in New Jersey. He said: "We have here an old-fashioned grist-mill. They have just what you want." Gleefully I alighted from the automobile and accosted the man at the desk: "Give me a peck of hominy, will you?" The man at the desk laughed and said: "I know what you want. We have not got it. I have heard my grandfather tell about it." Then I realized that I had grown beyond youthful years when a full-grown man like that had to refer to his grandfather!

Will some of my readers come to the rescue? Surely, somewhere, the hominy of yesteryears is to be found today. It cannot be that such a luscious, palatable, nourishing article of diet in my youth and the youth of my older readers (whose hair, like mine, is now silvered) has disappeared completely. Must the younger generation of today go without the genuine "white pudding" of crackly suet and the genuine hominy of yellow corn and perforce be content with nothing more than grape fruit and ripe olives? Let my readers who can give this easterner (hungering for his hominy) some tip that will end his quest write to me; I will forward the good word on to him most gladly.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Wisconsin Farmer as a Live Stock Paper.

OUR readers cannot help but notice the leadership of The Wisconsin Farmer as a Wisconsin live stock paper. It is our aim to strengthen this leadership and to continue in the future as in the past to give our readers valuable information and advice on live stock subjects. Recognizing the value of good stock on the farm and the good that a farm paper can do in creating interest in better live stock, The Wisconsin Farmer editors feel a keen responsibility along this line.

We feel that no general farm paper can properly serve its readers in a state like Wisconsin without giving considerable space to the live stock business. It follows as a matter of course that the interest which The Wisconsin Farmer arouses in better live stock, makes this paper a more profitable medium for those who wish to advertise their stock for sale. Hence the live stock advertising of The Wisconsin Farmer has grown and this paper carries a much larger volume of live stock advertising from Wisconsin breeders than any other agricultural weekly in the state. We believe it will pay those of our readers who are interested in improving their herds to look carefully each week through the live stock advertising and field note columns. Our field notes are written by men who visit the herds which they write up and who have practical knowledge of the live stock business covering a period of years. The services of these field men are available without charge for all breeders of the state who desire to give publicity to their live stock offerings. We have been trying to make it easy for the Wisconsin breeder to advertise and to help him with copy and with write-ups of his stock. The Wisconsin Farmer live stock policy is original and is not copied after any other periodical. Splendid letters have been coming to this office proving that advertising in the columns of this paper pays big returns.

More Wisconsin farmers advertise in the regular live stock columns of this paper than advertise in any other Wisconsin farm paper, and we feel this is a high compliment to the publication and to the service which The Wisconsin Farmer gives both to our readers and advertisers.

The season approaching promises to be a busy one in the live stock world and we hope to see our readers take every opportunity of the situation to make good profits. Suggestions which have been made to us by breeders of the state will be carried out during the year.

Where Hay Is Abundant.

CONDITIONS were exceedingly favorable for the production of a heavy crop of hay in 1916, and undoubtedly as large a supply of roughage is available this year as has been the case any time during the last decade. This situation is recognized by the Farm Improvement Association of Winnebago county, Illinois, and a special effort is being made to induce farmers of that locality to handle their hay land in the proper manner.

That association advises those who have more clover hay than they can feed, not to cut the second crop of red clover for hay but, rather, plow it under for fertilizer or cut it for seed if it promises a large yield. The second crop should be pastured in part if desired and the residue plowed under either late in the fall or early in the spring.

Spring plowing is preferred by many, and this allows for grazing in the fall, also the cover of clover holds the snow. It is not advisable, as a rule, to plow light soils in the fall. Heavy clayey soil may be benefited by late fall plowing, provided there is no danger of washing.

Every ton of clover hay contains 40 pounds of nitrogen. If nitrogen is purchased for fertilizer, it will cost about 20 cents a pound. A farmer who sells a ton of clover is, therefore, selling $10.00 worth of nitrogen. A ton of clover hay contains 5 pounds of phosphorus which, if purchased in any of the readily available forms for fertilizer, will cost 50 cents per pound. A ton of clover hay also contains 30 pounds of potassium which cannot be purchased as a fertilizer now, but at the regular price before the war would have been worth $1.80. This makes a total fertilizing value per ton of clover of $12.30 simply for the elements of plant food contained in the clover. Besides this, the plowing under of 1,900 pounds of organic matter has a very great value to the soil, which is hard to estimate.

Much land is worn and deficient in organic matter, and the plowing under of a good crop of clover hay may double the yield of the succeeding corn crop. The deficiency of nitrogen and organic matter is often the limiting factor in the yields of corn and grain in many of our fields. It will not pay the farmer who cannot feed the hay on his own farm to put up much of the second crop, since its value as a fertilizer will be greater than he will be able to realize for it if he sells the hay. Another suggestion is to get more live stock and feed the hay on the farm, and return the manure to the soil and thus get a double use and value out of the crop.

Small Tractor Receiving Special Attention.

SEVERAL tractor demonstrations have already been held this year, and thousands and tens of thousands of farmers have made first-hand investigations of these machines in operation. They have had the opportunity to see the tractor pulling plows, disks, harrows, drills, grain binders and even manure spreaders, and in nearly every case these tasks have been performed with ease and dispatch.

So far the main interest has centered around the smaller types of tractors, and those running from five to ten-horse power on the drawbar have been made the subject of special investigation by the majority of those attending the demonstrations. A tractor large enough to pull two plows, means that from five to six acres a day may be turned and the same power will disk fifteen or twenty acres a day or harrow fifty acres in ten hours. In other words, a machine of this weight would mean, under ordinary circumstances, the displacement of four horses. Assuming that the fuel consumption of such a tractor would equal the value of the food consumed while the horses are at work, it becomes apparent at once that the saving effected by such a form of power will be the value of the food consumed by horses while they are idle. The average work horse is in the harness approximately 150 days in the year and he is loafing the balance of the time. He has to be fed whether at labor or not, whereas the expense on the tractor stops just as soon as the throttle valve is closed.
